Mr. O. KORSCHULT then read a paper "On the Chemistry of Japanese Lacquer" by himself and Mr. Yoshida. The paper opened with a brief account of the source and preparation of the lacquer, and of the conditions as to temperature and moisture under which it hardens to the best advantage. The interest of the paper lay, however, in the very complete discussion of the chemical constituents of the substance, and the synthetic determination of which of these were most essential in the action. The summary of results was given in these terms:—1. The raw lacquer juice is an emulsion which contains: (a) a peculiar acid, called urushic acid, (b) a gum, (c) a nitrogenous body, (d) water, and (e) a volatile acid in traces. 2. The hardening of the lacquer-juice which takes place when the latter is exposed in a thin layer to moist air of (best) 20-27°C. is due to the oxidation of urushic acid into oxyurushic acid. 3. This oxidation is caused by the nitrogenous body which is an albumenoid and acts as a ferment. 4. The oxidation is not ac-

companied by hydration. The water must be present only to keep the ferment in solution, which else would not act. 5. The oxidation takes place within narrow limits of temperature, ranging from about zero Centigrade to the temperature of coagulation of albumen. 6. The gum seems to have a favourable influence in helping to keep the other substances in emulsion; but in the hardened lacquer its presence is injurious, causing it when in contact with water, to rise in blisters. 7. By mixture of the raw juice with urushic acid, the quantity of gum present is diminished, and the dried lacquer is enabled better to resist the injurious influence of water, besides obtaining a greater transparency. 8. The admixture of more than five parts urushic acid with one part juice weakens the action of the ferment and so deteriorates the quality of the lacquer. 9. The gum is very similar to gum arabic, but gives a sugar with two-thirds only of the reducing power of arabinose. 10. The ferment has the composition of albumen, except that it contains much less nitrogen. 11. Diastase and the ferment in the saliva cannot replace the lacquer ferment. Amongst other interesting points noted may be mentioned the following:—The difference between good and bad lacquers seems to depend mainly on the relative quantities of urushic acid and water present, the inferior lacquer having less acid and more water than the superior kind. The durable quality of lacquer is a property of the oxy-urushic acid, which is singularly negative in its actions, resisting all solvents tried, and affected by strong nitric acid only. The paper closed with a discussion of some of the salts of urushic acid, one (Potash urushiate) being shown as forming a remarkably black permanent ink.

Dr. DIVERS, in congratulating the authors of the paper upon their successful investigations, remarked that in all probability the direct effect of their work would be the improvement of the lacquer process, which was peculiarly a Japanese art.

In answer to an enquiry by Mr. J. M. DIXON,

Mr. KORSCHULT stated his belief that lacquer poisoning was due to the urushic acid, which only gradually disappeared during the hardening process. In the best lacquers and in old lacquer there was of course no urushic acid.

Mr. YOSHIDA mentioned that he had found sugar of lead the best antidote to the poisoning—washing the skin in this substance removing at once all irritation.

The thanks of the Society were then conveyed by the Chairman to the authors, and the meeting was adjourned.

MUNICIPAL REFORM.

In conformity with a resolution passed at the Meeting held on the 8th of October last, to consider the subject of Municipal Reform in the Foreign Settlement of Yokohama, the following reply to the Memorandum of the Governor of Kanagawa has been sent to us for publication by the Committee:—

REJOINDER TO THE MEMORANDUM OF THE GOVERNOR OF KANAGAWA ON THE SUBJECT OF THE MUNICIPAL CONTROL OF YOKOHAMA.

On the 27th March, 1882, a largely attended meeting of the foreign community of Yokohama was held to discuss the question of reform in the local or municipal government of the Settlement. The meeting unanimously adopted a memorial setting forth the grievances complained of and suggesting a remedy. On the 13th of April following, the memorial was presented to the Corps Diplomatique through the Consular Board. On the 10th September, 1883, the Chairman of the adjourned meeting received from the Senior Consul a communication covering a document styled "Memorandum in reply to the Memorial concerning the Municipal Government in Yokohama submitted to the Conference by the Foreign Residents of Yokohama through the Delegate of Great Britain." This document purports to be, as its closing passages imply, a statement of reasons by Mr. Oki Morikata, Governor of Kanagawa, for negating the prayer of the memorial. The adjourned meeting reassembled on the 1st and 8th October, and confirmed the appointment of a Committee, elected by the ballot of the community, consisting of Messrs. Gay, Walter, Talbot, von Hemert, Evers, and Thomas, authorizing that committee to submit a reply to the memorandum of the Governor of Kanagawa:—

1.—The Committee, in their reply, will first refer briefly to the last paragraphs of Mr. Oki Morikata's memorandum. He says:—"The urgent necessity for a uniform and enforceable system of municipal

government is recognized by none more than by myself. The means to obtain this end are, however, not far to seek. It can be secured by applying the universally accepted rule that all the inhabitants of a country should be governed by the territorial laws and regulations."

The Kenrei here touches upon a subject which is solely for the consideration of the Japanese Government and the treaty powers, and is not within the province of the Committee to discuss. The memorialists refrained from making any reference to the question of ex-territorial jurisdiction, confining themselves to a statement of the existing condition of the Settlement, and to suggestions for its better government. The treaties, under which foreigners reside within the bounds of the Settlement of Yokohama, make no provision for municipal government, and the inhabitants, believing that an improvement can be made in the present state of things, sought, in conjunction with the local authorities, to devise means to administer affairs in a manner which shall be satisfactory to all.

Mr. Oki further says—"That the foreign Settlement is at present without an effective system of control is not the fault of the Kencho, but of those who, not only claim exemption from the local administrative laws and regulations, but sometimes place obstructions in the way of their due administration."

Foreigners cannot, however, claim exemption from, and wilfully obstruct the administration of, laws which are unknown to them. Moreover, those who urge improvement in the administration are peaceful and law-abiding citizens, who desire to see the establishment of a responsible and effective local government adapted to the needs of the foreign inhabitants, in order that they may be protected against unruly persons who may come amongst them, whether they be native or foreign.

2.—Touching the statement describing the formation, and surrender of a municipal government at the opening of Yokohama. The port was opened in 1859. Five years later the necessity for local control pressed itself upon the attention of the residents. Meetings were held. On the 7th March, 1865, a scheme was proposed and approved by a meeting; it was subsequently ratified by the authorities; a Council was elected, and held its first meeting June 9th, 1865. This Council had undertaken a task for the due performance of which it soon discovered its income to be inadequate. The Japanese authorities had consented to permit the Council to receive 20 per cent. of the ground-rent: this yielded about \$6,000. There were other sources of revenue derived from the taxation of taverns, &c., and the total income of the Council was approximately \$8,000. The Council further urged the adoption of municipal regulations similar to those in force in Shanghai, but the foreign representatives failed to procure the necessary countenance and sanction of the Imperial Government of Japan.

On June 24th, 1867, the Council, unable to carry on its functions for the reasons stated, passed a resolution to the effect that, it being evident that with existing receipts only the necessary yearly expenditure cannot be met, the Council should resign office: and a suggestion was made that the land-renters should memorialize the foreign representatives to invite the Japanese Government to take upon themselves all the duties of the municipality; the Government undertaking to effectually drain the Settlement, carry out all measures necessary for sanitary purposes, maintain an efficient European police, and establish a government office specially appropriated to municipal affairs, at the head of which should be an European surveyor of roads, &c. A Committee of land-renters was then appointed, and on the 15th July, 1867, they addressed the Ministers of Great Britain, Italy, France, the United States, and Prussia, and the Consuls-General of the Netherlands, Denmark, and the Swiss Confederation, expressing the desire that the Japanese Government should be asked to receive back into their hands the control and management of municipal affairs "on the ground that the 20 per centum now returned by the Government to the community for municipal purposes, is, with all that can be collected from licenses and such other sources as are available, totally inadequate to meet the necessary expenditure."

A commission having been specially appointed by the Japanese Government to consider the application, a collective note was signed November 4th, 1867, at the French Legation, setting forth the arrangements proposed for the future municipal control of Yokohama. On the 6th November following, the Representative of Great Britain, when forwarding a copy of the arrangements agreed upon to the Chairman of the Land-renters' Committee, wrote as follows:—

[Copy.] Yokohama, November 6th, 1867.

SIR,—I am directed by H.M.'s Representative in Japan, to inform you that immediately on his return from visiting the ports

of the western coast, he took into his serious consideration the letter which was addressed to him and the other Foreign Representatives on the 15th July, by a committee of the land-renters of Yokohama, requesting them to call upon the Japanese Government to receive back into their hands the control and management of the municipal affairs of the foreign Settlement of Yokohama, and to obtain from them guarantee that the work should be efficiently done.

H.M.'s Minister has, in concert with his colleagues the Representatives of France, Holland, Italy, Prussia, and the United States, been in communication on this subject with a commission specially appointed for the purpose by the Japanese Government, and they have finally concluded an arrangement—copy of which I have now the honour to inclose to you.

You will perceive that the main feature of this arrangement is the measure recommended in the resolution adopted by the meeting of land-renters, on the 24th June last, namely—the resumption by the Japanese authorities of the municipal duties, and the establishment of a Government office, specially appropriated to municipal affairs, with an European at the head of it.

In consequence of the great difficulty of finding any other competent person willing to undertake the duties of the proposed office, H.M.'s Minister, at the request of the other Foreign Representatives and of the Japanese Commissioners, has allowed Mr. Dohmen, of H.M.'s Consular Service, and at present employed in the Kanagawa Consulate, to assume the direction of the municipal office. I am instructed, however, to observe to you that this provisional arrangement with Mr. Dohmen can only be continued until the pleasure of H.M.'s Government shall be ascertained.

H.M.'s Minister further directs me to inform you that the arrangement now concluded with the Japanese Government is not a permanent or unalterable one; on the contrary, should experience at any future time show that its revision is desirable, it will be in the power either of the Foreign Representatives or of the Japanese Government to call for a reconsideration of the question.—I have, &c.,

(Signed) SYDNEY LOCKOCK.

To WM. MARSHALL, Esq.,

President of the Committee of Land-renters at Yokohama.

On the 6th, 7th, and 9th November respectively similar communications, all uniting in stating the arrangement to be provisional only, and depending for its permanent establishment on success in its working, were made to the Committee by the Ministers of Prussia, United States, and Netherland.

The terms of the arrangement having been made operative, a very short time only elapsed before it became evident that a revision was desirable, and on April 8th, 1869, a public meeting nominated a committee to endeavour to obtain a revision. This committee relied upon the temporary character of the arrangements then in force, and proposed the formation of a properly constituted municipality receiving from the Japanese Government 80 per centum of the ground-rents. The committee urged that eighteen months' experience of the system introduced served to show "the unsatisfactory state of the streets, the marked inefficiency of the municipal police, and the deplorable sanitary condition of the Settlement." The committee added that the general conclusion at which the community had arrived was that the Japanese Government were incapable of understanding and fulfilling the municipal duties required of them; and this impression has never been lessened, for the memorialists of 1882 repeated it in similar words saying,—“the local government are not in a position to understand the wants of a well ordered foreign Settlement; or to undertake its control without the assistance of an advisory committee of foreign residents.” In support of the application that a municipality should be granted, the committee of 1869 urged that the Government of Japan had delegated part of their municipal rights by the agreement of November 4th, 1867, to a foreign municipal director acting under authority of the Governor of Kanagawa; a course which had not been satisfactory, and the proposition was that the Government of Japan should delegate to a corporation the same or fuller powers than they had delegated to an individual. That the Government could delegate such power by the grant of a charter is beyond doubt, for there is the certain evidence of the legality of the course pursued in Shanghai, where the land regulations drawn up by a committee elected by the community were approved of by a commissioner representing the Chinese Government and ratified by the joint notification of the representatives of Great Britain, North German Confederation, Russia, France, and the United States, making such regulations enforceable in the consular courts of their respective nationalities.

These details are cited for the purpose of showing that the community have never been satisfied with an arrangement which has not worked well; and that since its inauguration a series of efforts have been made to secure reform. And we believe that the share of municipal control granted to foreigners in 1865 has never been surrendered except conditionally and temporarily; that the conditions have not been carried out, and that by virtue of the understanding between the Japanese commissioners and the representatives of the treaty powers it is open to foreign residents to call for a reconsideration of the question.

In the interval to 1877 there was a nominal chief of a municipality in the person of Mr. Benson, to whom the Government of Japan delegated certain municipal powers which we now claim may be extended to a committee. His office was, however, abolished in 1877. In reference thereto, Mr. Oki says:—"This determination was duly communicated to the foreign consuls who raised no objections thereto, while the British Consul in his reply dated July 4, 1877, expressed his approval of the arrange-

ment." To this we urge, that the abolition of the office of municipal director was a most distasteful step to the foreign community, and a memorial dated May 19th, 1877, signed by the principal mercantile houses and leading residents, was forwarded to the Consular Board, stating that the proposed change in the municipal arrangements was, in the memorialists' opinion, very objectionable, as tending to depose the community from all agency in matters intimately concerning themselves. With full knowledge of the presentation of this protest to the Consular Board we are unable to find justification for Mr. Oki's assumption that the abolition of the office of municipal director was acquiesced in by the foreign community or their consular representatives.

When Mr. Oki says the memorialists seek once more to obtain municipal control of the foreign Settlement he entirely misconceives the spirit of their request. In order to meet existing difficulties they proposed the formation of an advisory board, to be composed of Japanese and foreigners, which should frame rules and regulations enforceable in Japanese courts as well as at the various consulates. The memorialists had in view only the good government of the Settlement, believing that this can best be attained by coöperation with the local authorities. They have no desire to take upon themselves a difficult task, but it seems necessary, for an effective government, that those who know best the wants of the inhabitants should take part in the direction of affairs.

3.—These remarks dispose of what the memorandum is pleased to call the inconsistency of the foreign residents of Yokohama in wishing to devise an effective form of municipal government.

4.—It is clearly stated in the memorandum that the Kenrei is unable to govern the foreign Settlement. He complains of the wilful disobedience, on the part of the residents, of rules and regulations which have never been promulgated, and of which they have absolutely no knowledge:—he accuses foreigners of harbouring thieves and other disorderly persons, and demands a general warrant to enable the police, in order to do their ordinary duty, to enter foreigners' premises, without question at any time, a power which the representatives of the treaty powers cannot grant, as it would be inconsistent with the laws and customs of their own countries.

5.—Mr. Oki says, with reference to burglary, that "it could not be expected that the [police] corps would be as effective as required because they meet with many difficulties in the proper discharge of their duties, arising from the fact that they are not clothed with any authority over foreigners." But authority over foreigners, or power to enter their premises, are not requisites to prevent burglars from breaking into godowns abutting directly upon streets which are entirely in the jurisdiction of the local government.

Mr. Oki says again, "in any honest endeavour to suppress crimes the first requisite is to drive out the thieves and other bad characters concealing themselves on foreign premises . . . but that this can never be done unless the police are empowered to enter the foreigner's premises for the purpose of arresting suspected persons." The inference is, that the police believe bad characters are concealed upon foreign premises. If they have good reason to believe this to be true, why do they not give information to the occupants of such premises and obtain permission to enter and arrest? Such permission would not be refused by the majority of foreign residents, upon proper representation. Foreigners do not hesitate to call upon the police without any formality, when they find thieves or disorderly persons on their grounds, and are always glad of their services in arresting suspected persons. It is difficult to understand the nature of a Japanese policeman's duties, if, because he is denied the unheard of permission to enter foreigners' premises at all times, he declines to protect their property from thieves and burglars, when even ordinary care would seem to be sufficient for the purpose.

6.—Mr. Oki is at a loss to understand the memorialists' complaint regarding the roads and drains, and refers to the "construction of the main drains now being carried out in the midst of the foreign Settlement." It should be pointed out, however, that the sewers in Main and Water, streets have been laid down since the memorial was written, and although the work was important and necessary, the streets referred to were left, long afterwards, in a worse condition than before, so that parts of them were almost impassable for heavy traffic in wet weather for nearly a year; and the repairs are still incomplete. The committee are unwilling to criticise adversely any improvements undertaken by the Kencho, but they may be permitted to express the opinion that the cost of the work, as stated by Mr. Oki, was far larger than it need have been, and that with better

management the roads might have been kept, as the work progressed, in a condition which would have left nothing to be desired.

The memorandum states as a "fact that foreign residents and their servants make the drains receptacles of sewerage, of all kinds or privately alter the course of such drains, thus causing them to be choked up," &c., &c. The truth of this statement must be called in question, as foreigners are not permitted, even if they had the inclination, to make excavations in the streets without which the drains cannot be reached. Whenever private drains are made to connect with those in the public thoroughfares, the work is done under supervision of officers from the Kencho, by their own staff of workmen, and if the street drains become choked, the fault is due to imperfect construction, or want of care in not keeping them free, and not from improper use of them by foreigners.

7.—With reference to "about one hundred" Japanese who reside in the foreign settlement without permission from the Kanagawa Kencho, and acknowledged to be the men "who are engaged in disreputable trades," Mr. Oki says—"In order to keep these people under control, it is essential that a strict surveillance be exercised over the servants of foreigners and the managers of servants' agencies; and it was for this reason that the proposed rules in that behalf were submitted to the Board of Foreign Consuls in July, 1876, and again in August, 1877, and although indispensable, they have never been agreed to." The proposal to the Consuls referred to, was that "the Governor should be provided with a general warrant enabling the proper officers to enter freely into the premises occupied by foreigners, of whatever nationality, when there is reason to suspect that offenders are concealing themselves therein." To this the Committee say that it exhibits great weakness on the part of the Governor if he has no power over known Japanese offenders who, as he says, have no right of residence in the foreign Settlement. If the evil exists the remedy is easy, as foreigners do not knowingly harbour Japanese or other offenders; certainly a warrant of the nature referred to is not required for its abatement. But the Consuls have no power to grant such general warrant even if it were desirable that they should do so. There is, however, a better remedy than the one proposed by Mr. Oki, and the only effective one that can be adopted to correct the many difficulties in the way of successful management of the affairs of the Settlement, and that is, a properly constituted municipal government, with authority to administer rules and regulations made under the sanction of the Imperial Government and the representatives of the foreign powers.

In closing this paper, the Committee have only to add that the memorial pointed to a method by which the requirements of the inhabitants would be met, but as the petition was not favourably received it was hoped the election of a permanent Committee, with whom the local authorities could consult, would be the means of meeting to some extent the existing difficulties, and if that Committee should have official recognition in their capacity as representatives of the foreign inhabitants, their counsel and suggestions would be useful in many ways, and be the means of bringing about a good understanding between the Japanese local authorities and the residents: the wants of the foreign community would be better understood and provided for; and many difficulties noticed in the memorandum would disappear, while the government of the Settlement would be more efficient than is possible under the existing system.

The Committee are not unmindful of the serious nature of the responsibility which falls upon the Kenrei in the care of a territory occupied by a foreign community, with whose customs he cannot be entirely familiar, and they fully appreciate the Governor's efforts to perform his difficult task with satisfaction; they readily acknowledge the improvements which have lately been made, particularly in some of the roads, and gladly take this opportunity to express their appreciation of Mr. Oki's activity and ability.

TRANSLATIONS FROM NATIVE JOURNALS.

THE NEW CONSCRIPTION REGULATIONS.

(Translated from the *Fiji Shimpō*.)

Our readers will remember the articles published in this journal, on the 5th, 6th, and 7th of April last, which treated of the necessity for making the National Army service the duty of all. The gist of those articles was:—(1) the extension of the scope of the service; (2) the necessity for making the service compulsory without exception; and (3) the stimulation of the military spirit of the nation. Conscription regulations, based upon these principles, are most urgently needed by Japan at the present juncture, but as there is a tendency to regard the general enrollment with disfavour, it is necessary to make it compulsory on every male of the population. Imperfect as were the old Conscription Regulations, the service was not universal, and there came to be a general feeling of "escape from the conscription" indicative of a want of patriotism. On the occasion referred to, we suggested that the service should be made obligatory, and that, instead of a fee for exemption, a duty called Military Service Tax should be levied on those who are temporarily exempted from it, and that those individuals should be drilled for three months every year.

On the 28th of December last, there were published the Conscription Regulations in the form of Notification No. 46. Although these do not entirely coincide with our views, yet they show a great improvement as compared with the old regulations, in so far as the extension of the scope of enrolment, and the compulsory nature of the service are concerned. Therefore are we right in saying that they are a great achievement of the Government. According to the old rules, deformed and crippled persons and those sentenced to penal servitude for upwards of one year, were exempt from service. Heads of families, single sons, single grandsons, adopted sons, and heirs of people above fifty years of age, and great grandsons, were not required to serve except in the Territorial Army. Heirs of people not fifty years old, and great grandsons and cadets of the Military and Naval Colleges were not liable, except in time of emergency. Those who were responsible for the support of families on account of their fathers or elder brothers having deserted them, or being deformed or crippled; also those who had completed one year's term in the Government schools, and those who were in foreign countries for commercial and educational purposes, were exempt from immediate enrolment. According to the new rules, all males, except deformed or maimed persons, are compelled to enter the Army. Even heirs of persons above the age of sixty, and great grandsons, are liable to be called upon in case of war or any other similar emergency. Priests, students of the Government colleges, teachers who have completed a course higher than the intermediate, and those studying in foreign countries, are likewise liable, the only difference being that they are not called upon to serve, while engaged in their respective pursuits. Persons, other than the heads of families, are entitled to temporary exemption under certain circumstances, provided they are not the heads of families who are registered in other families, or the head of new houses separated from the old family, or of houses re-established. Thus, the new rules are more minute than the old ones. "Escape from conscription" will be abolished for ever, and we might now say that the service has become obligatory upon all men.

The first impression conveyed in reading the new rules is that of the enlargement of the scope of enlistment. Amongst others, the abolition of the fee for exemption, and the enrolment of eldest sons whose fathers are not older than sixty years, should not only put a stop to the deficiency of recruits but bring in a large number. Under these circumstances, there can be no question that the Army will shortly undergo a marked improvement as regards both the stature and the martial appearance of the men as well as to their numbers. We may now have soldiers of much better physique and taller than previously. Sons of rich families, who would have otherwise become effeminate through the indulgences inseparable from their condition, will receive good physical training and be converted into useful men. The conscription is, therefore, beneficial, whether considered from the military or moral standpoint. And not this alone: it will go far towards the improvement of the Japanese race. In the old feudal time, the *Daimyo* and Court Ministers secluded themselves in Palaces, where no cold wind blew nor hot

weather prevailed, and they indulged in peace and plenty, almost forgetting the military arts. In consequence of this, their intellects were cramped and their physical growth was checked. They could not enjoy their gifts to the fullest extent, and the evil was transmitted to their descendants. This physical demoralization is more than significant now. Tradesmen and farmers came almost within the same category—which fact is very regrettable—though some allowance must be made for the political circumstances then existing. They amassed money, and spent it in debauchery, but knew nothing of manly accomplishments. They were frightened by the report of a gun; they turned pale at the sight of a naked sword; they could not mount a horse; and they knew nothing of out-door sports. Thus, both intellectually and physically, they have been degraded. But now we have no *Daimyo* nor Court nobles, and the class distinctions of former days no longer exist. They are all the people of *Dai Nippon* and the backbone of the nation. It reflects great credit upon the Government that the poor and the rich, the high and the low, are alike made liable. Some may say that the new conscription law is too stringent, but such an opinion is as untenable as it is absurd. The number of yearly recruits is limited and cannot be increased more than the finances admit. The intention of our rulers is to have a certain number of regulars on the muster-roll who can be increased to a larger number from the reserves in time of foreign war. The new rules do neither augment nor decrease the number of recruits. According to the old rules, many were exempted from service, so that the recruits were in the ratio of say 10,000 to every 100,000. But now this number is to be enrolled from among 150,000 or probably 200,000. In fact, the new rules are not stringent at all; on the contrary, they are much milder than the old ones. Allegorically speaking, formerly one load weighing one hundred *kuwame* was borne by ten men; whereas now it is borne by twenty men. There is no increase in the weight, but the number of persons to carry it is doubled. This is exactly the case with the new conscription regulations. We cannot see why some people should denounce them. They are probably those who have lost their chance of escape by the introduction of the new rules, and are therefore discontented.

We have a strong hope that the enlistment of a better educated class in the army will elevate the position of conscripts generally.

THE BANKS OF JAPAN.

(Translated from the *Nichi Nichi Shimbun*.)

Business is at a standstill, and money does not circulate as it should. This is the public outcry, which we hear repeated on every side. We are convinced that these complaints are thoroughly consistent with the truth. Under these circumstances traders, farmers, and manufacturers must suffer, and as the banks have to supply the financial machinery on which the whole of our national commerce turns they surely ought to feel the effects of trade stagnation more than do the mercantile communities themselves. Any other state of affairs can but surprise and astonish the public. The rate of dividends paid by the various companies and banks during the latter half of last year, from June to December, shows that, despite dull times, the banks have, with a few exceptions realised a profit of from 10 to 20 per cent. What the average percentage of the profit on the aggregate capital of all the banks is, we shall not be able to state until the publication of the report of the Banking Bureau. We may, however, in the meantime, assume that the average profit is 12 or 13 per cent. This assumption, taking into consideration the expenses of bank-management, taxes, reserve funds for the redemption of paper currency, bad debts, and salaries and annuities of the bank employes, shows that the gross profit is more than 20 per cent. per annum. This profit is, of course, derived directly from their capital. The Nippon Railway Company and the Kiyodo Unyu Kwaisha have declared dividends of 10 and 9 per cent, the sole result of business transacted. The insurance companies have dividends of 10 per cent, derived from the fees charged on policies issued, while the exchange offices naturally realize a commission on all their transactions. There is a decided difference between the profits of such establishments, as they do not include the direct employment of capital, and those of the banks; nor can they be placed on a similar footing. All the banks, with the two exceptions of the Nippon and Specie Banks, are national concerns, enjoying the privilege of the issue of notes on the security of Public Loan Bonds. The profits that accrue are due to the interest on the securities and the issues. Say, for instance, that a National Bank invests a

capital of 100,000 yen in 7 per cent. Bonds; these bonds, though nominally worth 100,000 yen, may be bought for 80,000 yen, bringing in 7,000 yen annually. On the other hand, there is a further interest of 7,000 yen derived from 80,000 yen worth of bank notes at 9 per cent—issued on the security of the Public Loan Bonds. The total interest would thus amount to 14,000 yen. In this case it is not unusual for the banks to declare a dividend of 10 per cent. Though business has been at a very low ebb since 1882, the banks have always cleared a profit of more than 10 per cent. In 1883 there was a great depression in the money market, and many establishments were almost paralyzed for want of ready cash, yet the banks have, almost without exception, been able to declare large dividends. This fact is, we are persuaded, due to the privileges enjoyed by the national banks, and the skilful manner in which they employed their capital. We must indeed congratulate the shareholders upon the satisfactory working of these institutions. But whether this congratulation can be extended to the general public is quite a different question.

Glancing at the relations existing between the national banks and their customers, one is immediately struck with the absence of public confidence and the wide spread of a feeling of distrust. The true prosperity of business is founded upon the confidence which should be mutually entertained by the banks and their clients. This is the very essence of success; this is the only trustworthy condition of affairs, a fact which was thoroughly recognized and duly explained by the present Minister of Finance in the inaugural meeting of the Nippon Bank. Trade has doubtless, like everything else, undergone great changes since the days of the Restoration. But during this period of change the confidence of our farmers, traders, and manufacturers has been completely lost, and its recovery now seems a hopeless matter. The banks are decidedly responsible for the restoration of public confidence, but they hesitate to give their clients any credit whatever. Whether their customers are men of integrity and ability, and whatever the trade may be in which they are engaged, are matters of little consequence to the banks: money is lent only on the best security. The position of affairs is not very different from the mode of dealing customary with pawn-brokers, who first examine the worth of the article to be pawned before advancing any money on it. As an actual fact, our banks are really nothing but money-lending establishments which do a pawn-broker's business. Indeed, there is rather a point in favour of the pawn-shops in the fact that they occasionally lend as much as 150 yen on one article of clothing. In this respect, the banks are below the level of pawn-shops. They do not employ their capital as briskly as they might, and their clients do not enjoy much financial relief in consequence. The Hongkong and Shanghai Bank was recently defrauded of nearly \$200,000. The blame fell upon the manager of the bank, who gave too unlimited a credit; yet it redounds to his credit that he gave the money on the security of his client's business ability. None of our banks have done, or can do, the same thing. The dividends declared for the latter half of 1883 arise from profits made solely on loans issued on good security; the pledges being lodged in the strong rooms of the banks. Money is thus dropping steadily out of frequent circulation. Though the matter of interest on the capital may not have decreased, the demand for cash is becoming less and less, active. The fact that our banks show large profits during the last year is not at all a matter of universal congratulation; especially when the questions of political economy are taken into consideration.

Correct answer received from "TESA."

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.50 and 10.30 a.m., and 12.15, 2.30, and 4 p.m.; and leave Yokosuka at 7.15 and 9 a.m., and 12 m. and 1.45 and 4.00 p.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, FEBRUARY 15TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
represents velocity of wind—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 29.8 miles per hour on Friday at 1 p.m.

The highest reading of the barometer for the week was 30.280 inches on Thursday at 10 a.m., and the lowest was 29.653 inches on Saturday at 11 p.m.

The highest temperature for the week was 53.3 on Saturday, and the lowest was 25.8 on same day. The maximum and the minimum for the corresponding week of last year were 50.2 and 27.9 respectively.

The total amount of rain and snow for the week was 0.046 inches, against 1.790 inches for the corresponding week of last year.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Shanghai, Nagasaki, & Kobe per M. B. Co. Thursday, Feb. 21st.
From America per O. & O. Co. Saturday, March 1st.*
For Hongkong per P. M. Co. Thursday, Feb. 28th.†
From Hongkong, per P. & O. Co. Saturday, March 1st‡

* Arabic left San Francisco on February 10th. † City of Rio de Janeiro left Hongkong on February 21st. ‡ Khir'a left Hongkong on February 22nd. The Takachiho Maru (with English mail) left Hongkong on February 15th.

THE NEXT MAIL LEAVES

For Kobe per M. B. Co. Monday, Feb. 25th.
For Shanghai, Kobe, and Nagasaki per M. B. Co. Wednesday, Feb. 27th.
For America per P. M. Co. Saturday, March 1st
For Europe, via Hongkong ... per M. M. Co. Saturday, March 1st.
For Europe, via Hongkong ... per P. & O. Co. Saturday, March 8th.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30,* 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00,* 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, February 16th.

AFFAIRS IN EGYPT.

Major-General Gordon has telegraphed, asking for money, arms, and ammunition.

The rebels have invested Kassala, and it is expected that they will attack Tokar before the arrival of the British troops at that place.

London, February 18th.

GENERAL GORDON IN THE SOUDAN.

Major-General Gordon has recognised El Mahdi. The Sultan of Kordofan has been to Khartoum.

London, February 22nd.

THE SOUDAN.

The expeditionary forces to Tokai are proceeding to rendezvous at Rasmala.

Major-General Gordon is very popular, and is establishing great influence.

London, February 22nd, 5.30 p.m.

Cotton, unaltered; 5½ for Mid. Uplands. Yarns, market dull and little doing. Shirtings, market steady. Silk, market very quiet and prices weak.

[FROM THE "HONGKONG DAILY PRESS."]

London, 8th February.

THE SOUDAN QUESTION IN PARLIAMENT.

The Marquis of Salisbury in the House of Lords, and Sir Stafford Northcote in the House of Commons, will, on Tuesday next, bring forward a motion to the effect that the disasters in the Soudan are due to the vacillating policy of the English Government.

London, 9th February.

AFFAIRS IN EGYPT.

Latest advices from the Soudan state that Suakin has been declared in a state of siege.

Baker Pasha and his Egyptian troops are to be recalled.

Three British officers will reorganise the Blacks and Turks, who will hold Suakim.

DEATH OF CETEWAYO.

Latest advices from Durban announce that King Cetewayo has died suddenly.

NOTES FROM JAPANESE PAPERS

A general meeting will be held in the Sanji-in to-day.

The oysters in the beds at Kanagawa have rapidly increased in size, and are in excellent condition. A large quantity was dredged the other day and presented to the high dignitaries of State.—Yubin Hochi Shimibun.

* * *

One of the Imperial Princes of Austria is expected here about the end of next April. Preparations for his reception are being made.

It is stated that the fund of the Foreign Office for the investigation of foreign affairs is to be increased. This sum is independent of the annual expenditure.

A broker of the Yokohama Bourse was arrested four days ago while walking down Benten-dori, when 3,000 yen were found on his person. His brother went at once to the Police Station in order to recover the money, but was also detained in custody. This action caused sundry vague apprehensions to be entertained by the local brokers and speculators, and materially affected business for the time. A petition has, in consequence, been dispatched to the authorities.—Fiyu Shimibun.

LATEST SHIPPING.

FREIGHT.

There have been a few charters effected here during the interval, mostly to load new season's sugar at Takao for this port, the following vessels having been taken up for that trade:—British bark *Velocity*, 460 tons, 22½ cents per picul; German brig *Minerva*, 219 tons, 23 cents per picul; German bark *Orient*, 460 tons, 25 cents per picul; British barkentine *Glenury*, 283 tons, 26 cents per picul. The demand for steam tonnage has not been great, but the supply has been fully equal to all requirements.

ARRIVALS.

Moray, British steamer, 1,427, W. S. Duncan, 16th February,—Hongkong 10th February, General.—Adamson, Bell & Co.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—56 Japanese.

Per Japanese steamer *Saikai Maru*, from Toba:—25 Japanese.

Per German steamer *Feronia*, from Kobe:—Mr. Cooke in cabin; and 1 Japanese in steerage.

Per Japanese steamer *Horai Maru*, from Kobe:—Captain James in cabin; and 25 Japanese in steerage.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—52 Japanese.

Per Japanese steamer *Toyoshima Maru*, from Kobe:—17 Japanese.

DEPARTED.

Per Japanese steamer *Toyoshima Maru* for Kobe:—60 Japanese in steerage.

Per American steamer *City of Tokio*, for Hongkong:—Mrs. H. Pagdon, Miss E. Prosper, Messrs. H. S. Greeley and M. Atchinson in cabin; and 77 Chinese in steerage.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—Governor Miyasaki, Mrs. Simms, Dr. Simmons, U.S.N., Messrs. M. Ginsburg, R. Kuki, S. Tsuji, N. Nakajima, J. Sabara, N. Yamada, K. Okakura, Hiodo, Takaye, Nagai, Tsuge, and Funatsu in cabin.

Per Japanese steamer *Takasago Maru*, for Oginohama:—Messrs. M. Watase and N. Uyeda in cabin. For Hakodate: Mr. and Mrs. S. Hirai, Messrs. M. Yamamoto and K. Fujinuma in cabin; and 70 Japanese in steerage.

Per British steamer *Kashgar*, for Hongkong via Kobe and Nagasaki:—Mr. and Mrs. Scribe, infant, and nurse, Rev. and Mrs. Jennings, infant, and servant, Mr. and Mrs. Wieler, Captain James, Rev. H. W. Lee, Mr. Dodds and servant, Messrs. Day, Hindson, Marcus, Medwin, Tobler, Duraffour, A. L. Robinson, and Chun Kum in cabin; and 1 Indian, 3 Chinese, and 18 Japanese in steerage.

CARGOES.

Per French steamer *Volga*, from Hongkong:—4,816 packages.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—Treasure, \$53,000.00.

Per British steamer *Kashgar*, for Hongkong via Kobe and Nagasaki:—Silk, for France, 55 bales; for London, 5 bales; Total, 60 bales.

REPORTS.

The Japanese steamer *Hiogo Maru*, Captain Walker, reports leaving Hakodate on the 14th February, at 6 a.m. with moderate E.N.E. winds and cloudy weather to Oginohama, where arrived on the 15th, at 5.45 a.m., left Oginohama on the 16th, at 1 a.m. with strong S.W. winds to Nosima; thence to port moderate N.E. winds. Arrived at Yokohama on the 17th February, at 10.50 a.m.

The American steamer *City of Tokio*, Captain J. Maury, reports leaving San Francisco on the 24th January, at 12.15 p.m. with variable winds and fine weather to Meridian; thence to Yokohama hard westerly gales, and high sea. Arrived at Yokohama on the 18th February, at 7.50 a.m. Time, 24 days and 1 hour.

LATEST COMMERCIAL.

IMPORTS.

A fair business continued for a few days following our last report, but it gradually died away, and during the past week the demand has been trifling.

COTTON YARN.—The eagerness to buy at advancing rates has come to an end after a very large business being done, and the Market has relapsed into a state of quiet, with quotations more or less nominal. A fair demand continues for Bombay 20's.

GREY GOODS.—Shirtings have been neglected, but fair sales of T.-Cloths have been made.

FANCIES.—Very few transactions have been reported except in Mousseline de Laine, for which trifling concessions in price have been made.

COTTON YARNS.

Nailrod, small size	2.85 to 3.15

KEROSENE.

Another week has passed without further sales of Oil being reported. Holders remain firm at previous quotations, but dealers have not yet cleared their late purchases. Deliveries have been 14,000 cases. The *Carondelet* has arrived, increasing our Stocks to about 677,000 cases sold and unsold Oil.

	PER CASE.
Devoe	\$1.81
Comet	1.78
Stella	1.72

SUGAR.

The dull condition of the Sugar trade continues, holders making no concession, and buyers holding off.

	PER PICUL.
White, No. 1	\$8.00 to 8.35
White, No. 2	6.75 to 7.00
White, No. 3	6.30 to 6.50
White, No. 4	5.80 to 6.00
White, No. 5	4.60 to 4.75
Brown Formosa	3.90 to 4.00

EXPORTS.

RAW SILK.

Since our last issue of the 14th instant, we have seen a quiet Market in this staple. About 200 piculs of various descriptions have been taken into godowns, but of this quantity half has been returned, and the nett Settlements do not exceed 100 piculs for the week. The Market may be called easier at former quotations; for, although holders still present a strong front, yet the absence of business has its effect, and some dealers who a few days ago held their Stock off sale would now be inclined to name a price for their silk.

The business done has been almost entirely confined to *Filatures*, *Re-reels*, and *Kakedas*; *Hanks* not appearing in the list. A feature in the Market of late has been the revival of demand for account of the native manufacturers. Each steamer going south takes a greater or less quantity for use in the native looms at Kiyoto, and the Stock here is thus kept down.

The M.M. steamer *Mensaleh*, which left this port at daylight on the 16th instant, carried 287 bales; of which 18 bales were entered as going to London, and 269 bales for France. These shipments bring the total Export up to 27,093 bales, against 20,961 bales last year, and 13,566 at same date in 1882.

Hanks.—This class has been almost neglected during the week, a few piculs only having been bought and sent back again. Dealers, without actually reducing their prices, are decidedly more inclined to do business, and another week of abstention may give buyers the silk at their limits. Rejections of former purchases and some fresh arrivals have brought the Stock up to 1,350 piculs.

Filatures.—Some business has been transacted at full prices, but holders are very conservative, and will not listen to, what they consider, unreasonable offers. Buyers resist as best they can, and apparently operate only for pressing requirements. Among the prices made we notice:—*Utsunomiya*, \$635; *Shinshu*, Best, \$630; *Koshu*, Best, \$610; *Yecchiu*, \$605; *Koshu* Medium, \$585; *Kanazawa*, \$570; *Mino* Common, \$565.

Re-reels.—Not much passing in these; the good qualities with recognised chops are not offered, and the little business done has been in *Matsushiro*, \$590; *Foshu*, \$560; *Bushu*, \$525.

Kakeda.—More business has been done in the Medium and lower grades at \$555, \$540, \$530, and \$500, according to quality. The higher classes are held at long prices, although holders are more inclined to be sellers than they were a week ago.

Oshu and Coarse Kinds.—Nothing done for Export, but some purchases are reported for use in the interior.

QUOTATIONS.

	Nominal
Hanks—No. 1½	\$520 to 530
Hanks—No. 2 (Shinshu)	510 to 520
Hanks—No. 2½ (Shinshu)	500 to 510
Hanks—No. 2½ (Joshu)	480 to 490
Hanks—No. 3	465 to 475

Export Tables Raw Silk to 21st Feb., 1884:—

	SEASON 1883-84.	1882-83.	1881-82.
France and Italy	16,685	10,933	6,946
America	7,774	6,944	4,032
England	2,034	3,084	2,588
Total	27,093	20,961	13,566

WASTE SILK.

Business in this article has been restricted by one or two causes. In the first place the Stock on hand is mostly inferior, and does not appear tempting to buyers; secondly, dealers are asking long prices, and are even reported to be speculating among themselves in certain classes. Recorded Settlements give only 50 piculs for the week, but to this amount should be added about 100 piculs *Noshi* and 80 piculs *Kibiso* reported settled by one buyer, which transactions do not seem to have appeared in the daily list. Arrivals have been rather more plentiful, and the Stock is somewhat larger. The French mail of the 16th instant took 52 bales, bringing the total Export of Waste and *Cocoons* up to 19,648 piculs, against 18,042 piculs last year, and 16,074 piculs in 1882.

Pierced Cocoons.—No fresh arrivals, and Market quite bare of Stock.

Noshi-ito.—Purchases amount in all to about 130 piculs, and prices are well maintained for anything showing fair quality. *Filatures* are held for an advance, \$157½ being asked for a few bales *Utsunomiya*. Some little has been done in *Oshu* under an old contract at \$145, but the chief business has been in *Foshu*, which is in demand at from \$90 to \$85, according to quality. A little fine *Hachoji* reported at \$120; in other sorts nothing doing at the moment.

Kibiso.—About 100 piculs have found buyers, ranging through all grades from *Tokosha* Filature down to *Shinshu Neri*. The native demand for "low curls" seems to be good; and dealers are reported to be offering foreigners a profit, if they will re-sell their recent purchases. Among the transactions of the week we observe *Zaguri Kibiso*, \$107½; *Oshu*, \$90; *Shinshu*, \$60; *Foshu*, \$35; *Hachoji*, \$25. A lot of "Tokosha Filature" *Neri* is reported done at \$15 uncleaned.

Mawata.—Still no sales; some few arrivals have raised the Stock on offer to 200 piculs.

QUOTATIONS.

Pierced Cocoons—Medium to Fair	None.
Noshi-ito—Filature, Best	160
Noshi-ito—Filature, Good	140
Noshi-ito—Filature, Medium	130
Noshi-ito—Oshu, Good to Best	140 to 150
Noshi-ito—Shinshu, Best	Nom. 110
Noshi-ito—Shinshu, Good	Nom. 100
Noshi-ito—Shinshu, Medium	Nom. 90
Noshi-ito—Joshu, Best	110 to 115
Noshi-ito—Joshu, Good	90 to 95
Noshi-ito—Joshu, Ordinary	85 to 87½

Kibiso—Shinshu, Seconds	Nom. 65 to 70
Kibiso—Joshu, Fair to Common	50 to 55
Kibiso—Hachoji, Medium to Low	25 to 30
Kibiso—Neri, Good to Common	18 to 12
Mawata—Good to Best	Nom. 175 to 185

Export Table Waste Silk to 21st Feb., 1884:—

	SEASON 1883-1884.	1882-1883.	1881-1882.
	PICULS.	PICULS.	PICULS.
Waste Silk	17,483	14,929	13,067
Pierced Cocoons	2,165	3,113	3,007
	19,648	18,042	16,074

Exchange has remained much as last advised; rates, however, close firm, especially for Sterling. We quote London 4 m/s. Credits, 3/8½; Documents, 3/8½; New York, 30 d/s., 89½; 60 d/s., 90½; Paris 6 m/s., fcs. 4.72. The *Kinsatsu* barometer would seem to have been extra-sensitive during the week, with daily fluctuations, closing at about 116 for \$100.

Estimated Silk Stock 21st Feb., 1884:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	1,350	Pierced Cocoons	—
Filature & Re-reels	600	Noshi-ito	100
Kakeda	400	Kibiso	550
Taysaam Kinds	100		
Total piculs	2,850	Total piculs	850

TEA.

During the interval that has elapsed since our last Market Report, we have to advise a fair amount of business transacted, the enquiry proceeding almost entirely from one firm. The total Settlements foot up at about 850 piculs, and they consist principally of Teas grading Good Common, Medium, and Good Medium, with some lines of Fine and Finest kinds. Market at the close is pretty firm, but we do not make any alteration in our quotations. Settlements here and at Kobe are 264,193 piculs since the commencement of the season at both ports, against 268,699 piculs at the same period in 1883. Receipts for the season are about 157,560 piculs, against 166,857 piculs in comparison with the preceding year. The steamship *Moray* sails to-day for New York, via Kobe and China ports, with a fair amount of Tea cargo. The next P.M. steamer *City of Rio de Janeiro* is circulated to take Tea at 3 cents per lb. gross to the United States and Canada, and at \$12 per ton for San Francisco, and is promised to be despatched on the 1st proximo.

QUOTATIONS.

Common	\$12 & under
Good Common	14 to 16
Medium	18 & up'ds
Good Medium	Nominal.

EXCHANGE.

Sterling quotations have gradually improved throughout the week, and at the close show signs of a slight rise. The amount of business transacted has, however, not been large, and the improvement has been chiefly caused by the advance in Bar Silver.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Faker that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S
PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.

White Rose, Frangipanne, Ylangylang, Stephanotis,
Opopanax, Jockey Club, Ess Bouquet, Trevoil,
Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet,
and all other odours, of the finest quality only.

ATKINSON'S
GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S
OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR.

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 1ST, 1884.

SUMMARY OF NEWS.

THE Yanagase tunnel is expected to be open for traffic in May.

THE appointment of Sinor Renato De Martino to represent His Majesty the King of Italy in Japan is announced.

THE French amateurs gave a very successful performance at the Gaiety Theatre on Monday night (25th ultimo).

H.E. FUKUOKA has been appointed chief of the Audit Bureau, and His Excellency Inouye chief of the Bureau of Letters.

THE Rejoinder of the Committee of Land-renters to the Memorandum of the Prefect of Kanagawa has been published.

A FIRE broke out in the French Legation, Tokiyo, on the morning of the 24th ult. It was speedily extinguished.

THE whole of the railway from Tokiyo to Takasaki is expected to be open to traffic next month (April). The bridging of the river Karasu, an undertaking of some difficulty, has been accomplished.

MISS YAMAGAWA, the elder sister of Madame Oyama, has been appointed to instruct Her Majesty the Empress in foreign literature. Miss Yamagawa has recently returned from America where she resided for many years.

THE organ of the Liberals (*Fiyu Shimbun*) comments unfavorably on the mission of the Minister

of War, General Oyama, to Europe, and says that no advantages equivalent to the heavy outlay are likely to be gained.

REGULATIONS with regard to stamps for legal documents have been promulgated by a Notification of the Privy Council. The stamps are intended to take the place of the ruled paper hitherto used for this class of document.

It is announced that the construction of a railway from Shinagawa to Ueno is about to be commenced without delay. This line is intended to connect the Tokiyo-Yokohama and Tokiyo-Takasaki roads.

DURING the week six fires occurred in Tokiyo. Of these, two were the work of incendiaries and were immediately extinguished. Of the remainder, none attained serious dimensions, the largest, in Fukaike, destroyed only three houses. The total number of houses burned was seven.

H.I.H. PRINCE ARISUGAWA has gone to Atami. His Imperial Highness' new palace is rapidly approaching completion, and a quantity of the furniture has arrived from London. It is said to be chaste and elegant, and by no means deserving of the strictures passed upon it by a London journal.

It is stated that an exchange has been opened by a Chinaman in the foreign Settlement, and that marginal transactions of an extensive character are daily carried on there, in defiance of the regulations of the Japanese Government. The establishment is exceptional in one respect. Defaulting operators are locked up in a godown and starved until they make suitable arrangements with their creditors.

A RUMOUR is circulated by a vernacular paper to the effect that the Minister for Foreign Affairs is urging the advisability of building a large reception hall at Yokohama for the entertainment of foreign guests. We believe that this rumour has its origin in an intention said to be entertained by the projectors of the public hall to complete the building with funds obtained from Japanese sources, and then turn it into a bluff hotel.

ON the evening of the 27th, the police made a raid upon a gambling house rented by a Chinaman in the foreign Settlement, and arrested twenty-three Japanese who were in the act of gambling. The Chinese proprietor and the Chinese visitors were not interfered with. This incident furnishes an interesting comment on the state of affairs that has been brought about under the present treaties. A foreign resident may carry on with impunity a degrading and immoral business which is strictly prohibited to Japanese.

THE purchase of the mining plant and the mine at Kamaishi by Mr. Fujita, of Osaka, is announced. This mine had proved a most unfortunate speculation. It had cost the country more than two million dollars when the discovery was made that a constant supply of ore could

not be looked for. The difficulty of obtaining fuel had always been serious, and when to this was added the unproductiveness of the mine, it was time to abandon the undertaking. Mr. Fujita, whose name is chiefly known in connection with some financial frauds, of which, however, his entire innocence was fully established, now becomes the possessor of a railway and a large plant of costly machinery. Presumably the prospects of the mine seem better to him than to the Government.

AFFAIRS in Tonquin are *in statu quo*. The French appear to be waiting for the arrival of all the reinforcements now *en route* before proceeding to the assault of Bac-ninh. Meanwhile, a rumour is industriously circulated in China that the assault has been already delivered and defeated with heavy loss to the invaders. So persistently is this rumour repeated, that it seems to have obtained some credence even among foreigners in China, and as reporters are not allowed to accompany the army of occupation, it is difficult to know the truth. That the French have sustained a serious reverse, we do not for a moment believe. What is very possible is that they made a reconnaissance in force, and that the troops taking part in it allowed themselves to be engaged more than necessary. It is very important for the French to determine the nature and disposition of the force garrisoning Bac-ninh. Great uncertainty exists on this point, some accounts placing the numbers of the garrison at twenty-five thousand, and others declaring that the place has been virtually evacuated. The business of a reconnoitering party would be to make the defenders show themselves and then to retire. But reconnaissance is probably an unknown art among the Chinese, and it seems not unlikely that they may have construed the appearance and retreat of a French force into a decisive defeat, especially if the French, venturing too far, were obliged to fight their way out. Meanwhile, the Viceroy T'so T'sung-tang has been allowed to retire, and the war party appears to be falling into disgrace in China.

NOTES.

THE London *Times* thinks that whatever may be the issue of the struggle in Tonquin, it must "exercise a profound influence on the relations that are in future to exist between China and her tributaries." Questions apparently calculated to determine the nature of those relations have already cropped up, as in the cases of Siam and Riukiu. With regard to the latter, the writer in *The Times* is singularly misinformed. He describes the incorporation of Riukiu into the mediatized system of Japanese administration thus:—"In 1879 the Japanese seized the Loochoo (Riukiu) Islands and deposed the ruling prince, who had always sought investiture at the hands of the Chinese Emperor. Nothing whatever has been done towards recovering the lost position, and by the time that China bestirs herself in this matter, the other Powers will have become

so accustomed to regard Loochoo as a Japanese possession that any attempt to redress the original wrong would be resented." The notion that Japan wrongfully seized islands which for centuries had formed an integral part of her possessions is about as accurate as the assertion that nothing whatever has been done by China to dispute Japan's title. These errors apart, however, it seems doubtful whether the Tonquin affair will have all the effects predicted of it. The easiest lesson to be learned from the history of China's foreign relations is, that though she were to surrender her claims of suzerainty in twenty cases without a struggle, she would assert them in the twenty-first as complacently and resolutely as ever. Her indifference to precedent has something almost sublime about it, and those that know her well have truly said of her that she tears up her records as she proceeds. We have seen her declining all responsibility with regard to Korea, and then, within a very few years, sending a body of troops there, and otherwise treating the country as an outlying province. To-day she declares that the payment of tribute by a bordering state is a mere interchange of neighbourly courtesies without any political signification whatsoever, and to-morrow she will gravely construe such payment as an incontrovertible evidence of vassalage. If the ties between herself and Tonquin are snapped without any ostensible exercise of strength on her part to sustain them, it does not by any means follow that she will consent to draw any practical deduction from the rupture, or even that she will cease to regard Tonquin as her vassal. The only safe forecast that can be formed of her conduct in a particular juncture is that it will be unlike the conduct of any other Power similarly situated.

A SUBJECT which has been rather overlooked by European journals has been recently taken up, and ably discussed, by the *Spectator*,—the attitude of the French peasantry. It is undoubtedly a matter of serious importance, not to France alone, but to all Europe. For it is questionable whether the labouring classes of France will support the present Ministry if there is any sudden check to the operations in Tongking or any serious defeat of the French arms. The English press is unanimous in its opinion on this subject, while the French periodicals observe a discreet silence, which does not tend to strengthen one's faith in the patriotic spirit of the peasantry. It is very evident that many of the French statesmen have entirely lost sight of the first dictates of political economy, if not of common justice, in neglecting to assure themselves of the allegiance of this important faction. That the peasantry are disposed for peace, and adverse to war, admits of no doubt. The aggressive wars of France have always been made by her rulers and the upper class, while the labouring classes and their opinion have been taken into little or no consideration. The aristocratic spirit, so far as the want of intimate coöperation with the peasantry is concerned, is still rampant, despite the socialistic motto of the Republic. For a moment during the revolution all classes joined the common cause, but the time was ill-chosen to found a new régime of fraternal coöperation. For the present the attitude of the French peasantry is directly antagonistic to that of their rulers, and they may at a moment's notice turn upon the Government, and upset the Ministry. Still, this undercurrent of national feeling is

apparently not strong enough, nor permanent enough, to induce the Ministry to put a stop to their so-called successful expeditions. It is possible that the labouring classes will still continue to view the operations of the French Government in Tongking with a sentiment akin to apathy; but once let some great shock, like the declaration of a costly war with China and the attendant great demand for money, arouse them, and their interference will be alike fatal to the present condition of the Republic, and injurious to the peace of Europe. Money is being recklessly sent out of the country, and a European war might find France unable to protect herself in the time of greatest need. "It is almost too disheartening," says the *Spectator*, "to believe that the Republic can continue in her present career; a career clearly opposed to the wishes of the majority of her people." The power of action may, for the moment, rest in the hands of the politicians, the journalists, and the upper classes of the capital; but the all-important *vis inertiae* of the peasantry has been left out of consideration, and may again threaten the country with a series of civil disasters.

THE SŌUL correspondent of the *Fiji Shimpō* writes as follows:—To-day (January 28th) the New Year was celebrated in the Palace. The American Minister, Mr. Shimamura, *Chargé d'Affaires* of the Japanese Legation, and the Chinese Consul proceeded to the Palace and paid their respects to the King. New Year's day was very rainy, which materially interfered with the out door festivities of the people. But on the second and third days the weather was all that could be desired, and large numbers of new year visitors exchanging congratulations filled the streets. Nothing of any great importance took place last year, except that the Chinese traders rapidly increased in numbers. The Koreans detest the Chinese soldiers, as they are fond of pillaging and continually do something to outrage the public. The recent murder of two people, a father and his son, by a Chinese "brave" gave rise to intense indignation. The port of Inchhōn is wonderfully prosperous, the monthly trade returns ranging from 170,000 *yen* to 180,000 *yen*. The native towns are alive with thieves, some of whom are caught and put to death every day. The other day forty burglars were simultaneously decapitated with the dull saw, the most horrible and disgusting scene it is possible to imagine.

THE proprietors of the Ice Factory in Tsukiji, Tokiyo, have started a scheme which promises to pay well. A large bath-house has been erected by the side of the Factory, the exhaust steam arising from the overflow of the condenser being used to heat the baths. Fuel and manual labour in filling the baths being thus dispensed with, the proprietors of the establishment are able to charge a smaller sum for hot baths than do all similar houses in Tokiyo: 8 *rin* instead of the usual 1 *sen* 3 *rin*. As over 2,000 people make daily use of the new establishment the returns more than cover the expense of the coal used in the Factory, so that ice can be made for a merely nominal sum, the cost of labour only.

A VERY curious story is published by the *Yomiuri-Shimbun*. The scene is laid near Kiyoto, in a village called Hidzume, where there resides an old gentleman, Nakao Shōhaku, more than sixty years of age. Of late years Mr. Nakao has

been a participator in the æsthetic renaissance of the time, and being a man of independent means, he lives at ease in a charming cottage where all the furniture is in strict uniformity with the most approved *Cha-no-yu* styles. The only constant companion of his retirement is a monkey, which he has reared from its infancy, and which is now an animal of great size and strength, but singularly docile and affectionate. On the 9th instant, Nakao having some business at the temple of Shōriu, set out in the evening with the intention of passing the night at the Abbot's house. A burglar took advantage of the old man's absence, broke into the house, and making up a large bundle of clothes and other articles, strapped it on his back and was creeping off, when the monkey observed him. Instantly the animal sprang on the thief's shoulders and attacked him with fury, biting and scratching his nose, eyes, and neck, and chattering the while as loud as possible. In vain the man struggled to escape from his active assailant. Hampered by the bundle on his back which the monkey never gave him time to throw off, he stumbled blindly about, until at last loss of blood and terror completely overcame him and he sank down fainting. The monkey, however, did not understand fainting. Seeing its enemy at its mercy, it proceeded to profit by the occasion, and would probably have killed the man, had not its jabbering attracted the attention of a passer by. According to the story told by the Japanese, it was the monkey itself that heard footsteps on the road, and, running out, made signs of some sort which induced the traveller to come in. However this may be, the thief was found in a very sorry plight, and the police had no little difficulty in restoring him sufficiently to learn that his name was Sugimoto Senjiro.

ACCORDING to some recently published statistical essays, it appears that the tendency to an increased state activity is becoming more and more apparent. The public take a more general interest in national affairs than they have ever done before; and this not merely in a flippant, emotional manner, but with a steadiness of purpose and a real anxiety that prove how deeply rooted is the popular taste for political science. The position of leading politicians is therefore one of grave responsibility. Political acumen is a most necessary postulate, and it is of the utmost importance that no state should be controlled by untrained men. An able and thoughtful discussion of this subject is the article "On the Education of Statesmen," written by Prof. Adams in the *Princeton Review*. The writer dwells upon the establishment of extended courses of instruction in political science at the leading colleges, and argues that the possibilities of the present political activity are, to a great extent, dependent upon university education. There is, he says, peculiar appropriateness, at the present time, in the careful study of questions relating to public policy and administration; as well as in view of the importance of the social problems that are still awaiting solution. Statesmen should, he contends, no longer be the mere outcome of a momentary enthusiasm, nor yet dependent entirely upon the support of the public in order to take part in legislative or executive administration. Politicians should be trained men, found worthy of their chosen career by means of unsparing examination. The need of special instruction in nearly all branches of industry, intellectual or manual, is very

generally recognized; it would be strange indeed if statesmanship were the only art for which no systematic and painstaking preparation were necessary.

SOME interesting experiments have recently been conducted by the Anthropometrical Committee of the British Association. This Committee, says the *Australasian*, has been engaged for some time past in the systematic examination of the height, weight, and other physical characteristics of the inhabitants of the British Islands. The report was based upon the examination of more than 53,000 individuals. From it we learn that a Briton of "average" height is a giant compared to the average of his race—67.66 inches. Scotchmen are taller than Englishmen, Welshmen are heavier. The Englishmen of the north and eastern parts average three-quarters of an inch more than the rest of their countrymen. Criminals and lunatics were found to be two inches smaller than the honest and sane parts of the population! From five to ten years of age boys grow more rapidly than girls, but in the next five years girls grow much more rapidly than boys. From 15 to 20 boys again take the lead, completing their growth at the age of 23, whilst girls complete theirs at 20. The common idea that the population in manufacturing towns is degenerating is not true. On the contrary, there is a slight but uniform increase in the stature, and a comparatively large increase in weight going on. At the same time, it was demonstrated that open-air engagements are more conducive to bulk and stature than indoor operations.

ABOUT half-past nine on Tuesday evening, the 26th inst., the police made a raid on a gambling house at No. 188. The house is rented by a Chinaman, and must have been doing a fine business, for no less than twenty-three Japanese were arrested. Several Chinamen were present at the time of the arrest, but were not interfered with. In the confusion that ensued, a lamp was upset and the flooring caught fire, but this was speedily extinguished through the exertions of some neighbours.

MR. WILFRID BLUNT, has written to *The Times* from Colombo, saying that Arabi Pasha looks forward hopefully to the time when he will be recalled to his Native country, to take her regeneration in hand. Mr. Blunt says that the illustrious exile and his compatriots are very well treated and highly regarded by the Cingalese, who look upon them as martyrs.

A WHALE which has frequented the estuary of the Tay for some weeks, says a home paper, and which has hitherto baffled all attempts to capture it, was again seen on Sunday (Dec. 29) and on Monday morning—on Sunday night off Broughty Ferry; and when close to the shore it leaped clean out of the water three times after the fashion of a salmon, and its enormous proportions were observed to advantage by thousands of spectators who had gathered on the beach. About nine o'clock on Monday morning it was again sighted in deep water, a little below Broughty Castle, and a steam launch and two whale-boats, manned with gun-harpoons, started off in pursuit. After an exciting chase the crew of the launch succeeded in firing a harpoon into the monster, and the two boats rowed to the assistance of the launch and were taken in tow

to give the whale a drag and impede its seaward course. Meanwhile a second harpoon was fired and seemed to infuriate the monster, which then swam off at a rapid speed towards the sea, dragging the launch and whale-boats after it. The whale-boats and the steamer returned to Dundee on Tuesday, and announced the escape of the whale. It had three harpoons in it, and it dragged the launch and boats for twenty-two hours, when the ropes broke.

ON Tuesday evening a large number of the members and congregation of Union Church assembled at the residence of their late Pastor, the Rev. W. C. Davison, where a very enjoyable sociable evening was spent. After refreshments had been served and partaken of, the following address was read by Mr. A. J. Wilkin:—

TO THE REV. W. C. DAVISSON.

We feel that we should be wanting in a proper recognition of the obligations we are under to you, if we suffered you to leave these shores without some collective expression of our sentiment of regret.

Fully occupied as you already were with the work in your own sphere, it was no light thing for you to accede as you did a year ago, to the request we then made that you would assume the duties of a pastor towards the Church and Congregation assembling in the Union Church.

It has been our happiness to see during the period of your ministrations amongst us, as at that time commenced, a steadily increasing attendance at the services, and an augmented interest in the welfare and prosperity of the cause: and in this we recognize the blessing that has followed upon the zeal and earnestness, the geniality and large hearted sympathy, with which you have laboured as our pastor. Your influence and the results of your work will remain when you have gone from us, and we know that in all this you will recognize some reward of your labours.

We are thankful to the great Head of the Church for your ministry amongst us,—for its faithful words of encouragement in the Divine life, for its sound words of instruction in righteousness, for exhortation and for doctrine.

And now we would bid you God speed. To yourself and Mrs. Davison we offer our parting and earnest wishes that you may be carried in safety to your journey's end. May the love of our Heavenly Father ever shine around your path and fill your hearts with joy: thus may you journey on in the fullness of the blessing of the gospel of peace, blessing and being blest, gathering sheaves unto life eternal.

We have to ask your acceptance of a small token of our esteem in the accompanying purse, and praying that the great Shepherd of the Sheep may ever have you in His holy keeping, we bid you again farewell.

A VERY remarkable mosaic has just been discovered at Nîmes. It is over one hundred and fifty square feet in size, and represents a Roman Emperor seated on a throne, by the side of which stands a female figure. There are also two figures of men, leading, the one a lion and the other a wild boar. A warrior with a Roman helmet and a number of slaves complete this highly interesting group. The work has happily escaped injury; the lines and the colours are as fresh as if they dated from yesterday. It is declared by competent judges to be the richest mosaic yet discovered, no museum in Europe possessing one to match it. As for its value, they decline to name a definite sum, though they express the opinion that it cannot be worth less than a million of francs at the lowest. The unfortunate owner of the house in which this treasure has been discovered had just sold the property to the municipality for less than £2,000. This body will frame the mosaic, and place it in the museum of the town, already so rich in local relics of the Roman period.

THE inquisitorial character of the American journalist has just received a fresh development. From an interviewer of public personages he threatens to become a visitor and questioner of private citizens. It occurred the other day to the editor of the *New York Times* to test the interest

taken by his readers in political matters of the "first importance;" and he accordingly commissioned a reporter to wait upon a certain number of the leading bankers, merchants, lawyers, and other professional men of New York, for the purpose of ascertaining how many of them had read the President's Message, as lately delivered to the assembled Congress. The reporter made 324 visits, and had no trouble in obtaining from the persons honoured with his calls the particulars he desired. He found that out of 324 readers of the *New York Times*, belonging to the most intelligent and best informed classes, 108 had read the Presidential Message from beginning to end, while 30 had read parts of it, and 189 had not read it at all.

WRITING, last November, of the new Armstrong guns mounted in the *Tsukushi Kan*, and of the admiration they had evoked in Japan, we said:—"Since England has abandoned her prejudice in favour of muzzle-loaders, her manufacturers have taken the leading place from which her theorists have never been ousted." The article containing these remarks appears to have been forwarded to Messrs. Krupp & Co., by a Tokiyo mercantile firm, and we now receive a message from Mr. F. Krupp to the effect that "Armstrong would not be likely to assert publicly that England is the leading place in regard to artillery or that her theorists have always had the first place in the science of artillery." We have no hesitation about publishing this indirect contradiction of our statement, though we cannot see clearly what good end will be served thereby. That Sir William Armstrong's modesty would forbid him to make an assertion which might sound like blowing his own trumpet, we readily admit; and that Mr. F. Krupp would dispute any assertion of Sir William Armstrong's superiority as a manufacturer of ordinance, may be assumed with no more hesitation. But the quality of these two scientist's weapons must be tested by something more trustworthy than words. We have stated our own opinion, but we have no objection to modify it in deference to facts, should such be forthcoming. Mr. Krupp further designates as "an invention" a report copied into the *Japan Mail* directly from a London journal, to the effect that a 13-inch Krupp gun recently burst in Fort Melton, Cronstadt, during the firing of an Imperial salute. "I have never delivered any 13-inch guns to the Russian Government," writes Mr. Krupp, "so that it is impossible that any such gun could have burst." This is conclusive. We can only suppose that the English newspaper was misinformed.

WE mentioned, lately, that some difficulty was experienced in finding carpenters sufficiently skilful to be entrusted with the building of the Imperial Palace. According to a Tokiyo journal, the officers charged with the execution of the work are now perplexed about the best earth to employ for making tiles. There has, however, been found, this authority tells us, an old book describing how the tiles used for the palace when the capital was moved to Heian, eleven hundred and five years ago, were made of clay obtained from a village called Matsumoto, in the province of Omi. Whether the earth of that locality still retains the properties that caused it to be then selected is a question which the local authorities have received instructions to investigate without

delay. It seems a little strange that any uncertainty should exist about such matters, but doubtless it is all for the good of trade.

It is said that the *Kangwakuai* (Society of Pictorial Experts) of which Mr. Machida is the originator, proposes to hold a *réunion* on the 6th proximo at the large tea-house called Nakamura, near Riyogoku Bridge. The chief members of the Society are Messrs. Kano Yeitoku, Yamana Tsurayoshi, Kano Tomonobu, and Fenollosa. The last named gentleman is probably, among foreigners, the most skilled connoisseur of Japanese pictures in existence. He is at present engaged in the preparation of a work on Japanese pictorial art, and we look for its completion with much interest. It is announced that the objects of exhibit on the 6th instant will be a number of remarkably fine pictures, scrolls, and screens by the most celebrated old masters.

We learn from the *Yomiuri Shimbun* that the map of the route to be taken by the railway from Shinagawa to Ueno has just been sent to the local authorities of the former place, with directions to take the necessary steps for the purchase of the land. It may, therefore, be presumed that the idea of making the line round the outskirts of the city is about to be carried into effect. Doubtless this course has advantages, so far as facility and cheapness of construction are concerned, but it really seems as though the object of those engaged in laying out the line was to make it as inaccessible as possible by the inhabitants of the capital. Both Ueno and Shinagawa are about as remote from the present business centres of Tokiyo as any places that could possibly have been chosen.

THE London *Echo* newspaper was in a West End police-court the other day as an interested party to one of the most ludicrous cases which ever convulsed a court. The defendant was arraigned upon two charges. The first accused him of being a "vagrant, without visible means of support," and the second alleged that there was good cause to suspect that he was also a "suspicious character," perhaps a Fenian or dynamite conspirator. He had absolutely refused to give the police who arrested him any information concerning himself and had declined to give his name. When the Court demanded to know the latter the prisoner said it was "Hugh MacLaughlin," and insisted upon being addressed as "Mister," "because he was a real gentleman." The grave sincerity with which this claim was put forth by the ragged and begrimed unfortunate made the Court roar, and the police significantly alluded to the "Irishness of the name." The testimony against the prisoner was that he had been detected prowling about Hanover-square and placed under "shadow." When he first attracted police attention he was disguised as a match pedlar, in which character he had secured entrance to many of the aristocratic residences of that neighborhood. He was subsequently tracked in movements under several other disguises, and was finally arrested while tramping around collecting tribute as a troubadour with a good voice and a very bad banjo. The prisoner listened to the testimony with mingled consternation and despair, but made no defence. He, however, pleaded, with choice and eloquent rhetoric, against being committed, but the contrast between his accomplish-

ments and his rags prejudiced his case. Finally, in desperation, the tramp admitted that he had been engaged in a secret mission, but claimed that he could prove his respectability by persons in the office of the *Evening Echo*. Sure of their game now, the detectives lost no time in procuring the attendance of the chief editor of the *Echo*. He failed at first to recognize the prisoner, but after a more careful scrutiny exclaimed, "Why, Mac! is that you?" and satisfied the Judge that the prisoner was no other than Mr. MacLaughlin, of the *Echo* staff, one of the best known of London journalists. He had been absent from the office for several days engaged in the task of gathering data concerning the profits of London beggars, and, unknown to his superiors, had chosen to secure a standard by playing the beggar himself. After a hearty laugh all around "Mac" was liberated.

THE writer of the following on Japanese waiting girls in the *Pittsburg Despatch* would appear to have gained his experience in the "round the road" suburbs of Yokohama:—The Japanese waiter girl is said to be an interesting creature. She has a big tub of hot rice at her elbow and fills your bowl as often as you lower the contents sensibly. The present crop of rice is unprecedentedly large and this popular grain is wonderfully cheap now. She removes the shell from your boiled eggs, the while chatting briskly, just as though you could understand what she says. She laughs pleasantly at your miserable failure with the chop-sticks, and taking them herself deftly bones your fish with them. She is inordinately curious, and has no idea of propriety. I have had them "chuck" me under the chin or slap me familiarly on the shoulder. They will look right down your throat, so frankly inquisitive are they. It is evident from their rigid and stately etiquette in other matters that they do not suspect they are shocking you.

A CHINESE speculator has, it is said, become so enamoured of Japanese umbrellas and parasols that he has conceived a project of introducing them on a wholesale scale into his own country. With this object he has engaged twenty experts of Osaka, at a salary of 380 *yen* each per annum, and carried them off to China where he proposes to set up a large manufactory. A dealer, by name Sudzuki Uhei, has contracted to export from Japan the necessary quantity of bamboo for the handles.

THE *Yomiuri Shimbun* says that on the morning of the 26th, a lad of fourteen, on his way to the Gasworks at Shinagawa, was in the act of crossing the railway near Kanasugi bridge just as the train from Yokohama came up. The boy attempted to escape, but lost his presence of mind and was caught by the engine. By a wonderful piece of good fortune, however, the train did not pass over his body but threw him outside the rails, and though considerably bruised and shaken, he received no serious injury.

THE *Alta* of the 21st ult., referring to the Robeson Navy says:—Some wit in the Atlantic States, where they have better chances than we of the Pacific to know about it, says that the navy now consists of two principal parts—"officers and water." The supply of these two essential elements to the existence of a powerful naval force is fortunately large and not likely to be diminished soon. But for the safety of our cities they seem to be rather inadequate. The

water being equally at the disposal of any hostile power, and the officers being of little or no account without a sufficient supply of ships and men. Chandler seems to have inherited much of the Robesonian policy, which consists in absorbing the public millions and leaving nothing valuable to off set them. It appears, however, that the ship *Lancaster* is achieving success in the Mediterranean as a reception hall. A proof of having the *entrée* to good society at Nice consists in being bidden to the entertainments held on board.

TRADESPEOPLE in Tokiyo complain bitterly of the bad times. They always do complain, for the matter of that, but a vernacular journal says that they have good reason to be desponding just now, as even the statistics of the telegraphs show that the number of messages sent across the wires between Tokiyo and Yokohama during last month was thirty per cent. less than the number during the corresponding month last year. The same journal says that the falling off in the post-office and railway receipts was equally marked.

A TOKIYO journal, commenting on the morbid love of novelties common to all humanity, tells a story of a little bunch of ten tomatoes exhibited, a few days ago, by a greengrocer in the capital. They made a paltry show, so far as bulk was concerned, but being the first tomatoes of the season and very early at that, a gentleman was soon found to purchase them for five *yen*. This moralizing journalist ought to go to London, where five guineas for a dish of grapes, and one guinea for a peach are not uncommon prices.

THE people at the hot springs of Arima are said to be greatly troubled by a terrestrial disturbance of some sort, which has been the means of spoiling the purity of the springs. The hitherto clear water is now muddy and offensive, and there are no signs of any improvement. Such a phenomenon has naturally reduced the number of visitors to a minimum.

THE *Fiji Shimpo* states that the gamblers recently arrested at No. 188, Settlement, have been found guilty, with the exception of one woman who happened to be arrested at the same time and who has since been discharged. Twenty-one of the gamblers were fined 30 *yen*, and sentenced to 5 months' imprisonment; four others were fined 5 *yen*, and sentenced to one month's imprisonment.

THE *Fiyu Shimbun* publishes a rumour that the Cabinet has resolved to sanction mixed residence and foreign trade in the interior, and states that this resolution will be put in force without loss of time. Difficulties with China are hinted at as well, and Mr. Soyeshima is said to be about starting for Peking as a diplomatic Envoy Extraordinary.

THE *San Francisco Chronicle*, in its "Art Column," devotes a laudatory paragraph to Mr. T. Kaji, spelling the name incorrectly *Kagi*, as a matter of course. Mr. Kaji, a native of Tosa, has met with much success; two of his pictures, "Winter Scene in the Yosemite," and "Pride Shall Have a Fall," being very highly spoken of. The painter, says the art critic, combines the Western with the Japanese style, the effect being most pleasing. He has recently received large orders from Chicago and Washington, and promises to enjoy financial, as well as artistic, success.

THE extraordinary tales telegraphed to America with regard to the murder of Colonel Sudeikin and the tortures to which he was subjected, appear to have been much exaggerated. The facts of the case are now believed to be these. Colonel Sudeikin, a man of great resolution and very exceptional strength and activity, was chief of the secret police of St. Petersburg. He had been one of the founders of the anti-Nihilistic league, originally formed under the patronage of Count Ignatieff, and he was one of the Emperor's special guards. Greatly feared and hated by the Nihilists, he had often been threatened with death, and was consequently in the habit of taking many precautions. He had apartments in various quarters of the city; never slept two consecutive nights in the same house; disguised himself very cleverly, and was always well armed. On the 2nd of January, he received information that a Nihilistic reunion was to be held in a house, No. 91, in the *Perspective Newsky*, that is to say, in the very locality destined for meetings of the agents of the secret police. This information was given by an agent named Jablowsky, who was himself a Nihilist, it appears, and who had only entered the police to further the plots of the revolutionists. Between five and six o'clock in the evening, Colonel Sudeikin, accompanied by his assistant, M. Gendcharoff, and escorted by four gendarmes, repaired to the house indicated. The gendarmes were left in the street, and the Colonel and his assistant went up-stairs. Suddenly a door opened and a pistol shot was heard. The ball struck the Colonel on the head and killed him at once. Gendcharoff tried to use his revolver, but was felled by a tremendous blow of an iron bar which crushed his skull. The murderer subsequently fractured Colonel Sudeikin's skull with the same bar. The crime was accomplished with remarkable celerity and address. The gendarmes standing in the street knew nothing of it, and when, after vainly waiting for their chief's return, they penetrated into the house, they found there only a corpse and a dying man. Of the murderers there was no trace. Thrust into Colonel Sudeikin's pocket was a letter promising death to Count Totstol and General Gresser, Prefect of St. Petersburg. It is feared that Nihilistic terrorism is about to be revived.

THE memoirs of Odilon Barrot, President of the Council of Ministers when Napoleon III. was still only a prince, have just been published, and contain, amongst other interesting matter, a curious story of the Prince's gallantries. Louis Napoleon had met in England one of those ladies who live by their charms, and a mutual attachment, followed by the birth of several children, was the result. She had a house not far from the Elysée, and lived on the most intimate terms with the Prince-President, who generally made her accompany him in all his tours through the provinces. Once when she was with him at Tours, travelling under the name of Madame Bacciochi, the gentleman whose business it was to find lodgings for the party, took it into his head to put her into the house of the Receiver-General, M. André, who happened to have come with his wife to the Pyrenees. The Receiver was one of those Protestant Puritans who take a pride in the strictness of their habits. He and his good lady were profoundly disturbed at the thought that their hearth, never before witness of anything

but religious practices, should be contaminated by the presence of one whom they were pleased to call a prostitute. "M. André," says Barrot, "complained to me bitterly. His letter, written under the first impulse of indignation, was even intemperate. 'Are we back again then,' he asked, 'at the epoch when the mistresses of monarchs paraded their scandals throughout the towns of France?' The President of the Council, not a little embarrassed, could only think of one plan. He desired his brother, Ferdinand Barrot, to contrive that the letter of the virtuous Procureur General should accidentally meet the eye of Napoleon. The latter replied to M. André's missive by an epistle which ended thus:—'I detest this pedantic rigorism, which always ill-conceals a cold heart, indulgent to itself, inexorable towards others. True religion is not intolerant. It does not seek to raise tempests in a glass of water, to make scandals for nothing, and to change into a crime a simple accident or an excusable fault. As for me, I do not accuse anyone, and I confess myself guilty of seeking, in an illegitimate union, the affection of which my heart stands in need. Since my position has hitherto prevented me from marrying; since, in the midst of governmental cares, I have not, alas! in my country from which I have been so long absent, either intimate friends, or acquaintances of my youth, or relations who can admit me to the pleasures of a family circle, I may well be pardoned, I think, an affection which does no harm to anyone and which I do not seek to publish. To return to M. André, if he thinks, as he says, that his house is soiled by the presence of an unmarried wife, I beg you to let him know from me that I keenly regret that a lady of devotion so pure and character so elevated should find herself, by accident, in a house where, under the mask of religion, there reigns only an ostentation of forced virtue without Christian charity.'

A CALCUTTA journal has the following:—A Dutch firm has recently obtained a concession from the Shah of Persia to work, the oil wells near Bushire. These wells are believed to be among the most bountiful in the world, and the spring is of such vitality that the oil flows spontaneously in quantity out of the earth. The supply, examination seems to indicate, is practically limitless, and the quality of the oil is excellent. The existence of the wells has been known for a long time, but hitherto the Persian Government has not only neglected to work them, but has declined to allow foreigners to attempt the task. The firm which has now at length obtained a concession proposes to bring out the best machinery and to begin work on a large scale.

THE *Echo* of the Dordogne announces the discovery of an immense bed of feldspath rock, about eight kilometres (nearly five miles) from the St. Yrieux railway station. The mass of mineral is found to be largely composed of pure kaolin or the finest white clay, for the extent of half a mile, partly covered by gneiss quartz and plates of mica. All the engineers describe the kaolin to be of the very finest substance, formed by the decomposition of the pegmatite rocks, of orthose and quartz, and consequently the only earth that can be employed in the manufacture of porcelain. The discovery is of great importance, and will prove of much advantage to the porcelain industry at

Limoges, long celebrated for its special production of enamel ware, and is not far distant from this valuable mineralogical find.

PROTECTION is a very pretty device until the nations against which it is directed begin to retaliate in kind. After the North American Colonies had established their independence, they enacted that all foreign vessels trading to the United States should pay 94 cents per ton duty beyond what was paid by American ships; and further, that goods imported in foreign bottoms should pay a duty of 10 per cent. over and above the duty payable on them when imported in American vessels. This law, avowedly directed against English shipping, had the effect of convincing Great Britain of her own errors, and led her to conclude with America a commercial treaty by which equal charges were imposed on the ships of either country in the ports of the other, and equal duties were laid upon all articles, the produce of the one country imported into the other, whether the importation was effected in ships of the one or the other. The United States have not forgotten their success on that occasion. By way of answer to the European restrictions upon the importation of American hams and bacon, Congress projects a law authorizing the President to "cause an examination to be made of the products of countries which have prohibited certain American imports on hygienic grounds, and to forbid the importation into the United States of such of those products as may be considered hurtful." In the abstract this proposal does not commend itself to common sense. It reads as though Congress said to Europe, "we don't mind how much poisonous rubbish you shoot upon us, provided you let us shoot our rubbish upon you, but if you get fastidious about ours, we, too, will begin to think about our healths." What American legislators mean to say is, however, plain enough. They declare that they recognize the motive of the French restrictions to be, not hygienic, but simply protective. And it must be confessed that the suspicion seems well founded. We find one of the stoutest supporters of the restrictive laws writing to the *Economiste Français* in these terms:—"We agriculturists attribute our sufferings to the introduction of American meats and grain. Let me ask whether it is possible in France to produce wheat and meat as cheaply as in America. * * * The decree of M. Méline (removing the restrictions upon the importation of American bacon) was presented some months ago, and it has had the effect of lowering the price of our pigs from 60 francs, a remunerative figure, to 44 francs (per 50 kilogr.), a figure which does not pay expenses." This gentleman has not one word to say about hygiene. With him it is simply a question of compelling French consumers of pork and bacon to pay a tax for the benefit of French pig-breeders. M. Paul Bert, when he tried to obtain a reversion of the decree mentioned here, took the purely hygienic line. But his success was mediocre. He compared the trichina to the phylloxera, and tried to persuade the deputies that when a local epidemic of the former establishes itself anywhere, "it constitutes an infection which goes on increasing and spreading from man to man." It appears to us that M. Bert would have been equally logical had he declared that a whole community is liable to die of hydrophobia if one of its members be bitten by a mad

dog. Science has demonstrated that the trichina can only find its way into the human body by the digestive organs, so that if people are to be attacked by it they must eat meat containing the germs. Under these circumstances, its ability to spread from man to man seems problematical except in a community of cannibals. Yet M. Paul Bert was so persuaded of the propriety of his proposal that he wanted the Chambers to reimpose restrictions which had been removed three weeks previously; to revoke a measure on the strength of which whole cargoes of American salted meats had been landed in France and others were on their way thither. It is true, as M. Bert said, that human lives are more important than commercial faith, but it is necessary to begin by proving that trichinæ are germinated in American porkers only, and to disprove the well established fact that the only trichinous epidemic certainly known to have taken place in France was caused by a pig of pure French breed. Otherwise it would be necessary to supplement the restrictions on American bacon by a law ordering the massacre of all French porkers.

REFERRING to the recent trials of the Glasgow dynamiters, the *Belfast Northern Whig* says:—"The great body of the people of the American Republic have the utmost detestation of the proceedings of these American-Irish, who abuse the rights of hospitality and of citizenship. But even the excuse made for certain trading politicians that they are anxious to obtain the Irish vote does not justify them in compromising the good relations of their country with the Government and people of the United Kingdom. As Lord Justice Clerk said, a more wicked conspiracy was never shown to exist. The cowardly ruffians and their Nationalist abettors in Ireland—one almost as bad as the other—can, however, expect very little sympathy from English or Scotch juries."

It is a significant little comment upon the state of the world in the last quarter of the nineteenth century, says the *St. James's Budget*, that there should be such a thing as the regular profession of War Correspondent. Nowadays we say that So-and-so is a war correspondent, just as we may say he is a doctor or a lawyer, the assumption being that there is enough business in his special line to keep him constantly employed. The professional war correspondent would not exist if it were not the case that there is generally a war going on somewhere or other. As a matter of fact, the practitioners in this branch have not had to complain of too many or too lengthy vacations. It is a circumstance which should suggest some pensive reflections to the surviving Radicals of the year 1850 or, thereabouts, who thought that with free trade and free government fighting would become a lost art. Free trade has not kept England out of a dozen wars little and big; and as for free government—we all know that Republican France is the home of liberty and equality, and Republican France is not a favourable example of a State at peace with all mankind. Moreover, in France it is precisely the party of "the people" which is most clamorous for war and conquest and annexation. It was the tribune of the people, Gambetta, who launched France on her present course of colonial enterprise; while the journal which represents an even more Radical leader, M. Clémenceau, once again takes up the paper

war with Germany, and warns his countrymen to prepare for another great struggle with the country of the perfidious Bismarck. The age of gold still seems a long way off.

THE vernacular press says that the Government at last proposes to do something towards the restoration of the Castle of Osaka, which is certainly one of Japan's most valuable heirlooms. The place is to be generally repaired, and it is probable that there will be built round it some sort of embankment planted with trees. The Castle of Owari, at Nagoya, has been completely resuscitated. Fortunately it suffered nothing during the troubles of 1867-68, and but for the wanton mischief done to its internal decorations by troops subsequently quartered there, it would remain to this day just as it was in the old feudal times. Nothing in Japan conveys so true an idea of the bigness of the people under their military chiefs as these massive castles with their colossal battlements and tier upon tier of huge framework.

M. FERRY's scheme for the revision of the French constitution has chosen rather an unfortunate time to achieve much success. There are, however, several changes suggested in this scheme which are, without question, of great importance to the republic. In the matter of public suffrages the new constitution proposes the abolition of the office of life senator, and the substitution of the system of voting for a general ticket instead of the present plan of voting by districts; and it is stated that the reactionists will support the latter proposition. "It would be not a little curious," comments a New York contemporary, "if in so short a time after the death of Gambetta, the very measure the persistent advocacy of which brought about his fall from power, should be successfully carried through by M. Ferry." But M. Ferry and his *clientèle* are notably over-sanguine, and it is very possible that his propositions will meet with little general favour; all the more so as the smaller French politicians are not likely to give up with alacrity the advantages secured to them by the present system.

THE death is announced of Keshub Chunder Sen, the great Hindoo religious reformer. He was a leader of the Brahma Somaj sect, which was originally founded by the Rajah Ram Mohun Roi. Chunder Sen, though not a Christian, recognized the nobility of that religion. In a speech at Calcutta in 1879, for example, he said:—"If unto any army appertains the honor of holding India for England, that army is the Army of Christian missionaries, headed by their invincible Captain, Jesus Christ. * * * They have given us the high code of Christian ethics, and their preachings and examples have distinctly influenced and won thousands of non-Christian Hindoos. Let England know that, thanks to the noble band of Christ's ambassadors, she has already succeeded in planting His banners in the heart of the nation."

A CABLEGRAM to the New York *Herald* dated London, January 8th, says:—"The government of the Dutch East Indies has sent a body of troops to the west coast of Acheen to compel the Rajah, who holds in captivity the crew of the steamer *Nisero*, which was wrecked there in November last on the passage from Sourabaya to Singapore, to surrender them. Twenty-five

of the crew are in the hands of the Rajah and his tribe, who have plundered and destroyed the vessel. Among those held by the Rajah are the second officer Moore, two Italians, two Germans, two Norwegians, and one American. The British gunboat *Pegasus*, which was sent to their relief in December, was unable to communicate with the Rajah, and British Consul Kennedy reported that if the *Pegasus* had fired upon the tribe the prisoners would have been massacred.

THE second lecture of the free series announced by the Evangelical Alliance was delivered at the Meiji Kwaido on Friday afternoon by the Rev. Dr. G. F. Verbeck. The weather was miserable, but despite incessant rain and sleet and nearly impassable roads, an audience of nearly seven hundred had assembled and taken their places in the hall half an hour before the appointed time. In the front row were several Buddhist priests, and in the gallery a few ladies, but the main body of the audience consisted of students. The Rev. C. S. Eby opened the proceedings by thanking the people for their attendance in such inclement weather, after which a Japanese gentleman, Mr. Yoshioka, addressed the meeting at some length with reference to the disturbances caused by certain students on recent occasions. Mr. Yoshioka spoke with singular candour and boldness, so much so, indeed, that he seemed at times to sacrifice tact to zeal. He frequently employed the simile of yapping dogs to describe the clamour of obstreperous listeners, and he reminded his hearers that such conduct was neither consistent with their intelligence nor creditable to their own and their country's reputation. This statement elicited various expressions of opinion, but the applause predominated. The speaker did not, however, limit himself to rebuke; he even ventured to assume a tone of defiance. For he exclaimed with considerable warmth that Christianity, having survived the rack, the dungeon, and the stake, was not likely to be checked by such paltry impediments as a few groans or hisses. This was hazardous ground to take, but Mr. Yoshioka, probably understood the temper of those he was addressing, and believed that a stout, uncompromising attitude would influence them more favorably than any gentler appeal. And certainly the result justified his method, for the audience thenceforth showed themselves thoroughly orderly and attentive. This was an agreeable surprise. It will be remembered, from our report of the last lecture, that a few noisy youths caused considerable inconvenience, although their number probably did not exceed twenty in an assembly of thirteen hundred. From some hints which these freethinkers subsequently let drop, it was believed that they contemplated a stronger and better organized effort on the next occasion, so that the perfect quiet of Friday's meeting was as unlooked for as it was pleasant. Dr. Verbeck, on rising to speak, was received with loud applause. His manner was very quiet, and his utterance, at first a little indistinct, attained, in a few moments, such force and clearness that every word was easily audible throughout the whole hall. The subject was Christianity and Science, and very soon the speaker's earnest style, well chosen language, and happy illustrations had thoroughly aroused the interest of his hearers. With the exception of an occasional reference to notes, he spoke, throughout, extemporaneously, and it was difficult to determine which was more worthy of admiration, his wonderful mastery of

the Japanese language or the force of his arguments. It is not our intention, to attempt here any analysis of the lecture, but we may mention, as a particularly happy point, the speaker's method of discussing the sectarian aspects of the Christian religion, and the discredit they have sometimes brought upon its professors. Referring to the various secular sciences, he showed, by well chosen and easily comprehensible illustrations, how extraordinary is the progress their investigation has made, and how multiform are the theories that have existed, and do still exist, about many subjects of research. Without the interchange of intelligence all this controversy caused, it was doubtful whether science could have made such rapid strides, and certainly discussions and differences of theory, though they might ultimately help to elucidate, could never change or pervert, the truth. So, too, with regard to religion, the science of all others that most exercised the human mind, while the essentials had long been placed beyond the reach of doubt, it was natural, and, as a help, to progress, fortunate, that the anxious earnestness of its investigators should lead them, here and there, into slightly different routes, which, however, all took, in the end, one common direction. For the rest, if any man objected to controversy, and thought unquestioning unanimity and apathetic acquiescence more becoming, Dr. Verbeck recommended him to take up his quarters among the negroes in Africa or in some society devoted wholly to sensual pleasures. Perfect rest from all intellectual effort might confidently be counted on there. The lecture lasted nearly two hours, and was listened to from first to last with such rapt attention that it was impossible to doubt the effect such a method of teaching must ultimately produce.

THE defeat of Hicks Pasha and the annihilation of his army took place about November 12th at Kashgate, which place lies 62 miles South of El Obeid, and 447 miles from Berber. On January 1st the presence at Berber of two advanced corps of El Mahdi's army was telegraphed. It appears, therefore, that the False Prophet's forces are moving northward at a rate of about 10 miles per diem. From Berber to Lukser is 558 miles, and from the latter place to Suez and Cairo, 310 miles. Thus from his position at the end of 1883, the Mahdi had only 868 miles to march in order to reach Egypt proper, so that unless steps are taken to arrest his progress, he may be expected to appear before Cairo early in April, if not at the end of March. There can be little doubt that his present object is Cairo, and that Mecca is his ultimate bourne. To reach Mecca his only road is by the isthmus of Suez, and every step he takes northward brings him nearer to the route which, through evil report and good report, England has struggled so hard to secure. It is impossible to comprehend, at this distance, the motives of a policy which suffers such a peril to gather unobstructed strength. The Gladstone Cabinet ordered the bombardment of Alexandria and fought the battle of Tel-el-Kebir to protect England's highway to India, and now, so far as the world can see, the same Cabinet proposes to look on quietly while there grows in the Soudan a power compared with which Arabi's puny efforts were a bagatelle. Whether or no it be wise and worthy to retire without a struggle from the vicarious contest Great Britain has hitherto maintained against

the slave dealers of Central Africa, is a question the present Government ought not to have much difficulty in answering; but that England will ever be able to retire from Egypt while the Soudan is ruled by such a potentate as the Mahdi, seems in the last degree unlikely. Hitherto the only comprehensible reason advanced in support of a policy of inaction has been that the False Prophet has neither the will nor the ability to reach lower Egypt. The telegrams are daily disposing of that theory.

THE death of Charles Delmonico, the last of the famous family of New York restaurant keepers, was attended by circumstances of an extraordinary character. The man whose name was synonymous with luxury and good cheer, and whose life had been surrounded by all conceivable accessories of comfort and elegance, came to his end in a wayside country ditch, frozen and starved, without friendly companionship, and in the more awful loneliness that separates a shattered mind from human fellowship. For several years he had shown signs of breaking under labors which were far too heavy for performance by any individual, but which he would not consent to abandon or divide. The failure of his strength was, however, so gradual and so well concealed that the announcement of his retirement, a few months ago, from the active management of his various establishments, was received with general surprise. Even then the full extent of his mental and physical ailments was known only to intimate associates. The fact that he was kept under constant guardianship during the last weeks of his life was unsuspected by those who occasionally met him in his accustomed resorts, and was, perhaps, but dimly realized by himself. Whenever he went abroad, he was accompanied, if possible, by some member of his family, and was invariably followed by one or more trained watchers. On the morning of January 5th he left his home, apparently in much better condition than usual, and so determined upon being alone that none of his relatives went with him. It is now understood that he eluded the surveillance of his keepers by rapidly ascending the steps of an elevated railway station, from which point he rode to a down-town terminus, where he was recognized by an acquaintance, who observed nothing unusual in his manner or appearance. Finding himself at the river side, he crossed in a ferry boat to New Jersey, and, it is supposed, took the cars for Newark, about ten miles distant. Here he alighted, and passed a considerable time in roaming about the desolate fields of the neighborhood, in one of which he threw aside his gloves and a number of papers. The accidental discovery of these, three days after, led to various surmises and dark suspicions, and was followed by anxious and elaborate investigations, all of which proved fruitless. He did not, indeed, long remain in this locality. Returning to Newark, he thence took a cross train in the direction of Orange. He was seen in the outskirts of that town soon after Saturday midnight, inquiring for a place of shelter; which, however, he did not find,—probably did not seriously seek. On Sunday morning he called at a house in the suburbs of Orange, asking, at the back door, for a drink of coffee. He was invited to enter, and after warming himself and eating a hearty breakfast, without exciting further remark than that his aspect and dress were not in accord with his application

for charity, he started forth again into the cold and storm. During that day and night he wandered aimlessly to and fro, and was met by no one until Monday noon, when he requested a passing stranger to direct him to a certain hotel. He was never again seen alive. Being fatigued, he presently sat down, it is believed, to rest upon a low log fence, built to protect one side of the road, which runs by a ditch, or gully, some feet in depth. Overcome by exhaustion and exposure to the bitter weather, he either dropped asleep, or fell backward, while yet alive but too weak to extricate himself, into the shallow stream. A violent tempest raged throughout the week, and the swollen current carried a mass of sand and pebbles to the spot, nearly covering the dead man's face. The body lay undisturbed until the morning of January 14th, when it was discovered by a couple of lads who were scouring the fields for wild game. But for this chance it might have remained undetected, and hidden by the heavily gathering debris, until the coming spring.

* * *

The excitement caused by this untoward event can be easily comprehended. The prolonged disappearance of any citizen, under similar circumstances, would awaken the keenest public anxiety, and in the case of one of the most conspicuous figures in New York business circles, the interest became more vivid and universal. No man was better known, and few were personally more popular, in any station. For twenty-five years or more, he had been prominent in the management of all the houses of entertainment to which the family name was attached. The founders of the several enterprises preferred retirement and obscurity in their declining years, and were content to surrender the nominal control to their shrewd and clever heir. In course of time the control became actual and independent. The older Delmonicos would willingly have rested with the success of their down-town "stands," at the Buttery and in Beaver and Chambers Streets; but the speculative son and nephew foresaw the larger possibilities of an up-town centre, and persuaded them, almost against their will, to open, one after another, the houses on Fifth Avenue. By these operations the family fortunes were more than doubled, with great rapidity, and the honors and cares of management were ceded to the youthful partner, with as little reluctance as those of "Hardie's Bank" were transferred, in Charles Reade's "Love Me Little, Love Me Long." In his early manhood, everything touched by young Delmonico,—"Charley," as he was called by high and low, in that democratic community,—turned to prosperity; and all that he opposed drooped and withered. It was he who conceived the idea of creating a new brand of champagne, chiefly for consumption in the Delmonico restaurants,—a vineyard in France being bought and developed for that sole purpose. Such was its success that at one period of inflated currency, when the stock of beverage in question was low, it was sold at twenty-five dollars per bottle in most New York resorts, although the price was more moderate on his own lists. On the other hand, the few attempts to institute branches of the concern in other cities,—mostly inspired by Siro Delmonico, the youngest of the original band of brothers,—were discountenanced by him, and they all came to grief. It was his theory that the business should never extend beyond the superintending grasp of one person; and he

spared no effort to carry this theory into effect. It was his habit to rise regularly at four o'clock and visit the city markets, making the necessary purchases for all the restaurants, at each of which he afterward called, to see the affairs of the day duly inaugurated. His head-quarters were in Fifth Avenue,—first at Fourteenth Street and later at Twenty-fifth Street. Here he breakfasted, and subsequently gave an hour or two to what he called leisure, though it was in reality the adjustment of outside business details. In the early afternoon he overlooked the arrangements for special dinners, balls, etc., to be given under his auspices. Ordinarily he dined at four o'clock, more abstemiously than any other consumer of food within his walls. He sometimes had the fancy to impart to privileged friends what he called the secret of economical living; and it is certain that those who followed his instructions could accomplish the marvellous feat of getting an excellent meal, in the most expensive of modern eating-houses, for less than a dollar. Many a time he was heard to say that his average patrons would not touch the wine he habitually drank on account of its cheapness. It was, in fact, of excellent quality, but of more recent manufacture than the "fashionable" article. If it be thought that this encouragement of light disbursement was contrary to his interests, it must be remembered that the Delmonico establishments were visited by tens of thousands daily, and that his considerate suggestions were confined to a score or two, at the outside. It was not unfrequently said, indeed, that if his liberality had been carefully planned, with a view to profitable consequences, it could not have been better directed. As a matter of truth, he had a peculiar fondness for the society of "wits,"—men of letters, journalists, writers generally, provided that they were clever; and in the natural course of events it was frequently in their power to augment the fame and extend the name of this kindly caterer. He probably gave more than he ever received, for those who could do him the most good were of the class that would not accept many favors; while the shameless consumers of his bounty were incapable of making any return. It did not matter to him. Broken down Bohemians of the order represented in a past generation by those marvels of misapplied intellect, the outcast Clapp and the "unblushing" Evans, were sure of food and welcome wherever [he] held sway, even after their power to please had vanished; and the final sufferings of many who hardly merited his generous solicitude were assuaged by his thoughtful care, which often outlasted their wasted lives, and secured a decent burial for their ashes.

* * *

Charles Delmonico's life was too laborious to be prolonged. His reckless outlay of physical and mental force could not have been sustained for many years, even if no other disturbing influence had acted upon him. But, in addition to early and late hours,—which left him no proper allowance of rest,—and his agglomeration of wearing occupations, he was a victim to the passion which consumed all of his name who were born and reared in America. The elders were prudent, calm, unambitious men. Those who succeeded them were gamblers, to the last drop of their blood. Siro Delmonico was as desperate a faro player as New York ever saw. Charles, though not so wild a trifle with chance, challenged fortune on a larger scale. The pro-

cesses of the gaming-houses were too sluggish for his temper. The field which fascinated him was Wall Street. Untrained in the methods of the Stock Exchange, and trusting unwisely to representations which, it is declared, were not only misleading, but frequently fraudulent, he exposed himself to risks and losses which preyed upon his resources and strained his tired and overwrought brain, until its elastic vigour was irreparably impaired, if not destroyed. From that time his happiness was clouded by visions of wretchedness, poverty, and despair. But it was hoped that delicate treatment and close attention might restore his reason, even if his more sturdy faculties were beyond recovery. There was, apparently, no violence in his derangement, but his restlessness and suspicious anxiety were incessant. The longing to evade scrutiny was what sent him on his fatal course of wandering through the meadows of New Jersey. He leaves a host of pleasant memories behind him, and it is doubtless true that no man in the American metropolis had so large a circle of acquaintance-ship in which so few ungenial shadows could be found. All the associations of his existence were agreeable, and in more ways than one his name was a token of gaiety, warmth, and plenty. His death was accompanied by the direst reversal of all the conditions of his life, and many will regard it as a pathetic feature of the tragedy, that he who dwelt in the midst of plenty and careless profusion,—upon whose career no conception of real hardship or deprivation ever intruded,—should have passed his last hours in such misery as a pauper might pity, and probably perished from the consequences, direct or indirect, of sheer starvation.

A CORRESPONDENT of the *Standard* suggests the advisability of starting a battery of artillery manned entirely by sons of officers. It is a suggestion which in one shape or other has been made rather frequently before, and it is perhaps worth the consideration of the authorities. A battalion or a battery of "gentlemen" could be raised without much difficulty, and, as a sort of *corps d'élite*, strong in numbers and excellent for its physique and smartness, would be a useful body (something like the famous Potsdam Sergeants' Battalion) for other regiments to admire and envy. There would be no difficulty in recruiting for this force, we believe. There are hundreds of young English gentlemen who, in their liking for an active life and their despair of finding any career in England, have wandered off to the uttermost parts of the earth. They are to be found herding sheep in Queensland, cattle-ranching in Texas, or doing the rough work on Western farms in Minnesota and Wyoming. As "gunners" or troopers they would find their duties much easier and quite as pleasant, with the additional advantage that they would not be entirely cut off from congenial society.

HONGKONG Race Meeting is a thing of the past, and although only the results of one day's running have come to hand, these are sufficient to indicate that the great local owner, Mr. Paul, will have things pretty much his own way. Of the first day's programme, which contained eight events, the Hongkong Cæsus managed to gather in half the number, including the Derby and the Ashley Cup. The four races placed to the credit of the colours so frequently seen to the fore both in Shanghai as well as at Wong-nei-cheong, were won by four different

animals and over four different distances. This, taken with the fact that the stable had not all been out, would make it appear that Mr. Paul's string during the two following days of the meeting was sufficiently strong to enable him to pick and choose, and to win the races most to his liking.

It was thought possible that the Hongkong papers which came on Thursday might contain some news from Tonquin, but there is absolutely nothing so far as any movement towards Bac-ninh is concerned. We notice that the Hongkong journals reproduce the silly story published in a Shanghai native paper of the defeat of the French at Bac-ninh with terrible slaughter, one paper publishing news from a correspondent dated several days after the imaginary fight in which he says there is nothing moving. Rain had fallen in some places already in Tonquin, which, it is stated, augurs an early wet season.

A RECENT issue of the *Pall Mall* says that on the occasion of Mr. Gladstone celebrating his seventy-fourth birthday, a stream of congratulatory letters and telegrams were despatched to Hawarden. Among others, the following were received:—"Prince and Princess of Wales, Sandringham.—To the Right Hon. W. E. Gladstone, M.P., Hawarden Castle, Chester.—We offer you our best wishes on the anniversary of your birthday." From Earl Greville, Devonshire Club, London:—"On the part of the Devonshire Club and of myself, accept our hearty congratulations, and we trust you will long be spared to direct the affairs of the nation."

PROFESSOR Monier Williams tells the following story illustrative of the feeling of Egyptians on current politics:—(On reaching Suez I took a sailing boat, manned by five intelligent Egyptians—sturdy, active fellows, who were very communicative. I asked the man at the helm whether he preferred Arabi or the Khedive. He answered, "We want neither the one nor the other; we want bread." I next inquired what he thought of the Mahdi. His reply was, "The Mahdi is the devil." To understand this strong language it is necessary to bear in mind that an intense *odium theologicum* exists between the two opposing religious parties of Mussulmans, and that the Egyptians are mostly Sunnis, while the Mahdi is a figment of the Shina sect. The worst of it is that if the man at the helm were to be asked the same set of questions—say by Mr. Wilfrid Blunt or Sir W. H. Gregory—he would reply in an exactly contrary sense. The "intelligent Egyptian" is apt to show his intelligence in nothing so much as in taking the measure of the foot of his interviewer and treating him accordingly.

THE *Yomi-uri Shimbun* gives the returns of the Uyeno-Takasaki line (now opened as far as Shin-machi) for last month (January) as follows:—

Passengers (43,199).....	15,810.27 yen
Goods.....	8,186.52 yen
Total.....	23,996.79 yen

WE are informed that the Messageries Maritimes steamship *Menzaleh*, with the next French mail, bringing dates from Marseilles to the 20th ult., left Hongkong for this port at six o'clock on Thursday morning.

THE screw sloop *Nisshin Kan* (12), Captain T. Nomura, left here on Thursday for Fusan, Korea.

THE MUNICIPAL REJOINDER.

WE do not believe that the prospects of municipal reform will ever be much improved by writing memorials, memorandums, rejoinders, or any other variety of document. The parties engaged in this wordy controversy may be compared to men who spend their time disputing about the way to cut garments, the material for which they have no means of procuring. It will be time enough to discuss the method of exercising municipal power in Yokohama when the power itself has a recognised existence. At present, the position is simply this: the Japanese local authorities may enact any regulations they please, but they have neither the power to enforce them nor the means of getting them enforced. Until this farcical fashion of government is mended, all the literary and controversial ability in the universe will not bring things one jot nearer a practical solution.

In addition to the profitless waste of busy men's time involved in the preparation of such a document as the Rejoinder recently addressed by the Committee of Land Renters to the Prefect of Kanagawa, there is the still more regrettable fact that the true source of the dilemma seems to be ignored by the writers. The Prefect had declared his opinion that a sound and satisfactory system of municipal government could only be secured "by applying the universally accepted rule that all the inhabitants of a country should be governed by the territorial laws and regulations." To this the Committee reply that it is not within their province to discuss such a subject, and that they had purposely "refrained from making any reference to the question of extraterritorial jurisdiction." If this reply means anything, it means that municipal and extraterritorial jurisdiction are inseparable. The question under discussion had reference to municipal government and to municipal government only. It ought to have been quite plain that in speaking of "territorial regulations," the Prefect referred not to State, but to local, laws. When, therefore, the Committee charge him with making excursions into a domain which belongs solely to the Central Government and the Treaty Powers, they plainly infer a connection between extraterritoriality and municipal government. Yet in the very next sentence, they state that "the treaties, under which foreigners reside within the bounds of the Settlement of Yokohama, make no provision for municipal Government." So then the treaties, while releasing foreign residents from the obligation to observe Japanese "territorial regulations," release them also from the obligation to observe *any* territorial regulations whatsoever. The Committee will not readily endorse such a proposition as that, and yet their own language admits no other interpretation. In fact, while themselves stating the diffi-

culty, they apparently fail to apprehend it. The treaties have been falsely construed as placing foreigners beyond the purview of all Japanese law, whether Imperial or Local. That construction is attested by the evidence of official documents as well as by the practice of many years. Yet the same treaties "make no provision" for the local government of foreigners. Thus the issue is that, under existing conditions, foreigners in Japan cannot be municipally governed at all. That is what the Prefect evidently means when he speaks of the necessity of subjecting all the inhabitants of a country to its territorial regulations. It may be a pretty sport to play at sham government, and it may be an instructive occupation to criticise the pastime, but neither process will clean our drains or restrain our malefactors.

The statement that "foreigners cannot claim exemption from, and wilfully obstruct the administration of, laws which are unknown to them," is not more relevant than the argument that precedes it. For it is precisely because foreigners do claim exemption from Japanese laws of every sort, that those laws are unknown to them. Granting that the Prefect thought it worth while to promulgate regulations to men who deny any obligation to obey them, how is he to set about the operation? Out of the seventeen Treaty Powers, two only have endowed their Representatives with authority to make Japanese regulations binding on their nationals. These two might, if they were so minded, take steps to publish and enforce the Kanagawa Municipal Laws, but their fifteen colleagues are not competent to do anything of the sort. It would be a feature worthy of the whole farce if the Prefect were to avail himself of this partial assistance.

Had these things occurred to the Committee, their rejoinder would probably have assumed a more practical shape. Perhaps we should be nearer the truth, however, if we said that the document was not intended to serve any higher purpose than that of guarding the community against the consent implied by silence. Mr. OKI'S Memorandum demanded some sort of reply, and it has elicited one which, whatever its logical value, is happily distinguished from the original memorial by the courtesy and moderation of its language. But under any circumstances it is permissible to wish that the compilation were less vulnerable. When, for example, the Prefect complains that obstructions are sometimes placed in the way of administering the local laws, what is the use of replying that the memorialists are "peaceful and law-abiding citizens" who desire to be "protected against unruly persons"? It does not appear that there was any necessity to vindicate the character of the memorialists. Not their law-abiding disposition was in question, but the law-defying propensities of the unruly persons against whom they invoke the protection

of regulations which can neither be promulgated nor enforced. Again, what good purpose can be served by misconstruing the Prefect's complaint of the insufficient authority exercised by the police? The Prefect did not ask for anything "inconsistent with the laws and customs of foreign countries" when he desired to have transferred to himself, and to other magistrates of Japanese police, the same warrant-issuing power which is vested in every magistrate in Great Britain, but which, in Yokohama, is divided up among seventeen Consuls. These errors of apprehension are to be regretted: assuredly they will not help to unravel the complication.

Turning from incidental considerations to the final purpose of the present Committee, as explained in this Rejoinder, we find it stated thus:—

In closing this paper, the Committee have only to add that the memorial pointed to a method by which the requirements of the inhabitants would be met, but as the petition was not favourably received, it was hoped the election of a permanent Committee, with whom the local authorities could consult, would be the means of meeting to some extent the existing difficulties, and if that Committee should have official recognition in their capacity as representatives of the foreign inhabitants, their counsel and suggestions would be useful in many ways, and be the means of bringing about a good understanding between the Japanese local authorities and the residents: the wants of the foreign community would be better understood and provided for; and many difficulties noticed in the memorandum would disappear, while the government of the Settlement would be more efficient than is possible under the existing system.

It is here explained, clearly enough, that the appointment of the Committee is a substitute for the method proposed in the original memorial. We are nevertheless told elsewhere what that method is, namely, "a properly constituted Municipal Government, with authority to administer rules and regulations made under the sanction of the Imperial Government and the Representatives of the Foreign Powers." One is at a loss to understand what the Foreign Representatives have to do with the matter, since, as the Rejoinder itself declares, "the treaties, under which foreigners reside within the bounds of the Settlement of Yokohama, make no provision for Municipal Government." If the treaties are silent on this subject, obviously they cannot be interpreted as depriving Japanese of municipal authority, and equally obviously they do not confer on the Foreign Representatives any right to meddle with Municipal Government. This exception made, we cordially endorse the statement that a properly constituted Municipal Government is "the only effective" remedy for existing difficulties. The first essential, we again repeat, is a recognized source of authority. It is ridiculous to pretend that any authority can be practically exercised so long as foreigners claim exemption from Japanese local regulations and at the same time admit that they have no power to govern themselves. This very Rejoinder, now lying before us, says:—"It is beyond doubt that the Government could delegate municipal power by the grant of a charter." Plainly the Government cannot grant a power which it does not

possess. Yet if its present delegates, the local authorities of Kanagawa, were to issue, to-morrow, a code of municipal regulations for the control of the foreign settlement, would any resident obey them, or could any Consul attempt to enforce them? What we have, therefore, is an authority theoretically acknowledged but practically defied, and until this anomaly is removed, the case is hopeless. How, then, can the Committee of Land Renters help to remove it? Certainly not by asking for "official recognition." That they cannot possibly obtain, their election having been purely a private affair. But if they go properly to work, they can easily procure access to the local authorities and receive from them information as to the system of municipal government actually existing. The arbitrary obstacles which ill-advised Foreign Representatives have placed in the way of the maintenance of peace and good order cannot be endured for ever. If the Japanese are not to be allowed to promulgate or enforce their own regulations, and if the Foreign Representatives are not competent to promulgate them, or the foreign Consuls to enforce them, then it behoves the community to act for itself. We are persuaded that if the Committee ceases to invest itself with an official character which cannot belong to it, the Prefect will readily confer with it and receive its suggestions. In this way there may easily be prepared, if indeed there does not already exist, a code of municipal regulations suitable to the requirements of the Settlement. The Local Authorities and the foreign residents, thus mutually assured of each others willingness to coöperate, might then memorialize the Central Government to confer on Yokohama a municipal charter. In this charter no distinction should be made between the foreign and Japanese Settlements. Any attempt to govern the two apart must be inefficient. Due provision should, however, be made for the participation of foreigners in the municipality, on condition that they contribute, equally with their Japanese fellow residents, towards the expenses of local government. It is absolutely certain that the Japanese will not surrender their authority, and it is not less certain that foreigners will never willingly submit to Japanese control unless they have a share in its exercise. But whatever may be the disposition of foreigners and natives, neither side can solve the problem of governing without the power to govern. That is the grotesque dilemma which results from the pretence that no regulations, whether imperial or local, emanating from a Japanese source, have any binding effect upon foreigners. The first thing to be done is to remove that dilemma, and to admit frankly that when we ask the Japanese to govern us municipally, we do not, at the same time, deny their right to make and enforce municipal laws. Probably it will then be found that they are quite as willing to profit by our assistance as we are anxious to have a voice in the management of our own affairs.

HOME AND FOREIGN LOANS.

A CORRESPONDENT, "Protectionist," advocates the cause of home, *versus* foreign, loans for the construction of railways, and in doing so advances some propositions which, as they probably represent the ideas entertained by many Japanese financiers, will repay consideration.

Underlying the whole of "Protectionist's" argument, and, for the most part, vitiating it, is an apparent confusion between money and capital. "I am at a loss to see," he says, "how capital applied to the purchase of railway bonds will become 'fixed' in any such way as to prevent its availability as a circulating medium." Undoubtedly it does not become 'fixed' in that sense. The money, as money, remains, and continues to perform its functions as a medium of exchange with unaltered efficiency. But as capital available for productive purposes, it has virtually disappeared, until the slow process of accumulation converts it once more into its original form. Few questions have been subjected to closer scrutiny by political economists than the employment of capital in different enterprises under varying circumstances, and we do not know that any writer has stated the problem and its solution more clearly or in a fashion more apposite to our present purpose, than JOHN STUART MILL. Speaking generally of the sinking of capital for productive purposes, he says:—"In a country where capital accumulates slowly, the introduction of machinery, permanent improvements of land, and the like, might be for the time extremely injurious; since the capital so employed might be taken from the wages fund, the subsistence of the people and the employment of labour curtailed, and the gross annual produce of the country actually diminished. In a country of great annual savings and low profits, no such effects need be apprehended. Since even the emigration of capital, or its unproductive expenditure, or its absolute waste, do not in such a country, if confined within any moderate bounds, at all diminish the aggregate amount of the wages fund—still less can the mere conversion of a like sum into fixed capital, which continues to be productive, have that effect. It merely draws off at one orifice what was already flowing out at another; or if not, the greater vacant space left in the reservoir does but cause a greater quantity to flow in. Accordingly, in spite of the mischievous derangements of the money market which have been occasioned by the sinking of great sums in railways, I was never able to agree with those who apprehended mischief from this source to the productive resources of the country. Not on the absurd ground (which to any one acquainted with the elements of the subject needs no confutation) that railway expenditure is a mere transfer of capital from hand to hand, by which nothing is lost or destroyed. This is true of what is spent

in the purchase of the land; a portion, too of what is paid to parliamentary agents, counsel, engineers, and surveyors, is saved by those who receive it and becomes capital again: but what is laid out in the *bonâ fide* construction of the railway itself is lost and gone. When once expended, it is incapable of ever being paid in wages or applied to the maintenance of labourers again; as a matter of account, the result is that so much food and clothing and tools have been consumed and the country has got a railway instead. But what I would urge is, that sums so applied are mostly a mere appropriation of the annual overflowing which would otherwise have gone abroad, or been thrown away unprofitably, leaving neither a railway nor any other tangible result."

Nothing could be clearer than the distinction MILL here draws between the fixing of domestic capital in rich and poor countries. In the former, he apprehends no mischief from such a proceeding, "if confined within any moderate bounds;" in the latter, he thinks that it may be for the time extremely injurious." Elsewhere he is even more explicit when he says that, "in poor countries the legislator should favour to the utmost the accumulation of capital at home, and its introduction from abroad." Our correspondent quietly disposes of this by observing:—"I need not point out that, in speaking of the introduction of capital from abroad, MILL does not refer to its introduction in the shape of a loan." But that is precisely what MILL does refer to. "In the poorer countries of Europe," he says, "the rage for railway construction might have had worse consequences than in England, were it not that in those countries such enterprises are in a great measure carried on by foreign capital. The railway operations of the various nations of the world may be looked upon as a sort of competition for the overflowing capital of the countries where profit is low and capital abundant, as England and Holland. The English railway speculations are a struggle to keep our annual increase of capital at home; those of foreign countries are an effort to obtain it." We are at a loss to see how a country can obtain foreign capital for purposes of railway construction in any form except that of a loan. If "Protectionist" still entertains any doubt upon this subject, the following quotations from the same author will probably suffice to convince him:—"If the capital taken in loans is abstracted from funds either engaged in production, or destined to be employed in it, their diversion from that purpose is equivalent to taking the amount from the wages of the labouring classes. The system of public loans, in such circumstances, may be pronounced the very worst which, in the present state of civilization, is still included in the catalogue of financial expedients. There are, however, other circumstances

in which loans are not chargeable with these pernicious consequences: namely, first, when what is borrowed is foreign capital, the overflowings of the general accumulation of the world; or, etc." MILL is here speaking of loans for unproductive purposes, but even in that case he still prefers the introduction of foreign capital in the shape of a loan to the abstraction of domestic capital from the labour fund.

We have recourse thus largely to quotations because the question at issue is one of first principles, and we cannot answer our correspondent better than by referring him to the dicta of acknowledged authorities. All through his argument there is observable the same tendency to confuse money and capital. He says that if the money for the railway be borrowed in Europe, it comes here, stays awhile, and ultimately goes back with many additional millions: whereas, if it be obtained by a domestic loan, "we have, when the work is completed, a new railway in Japan and also the twenty millions required to construct it." This statement is most misleading. To be accurate we should say, that in either case Japan has the railway, but that while in the case of the domestic loan the money expended in the construction of the line is withdrawn from the available capital of the country, where, by hypothesis, it is wanted, and where its absence may be seriously injurious; in the case of the foreign loan, no demand whatsoever is made upon the country's productive capital; the railway is constructed with funds which are obtained abroad, and which, if the transaction is properly managed, are ultimately repaid out of the money earned by the line. A great writer has well said that "it is the intervention of money which obscures, to an unpractised apprehension, the true character of many of the phenomena of political economy. Almost all expenditure being carried on by means of money, the money comes to be looked on as the main feature in the transaction; and since that does not perish, but only changes hands, people think the wealth only has been merely handed over—which is simply confounding capital with money." As a matter of account the comparative results of a domestic and foreign loan in the instance under consideration may be set forth thus:—in the case of a domestic loan, Japan gets a railway, minus the industries that might have been developed and the general prosperity that might have been conferred by the funds sunk in its construction had they remained a part of the circulating capital of the country: in the case of a foreign loan, she gets a railway, plus the above industries and increment of prosperity, but minus the obligation to devote a part, or the whole, of the earnings of the line during a certain number of years to the repayment of the sum expended in constructing it.

"Protectionist" lays much stress on the hypothesis that the money obtained by a

domestic loan is "lying idle." He sums up a specious argument, founded on that hypothesis, by asking "what would be said of a merchant who, having funds to spare, and intending to set about a serious piece of work, should borrow money at any rate whatever, and hold his own capital in thriftless stagnation." It is somewhat surprising that a writer whose ideas, whether fundamentally right or wrong, are so clearly conceived and concisely expressed, should thus deliberately beg the whole question. For by his hypothesis he places Japan in the category of countries with overflowing capital, and that is precisely the description that does not apply to her. She is essentially a poor country, where accumulations are slow and rates of interest high, and she has urgent need of every cent of capital she possesses to develop her natural resources. It is not a question of a merchant who, while "holding his own capital in thriftless stagnation," borrows money abroad. It is a question of a merchant who, with very much less capital than he requires to meet the immediate calls of his business, sinks a considerable portion of that capital in an enterprise not immediately productive, and the proceeds of which will not for years be available in the form of capital. We entirely agree with our correspondent that the *Government* and the *country* of Japan cannot be considered as distinct entities. Nay, we go a step further. For while admitting that every improvement, even if for the time it diminishes the circulating capital and consequently the amount of gross produce raised, ultimately makes room for a larger amount of both, than could possibly have existed otherwise, we hold with MILL that "if the sinking of capital in machinery and useful works proceeds at such a pace as to impair materially the funds for the maintenance of labour, it is incumbent on legislators to take measures for moderating its rapidity." The responsibilities of the Japanese Government in this direction are particularly heavy just at present. If there is any capital "lying idle" in the country, it is not because enterprise is fully furnished with resources, but because the defective state of the currency opposes abnormal obstacles to the flow of capital into the ordinary channels of industry and commerce. We omit the fact that the railway scrip has been chiefly taken up by the banks. That wholly improper application of banking funds, due mainly to the false principles on which the national banks were established, is a mere incident of the situation. The general condition is, that currency appreciation, by temporarily paralyzing industrial and commercial enterprise, has checked the demand for capital. The country is in the position, not of a merchant who seeks employment for the accumulations of an active and profitable business, but of a merchant who, with his mills stopped and his factories closed, anxiously awaits the moment when it will be

possible for him to re-devote his scanty capital to lucrative operations. How much the advent of that moment must be postponed by diminishing his capital in the interim, it is surely unnecessary to point out. All experience shows that, at a time of currency appreciation, fixed securities offer exceptional temptations to investors. The Government, by placing such securities on the market at this juncture, and thus absorbing the capital which currency defects keep temporarily idle, is directly helping to perpetuate the commercial and industrial paralysis from which the country is suffering so severely.

We have gone into this subject at some length because its importance seemed to warrant a careful examination. There may be political reasons which influence Japan's choice, but we cannot discover any financial sagacity in the course she has adopted.

WENDELL PHILLIPS.

WENDELL PHILLIPS, the distinguished American orator, died in the fulness of years, at a time when he was preparing to surrender the activities of busy political life, and seek, in domestic retirement, the repose which he had denied himself throughout a long and turbulent public career. It may be doubted, however, whether his energetic and impetuous spirit would ever have reconciled itself to a self imposed tranquillity. Rest could come to him only in the grave. His best work,—that to which he devoted all his might and skill, ended with the abolition of human slavery in the United States; and his subsequent labours, in various liberal causes, failed to command the attention or exercise the influence upon which he had confidently calculated. Habituated to controversy on the broadest scale, and accustomed to wield the massive weapons which won him the leadership of a powerful wing of the anti-slavery army, he afterwards appeared at a disadvantage in the narrower arena of local disputation, and as the advocate or assailant of minor party interests. But, for a period of at least ten years before the outbreak of the war for secession, he was the most redoubtable champion that the abolitionists produced. His power over the populace was almost without limit, and if the sway which he personally exerted could have been extended by printed reproductions of his words, he might at times have led half the nation captive by his eloquence. All his great effects, however, were dependent upon the magnetism of his presence. The irresistible and consuming fire of his speech faded into a dull glow, at the best, when subjected to the critical tests of calm perusal. The secret of his mastery over an audience was not easy to penetrate. Whatever art there was in his oratory, was of the kind which adroitly conceals itself. In his youth, the idol and model of public speakers was WEBSTER, who cultivated the majestic, sonorous, and elevated style of the revolutionary fathers. Although elaborate and studied to the verge of artificiality, its loftiness, dignity, and grace were as far above rivalry as they were beyond description. If PHILLIPS'S intention had been to make himself the opposite of WEBSTER in every rhetorical device, he would have reached no other result than that which he did in

truth attain. His dignity of bearing was perhaps equal to the great senator's, but it was relieved by an equability and an ease peculiarly his own. The calmness and quietude of his delivery were unvarying. His voice seemed never to be raised above an ordinary conversational pitch. When intensely moved, his tones were still more subdued. He could raise a whirl-wind with a whisper. How he accomplished his remarkable successes, few listeners could tell. It was impossible to analyze the process while the spell was working. Doubtless the fervor of his own feeling was vividly imparted, by some mysterious electricity, to all within hearing. He sought no aid from gesticulation. An occasional sweep of the arm, or a slighter wave of the hand, were his only illustrative or emphasizing actions. His countenance was luminously expressive, and the large, mobile features added greatly to the force of each pointed utterance. On one occasion, when he was denouncing the wealthy pro-slavery class in Boston, just after the execution of JOHN BROWN, a democratic leader (himself a brilliant speaker) who stood on the outskirts of the congregation, remarked excitedly, "I can't hear what he says, but if he *looks* like that again he'll have Beacon Street all afire before morning." Beacon Street was the centre of the conservative "first families," and there is little doubt that PHILLIPS could have turned loose a mob that would have made sad work with its stately mansions. But he was never an agitator in an ignoble sense. He would have overthrown Government and Constitution to secure the emancipation of the slaves, but he would have injured no living creature in a less exalted cause. Nothing could ever induce him to resent attacks upon himself, though his life was often threatened; and, while he hated the appearance of shrinking from personal danger, he more than once did violence to his instincts by avoiding it rather than give cause for a riotous outbreak. His courage was unimpeachable, and it cost him many an effort to take the prudent path which the highest sense of honor often required him to follow. The impulses which guided him may be indicated by the course he pursued with reference to his public appearances at critical times. When announced to speak, no persuasion, no warning, no certainty of peril even, could keep him from his engagement; but having redeemed his pledge and fulfilled the appointed duty, he would not give further incitement to strife by forcing his way homeward through the opposition crowds, and thus precipitating a conflict which could have served none of the purposes he had in view. The war he longed for was that mighty war which speedily ensued. He had grown to believe that by no other means could the crime of slavery be atoned for. And when the contest came, his voice was potent in stimulating and inspiring the North to tumultuous action. When peace was restored, there was nothing for him to turn his hand to. In the work of pacification and reconstruction he lent no aid. The bitterness of his hatred for the South was undying. He could not forgive. He was, in fact, indifferent to everything but the pursuit and overthrow of giant evils. The worst of all evils being extirpated, his occupation was well nigh gone. Now and then he would lead a dashing charge against the iniquity of Indian persecutions in the United States, but for the most part he devoted himself to subjects which gave no opportunity for the display of his

brilliant qualities. Occasionally forsaking politics, he delighted intellectual audiences with lectures upon literary and historical topics; and in these the exquisite charm of his eloquence was revived. "Eloquence" we call it, although the word seems scarcely suited to a form of speech so simple and unadorned. The heat and ardor of his earlier improvised addresses could not be rekindled, nor were they to be expected. The glorious period of his career was when he rang out the cries of wrath and retribution for a nation's sin; and his lasting fame will rest upon his record as the foremost of all the band of splendid orators called forth to arraign, and to aid in vanquishing, American slavery.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

DOMESTIC VERSUS FOREIGN LOANS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I ask the privilege of submitting a few questions suggested by the article in your issue of the 6th instant, on the subject of the new railway loan; and in doing so, I will endeavour to avoid financial technicalities,—in which I am wholly unskilled,—and to convey my meaning by such simple methods as would be natural to an ordinary Japanese or other inquirer upon topics new to this country, but of indisputable national importance.

It is obvious that your judgment is opposed to the issue of the railway bonds in Japan; and that you would have advised the Government to borrow the money required in some foreign market. Your reasons for this preference are, I believe, as follows:—

I.—You object to the investment of large sums in Government securities, on the ground that the money thus invested will become a "fixed capital," and will not be available for free circulation among the people.

II.—You are convinced that the Government makes a needless sacrifice in not borrowing from abroad, on account of the lower cost of money in Europe.

As regards the first of these propositions, I am at a loss to see how capital applied to the purchase of railway bonds will become "fixed" in any such way as to prevent its availability as a circulating medium. It cannot be supposed that the Government intends to keep it hoarded for any length of time. On the contrary, the bonds are to be issued in instalments, according to the need of funds for beginning the works. The money is to be expended without delay, in the construction of the road. It will go into instant circulation, on an extensive scale. On the other hand, if money holders have cash lying idle, and keep it lying idle, for an indefinite purpose, it is certainly more unprofitably "fixed," than if applied to the distributing process of railway building. You do not assert that any positive prospect is offered, at a specified time, for using the funds now "lying idle" to superior advantage. You simply point to the probability of "an industrial and commercial revival . . . so soon as prices have completely adjusted themselves to the altered value of *Kinsatsu*." But can you, or the money holders, or the Government, tell when that time is to be? We may hope and believe it will not be long delayed, but while the outlook is so uncertain, are investors to be blamed for confiding their money to an enterprise which offers immediate opportunities? Is the Government fairly open to criticism for seeking to utilize the money now "lying idle;" to remove it from its hoarding places; and to send it

through infinite channels of circulation among the populace? *

In support of your remonstrance, you quote a passage from the eminent economist John Stuart Mill. I have read that extract carefully, and I am bound to say that it seems to me susceptible of a different interpretation from that which you put upon it. Mill says that "in poor countries, the capital of the country requires the legislator's sedulous care; he is bound to be most careful of encroaching upon it, and should favour to the utmost its accumulation at home, and its introduction from abroad." Conceding the propriety of this argument, we may ask if the negotiation of a foreign loan can really be regarded as an avoidance of encroachment upon a country's capital, or as promoting "its accumulation at home." I need not point out that, in speaking of "its introduction from abroad," Mill does not refer to its introduction in the shape of a loan. He evidently speaks of capital which is to remain, and to form a permanent part of the nation's wealth. A foreign loan brings a certain sum into the country, but in course of time it must all be returned, together with the interest. Is that to be called "accumulation at home?" Let us take this very case of Japan's railway loan. Twenty millions of *yen* it is estimated, will be called for. The amount being subscribed in Japan, it will be repaid in Japan, principal and interest. So far as I can see, this is being "careful of encroaching" upon the capital possessed by a country, and does "favour its accumulation at home." But suppose the money to be borrowed in Europe. It will come here, and stay a while; but it will all go back, and with it many additional millions. If the enterprise is carried through by a domestic loan, we have, when the work is completed, a new railway in Japan and also the twenty millions required to construct it. If the interest on the bonds is high (though I may be permitted to doubt if Japan could obtain an European loan on much better terms), it is paid in Japan, and, for the most part, remains here. If this be not "accumulation at home," I fail to understand what is. In the case of a foreign loan, we have the railroad, it is true, but we keep none of the money, and we also pay away from sixty to eighty thousand dollars a year for every million borrowed. That I call "encroachment" upon a country's capital, and it passes my power to conceive why the foreign operation can be pronounced the more desirable, or the more beneficial to a nation, provided that the funds required exist and can be supplied at home.

Turning to your second proposition, I observe that you enforce it by saying that "when this country undertakes to build railways with its own funds, it is behaving like a merchant who deliberately elects to borrow capital for his business at a rate of interest twice as high as necessary." I cannot discover the just application of this figure. The case is not (as I view it) of a merchant who elects to borrow capital at a high rate, or at any rate; but of one who need not borrow at all, having the money he wants already deposited in his bank. He is engaged in steady business, and he contemplates an important undertaking, the cost of which can be supplied from his own resources. You say to him, however, "Do not spend the money you have 'lying idle,' for I am firmly persuaded you will need it by and bye, for different purposes. Better borrow an extra amount from a friend,—(never mind if your previous experience in borrowing from friends has been bitter and cruel),—pay him a reasonable interest, and let your own money go on 'lying idle,' until the time arrives for employing it in the other way." That, I conceive, is the true situation. For it will never do to separate the *Government* and the *country* of

* I may be reminded that your objections were mainly directed to investment by Japanese banks. But I shall be pardoned for not entering upon that branch of the discussion, as I am occupied only with the question of the relative expediency of a domestic and a foreign loan. Moreover, I am exempted from doing so by your statement that the objections "apply generally, and with not less force, to the case of all Japanese money."

Japan and consider them as distinct entities. In a business of this kind, the Government is the country, and it is impossible to dissociate them, even in rhetorical illustration, further than perhaps to represent the Government as the agent of the hypothetical merchant. And I think I am justified in asking what would be said of a merchant who, having funds to spare, and, intending to set about a serious piece of work, should borrow money at any rate whatever, and hold his own capital in thriftless stagnation.

With respect to the advantage supposed to be derivable from the cheapness of money in Europe, I submit that we have no evidence sufficient to warrant positive assertions on that head. You do not, yourself, claim that even in England a loan could be obtained at less than six per cent. interest,—and many, I fear will doubt the possibility of securing it at so low a figure. The interest offered by this Government is only one per cent. higher,—not “twice as high,” as might be inferred from your language, as quoted above. It may be left to financiers to decide whether the small margin of one per cent. would or would not be swallowed up in the process of procuring a loan from Europe. The suppositious “loss which may accrue by borrowing in a depreciated currency” also belongs to the region of speculative discussion; but even if it could be set forth in definite terms, it would hardly affect my view of the position of affairs, since I hold that so long as the money disbursed is paid at home,—paid by the Government to the country; by the servants of the community to the community,—there can be no real sacrifice. If Japan pays a little too much, in the course of the transaction,—(which I am not disposed to admit)—she pays it to herself, not to anybody else. Her stewards use her resources in the manner which they consider most provident, and nobody dreams of accusing them of dishonesty or indifference to her truest welfare. As she is a “poor country,” they deem it their duty to keep what money she has for her own uses,—and not to waste a fraction of it in interest payable to foreign creditors. They abstain from encroaching upon the wealth of the nation, and they accumulate its increase at home.

It is, I trust, unnecessary to say that these remarks are offered in no spirit of frivolous criticism, but with a sincere desire that all possible light may be thrown upon a question now under anxious discussion by the political and financial community. There can be little doubt that the weight of public opinion in Japan, strongly favors the course adopted by the Government. When, therefore, a friendly observer advocates the opposite plan, it will not be considered intrusive to state, as above, some of the grounds upon which the judgment of the majority of Japanese is founded, and respectfully to ask for a fuller enunciation of the principles which sustain your own adverse opinion.

I am, sir, yours &c.,

PROTECTIONIST.

Tokio, February 21st, 1884.

RIGHTS AND PRIVILEGES.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—Mr. A. J. Wilkin and others of his way of thinking have, at one time and another, a great deal to say about the “privileges” enjoyed by Japanese in Western countries, as contrasted with the denial of similar privileges to foreigners in Japan. According to the notions of his class, all sorts of beneficent favours are bounteously lavished upon the natives of this empire who happen to dwell in Europe or America, while no corresponding consideration of any kind is accorded to natives of the West who reside here. When asked how it happens that foreigners are exempt from numerous obligations to which the Japanese themselves are subject, the gentlemen referred to will answer that

“these are our rights.” Our freedom from contribution to the internal revenue, for example; our power to prevent the Japanese from living, or holding property, in certain parts of their own country; our non-liability to police supervision; our enjoyment of the use of roads and bridges, without paying toll;—these and a score of other advantages are simply our absolute and indisputable “rights.” The ability of a Japanese to travel all over Europe,—that is not a right, at all. Oh dear, no! that is a “privilege,” or, as it seems to be understood here, a kindly, generous, fraternal boon, the enjoyment of which ought to instantly convince the people of this country of their own moral, social, and political inferiority. Nothing is more curious than to observe how ineradicably the ideas are fixed, in a particular grade of foreign minds, that all the benefits from which they profit belong to them by a title little less than divine, and that all conventional usages followed by Japanese in other lands, in common with the world at large, are special marks of grace, for which no acknowledgment can be too fervent or humble. Notwithstanding that we are all aware of the questionable origin of these so-called “rights,” that most of them were secured by treaties extorted from the ignorance and timidity of a Government which knew little of what it was surrendering; and that not a few of them are based upon no shadow of authority, either in the treaties or anywhere else;—notwithstanding all this, the self-complacent sophists persistently say,—“Do not meddle with our ‘rights;’” they are as sacred as the decrees of Heaven. Occupy yourselves, rather, in giving thanks on your knees for the rare and inestimable ‘privileges’ which Western nations allow you, when you visit them; and having thus brought yourselves to a proper understanding of what is due us, see to it that we, aliens in Japan, are relieved from all restrictions upon our movements, inclinations, projects, hopes, and needs. Then, perhaps, you may “aspire to be considered enlightened and civilized.”

My purpose in addressing you, Mr. Editor, is to inquire,—of Mr. Wilkin or any of his school that will be kind enough to inform me,—what are the marvellous favours and blessings into the enjoyment of which a Japanese enters when he sets foot on Western soil? What “civilized and enlightened” indulgences are conferred upon him, which a foreigner does not possess in Japan? He cannot start a newspaper without leave or license, for the purpose of abusing the country in which he sojourns, and vilifying its rulers,—that I am sure of. He cannot make his private dwelling a sanctuary for real or alleged malefactors, and defy the scrutiny of the local magistrates. He cannot say (supposing him to be in England) that no Englishman shall live next door to him, or rent a floor in the house where he himself is established. He cannot make a promissory note, or draw a cheque, without affixing a Government stamp thereto. He cannot violate a single law of the land without receiving the punishment properly due to a felon. Yet each and all of these things, and many more of a like nature, may be done by any European who lives in Japan. They are his “rights,” if you please. And he possesses another, of infinitely greater range and scope, the equivalent of which no alien in a Western State has ever obtained, or dreamed of obtaining. The time has never been, and probably never will be, when England, France, Germany, or even Portugal or Greece, would consent to waive their judicial authority in certain districts of their territory, and turn it over to consuls from outside Governments. The man who should barely hint at the justice or the practicability of such a scheme, would be speedily fitted with a straight waistcoat. In the smallest and meanest of European Kingdoms or American Republics, the mere suggestion would be scouted as an indecency. Yet the class of foreigners to whom I allude think it an evidence of sagacity, and credit themselves with statesmanship, when they advocate

the indefinite extension of the system, on an enlarged scale, in this empire of Japan.

Reflecting upon these facts, I submit that a little more modesty in the assertion of the “rights” we possess, and a little less vain-glory in proclaiming the “privileges” (meaning liberal favours) we confer, might not be unbecoming on the part of our forward representatives of Western “enlightenment” and “civilization.”

I am, Sir, yours &c.,

EQUITY.

Tokio, February 23rd, 1884.

COALS AGAIN.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—The subject introduced by your correspondent, “M.,” is undoubtedly important to all residents in Tsukiji. I wish he had been willing to give the names of the delinquent dealers, as by that means purchasers would be put on their guard. There is, however, another branch of the subject, which has not yet been touched upon. A well known Tokiyo merchant, whose transactions with foreigners are very extensive, and whose reputation is, I believe, above suspicion, is in the habit of delivering coals at the houses of his customers, charging two *yen* per ton for carriage from Yokohama. This makes the cost of American coal, thirteen dollars plus two *yen* per ton;—a cheaper rate than if it is ordered direct from Yokohama. In the early part of the winter, the coal supplied in this manner was of excellent quality, but of late it has proved very inferior, and complaints have been made by many purchasers. The explanation, suggested rather than plainly given, is that the wholesale importers no longer send the best quality to the Tokiyo agent, finding it convenient to pass off a second rate article through his hands. If it be really the case that the sellers in Yokohama keep their finest coals for those who buy from them at first hand, it would be well that the public should be informed of that fact. Persons who have dealt with the Tokiyo agent have done so more for the sake of convenience, than on account of the somewhat cheaper price; but they would naturally prefer to take a little more trouble and pay a little more money, than to be bothered by bad fuel. As this has come to be regarded as rather a common grievance, I think the Yokohama importers would find it worth their while to let it be clearly understood whether there is, or is not, any difference between the coals sold by them directly to private purchasers, and those sent to the Tokiyo agent,—whose name I do not mention simply because it is so well known to the community that no misunderstanding is possible.

Yours &c.,

A.Q.

Tokio, February 23rd, 1884.

AFFAIRS IN TONQUIN.

The following is the interesting letter has been kindly placed at our disposal. A translation is appended:—

Haiphong, 12 Janvier, 1884.

Ne m'en veuillez pas, mon cher ami, de ne pas vous avoir donné plus tôt de nos nouvelles: mais vous aurez été pris, combien, une fois arrivés ici, nous avons été pris, captivés par ce que nous avons vu se passer autour de nous, et cela sera mon excuse.

N'attendez pas de moi le récit d'événements que vous devez connaître aussi bien, sinon peut-être mieux que nous, qui, à part ce que nous voyons nous-mêmes, sommes très probablement moins renseignés qu'on ne l'est en Europe, voire au Japon. Les journaux vous auront appris tout cela. Je veux seulement vous faire part de quelques impressions personnelles, vous donner quelques détails inédits, qui vous intéresseront peut-être.

Je commencerai par vous dire que bien que menacés tous les soirs, et cela à peu près depuis que nous sommes ici, de nous réveiller le lendemain sans tête, ou grillés comme autant de St. Laurent, nous ne nous en portons pas moins à merveille. Nous jouissons depuis trois mois de la température

la plus agréable qu'on puisse désirer, le thermomètre se maintenant entre 13° et 18° centigrades. Les jardins sont remplis de fleurs : depuis le 1^{er} Octobre, nous avons vu pousser les uns après les autres, et comme par enchantement, tous les légumes d'Europe, sans exception, et sans préjudice des fruits naturels du pays, oranges, citrons, bananes, papayes, corambolles etc. Les enfants sucent à qui mieux mieux la canne à sucre, ne craignant pas d'ailleurs de mâcher en même temps le bétel auquel ils s'habituent dès le plus bas âge.

Que vous dirai-je d'Haiphong, notre résidence jusqu'à nouvel ordre ? Comme Vénus, elle sort de l'onde, mais elle est loin de ressembler à la déesse. Assise sur la rive droite du Kwa-ram, et en même temps à cheval sur un petit bras du Fleuve Rouge, le Santan-Back, qui changeant plusieurs fois de nom sur son parcours, est la route suivie pour se rendre à Hanoi, elle est peut-être appelée à recevoir un jour, des mains d'un nouveau Paris qui s'appellera l'avenir, la pomme de beauté, de préférence à ses orgueilleuses rivales d'aujourd'hui, Hongkong et Saigon. En attendant, ce n'est encore qu'un chaos, un immense amas de matériaux de toute nature, briques, pierres, bois de construction, tonneaux de ciment, fours à chaux, roseaux et feuilles de palmiers pour toitures, (les maisons couvertes en tuiles sont l'exception). Chacun travaille pour soi, sans plan préconçu, sans tenir le moindre compte de ce qui sera forcément plus tard les quais, les places, les rues, les carrefours. Cependant, de jolies maisonnettes avec jardins commencent à se dessiner çà et là au milieu d'étangs, de fossés et de boulevards, brusquement interrompus par des lagunes. Malheur à qui s'engage la nuit sans lanterne et sans guide à travers ces affreux casse-cou !

Le personnel militaire est peu nombreux à Haiphong, comparativement à l'importance qu'il a actuellement dans le Delta. Il n'est guère que de 400 à 500 hommes. Quant à la population indigène qui fourmille dans la journée, elle quitte la ville vers cinq heures de l'après-midi, pour y revenir dès six heures du matin vaquer à tous les travaux actuellement en cours. Tous ces gens-là demeurent dans les nombreux villages qui entourent Haiphong.

La population Tonkinoise, celle que j'ai vue du moins jusqu'ici, est littéralement affreuse. Il est évident qu'en pétrissant ensemble Chinois et Annamites, on obtient le plus hideux de tous les magots. Singe par la laideur, repoussant par sa saleté, couvert d'une vermine qu'il mâche toute la journée en même temps que son bétel, criant, hurlant, bavant sans cesse une salive sanguinolente, voilà le Tonkinois. Beaucoup d'entre eux sont couverts de léproses on autres plaies d'une nature non équivoque : notez en outre que nous avons ici la plus belle collection de mendiants que l'on puisse imaginer. Ils paraissent tous s'être donné rendez-vous à Haiphong.

Et cependant, cette même population paraît et est en général laborieuse, mais pour ce qui la touche bien entendu. Prenez un indigène à la journée, et comme beaucoup d'Asiatiques, sans compter du reste pas mal d'Indiens, d'Africains, etc., etc., il ne fera que le moins possible. On n'obtient quelque chose de lui qu'en le menaçant du bâton. Je crois toutefois qu'on pourra en tirer meilleur parti dans l'avenir : jusqu'à présent, les Tonkinois considèrent notre occupation comme provisoire, et agissent en conséquence. Ils changeront d'allure lorsque nous serons réellement et définitivement leurs maîtres, en même temps que leurs protecteurs.

Les femmes sont plutôt grandes : elles ont la taille bien prise et le port gracieux des Indiennes ; mais à part cela, elles sont toutes plus laides les unes que les autres. Maigres et osseuses, on les voit courir et sauter comme des chèvres. Aussi méchantes que des harpies, elles se disputent et se battent fréquemment. Ce sont de véritables viragos, qui en revendraient à nos poissardes des halles par la violence de leur geste, et le ton criard de leur voix. En somme, on peut dire d'elles qu'elles sont réellement le sexe fort : elles sont du reste ardentes au travail et infatigables. Si les Siamaises sont comme les Tonkinoises, je conçois parfaitement que dans le pays des éléphants blancs on les enrôle comme des soldats.

Une chose qui m'a frappé dans la coiffure de ces dernières, c'est l'espèce de coiffure à la bordelaise qu'elles se font avec des mouchoirs de cotonnade ou de soie. C'est assez gracieux : mais pourquoi faut-il que cette coiffure ne surmonte que de si peu séduisants visages ?

Nous avons eu une série de nuits magnifiques, resplendissantes d'étoiles : mais les chiens indigènes, qui sont bien les plus hargneux et les plus désagréables de leur espèce, ne cessent de remplir l'air de leurs aboiements, et nous marchant durement le sommeil.

Il me faut bien vous dire aussi quelques mots des *qui-vive* qui agrémentent nos promenades du soir, et ne laissent pas que de tenir quelque peu en souci, surtout si l'on songe que plus d'une fois les senti-

nelles se sont prouvées leur vigilance, en se fusillant réciproquement. Histoire de se faire la main en prévision des Pavillons Noirs.

Quant à ces derniers, ils sont loin d'être un mythe, même tout près de nous. Il est bien certain que le pays est en état complet de révolution ; que les mandarins, d'après les ordres secrets de la Cour de Hué et les encouragements de la Chine, ont excité les populations contre nous ; que des bandes qui attendent une meilleure organisation parcourent la campagne, armées de lances, de piques et de quelques fusils, agitant à l'occasion, comme des forcenés, des étendards de toutes couleurs en signe de défi et de menace, et qu'elles ont infligé à nos partisans Tonkinois quelques rudes leçons. Tous les quatre ou cinq jours de petites excursions sont organisées contre ces bandes. Nos troupes, appuyées par nos canonnières et suivies d'un *goum* de partisans, vont les traquer jusque dans leurs repaires et exercent contre elles, ainsi que contre les villages où elles se sont réfugiées, de dures représailles : mais la tâche est pénible. Les villages, emportés à la baïonnette par nos soldats, sont abandonnés ensuite à nos auxiliaires annamites qui, eux, ne sont pas tendres et se permettent bien quelques excès, sans préjudice de quelques têtes coupées. Mais comment éviter cela ? Tandis que nos troupes rentrent harassées pour chercher un repos bien mérité, les pillards indigènes arrivent triomphalement de leur côté en file indienne, portant suspendus à des bambous quelques quartiers de chèvre ou de porc, quelques sacs pleins de noix d'arack et laissant parfois tomber et rouler sur leur passage quelques têtes des bandits qu'ils ont tués, ou celles d'innocentes victimes. Tristes et hideux trophées, dont on détourne les yeux avec horreur !

Nos officiers affirment que les pirates (ce sont eux que l'on cherche à épouvanter ainsi) attendent bien rarement nos hommes. Montés à deux ou trois sur de légères barques construites en bambou, d'après le modèle du berceau de Moïse, les pillards prennent la fuite dès qu'ils les aperçoivent. On les voit traverser à la hâte d'immenses rizières submergées, et séparés de leurs ennemis par une étendue d'eau de deux ou trois kilomètres, ils regardent stoïquement flamber leurs villages.

Si ces gens-là avaient des armes pour tout de bon, je crois que nous aurions bien de la peine à nous maintenir dans le pays, étant donnée sa configuration, dont je vous envoie un aperçu, et qui en fait, selon moi, un champ de bataille vingt fois plus difficile à enlever que notre fameux Bocage.

L'ennemi n'est pas, d'ailleurs, toujours facile à mettre à la raison. Vous aurez vu que sans la résistance héroïque de deux cents de nos marins et de quelques Annamites auxiliaires, sans l'arrivée imprévue de secours providentiels, nous perdions incontestablement la forteresse d'Haidzuon : les conséquences de cette perte eussent été incalculables. Elle entraînerait forcément la prise d'Haiphong et de tous les approvisionnements accumulés dans cette place, l'isolement presque complet de la citadelle d'Hanoi et rendait peut-être impossible la prise de Sontai. Voici le fait :

Au moment de la concentration à Hanoi des troupes qui devaient tomber sur Sontai ou sur Bak-nin, on avait dégarni toutes les places du bas de la rivière. On n'avait laissé que 150 hommes environ à Haiphong et 200 à Haidzuon, qui, comme je vous l'ai dit, peut couper les communications entre Hanoi et la mer.

Les Chinois de Baknin, sentant l'importance de cette position, avaient résolu de s'en emparer à tout prix. Ils avaient, grâce à la facilité des transports par les rivières, réuni autour d'Haidzuon 2,000 à 2,500 réguliers armés de carabines de précision et de fusils de remparts. L'étendue de la citadelle n'avait permis à la garnison française, vu son petit nombre, que d'en occuper un point ou deux, la citadelle proprement dite et un blokaus séparé d'elle par une assez grande distance, ces deux ouvrages menaçant la ville et menacés par elle. La nuit de l'attaque (je ne me souviens plus exactement de la date, mais vous la trouverez dans les dépêches et les journaux) la ville fut envahie, les assaillants s'étant concertés avec les habitants Annamites et Chinois. Les pagodes et les maisons faisant face à nos retranchements étaient crénelées ou percées de meurtrières : tous les chiens avaient été éloignés ou étroitement muselés : pas un bruit insolite n'était venu prévenir nos soldats de l'approche de l'ennemi. Dès quatre heures du matin, un feu de mousqueterie des plus violents était ouvert sur le blokaus et sur la citadelle. Au jour, les Chinois s'avancèrent pour mettre le feu au mirador et planter leur drapeau à quelques mètres de la porte de la citadelle. Nos soldats résistèrent héroïquement, sachant bien que la fin de leurs munitions, qui commençaient à s'épuiser, serait le signal de leur perte. La canonnière *La Carabine* était venue à leur secours ; mais ne pouvant manœuvrer dans un bras trop étroit, elle se trouvait dominée par une berge d'où elle avait à essuyer, à bout por-

tant, le feu plongeant et oblique d'un ennemi nombreux. Elle n'était qu'à quelques mètres du rivage : son équipage était décimé ; mais les survivants encouragés par le brave commandant Bauer et notre Consul résident d'Haiphong, Mr. Marquis, parvinrent enfin à la dégager, et à lui faire prendre une position plus avantageuse. Dire qu'elle portait au retour la trace de plus de 1800 projectiles, c'est dire la façon dont elle avait été attaquée. Ses plaques en acier, de 8 à 9 millimètres, étaient percées comme des écumoires.

A ce moment, vers deux heures de l'après-midi, le commandant de la citadelle aperçut la fumée d'un vapeur. C'était le *Lynx*, bien armé, avec des canons revolvers dans sa mâture, et qui, en route pour Hanoi, était revenu sur ses pas au bruit de la cannonade. Le combat prit alors, pour les Chinois, le caractère d'une déroute terrible. Le feu du *Lynx* et de la *Carabine* démolissaient les maisons crénelées par les Chinois ; les bombes éclataient dans ces demeures, d'où les fuyards n'échappaient au feu de la mitraille que pour recevoir celui de nos soldats. De la ville d'Haidzuong, il n'est pas resté une pierre. L'église catholique seule est demeurée debout.

Il était temps que le *Lynx* arrivât. Les madriers du blokaus dans lequel se trouvaient 30 de nos soldats étaient littéralement hachés et émiettés par les balles Chinoises. Une heure de plus, et 200 têtes françaises portées au bout des piques seraient venues donner une deuxième édition de l'affaire Rivière et encourager tout le pays à un soulèvement général.

A partir de ce moment, les incursions Chinoises et Annamites sont devenues moins fréquentes, et bien que nous ne puissions pas avoir de sécurité complète avant la prise de Baknin, ni circuler entre Haiphong et Hanoi par la voie la plus prompte (nous sommes encore obligés de faire vingt à vingt-deux heures de navigation à vapeur au lieu de douze) néanmoins les jonques peuvent actuellement monter et descendre le fleuve sans escorte.

Il y a d'ailleurs dans notre situation une amélioration quotidienne : à Hanoi et à Haiphong, on est sans la moindre crainte. J'ai profité de cela pour faire une excursion jusqu'à la première de ces villes. Je suis parti le 1^{er} Janvier avec Mr. C., sur une chaloupe à vapeur lui appartenant. Mr. C. est un ancien résident du Tonkin, et connaît parfaitement le pays. Chauffeur, mécanicien, pilote, matelots, tout notre équipage était Chinois : nous avions en outre un petit serviteur annamite. Par contre, l'équipage de deux jonques, que nous rémarquions, ne se composait que de Tonkinois. La marée monte, les eaux sont hautes et nous favorisent. Le Santan-Back, qui varie beaucoup de largeur dans son parcours, est très sinueux. Après quatre heures de marche, nous arrivons à la hauteur de la montagne de l'Eléphant Blanc, ainsi nommée à cause d'une sorte de ressemblance, comme forme, avec l'animal de ce nom, ressemblance qui lui donnent les rochers qui la terminent et en sont en même temps les points culminants. Quand nous arrivons à la pointe extrême de la montagne, les rives s'abaissent considérablement, et nous ne pouvons que deviner le cours de la rivière, car les berges se confondent avec les rizières. Il nous faut sonder à droite et à gauche pour garder le lit. Je n'ai vu, dans tout le parcours, que cet endroit qui fût aussi bas. En Mars et en Avril, les eaux baissent encore ; mais pendant tous les autres mois, on peut passer impunément dans le lit ou à côté. A partir de ce point, le terrain va s'élevant jusqu'à Hanoi, ou l'eau déborde dans les grandes crues qui sont périodiques, bien qu'actuellement la différence du niveau du fleuve avec la berge soit au moins de 8 à 9 mètres.

Du Santan-Back, nous passons dans le Kwatrail, du Kwatrail dans le Taibin, et du Taibin dans le canal du même nom, lequel nous mène au Fleuve Rouge. En somme, tous ces cours d'eau ne sont que des ramifications, des bras de ce fleuve.

Notre voyage se prolonge jusqu'à six heures du soir sans accident : la nuit tombe, soudaine comme dans tous les pays inter-tropicaux. J'ai eu ce jour-là l'occasion d'admirer ces terres productives, fertiles, comme celles du Nil, par le limon qu'y dépose le fleuve qui les traverse. On peut juger de cette fertilité par le nombre d'habitants que le sol peut nourrir. Vous qui êtes à Yokohama, imaginez la plaine de Kawasaki toujours couverte d'une moisson de riz en herbe ou en épis. Aux mois de Novembre et de Décembre, j'ai assisté à la deuxième récolte ; j'assistais depuis quinze jours au moins aux repiquages nouveaux, dont on voit le vert tendre se perdre au loin, mêlés aux plantations de cannes à sucre, de patates et de mûriers. La culture de ces derniers est bien différente de ce qu'elle est en France et au Japon : mais j'ai vu cependant de très beaux spécimens de soie.

Quant aux villages, ils se dessinent à peu près, comme ceux du Japon, en tâches vert sombre sur le vert joyeux des plaines. Les cocotiers, les bana-

niers, les arekeio, les laitichi et autres arbres sont la principale richesse de leurs vergers. Ils sont tous entourés d'une ceinture de bambous, que domine gracieusement le feuillage des palmiers, et sont si rapprochés les uns des autres que de loin ils paraissent se toucher tous, et cela sur tout le parcours, et dans quelque direction que vos regards se portent. Avec leurs haies de bambous et de cactus, ces villages sont comme autant de petites forteresses, protégées par des fossés extérieurs et intérieurs, avec des relevements en terre qui constituent de véritables remparts. Si vous y pénétrez, vous trouvez la rue, ou les rues coupées par de larges canaux que le bond le plus furieux aurait peine à franchir, et qu'on ne peut traverser que sur un ou deux troncs de palmier qui peuvent être retirés en cas d'attaque. Mêmes précautions autour des maisons. Si l'on ne connaît pas les lieux, il est en quelque sorte impossible de passer sans s'exposer à être surpris par devant, par derrière ou de côté. Quand les sortes de ponts dont je viens de parler ne se composent d'un tronc, les indigènes les franchissent en se servant d'un long bambou sur lequel ils s'appuient.

Comment nos braves soldats, à la prise de Son Tai, ont-ils pu déloger les Pavillons noirs retranchés dans de pareilles positions, c'est pour moi un problème. Et cependant ils ont emporté une ceinture de ces villages avant de s'emparer de la citadelle. Il est vrai qu'au dire de tous les acteurs ou témoins oculaires de l'action, la prise de possession de ces hameaux et de leurs blokaus a été, de beaucoup, la besogne la plus rude et la plus pénible, celle qui nous a coûté le plus de monde. Ne pas oublier d'ailleurs que dès qu'on est obligé de quitter les dignes, on a de l'eau presque partout.

Mais je reviens à mon voyage. Jusqu'à six heures, nous n'avions rencontré que des gens occupés aux travaux habituels de la campagne. A ce moment, une jonque qui descend le courant que nous remontons hèle notre équipage, et avec un grand luxe de vociférations, nous apprend qu'elle vient d'être attaquée par des pirates avec lesquels elle a échangé force coups de fusil. On nous invite donc à nous tenir sur nos gardes. Immédiatement, nous sautons sur nos armes, Mr C. sur son Peabody, moi sur mon Winchester, et nous voilà à l'avant de la première de nos jonques, prêts à défendre nos biens et notre vie. La nuit était venue : néanmoins nous pouvions voir, à un coude de la rivière, le passage à peu près barré, et des hommes criant et gesticulant sur leurs embarcations, dans la pénombre. Nous étions convenus de ne faire usage de nos armes qu'après avoir essuyé le premier coup de feu, et notre mécanicien avait ordre de passer à toute vapeur et quand même. Tout-à-coup la chaloupe s'arrête au beau milieu de nos ennemis, et après un échange de nouvelles vociférations, notre interprète vient nous dire qu'on nous avertit que les pirates sont dans un village à environ huit kilomètres, et qu'on nous conseille ne pas nous aventurer plus loin dans les ténèbres. Les jonques qui nous croisent, et nous ont occasionné cette alerte, sont montées par des Chinois et des Annamites : elles sont chargées de riz venant de Namdin et appartiennent à la maison Roque. Les pirates ont essayé de s'en emparer, mais ils ont essuyé une résistance énergique de la part de leurs équipages, qui nous prient de rester avec eux pour être plus en nombre, en cas d'une nouvelle attaque. La nuit est sombre, les passages de la rivière étroits et tortueux ; nous avons avec nous deux jonques ; ma foi, nous nous décidons à prendre ce parti, et à attendre le jour au milieu de la caravane. En attendant la venue des pirates, que nous supposons plus près de nous qu'on ne nous le dit, nous soupçons confortablement, et j'engage ensuite mon compagnon à se reposer au moins jusqu'à une heure et demie ou deux heures, promettant de faire bonne garde. Ainsi fut fait, et je vis avec plaisir Mr. C. s'endormir aussi paisiblement que s'il eût été à son aise, couché dans son lit, ou à l'abri derrière les canons d'une forteresse. Vers dix heures et demie, deux coups de feu. Informations prises, c'est un Chinois qui n'ayant pu faire partir son arme dans la bagarre, a réussi cette fois à la décharger. A part ce petit incident, nuit calme. A 4 heures, j'éveille Mr. C. et m'étends à mon tour pour tâcher de reposer un peu. Je n'avais pas dormi depuis vingt-trois heures. J'avais recommandé qu'on m'éveillât avant d'arriver au village soi-disant occupé par les pirates ; ce qu'on n'oublia pas. Je saisis ma carabine et m'élançai sur le pont. Bah, silence complet dans le village ; de bandits nulle part. Il y a bien du monde pour nous voir passer, mais surtout des femmes et des enfants, ces derniers nous faisant des signes pour obtenir de nous quelques sapèques. Quant aux hommes, il y a sur leurs visages plus de curiosité qu'autre chose.

Enfin, nous arrivons à la jonction du Canal du Taibin avec le Fleuve Rouge. Il s'y trouve un Blokaus occupé par un poste de dix hommes. Le sous-officier qui le commande vient au devant de nous

dans une embarcation, et nous apprenons de lui que des bandes nombreuses rôdent aux alentours ; que le poste a été attaqué, mais vigoureusement défendu par eux et par un renfort de Tonkinois chrétiens envoyés par une mission voisine. Deux morts sont restés aux mains de nos soldats, qui nous apprennent en outre qu'une jonque chargée de sel a été pillée la veille.

Nous quittons nos compatriotes et entrons dans le Fleuve Rouge qui, dans cet endroit, déploie une splendide nappe d'eau de plus d'un kilomètre de largeur. Les rives du fleuve paraissent de plus en plus fertiles au fur et à mesure que nous le remontons. Un accident de machine nous force à éteindre nos feux : nous perdons là trois ou quatre heures, et n'arrivons à Hanoi qu'à dix heures du soir, après 24 heures de navigation effective, mais 40 heures de route. (Notre retour s'effectua en 21 heures de navigation, plus six heures d'arrêt pour attendre le jour, la lune nous ayant quittés à minuit.)

Après une excellente nuit passée dans la cabine de notre chaloupe, je suis allé visiter ville, et quelques points environnants. J'ai trouvé une cité immense, mais ruinée en grande partie par les derniers efforts des Chinois et des Annamites réunis. Depuis la prise de Sontai, tout est calme, et la confiance tend à renaître. Hanoi a dû être bien riche autrefois, car elle était couverte de pagodes et de maisons de mandarins : aujourd'hui tout cela est occupé par nos soldats.

J'ai visité la forteresse, où une compagnie de marins a dû résister, après la mort du commandant Rivière, à une terrible attaque de nuit des Pavillons Noirs, qui avaient envahi la ville, y avaient mis le feu, et avaient incendié également les magasins des quelques négociants établis en dehors de la concession.

La forteresse est un vaste quadrilatère, de 1000 à 1200 mètres de côté, entouré d'un mur de 8 à 10 mètres de haut, en bonnes briques cuites : ce mur a une épaisseur de 90 centimètres au sommet. La place est munie de demi-lunes, de redans, de 4 blokaus et d'une tour d'observation, au centre. Cette tour est très élevée et contient à son sommet un observatoire et un télégraphe optique.

A part la citadelle, dont les bâtiments sont en partie démantelés et servent de magasins et de casernements à nos troupes, la ville ne renferme aucun monument digne de remarque. Un escalier dont les murs sont en marbre sculpté en relief, dans le style indien, et surmontés à droite et à gauche par des dragons, est la seule chose digne d'attention qui me soit tombée sous les yeux.

La ville Chinoise est divisée en rues assez bien pavées, qui se croisent à angle droit. Chacune de ces rues paraît avoir un commerce spécial. Le jour de mon arrivée était jour de marché : j'ai vu une assez grande quantité de soies jaunes, de toute espèce de guindrages, pliées en carrés, assez grossières, fortement gommées et que l'on m'a dit être d'un dévidage assez difficile. Une maison française a fait venir un petit appareil de dévidage pour en tirer meilleur parti : il est, dans tous les cas, à présumer que cette industrie fera promptement des progrès, une fois que nos compatriotes, qui commencent enfin à aller s'établir un peu au loin, auront formé un bon noyau de colonie.

Pendant notre séjour à Hanoi, il y a eu une petite affaire à Batan, village de briquetiers, dont la population, très turbulente, a été sévèrement mise à la raison. Une centaine de têtes sont tombées : il faut espérer que la leçon servira. Tout est parfaitement calme actuellement.

M. Tricou, notre ancien ministre au Japon, vient de rentrer de Hué, où il a obtenu tout ce qu'il a demandé. La réception qui lui a été faite par le gouvernement du nouveau jeune roi a été, paraît-il, des plus brillantes, et a témoigné du prestige que la prise de Son-Tai a rendu à nos armes. J'ignore encore si des clauses nouvelles ont été ajoutées au traité de 1874, et quelles elles sont. Dans tous les cas, ce que je sais, c'est qu'une garnison de 500 hommes sera maintenue à Hué, et qu'elle pourra être augmentée si cela paraît nécessaire. Le jeune roi, qui a à peine quinze ans, est en quelque sorte notre prisonnier ou notre otage. Ou peut, dès aujourd'hui, considérer comme aplanie toute résistance à notre protectorat du côté des Annamites et des Tonkinois. Cultivateurs et marchands, tout ce monde là ne songe plus qu'à s'occuper de ses petites affaires. Restent les Pavillons Noirs et Messieurs les Chinois, réguliers ou non. De ce côté là, c'est sérieux. Mais on a maintenant toute confiance dans le succès de l'attaque qui va être prochainement dirigée contre Baknin. On a beau dire que le gouvernement Chinois est définitivement décidé à ne pas rappeler les troupes qu'il a dans cette place, qu'elle est formidablement armée et défendue, et que de nouveaux renforts y sont même attendus de la province de Kwangsi, tout cela ne nous impressionne pas beaucoup. Baknin tombera comme Sontai, et alors ce sera le

commencement de la fin. J'entends dire que l'Amiral Courbet a l'intention de se mettre en marche avant l'arrivée des forces qui nous sont annoncées : mais je ne le crois pas. Mieux vaut ne pas se presser, être en nombre et n'agir qu'avec toutes les chances pour soi.

14 Janvier. Une reconnaissance a été effectuée, le 11, d'Hanoi dans la direction de Baknin. Elle a confirmé ce qu'on disait des préparatifs de défense faits par les Chinois. La reconnaissance se composait de quatre compagnies de Turcos et d'une compagnie de trailliers Annamites, avec trois pièces d'artillerie. Il a été constaté que la place était fortifiée partout et que nos braves soldats auront à donner là un vigoureux coup de collier. Mais cela n'enlève rien à notre confiance à tous, et à moi en particulier. Enfin, encore un peu de patience.

Bien à vous,

L. J.

[TRANSLATION.]

Haiphong, January 12th, 1884.

Do not blame me, my friend, for not having sent you any items of interest before this, but you will readily understand that, since our arrival at this place, we have been so taken up and absorbingly interested in what we have seen around us that this fact is the best excuse I can offer for not having written.

Do not expect a detailed account of all that has taken place, for you are doubtless better informed than ourselves with regard to leading events, and we know probably less of these than is known in Europe, or even in Japan. This you will have gleaned yourself from the daily papers. As for myself, I intend only to write you of my personal experiences, and to give you some unpublished details which may be of interest.

I shall commence by stating that, as we go to rest each evening with the disagreeable apprehension of finding ourselves headless in the morning, or at least broiled as was St. Laurence of happy memory, we do not enjoy the best of health. The temperature here is all that can be desired, the thermometer ranging between 13° and 18° centigrade. The gardens are luxuriant with their floral wealth ; since the first of October we have watched one after another burst forth into flower, and, as if by magic, we have all the vegetables of the European market here as well, beside the indigenous fruits, such as oranges, lemons, bananas, papaws and carambolas. The children go around sucking the sweet juice of the sugar-cane, not disdaining at the same time to chew the acrid betel-nut, to the use of which they are accustomed almost from infancy. What shall I say of Haiphong itself, our temporary place of abode? Like Venus, it rises from the waves, yet it is far from resembling this fair goddess. Situated on the right bank of the Kwa-ram, and built across a small tributary of the Red River, the Santan-Back,—which, after undergoing many changes of name, is the water-road to Hanoi—Haiphong may yet in future receive the apple of beauty from a modern Paris, in preference to its proud rivals Hongkong and Saigon. But in the meantime it is little else than a veritable chaos, a confused agglomeration of all sorts of materials : bricks, stones, lumber, barrels of cement, lime—kilns, and tall reeds and palm-leaves for thatching purposes (tile-covered houses are the exception). Every one works independent of others, generally without any preconceived plan, and without giving the least attention to what, later on, will be quays, squares, streets, and cross-roads. In spite of all, pretty little dwellings surrounded with pleasant gardens are visible here and there in the very centre of ponds, ditches, and broad streets broken up everywhere by canals. Woe betide the unlucky wight who ventures at night-fall in these break-neck localities without a lantern or without a guide!

The garrison of Haiphong is not numerous in comparison with the importance of its situation in the delta. There are hardly more than 400 to 500 troops. The natives, who swarm like ants here during the day-time, leave the town at about five o'clock each afternoon, to return the next morning, in order to assist in the various undertakings going on. All these people live in the many little villages about Haiphong. The Tongkinese, as far as I am able to judge by those here, are literally hideous. It is very evident that a judicious kneading of Chinese and Annamese is the original type of the baboon. An ape of ugliness, repulsively dirty, covered with vermin which he masticates in common with the areca nut, loud-voiced, screeching, spitting without cessation a reddish saliva,—such is the typical man of Tongking. Many of them are disfigured with leprosy sores or other equally disgusting plagues of a non-equivocal nature, and add to this that we have here the largest and best assorted collection of mendicants imaginable. Indeed, Haiphong seems to be the rendezvous of all the beggars of Tongking. Yet, nevertheless, these very fellows are usually a hard-working lot,

when its suits their convenience. Engage a native for a day's work, and you will find that, like all other Asiatics, not to speak of Indians and Africans, he will do just so much as he is forced to do, and no more. There is no way to make him work but by the *argumentum ad baculum*. At the same time I believe that things will go along better in future; for the present the Tongkinese deem our residence here a temporary one, and act as pleases them. They will, however, change their tune when we are definitely and really masters of the country, as well as their natural protectors.

The women are mostly tall. They have a good figure, and carry themselves as gracefully as do the Indian women; but with these two exceptions each one is uglier than the other. Thin and bony, they can run and jump like deer. Wicked and quarrelsome as the harpies, they are continually wrangling and getting into a row. They are veritable viragos and could give a fishwoman of Billingsgate lessons in yelling and violent gesticulation. Altogether, one may justly call them the stronger sex. But beyond this, they are really laborious and indefatigable; so much so that I can readily believe that there is an Amazonian soldiery in the Land of the White Elephant, if the Siamese are at all like the Annamese. One thing has struck me with regard to these gentle beings: they dress their hair *à la bordelaise* and wear a kerchief of cotton or silk around their heads. It's graceful enough, but it seems like the irony of fate that this pretty head-dress should deck such unpleasant physiognomies.

We have had a series of magnificently starry nights, but the native dogs, the most snappish, cross-grained and altogether disagreeable members of the canine family, never cease making night hideous with their howls, effectually murdering sleep as far as we are concerned.

I must give you also a few of the countersigns, which add a charm to the evening promenade, even though we have just cause for apprehension. For it has already happened more than once that our sentinels have given evidence of their vigilance by shooting each other, just by way of keeping their hand in for the Black Flags. With regard to these latter gentry, far from being a myth, they are in our immediate vicinity. It is perfectly certain that the whole country is in a state of revolution; that the mandarins, acting in accordance with the secret orders of the Court at Hué and encouraged by the Chinese Government, have excited the people against us; that numerous hordes of irregulars, not yet embodied with the army, are spread all over the country, armed with lances, pikes, and a few guns, and rallying like madmen around their many-coloured standards in a defiant and menacing spirit, have inflicted not a few forcible lessons upon our allies, the Tongkinese. Every four or five days organised raids are made upon these bandit-like irregulars. Our troops, reinforced by our gunboats and followed by crowds of native allies, track these bandits to their lairs, and force them, as well as the villages in which they hide, to appreciate the true inwardness of the *lex talionis*; but the task is one of great difficulty. The villages carried at the point of our bayonets are then abandoned to the mercy of our Annamese auxiliaries, and they are not over-merciful, nor do they hesitate to indulge in occasional excesses, such as ruthlessly decapitating those that fall in to their hands. But how can this be helped? When our troops have come back wearied and in need of a well-deserved repose, the native pillagers arrive in triumph in their turn, carrying in Indian file long bamboos on which the trophies of their raid are suspended, such as quarters of goats and pigs, sacks full of the arrack-nut, and dropping here and there, it may be, the heads of slain bandits or even those of innocent victims. Sad and hideous trophies, from which one turns one's eyes in horror!

Our officers state that the pirates (for these are they whom we want to frighten off) very rarely wait for our men to come up with them. Seated in light, bamboo-made boats, something in the style of the reed-cradle of the infant Moses, they hurry off as soon as they catch sight of the troops. In their haste they paddle over immense tracts of submerged rice-fields, and one can see them, at a distance of two or three kilometres from their enemies, stoically gazing upon the flames that soon lay their villages and homesteads in ashes. If these fellows were at all well armed, I believe that there would be no staying in this country; for the glance that I have given you at their characteristics and mode of warfare is sufficient to carry the conviction that to meet them on the field of battle is twenty times as difficult as in our famous *Bocage*.

The enemy is not, moreover, easy to bring to reason. You will have already heard that, unless our little body of 200 marines and a few Annamese auxiliaries had fought most heroically, and without the unexpected arrival of a most providential assistance, we should have certainly lost the fortress of

Hai-dzuong: and the consequences of a defeat would have been almost incalculable. This action forced us to take Hai-phong and all the supplies stored there; yet the almost complete isolation of the citadel of Hanoi might have seriously interfered with the capture of Son-tai. Herewith the facts:—When the troops that were to attack Son-tai or Bac-ninh had gathered around Hanoi, all the places on the lower river were left without a garrison. There were but 150 men about Hai-phong and 200 at Hai-dzuong, which, as I have said, might cut off all communication between Hanoi and the sea. The Chinese at Bac-ninh, knowing the importance of its situation, had resolved to keep it in their hands at all costs. Thanks to the facility of river transport, they had gathered some 2,000 or 2,500 regulars around Hai-dzuong, well armed and accoutred. The great size of the citadel prevented the French garrison, on account of the paucity of men, to occupy more than one or two of the most important points; the actual citadel being a block-house, at a considerable distance from the garrison, and these two places were within range of the city. On the night of the attack the city was surrounded, its assailants having combined their forces with the Annamese inhabitants and the Chinese. The pagodas and houses facing our intrenchments were battlemented or pierced with loop-holes; all the dogs had been removed or forcibly silenced, and no unusual sound apprised our soldiers of the stealthy approach of the enemy. About four o'clock in the morning a violent musketry fire opened on the block-house and the citadel. Towards day-light, the Chinese advanced to set Mirador on fire, and planted their flag at only a few metres distance from the gate of the citadel. Our soldiers fought most heroically, well knowing that if their ammunition gave out, and it was well-nigh exhausted, they would be in a hopeless plight. The gunboat *La Carabine* had come to their aid, but, not being able to manœuvre in the narrow strait, was exposed to the heavy, oblique fire of numerous enemies on the river bank. She was only a few metres distant from the shore; her men had been decimated, but the survivors fired by the brave example of Commander Bauer and Mr. Marquis, our consular resident at Haiphong, succeeded finally in getting the gunboat under control and placed her speedily in a more advantageous position. When I say that, later on, the traces of over 1,800 shots were to be seen in her sides and planks, it may give you an idea of the furious fire to which she was exposed. Her steel armour, 8 or 9 millimètres thick, was shot through like so much glass.

Just then, about two o'clock in the afternoon, the commander of the citadel caught sight of the smoke of a steamer. It was the *Lynx*, a well-armed gunboat, carrying pivot-guns in her main-top; she had heard the noise of the furious cannonade at a great distance, and, instead of going on towards Hanoi, immediately steamed in direction of the sound. The battle hereupon resulted in a complete and terrible overthrow of the Chinese. The heavy guns of the *Lynx* and *Carabine* made short work of the Chinese battlements and shot-towers; the bombs burst in their midst with terrible effect, and the few fugitives which had escaped the grape and canister of the gunboats, fell under the fusillade of our troops. Of the town of Hai-dzuong not one stone was left upon another; the catholic church alone escaping total demolition. It was high time that the *Lynx* arrived. The wooden joists of the block-house, in which there were no less than thirty of our men, were literally hacked and torn in splinters by the bullets of the Chinese. One hour later, and the heads of 200 Frenchmen borne on the points of spikes would have given a second edition of the Rivière episode, and have encouraged a general revolt throughout the country.

Since this time the raids of the Chinese and Annamese have become less frequent, and despite the fact that we cannot enjoy absolute safety before the capture of Bac-ninh, nor travel between Haiphong and Hanoi by the shortest road (it still takes 20 to 22 hours to go by steamer from the one place to the other, instead of twelve), junks can, nevertheless, ascend and descend the river unescorted.

On the other hand, there is a daily change for the better in our situation; at Hanoi and Haiphong there is no longer the least cause for apprehension. I profited by this condition of affairs to make a trip the other day to the first-named city. On the 1st of January I started with Mr. C. in a steam-launch belonging to that gentleman. Mr. C. is an old resident in Tongking, and is well acquainted with the country. Stokers, engineer, pilot, and sailors, all the complement of our roomy launch were Chinese, and we had beside one Annamese boy. Two junks that we met while steaming up the river were manned entirely by Tongkinese. It was just flood-tide, the water was high, and everything in our favour. The Santan-Back,

which changes greatly in width in its course, is very winding and tortuous. After steaming for four hours we arrived at the foot of the White Elephant Mountain, a name given on account of a fancied resemblance between this mountain and the pachydermaton, a resemblance due to the abrupt cliffs and rocks which lie along the ridge of the hill. As we reached the base of the mountain the banks of the river began to sink gradually lower, and we could hardly follow the course of the river with our eyes, because the banks were easily confounded with the ridges of the rice-fields. We had to keep casting the lead to the right and left in order to keep within the channel. This was the flattest place I saw on the trip. In the months of March and April the waters are very shallow, but at any other time one can follow the channel in safety. After passing this point, the ground rises steadily up to Hanoi, where the river overflows only at certain periods, the general difference between the level of the river and the top of the bank is at least 8 or 9 mètres.

From the Santan-Back we steamed into the Kwatrail, from the Kwatrail into the Taibin, and from the Taibin into the canal of the same name which brought us to the Red River. In fact, all these streams are but tributaries of the one river. Our voyage continued until six in the evening without any accident; night falls suddenly in inter-tropical countries. I had that day the opportunity of admiring these fertile districts, fertilised, as is the Nile-land, by the rich mud deposited upon them during the period of inundation. One may get a fair idea of the fertility of the country by seeing how many inhabitants gain their livelihood by cultivating the soil. You, who are at Yokohama, imagine, for a moment, the plain of Kawasaki always covered by a luxuriant harvest in the blade or in the ear. In the months of November and December I watched the gathering of the second yearly crops; and for the last fifteen days I have witnessed the transplanting of the young rice, whose tender green fades away in the distance, surrounded by plantations of the sugar-cane, fields of sweet potatoes, and groves of the mulberry. The cultivation of the last-named is quite different from that in France and Japan, but I have seen nevertheless, very fine specimens of silk.

With regard to the villages, their general aspect strongly resembles those in Japan, dark green patches on the smiling green of the plains. Cocoa-nut-palms, bananas, areca-palms, lychees, and other trees are the principal wealth of the orchards. The villages are surrounded, as a rule, by bamboo groves which nod gracefully over the spreading tops of the palms, and are planted so close together that they seem to touch each other; and this sight gladdens the eyes in whatever direction one may look. With their hedges of bamboos and cactus, the villages are like so many little fortresses, protected outside and inside by ditches, with small rows of earth works which might serve as veritable ramparts. In entering these picturesque villages one finds the main and side-streets alike cut up by canals which the best jumper could hardly leap across, and these canals are bridged by one or two palm-logs, which can be withdrawn in case of an attack. The same safeguards are around all the houses. Without a thorough acquaintance with the topography of these villages it would be impossible to get by them without exposing one's self to attacks from all sides. When the rude bridges across the canals are composed of one log only, the natives jump across with the help of a long bamboo.

How our brave soldiers, at the capture of Son-tai, could possibly have dislodged the Black Flags from such a position puzzles me completely. Yet they carried a long line of these native villages before they made themselves masters of the citadel. It is true that the actors in, and eye-witnesses of, this battle, state that the capture of the native hamlets and log huts was the most difficult and hardest job imaginable; and it certainly gave us the utmost trouble. And it must not be forgotten that, so soon as one leaves the dikes, there is water anywhere and everywhere.

But to come back to our voyage. Up to ten o'clock we had met no one beside the natives engaged in the daily labours in the fields. But just at this moment a junk descending the stream up which we were steaming, hailed our launch, and with a considerable waste of vocal power informed us that they had just been attacked by pirates, with whom they had exchanged several salvos. They urged us to keep a good look out. We immediately sprang to our guns; Mr. C. caught up his trusty Peabody, while I grasped my Winchester, and we declared ourselves ready to defend our lives and property. In the meantime night had come on, but we could still see that one turn of the river had been almost completely barred, and we caught a glimpse of shadowy forms gesticulating and yelling from a number of small boats. We agreed not to make use of our fire-arms until

we were actually attacked, and our engineer was ordered to go ahead at full speed. Suddenly the launch stopped in the middle of our enemies, and, after another exchange of loud yells, our interpreter informed us that the pirates were at a village about eight kilometres distant, and that we were requested not to venture any further in the darkness. The junks that passed us, and which brought us this news, were manned by Chinese and Annamese; they were loaded with rice and were on their way from Nam-dinh, being in the employ of the firm Rogue. The pirates had attempted to get possession of these valuable junks, but had met with an energetic repulse on the part of their men, who begged us to stay with them in order to be better able to repel any new attack. The night was very dark; the passages of the river narrow and tortuous; we had with us two junks, and so, concluding that discretion was the better part of valour, we decided to accede to their request and pass the rest of the night in the midst of the little fleet. While we awaited the arrival of the pirates, which we supposed to be in our immediate vicinity, we made a comfortable supper, and I urged my companion to take a few hours' rest, promising to keep watch. This was done, and I remarked with pleasure that Mr. C. fell asleep as calmly as an infant, and as peacefully as though he had been in his own comfortable bed or behind the cannons of a fortress. About half-past ten we heard two shots; but it was only a Chinaman, who, having been unable to fire his piece in the general fight, had at last succeeded in persuading it to go off. With the exception of this little disturbance, we passed a quiet night. At four o'clock I aroused Mr. C., and stretched myself out for a short nap, as I had not closed my eyes for 23 hours; I asked, however, to be awakened before arriving at the village supposed to be in the hands of the pirates, and my request was not forgotten. As soon as we drew in sight of the village, I seized my gun and sprang to the deck. Bah! utter silence, and no bandits to be seen. We passed by crowds of natives, but mostly women and children, who begged for small coins in dumb show. As for the men, their faces showed more curiosity than anything else.

We arrived, at last, at the junction of the Taibin canal with the Red River. Here there is a wooden fort occupied by ten soldiers. The subaltern in command came within hailing distance of us, and we learnt that numerous bands of pirates had been prowling about the neighborhood; that the fort had been attacked, but vigorously and successfully defended by our men and a reinforcement of Tonkingese Christians, despatched to their assistance by a neighbouring mission. Two men fell on the side of the garrison, and a junk loaded with salt had been pillaged the night before. We bid our compatriots farewell, and entered the Red River, which at this place displays a splendid sheet of water, more than a kilometre in breadth. The banks of the river gradually grew more fertile and richer in vegetation as we ascended. A slight accident to the machinery forced us to put out the fires, and so we lost three or four hours, not arriving at Hanoi until ten o'clock at night. We had steamed 24 hours, but had been 40 hours on the river. (Our journey back took us but 20 hours, not including a stoppage of 6 hours during the night-time, as there was no moon).

After passing an excellent night in the cabin of our launch, I sallied forth to visit the city and its environs. I found an immense city, but a half-ruined one, thanks to the last efforts of the combined forces of the Chinese and Annamese. Since the fall of Son-tai, everything has been quiet, and the natives have regained a little confidence. Hanoi must have been very rich in former times, for the city is filled with pagodas and the dwellings of mandarins; all these are now occupied by our soldiers. I visited the fortress, where a company of marines had, shortly after the death of Commander Rivière, to stand a terrible night-attack at the hands of the Black Flags, who had surrounded the city and set it in many places on fire, besides burning the storehouses of several merchants just outside of the settlement.

The fortress is a vast quadrilateral structure, about 1,000 to 1,200 metres in length on each side, surrounded by a strong brick wall between 8 and 10 metres in height, and about 90 centimetres thick at the top. It is furnished with *démilunes*, redans, block-houses, and there is a watch-tower in the centre. This tower is very high, and has an optical telegraph and observatory on the top. Apart from the citadel, the walls of which are mostly dismantled and form the magazines and barracks of our troops, the city has no building worthy of remark. A broad flight of stairs, the sides of which are marble covered with sculptures in bas-relief in Indian style, and surmounted with dragons on both sides, was the only object which attracted my attention.

The Chinese town is divided into tolerably well-

paved streets, which cross each other at right angles. Each street seems to have an especial branch of trade. I arrived on a market day, and saw a large quantity of yellow silks, all sorts of silken manufactures, of a rather gross texture, well gummed, and rather difficult to reel, I am told. A French firm sent a hand-reel here in order to better the quality of this article. One can certainly predict that this industry will make rapid progress when once our countrymen, who have already commenced to settle here, have formed the nucleus of a colony.

During our stay at Hanoi there was one rather notable episode. Batan, a village of brick-makers, the inhabitants of which were most unruly fellows, was promptly brought to its senses by the decapitation of about a hundred of the ring-leaders; and it is to be hoped that this one lesson will suffice. The affair passed off without any undue disturbance.

M. Tricou, our former Minister to Japan, has just returned from Hué, where he obtained all that he demanded. His reception by the young King and his court seems to have been a most brilliant one,—an additional proof of the prestige we have gained by the capture of Son-tai. I do not know as yet whether any clauses have been added to the treaty of 1874, nor what may be their nature. But this I do know that a garrison of 500 men will be kept in Hué, and that their numbers can be increased if it is deemed necessary. The young King, who is hardly more than fifteen years old, is after a fashion our prisoner, or at least a hostage for the well-behaviour of his people. One may justly state that, for the present, our protectorate will not be rebelled against by either the Annamese or the Tongkinese. Farmers and traders and all their kind, do not think of anything but their own immediate pursuits. There remain, however, but the Black Flags and the Chinese, regulars or irregulars. The case is a rather serious one as far as they are concerned. But we have every confidence in the success of the approaching attack on Bac-ninh. It is all very well to say that the Chinese Government has definitely decided not to recall its troops stationed there; that Bac-ninh is well-armed and its defenders thoroughly equipped; that fresh reinforcements are expected from Kwang-si, etc.; all this does not disturb our peace of mind. Bac-ninh will fall as did Son-tai, and that will be the beginning of the end. I hear that Admiral Courbet intends commencing his approach upon Bac-ninh before the arrival of the expected troops from France, but I hardly credit the report. It is far better to go to work a little more slowly, to have a large number of trustworthy men, and to have all the chances in one's own favour.

January 14th.

A reconnoitring party was despatched on the 11th from Hanoi in the direction of Bac-ninh. They confirm what has been already stated regarding the extended defensive operations of the Chinese. The party was composed of four companies of Turcos, and one company of Annamese sharpshooters with three cannons. They state that the place is thoroughly fortified on every side, and our brave troops have a tough task before them. But all this does not shake our courage, certainly not mine. Only a little more patience!—Yours always,

L. J.

NOTIFICATION NO. 5 OF THE IMPERIAL GOVERNMENT.

It is hereby notified that the following Legal Stamp Regulations for Civil Cases have been enacted, and will come into force on and after the 1st of April, 1884:—

N.B.—The regulations with regard to ruled paper for legal documents, issued in accordance with Notification No. 196, in December, 1875, will be abolished on and after the above date.

Art. I.—Civil cases will be subject to the imposition of a stamp duty.

Art. II.—In presenting petitions, stamps shall be affixed to each and every document, in proportion to the amount of money demanded or the value of the case. Cases involving less than 5 *yen*, 20 *sen*; from 5 *yen* to 10 *yen*, 30 *sen*; 10 *yen* to 20 *yen*, 60 *sen*; 20 *yen* to 50 *yen*, 1.50 *yen*; 50 *yen* to 75 *yen*, 2.10 *yen*; 75 *yen* to 100 *yen*, 3 *yen*; 100 *yen* to 250 *yen*, 6.50 *yen*; 250 *yen* to 500 *yen*, 10 *yen*; 500 *yen* to 750 *yen*, 13 *yen*; 750 *yen* to 1,000 *yen*, 15 *yen*; 1,000 *yen* to 2,500 *yen*, 20 *yen*; 2,500 *yen* to 5,000 *yen*, 25 *yen*; and 2 *yen* extra for every 1,000 *yen* above 5,000 *yen*. In case of appeal to the Court of Appeal these rates will be increased by one half, and to the Court of Cassation, by double the amount.

Art. III.—Personal and other matters that can-

not be measured by a money value, will be subject to a stamp duty of 3 *yen*. This duty to be increased by one half in case of appeal to the Court of Appeal, and doubled in case of appeal to the Court of Cassation.

N.B.—This article will not apply to indigent persons who can obtain a certificate of poverty from the officer of their ward.

Art. IV.—20 *sen* stamps will be attached to each of the following documents:—Affidavits, written evidence, statements, applications for the calling of witnesses, experts, or appraisers, and for the postponement of trial.

Art. V.—50 *sen* stamps will be attached to each of the following documents:—Applications for the official inspection of real estate, etc.; for the seizure of property, or the public sale of seized articles; and for declarations of insolvency or bankruptcy.

Art. VI.—Written judgments shall be subject to a stamp duty of 5 *sen* per page; and other legal documents issued by the Court shall be subject to a stamp duty of 3 *sen* per page.

N.B.—A page of written judgment shall consist of 12 lines of 12 letters each; of other documents, 20 lines of 18 letters each.

Art. VII.—Cases of compromise shall be subject to a stamp duty of 20 *sen*.

Art. VIII.—The stamp duties shall be paid by the party or parties who have lost the case.

Art. IX.—The denomination of the stamps and the manner of affixing them to legal documents will be notified.

Art. X.—These stamps shall be sold only in places sanctioned by the local authorities.

Art. XI.—Those who sell these stamps without due permission from the authorities, shall be subject to a fine of 20 *yen* to 200 *yen*, and the stamps found in their possession will be confiscated. Those who buy stamps from such persons, being aware of the illegal sale, shall be liable to a fine of 10 *yen* to 100 *yen*, and the stamps in their possession shall be confiscated.

Art. XII.—Those who violate these regulations shall not come under the articles in the Penal Code which confer exemption from punishment and the reduction of penalty.

By Imperial order,

SANJO SANETOMI, Prime Minister.

YAMA AKIYOSHI, Minister of Justice.

February 23rd, 1884.

GAIETY THEATRE.

The French Amateurs gave another most enjoyable proof of their histrionic capabilities on Monday evening. The Gaiety Theatre was well filled, thanks to the fame of their former performance, and the audience was a most appreciative one throughout. Amateur theatricals should, it is said, rarely be subjected to severe, never to adverse, criticism, and this is more especially the case when the proceeds of such a performance are to be devoted to charity. But this rule is very evidently out of place as far as the acting of the French Amateurs is concerned: the severest criticism can but take the form of unqualified praise.

The first appearance of the talented amateurs met with such success that a repetition was requested, and last night two comedies by Labiche were again placed on the stage, the first being a new one, "J'invite le Colonel," in place of "Un Monsieur qui prend la Mouche." The comedy was well chosen, although in our opinion not quite so enjoyable as the former; yet it abounds, as do all of Labiche's comedies, in amusing situations and lively dialogue. M. The O'Flanagan took the part of *Carbonnel*, the errant husband, whose unfortunate little escapade at the Café Brébant has led to his being a most most hen-pecked mortal. The rôle is decidedly a difficult one, as *Carbonnel* is on the stage almost without a pause from the beginning to the end, but M. The O'Flanagan seemed, however, quite to the manner born, his by-play in particular being really excellent. It is also a part in which the gestures have quite as much, if not more, to delineate than the actor's words. The part of *Elisa Carbonnel* was taken by a lady whose talent truly needs no name to achieve success. If possible, the lady acted better than in the earlier performance; at any rate she appeared perfectly *en rapport* with her part, and was applauded to the echo. M. Beau Pif was the middle-aged *Colonel Bernard* to the life; M. The O'Flanagan and M. Beau Pif are probably two of the finest amateurs that have ever appeared on the local stage, but the latter gentleman, in especial cannot be too highly rated. His make-up fulfilled exactly the popular idea of the elderly French soldier,

while his carriage and manner bore the stamp of the *vieux moustache*. The minor parts of *Isidore* and *Fules* were entrusted to MM. Riflard and Barbanchu, and were well played throughout.

With regard to the second piece, "Embrassons-nous! Foileville!" it was certainly a greater success than ever. Every joke told, every sally was laughed at, and the audience was a most merry one as long as the piece lasted. *Mlle. Berthe de Manicamp* surpassed herself, and received a floral tribute from many of the audience. M. Machinsky as the *Chevalier de Folleville* showed a decided improvement; his rôle was that of the unwilling, unimpassioned bridegroom in perspective, and, as such, did not admit of any great vigour of expression or gesticulation. M. Beau Pif as the *Marquis de Manicamp* was very fine; no professional could have made more out of the character. In the altercation between *Vicomte de Chateau* and himself, as well as in the dinner scene, he showed his really remarkable talent to the best advantage, while M. The O'Flanagan was most excellent, as always. The actors were called before the curtain after each piece, and several encores were demanded, to which they kindly responded. The music of the songs in the latter comedy was well chosen, pretty, and pleasing; altogether decidedly better than the songs in "J'invite le Colonel," although these were taken from such melodious operettas as "La Périchole," "La Mascotte," and "La Vie Parisienne."

The Amateur Orchestra played several selections during the course of the evening, one or two of which were new to us. Giorza's "Daghela avanti un passo" is very tuneful, but not very high-class music. Prettier is the Serenade, a Spanish waltz by Metro, although we missed the cornet-duet at the opening. Both of the overtures—Rossini's "Tancredi," and "Italiana in Algieri"—were rendered with grace and precision, and were highly appreciated. Altogether the evening was in every way a delightful one, and we are quite willing to embrace the cause of charity in future if it always finds such talented exponents.

REVIEW OF THE YOKOHAMA TEA TRADE FOR THE SEASON 1883-4.

With the approaching end of the tea season, we publish, as usual, a review of the trade at this port from the 1st of May, 1883, to 29th of February of the present year, as follows:—

MAY.

A few hand musters of New Tea appeared on the 12th of April, but they were then too trivial to be any criterion, and gave no indication of the coming crop. However, on the 2nd May, and from this date, the season can be said to have fairly opened, New crop began to come in in small lots up to the 4th, and after that date sizeable parcels began to arrive from the producing districts. By the middle of the month, some 11,484 piculs had changed hands at prices ranging from \$29 to \$34 per picul for Finest, Choice, and Choicest kinds. The general character of the leaf was not so good as the preceding year, many parcels showing carelessness in their manipulation, but the cup drawings of these different lots was on the whole generally pretty good. The steamship *City of Peking*, which sailed on the 15th of the month, was the first steamer that took new Tea to the United States and Canada Markets. About the 18th Teas grading Good Medium and Fine sorts arrived on the Market. Good Medium was purchaseable at \$22 to \$25, and \$26 to \$27 per picul for Fine, or about four or five dollars under last year's quotations respectively for both classes. This class of Tea cannot be considered as fully equal to that of the year previous in make, but the cup quality was satisfactory. Total settlements from the commencement of the season to the end of the May footed up to about 41,007 piculs. Receipts from the country for the month aggregating about 48,341 piculs. Tea in stock in Yokohama, on the 31st, was about 7,300 piculs. The following were the shipments of Tea during the month of May to the United States and Canada from Yokohama:—For New York 762,220 lbs., for Chicago, Canada, and elsewhere 674,835 lbs., and for California 221,806 lbs., making a total for the month

of 1,658,861 lbs. Fired Tea. The average quotations for the month ruled as follows:—

Good Medium...	\$22 to 24	Fine	\$25 to 27
Finest	\$28 to 30	Choice	\$32 to 34
Choicest			\$36 & upwards.

JUNE.

The market being now pretty well supplied with nearly all grades of Tea, both buyers and sellers had settled down to hard work, holders were firm and prices generally were well maintained. This state of things continued up to the 20th of the month. But after the 21st unfavorable telegraphic information from New York and other American markets caused settlements to fall off, and prices gradually dropped, from one dollar to one dollar and half all round for Teas on offer. Notwithstanding this discouraging news, the total settlement for the month showed a very extensive business. There were six Suez Canal steamers on the berth for New York *via* the usual ports during the month, and the amount of Tea shipped on those, besides the regular mail steamers was specially heavy. The highest rate of freight paid for Tea to New York *via* Suez Canal was £3.15 per ton of 40 cubic feet and the lowest for this month was £3.10 per ton. The aggregate settlements amounted to about 49,420 piculs, making a total for the season of about 90,427 piculs, against 97,987 piculs at the same date in 1882. Receipts for the same period were about 52,034 piculs, leaving a stock on hand of about 10,000 piculs. The market closed weak with a drooping tendency. The following were the number of pounds of Tea shipped during this month:—To the United States and Canada, for New York, 4,776,755 lbs.; for Chicago, Canada and beyond, 1,909,301 lbs.; and for California, 159,988 lbs., making the total of Fired Tea for this month 6,836,044 lbs. The average quotations ruled as under.

Good Common	\$14 to 15	Medium	\$17 to 19
Good Medium	\$20 to 21	Fine	\$22 to 25
Finest	\$27 to 29	Choice	\$31 to 33
Choicest			\$36 & upwards.

JULY.

The animation which characterised our market during the previous month, did not resume its wonted channels on the opening of the month now under review, as buyers showed but little disposition to purchase. The same desultory state of affairs continued throughout the whole month, prices drooping and buyers only purchasing as rates declined. Good Medium, Fine, and Finest grades attracting most attention, their values showed but little alteration on rates ruling during the end of June. By the middle of July the second crop leaf began to arrive pretty freely, the quality of many parcels was not altogether very good, but the drawings were as a rule, satisfactory, especially for those grading Good Common to Good Medium kinds which generally possessed nice clear liquor and sweet flavor. Settlements in July totaled 19,960 piculs. Shipments to the United States and Canada markets, were as follows:—For New York and Boston, 1,342,038; for Chicago, Canada and Western parts of the Union, 1,063,288 lbs.; and 535,868 lbs. for California bring up the total for the month to 2,941,194 lbs. Fired Tea to America and Canada. Receipts during the period were about 17,375 piculs, making the stock in Yokohama 7,200 piculs at the end of the month. The market remained steady at the under-noted quotations.

Common	\$12 & under	Good Common	\$13 to 14
Medium	\$15 to 17	Good Medium	\$18 to 20
Fine	\$22 to 24	Finest	\$25 to 27
Choice	\$28 to 31	Choicest	\$33 & up'ds.

AUGUST.

Prices continued easy during this month, in the course of which some 11,392 piculs changed hands, purchasers having if anything the advantage. The higher grades were now met with difficulty and many parcels as usual proved wanting in freshness and fragrance. All grades of Tea on offer were represented, although Teas grading Medium and Good Medium kinds were principally dealt in. Some cheap purchases were made in these classes of Teas. The better kinds were held for full market value, Tea producers apparently not very anxious to part with higher grades unless better offers were made for them. Most of the business transacted was for California trade. During the early part of the month, receipts from the country began to be very light and consequently stocks were much reduced and were something like 6,000 piculs against 7,200 piculs at the same time in 1882. After the 18th, and to the end of the month, receipts from the country were more liberal and the unsold stock was somewhat augmented. The aggregate receipts during the month was 12,299. Estimated Tea in stock here was 7,500 piculs. Tea exported from Yokohama to the Home Markets were as follows:—for New York and Boston, 1,459,325 lbs.; for Chicago, Canada, &c. 647,025 lbs.; and for California 816,333 lbs.; making

the total for the month some 2,922,683 lbs. Tea. Quotations at this period ruled as follows:—

Common	\$10 & under	Good Common	\$12 to 13
Medium	\$14 to 16	Good Medium	\$17 to 19
Fine	\$21 to 24	Finest	\$25 to 27
Choice	\$28 to 31	Choicest	Nominal.

SEPTEMBER.

This month opened with a very small demand, also to the continued unfavorable telegraphic information from American markets, and partly owing to the difficulty of securing the better grades, which were in limited supply and not freely offered. A steady business ruled throughout the balance of the month. Settlements for September footed up to some 12,230 piculs, and Good Common, Medium, and Good Medium grades attracted most attention and showed an advance of one dollar per picul on the quotations ruling in the early part of the month. Receipts from the country during the month were light in proportion to the demand, the aggregate receipts being about 9,682 piculs leaving a stock estimated roughly at 5,500 piculs to be carried over for October business. The following were the shipments of Tea to American and Canada markets during the month of September from this port:—For New York and Boston, 494,970 lbs.; for Chicago, Canada and beyond 366,050 lbs.; and 829,876 lbs. for California. Prices now averaged as under, but the values obtained were hardly so good as in the preceding month.

Common	\$10 & under	Good Common	\$11 to 12
Medium	\$15 to 17	Good Medium	\$18 to 23
Fine	\$22 to 25	Finest	\$27 to 29
Choice	Nominal.	Choicest	Nominal.

OCTOBER.

Business generally fell off, purchases averaging only about 210 piculs per day, and the total settlements for the month showed a marked falling off as compared with the previous months. Prices gradually weakened by half a dollar for Teas grading Good Common to Good Medium sorts, but Fine continued to advanced owing to the demand for them, and were quoted \$23 to \$26 per picul, and being scarce maintained their position throughout the month. Total receipts from the country were about 5,403 piculs, making a total of 144,555 piculs since the commencement of the season, against 152,811 piculs in the preceding year. Stocks on hand were about 4,850 piculs, against 6,200 piculs at the same time in 1882. The aggregate settlements effected during this month were 6,537 piculs, making a grand total for the year of 141,271 piculs against 146,597 piculs in the year previous. Tea export from Yokohama to the United States and Canada markets were as follows:—318,832 lbs. for New York and Boston, 356,849 lbs. for Chicago, Canada and the Western States, and 319,520 lbs. for California; making a total of 1,195,201 lbs. Tea shipped during October. The following quotations show the course of our market during that period, the market closed very firm:—

Common	\$10 & under	Good Common	\$11 to 12
Medium	\$14 to 16	Good Medium	\$17 to 19
Fine	\$22 to 26	Finest	\$28 & up'ds.
Choice	Nominal.	Choicest	Nominal.

NOVEMBER.

Less desire to operate was manifested by purchasers up to the 11th of the month and combined with depressing telegrams from home, the market relapsed into extreme quietness and the buying done was confined to but few houses. After the 12th, however, a better feeling sprung up, and the increasing scarcity of stock on offer caused prices to advance by fully \$2.00 per picul over last month's quotations for Teas grading Medium to Fine. Settlements for this month, were about 7,000 piculs, against 5,893 piculs in 1882. Receipts during the same time were only 4,442 piculs or about 872 piculs more than the preceding year. Estimated stock on hand was 2,700 piculs, against 3,800 piculs at the corresponding date in 1882. The Tea shipments during this month were as follows:—for New York and Boston 152,468 lbs., for the Western States and Canada 342,805 lbs., and 208,811 lbs. for California. This month's shipments aggregated 704,084 lbs. of Fired Tea. The closing rates ruled as follows, and were very firm:—

Common	\$10 & under	Good Common	\$12 to 14
Medium	\$16 to 18	Good Medium	\$19 to 21
Fine	\$24 to 26	Finest	Nominal.

DECEMBER AND JANUARY.

The months of December and January present no marked feature to report; a steady business with moderate rates was transacted, and everything seemed to point to a quiet and sluggish course of the market for the remainder of the season. These calculations were, however, soon upset, for about the 21st January, telegraphic advices of a rather better feeling on the New York market was received by several firms, causing them to operate pretty generally for all grades of Tea on offer. Owing to the limited supplies from the

country during the month, business altogether was not very large in proportion to the amount done in 1882 for the same month. Prices had been somewhat irregular, and an advance of one dollar per picul over previous quotations must be noted. Transactions done were principally in Teas grading Good Common and Medium classes. The total settlements for both months amounted to 7,060 piculs, against 10,110 piculs at the corresponding date in 1882. Receipts during the same time were 5,485 piculs, against 8,080 piculs as compared with 1882. Estimated Tea in stock was about 800 piculs. Tea shipments during the same time were 1,179,741 lbs., distributed as follows:—For New York and Boston 426,331 lbs., for Chicago, Canada, &c., 255,524 lbs., and for California 497,886 lbs. Average quotations ruled as follows:—

Common.....\$10 & under | Good Common.....\$12 to 14
Medium\$16 to 18 | Good Medium.....\$20 & up'ds.

FEBRUARY.

With the exception of 10 days during the first half of the interval, when the settlements of each day only reached about 13 piculs, transactions during that period show indifference on the part of buyers. Since the 15th better news from the Home markets have arrived, and the business done for this month, considering the scarcity of Tea on offer, shows fair purchases. Very little has been done in Common Teas, the grades chiefly dealt in being Good Common to Medium, with few lots of higher class. It would seem that the approaching close of the season, which promises to be considerably earlier than last year, and the general belief that there is but a very small quantity of leaf to come forward from the country, have stimulated purchasers to operate at advanced prices. It is not expected that the future receipts from the country will exceed more than 2,000 piculs, and if this proves to be the case the total supply for the season will be considerably short of the previous year's. The total settlements for this month foot up to about 2,030 piculs. The grand total settlements for the year 1883-4 are 157,531 piculs, against 165,505 piculs, during the previous season. Total receipts since the commencement of the season come up to 158,245 piculs, against 167,814 piculs at the corresponding date in 1883. The steamship *Moray* sailed for New York via Kobe and other ports on the 24th instant and will be the last Tea steamer from this port via Suez Canal for the season 1883-4. Stocks here are very small, most dealers having sold their entire supply, and daily receipts from the country do not amount to anything of importance. Tea shipments from Yokohama during this month for the American and Canadian markets are as follows:—For New York and Boston 197,613 lbs., for Chicago, Canada, and beyond 125,647 lbs., and for California 54,168 lbs., making in all 377,428 lbs. The total export during the season 1883-4 to the United States and Canada stands as under from Yokohama:—For New York 10,208,296 lbs., for Boston, Chicago, Canada, and other States of the Union 5,743,525 lbs., and for California 3,644,256 lbs., making a grand total of 19,596,027 lbs. Fired Tea, against 20,192,218 lbs. at the corresponding period during the season 1882-3. The average quotations during this month are as under, but they are all nominal, as they have been regulated more by the actual requirements of buyers than any regard to a recognised standard of value:—

Common.....\$12 & under | Good Common.....\$14 to 16
Medium\$18 & upwards.

THE FOLLOWING IS A STATEMENT, SHOWING THE VARIOUS GRADES OF TEAS SETTLED IN YOKOHAMA DURING THE SEASONS 1876-77 TO 1884.

AN ENGLISH JOURNALIST IN JAPAN.

The following is one of a series of letters, which recently appeared in the *Daily News*, from the pen of Mr. H. W. Lucey, one of the editors of that journal, who has been making a tour round the world:—

Yokohama, Nov. 1.

As we steamed into the bay of Yeddo, Yokohama was dimly discernible under lowering skies and through the mist of incessant rain. In crossing the Pacific we had been cheered by the sight of many sunsets of ever varied beauty. However dull or wet the day might be, the sunset was rarely missing. Now the sun seemed to have set for ever. It had, we learned on landing, been raining for a fortnight; which was a little hard on Yokohama, since it had its rains in June and July, and this was its season for fair weather. One of our fellow-passengers was from Glasgow, and as we stood in the Custom-house, sheltering from the pitiless rain and wondering how far we should be successful in making a dash into a jinricki-sha without getting wet through, he was visibly affected. "It is just like Glasgow," he murmured, thinking of the many months that had separated him from home and friends, fog and rain. But the rain was the only thing home-like in the scene. As the *Coptic* steamed up to the buoy we caught some indefinite glimpses of Yokohama with the Green Bluff which Europeans have wisely marked for their own, and where they live in pretty bungalows set in cool gardens flanked by tennis lawns. Even through the rain the bay was a fine sight. All the navies of the world might ride at anchor here safe from the winds that mock at the name of the Pacific. Half a dozen men-of-war were already anchored, notably a Russian ironclad, one of the most beautiful things afloat. England was represented by a single ship, two having been ordered off to Hongkong in view of possibilities that might be created by the trouble still agitating France and China. There were ships of larger or smaller tonnage from American and British ports. A Mitsu Bishi steamer came puffing in our wake, arriving from one of the southern Japanese ports and going north at daybreak. One smart steamer moored to the buoy must have been an object of special interest to the Mitsu Bishi people. She is the first comer of a splendid fleet of sixteen steamers now building on the Clyde, and intended to run in competition with the Mitsu Bishi line. By October in next year this fine fleet of steamers will be coasting round Japan.

Long before the *Coptic* was made fast to the buoy the bay was alive with sampans, the heavy-looking native boat, with the crews clamorous for fares. The boatmen, standing in the stern vigorously working the colossal oar that sculls the sampan, were dressed for a wet day. It is not many years since the Japanese native costume amongst the lower orders was limited to a hand's-breadth of cloth tied about the loins. The new order of Japanese, impregnated with Western ideas, sternly sets its face against this habitude. The upper classes, laying aside the graceful Eastern robes which their fathers wore, have attired themselves in European dress, which they wear without grace. There seems no reason why, given a capable tailor, a Japanese gentleman should not look well in broadcloth. As a matter of fact he never does. From the Mikado down to the merchant or tradesman, a Japanese who wears European dress seems to have bought his suit at a ready-made clothing establishment. Happily the ladies, with instinctive good taste, more generally retain the native costume, with its graceful lines and soft colours. When they lay it aside for European clothes they lose all their natural taste in colours, and come out with painful contrasts. The lower classes, compelled by Imperial edict to go about clothed, keep to the native dress, and so obtain a vast advantage over their superiors in station. In fine weather this dress is with the men exceeding scanty, consisting of a blouse and blue cotton drawers, tightly fitting and extending halfway down the thigh. On a day like this they put on wonderful straw cloaks, reaching to the knee, whilst their heads are thatched with wide straw hats of saucer shape. Thus arrayed with bare brown legs, and brawny arms wielding the gigantic oar, they looked like a regiment of Man-Fridays expectant of Robinson Crusoes' arrival in the *Coptic*, and eager to welcome him back to island life. Presently, when the rain ceased, the cloaks were dropped off, straw hats pitched aside, and they stood there some forty or fifty of the stalwartest men in either hemisphere. They do not run much to height, but their limbs are magnificent and their energy tireless. All ages were represented in the

sampans, from boys of eight or ten with tremendous biceps and stout calves, to men so old and wrinkled that they would seem past the time at which these heavy oars could be usefully wielded. One old gentleman, a priceless subject for a painter skulled in with the first of the fleet with a bright blue cotton handkerchief tied round his wrinkled face, a straw cloak on his shoulders, and apparently nothing else. The object of attack was the coolies who might be going ashore, and the victory was to the boatman who got his sampan nearest to the ship's side, and so secured the chance of the first coolie disembarking. There being no provision for holding on to the steamer, the only way of keeping in place among the heaving mass of sampans was to keep sculling. Old Blue Cotton Handkerchief, after racing across the bay, stood in the stern of his sampan with brawny muscle, corded legs set wide apart, sculling for his life; whilst in the bows, thrown out in skirmishing order, was his grandson, perhaps his great grandson, fishing for coolies with a boathook. I was on the steamer for nearly two hours after she was attached to the buoy, during which time the crowd of sampans were struggling and heaving on the port side, amid an incessant din of voices. Whenever I looked over the side there was the blue cotton handkerchief bound about a wrinkled face that seemed to be carved deep out of mahogany, the old man, with lips firmly set and eyes anxiously fixed on the throng of coolies, sculling as if he had just taken the oar in hand, and it was feather weight.

The coolies had an uncommonly lively time of it. I could not make out upon what plan selection was made, whether the coolie chose the sampan or the sampan-man the coolie. All that was to be seen at brief intervals over the bulwarks was a coolie bundling into a sampan, where half-a-dozen brawny arms seized him, and amid a fearsome clamour handed him about till he was finally deposited in a boat and was presently rowed away. One who had evidently got himself up with great care, probably having a circle of visiting acquaintance in Yokohama, had undergone this process of selection, and was sitting, pale and heated, smoothing out his umbrella, wiping his spectacles, and shaking his clothes into shape. He had had a bad time of it, but it was over now, and he would soon be on dry land. Suddenly the clamour recommenced. He was seized upon, and hustled, spectacles, umbrella, and all, into a sampan three boats off, where five of his compatriots were already seated. From this and one or two other incidents, I surmised that the sampan men arranged among themselves to take parties of coolies who were going together to various parts of the town, and that they were sorting them out as if they were a consignment of apples.

We had two Japanese passengers in the saloon, young fellows who had been travelling and studying in Europe and the States. They had all the amiability and gentleness of the Japanese, modest, retiring, and almost pathetically polite. In rough weather they were always being blown about the decks, pulled short up by running against portions of the rigging and, in various ways being made light of. Coming on deck shortly after we were anchored, I beheld a strange transformation scene. The elder of the Japanese was leaning in easy, dignified attitude against the gangway. The younger one was standing talking to him bare-headed, and before him in a semi-circle at respectful distance stood an extraordinary group of Japanese. They were five in number. Each man had a large paper umbrella stuck under one arm, and a hat of straw under the other. Three wore straw cloaks: one had a musty brown cloak; and the fifth, the beau of the party, wore a pair of top-boots and a gorgeous green blanket. I noticed—and the accuracy of the observation has been abundantly confirmed in various parts of Japan—that when a native draws on a pair of top-boots he thinks he has done all that can be fairly required of him in the way of dressing. But the law is stern, and as the day was wet the green blanket had been superadded. Nevertheless, as he moved about and bowed, unexpected glimpses were caught above the top-boots of sun-tanned flesh. Whenever the elder Japanese spoke, all the five men bowed down to the ground. If, without speaking, his glance wandered in any particular direction, the individual so honoured bowed and smiled, "and chortled in his joy." After this scene the secret about the elder Japanese could no longer be kept. He was a prince in disguise. Young as he was, he had been a Daimio at the time of the revolution, and had been endowed with vast wealth and almost boundless power. He had never stirred abroad without an escort of two-sworded men. When the revolution came the Daimios accepted the situation with praiseworthy philosophy. They abandoned their rank and state, took Government bonds in part payment of

the value of their lands, and this young Prince, like some others, contentedly went forth to see the wonders of the Western world. The five men were some of his old retainers, probably two-sworded men, who, hearing of his arrival, had come to do him homage.

The Custom House at Yokohama is based entirely upon European models, except in the matter of roughness or incivility. One of my trunks, the least battered after running the gauntlet of the American baggage service, they asked to have opened. But the whole thing was over in a few minutes, and we were at liberty. Jinricki-sha men were patiently waiting, not pestering passengers with demand for preference, but standing quietly in a row, dumbly hoping they might obtain it. The jinricki-sha is perhaps the most prominent and certainly not the least useful institution of Japan. It is like an enlarged perambulator placed upon two light wheels; there is a hood, movable backwards or forwards at pleasure, and on a day such as that on which we landed the fare is covered in from the rain with a curtain of oil-paper let down in front. For steed you have a little Jap, all bone, muscle, and good temper, who trots along with you at about six miles an hour, and can, if you will hire him, take you forty or fifty miles in the day, coming up smiling in the morning for another journey. The fare inside the bridges of Yokohama, practically the length and breadth of the city, is equal to a trifle under fivepence. You can hire a jinricki-sha by the hour for 7½d. The mode of locomotion is pleasant and convenient, and with lingering reminiscence of the London cabby and the United States hackman it is a positive pleasure to have for companion a jinricki-sha man. He takes his poor pittance with a smile and a bow, and cheerfully trots off without thought or contingency of a supplementary copper. He is as merry as a child, and when two or three run together they laugh and talk like schoolboys. In common with their nation they have a keen sense of the humorous or the ridiculous, and, to judge from the frequency of their laughter, they are constantly finding it. Robinson Crusoe, in saucer hat and short straw cloak dripping over bare legs, took me to the hotel, and all the way I could hear him, amid the gusts of wind and the patter of the rain, chatting and laughing with his companions. On a day like this there was nothing to be done but shopping, and after delivering a few letters of introduction we went out to the silk stores. This time my jinricki-sha man was a butterfly being, with a bright blue cotton handkerchief wound about his head and a yellow oil-paper waterproof which glistened transparent in the pouring rain. The five retainers of the deposed prince wore white stockings, with the big toe in a place all to itself for convenience of tying the straw sandal. The people walking about the streets with paper umbrellas, and paper or straw cloaks, wore wooden pattens, standing fully three inches off the ground. To Western ideas it would have seemed better if there had been less clog and more trouser. But it was very wet, and there was no use in spoiling any clothing that might possibly be dispensed with. The jinricki-sha men wore nothing on their feet but straw sandals, with which they gaily splashed through the mud, the water running down their bare legs in never-ceasing streams.

The next morning Yokohama underwent a glorious transformation. The clouds had rained themselves out, and the sun, like the Mikado breaking the bonds in which he had long been held by the Shoguns, had a complete restoration. We rose early, got into jinricki-shas, and gaily bowled along for a trip round the Bluff. As we crossed the bridge over the canal a few paces to the right there was Fuji, with snowcap on, lifted far up into the blue sky. This famous mountain of Japan is seventy miles distant from Yokohama, but it seemed close enough to invite us to a run there and back before breakfast. Before mounting the steep to the Bluff we passed down a street wholly occupied by the Japanese. Yokohama is a foreign settlement. It was a fishing-village when, in 1859, it was selected as the site of one of the treaty ports. Foreigners, among whom English predominate, have built its principal streets, its hotel, its shops, its banks, and its club-house. Walking along the Bund, there is nothing except stray Japanese or a group of jinrickishaw men to contest the assumption that this is an English colonial street. But for the same striking feature in the scenery, Main-street might pass for a British thoroughfare. But cross the bridge, follow this street that skirts the canal, and you are in a new world. The street swarms with its residents in a manner peculiar to Eastern life. In an English street, there are to be seen the people who may chance to be passing, whilst glimpses are caught through windows of others in the shops and houses. In Japan the people in the houses are as much on view as those actually in the street. The first duty of a Japanese householder or his deputy

on rising in the morning is to take down the front of his house. It is literally slid away and the interior left in full view with whatever domestic operations may be going forward at the moment or through the day. This peculiarity of house architecture is not confined merely to the front. The inner rooms are made up on the same principle. There is a groove in the floor along which a panel slides. When night comes and bedrooms are required the panel is slid along, and there is the room. In the morning when it is time to get up, and sometimes, as travellers in the interior find to their embarrassment, before it is time to get up—the panels are slid back, and what was a bedroom is an unenclosed space. These panels (called *shoji*) are made of lattice-work of wood, the open spaces being covered with paper tightly stretched. This is the only wall of the inner rooms, the outer wall, front and back, being composed of sliding shutters all wood. The shutters were drawn back, the bedroom walls had disappeared, and all the houses were open as we drove through in the fresh early morning. All the men and women were at work, and all the children carrying babies. In this street, as in all other Japanese thoroughfares, the number of children is astounding. Salt Lake City is childless as compared with any Japanese quarter, whether in town or country. The stranger is startled by the first impression that all the girls are born double-headed. To see a girl from three years old up to twelve is to make the discovery of a second and smaller head apparently growing on her right or left shoulder. On closer inspection this turns out to be a baby, which she is carrying strapped to her back, no portion of it visible except its head and face. I could not learn at what age a girl is held to be capable of carrying a baby, but I have seen scores whose age did not exceed four staggering along under the weight of an infant brother or sister bound to its back. This is the national form of carrying what in England are known as infants in arms. The Japanese equivalent to the phrase would naturally be infants on back. I do not know how it is for the infant, but it is evidently a very convenient way for the bearer. Women carrying children can and do go about their daily work as if they had no incumbrance, whilst the children play about the streets just as if the baby on their back were a wart or other insignificant natural excrescence. I never saw in Japan a baby held in other fashion, with the single exception of a man in Oyama who dandled one in his arms, and he, I subsequently ascertained, was a man of weak intellect.

Amongst the most striking of the costumes in the moving scene was that of men in blouses, with a sort of white brick dado below the belt and between the shoulders a circle, also of white, marked with cabalistic signs. From a back view they looked like movable targets for archery practice. But they were merely labourers in particular trades, or engaged by firms, whose badge they wore. There was among the population a larger proportion of trouser than obtains among jinricki-sha men; but this article of dress, considered indispensable in some countries, is held in but light esteem in Japan. Where it is worn there is an evident desire to make as little of it as possible. It is cut off short with surprising determination, and where worn down to the ankle a compromise is effected by having the cloth made almost skin-tight. When the waiters at the Grand Hotel brought me my first meal, I thought I was about to be entertained with a saltatory performance. They wore black serge tights of the cut familiar in the stage costume of male members of the Vokes family. I should not have been at all surprised if one had incontinently passed his leg over the head of the other. But they had only brought in tiffin, and left the room in the usual fashion after placing it on the table. Many of the women had added to their natural charms by blacking their teeth. This is the sign of the married state and has a particularly hideous effect. I am told it is now going out of fashion. The younger girls when dressed for the day touch the front of their under lip with a brush dipped in vermilion. Our jinricki-sha men made their way through the throng without running over any children, a feat accomplished only by dint of incessant shouting. We walked up the hill and finally came out on the reccourse, on the way obtaining a bird's-eye view of Yokohama. Coming back one of the jinricki-sha men politely invited us to visit a "garden shop." Not desiring to buy anything we were reluctant to enter, but yielded to pressure, and were received by the nursery gardener with profound courtesy, not abated by one jot when we left without a chrysanthemum pot or a flowering shrub under each arm. Yet the temptation to buy was very great. There were wonderful chrysanthemums, familiar as home friends in colour and shape, but in size and variety exceeding our choicest growths. Besides these, the chief growth

of the garden, there were a variety of clever and artistic arrangements of ferns and grasses in china pots and dishes of diverse shape, with pieces of rock or tiny stumps of trees standing in cool water, and presenting within the space of a few hands'-breadth a charming bit of sylvan scenery. We skirted the Bluff, looked down on the harbour, its quiet waters glistening in the morning sunlight, and reached the level road by a steep hill, in which was a Joss House. Looking in we saw kneeling before a tinselled altar two men, one reciting prayer in a monotonous voice, and the other beating a drum, whose tireless tum-tum-tum, tum-tum-tum, we could hear half-way down the hill.

Returning through the narrow street by the canal, the busy scene had grown in colour and motion with the advancing day. The houses were full of people, and yet the street was thronged. The domestic arrangements in a Japanese shop trench closely upon those of trade. The family sit in a group on the floor, the men, and not unfrequently the women, smoking. A small square box, containing burning charcoal and a receptacle for tobacco ash, is an indispensable article of furniture in every sitting room, whether it be shop or kitchen. The pipe, made of metal, has a bowl about as broad and deep as the nail of the little finger. It holds sufficient tobacco to afford the gratification of three whiffs. These taken, the ashes are knocked out, and the pipe laid down with as much satisfaction as if the owner had had an honest smoke of an hour's duration. Out of doors the Japanese carries his pipe in a leathern case, which, together with his tobacco pouch, is fastened at his girdle. Many, even among the poorer classes, have at the end of the cord on which pipe and pouch are slung, a piece of carved ivory or bone. The tobacco smoked by the Japanese is home-grown, and to the British taste flavourless save for a *soupsçon* of chopped hay. Tiny whiffs of smoke were going up from many of the groups squatted on the shop floors waiting for custom. Here was a woman washing vegetables in water drawn from the street well, with barrel top and pulley and rope overhead to haul up the bucket. Next door was a cooper's shop with an attractive store of the buckets and dippers which abound in Japanese households. Further on was a man mending tins. On the opposite side of the road a woman was spreading out rice to dry on mats. Her neighbour, equally industrious, was carefully stretching on a board the blouse she had been washing for her husband. Here was a butcher's shop with chrysanthemums blooming among the shoulders of mutton and ribs of beef. Many of the joints had attached to them long strips of paper, on which Japanese characters were traced in a bold hand. They probably stated the price and recommended the quality of the meat. But to the new comer there was a strange incongruity between this learned-looking calligraphy and a plate of mutton chops. The tailors in the shop next door seemed familiar enough as they sat cross-legged on the floor busily stitching. Of course the sixteen-shilling trowser is unknown in Japan; but the Japanese when fully dressed wears a surprising number of garments, the making of which keeps the tailors busy. Another thing that had a homelook was the fruit shops, which, as in many parts of London, were open to the street. But in the fruit shops as in all the others the floor is raised only a few inches from the pavement, which gives the general idea that the people are sitting in the street itself. There was a grocer's shop with father, mother, and three children squatted round the hibachi, each with a hand over the glowing charcoal, for though the sun was up the morning air was keen. The man pounding rice next door had no need of artificial means to keep him warm, nor had the man carrying water in two tubs slung on a bamboo pole and carried across his shoulder. This seems an uncomfortable way of getting along with portable property; but it is an ancient habit with the Japanese, and he makes light of it. If the weight be unusually heavy, he eases the burden on his shoulder by thrusting a smaller bamboo under the larger one, using it as a lever which rests on his other shoulder, the end being held in his hand. All kinds of things are carried in this way. There passed us in the street what seemed like a bed of chrysanthemums, but was really a coolie carrying innumerable pots on two trays slung from bamboo in the manner described. There were several cake and sweet shops, whose contents were more curious than toothsome. But they had attractions for the countless double-headed children who stood around and with the larger head looked longingly at the bountiful stores, whilst the smaller one stared out into space, its owner not yet having reached the age when it could covet sweet-meats. Through this bright and bustling scene the jinricki-sha men ran to and fro, laughing and chattering as if it were rather fun than otherwise to be beasts of burden.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, February 24th.

AFFAIRS IN EGYPT.

4,300 British troops have landed at Trinkitat, and are preparing to advance. The cavalry have reconnoitred, and found the enemy 10,000 strong.

London, February 25th.

REPLY TO THE QUEEN'S SPEECH.

The House of Commons has voted the address in reply to the Queen's Speech from the Throne after a long debate.

MUTINY OF EGYPTIAN FORCES.

The Blacks at Suakim have mutinied, and will be sent to Cairo. Suakim is thus dangerously denuded of troops and but weakly garrisoned by Marines.

London, February 29th, 6.10 p.m.

Cotton, $\frac{1}{8}$ higher; Mid. Upland, $5\frac{1}{2}$. Yarn, prices firmer. Shirts, prices firmer. Silk, Market dull and prices weak.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, FEBRUARY 22ND, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Line with dots—represents velocity of wind.
Line with crosses—percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 16.8 miles per hour on Tuesday at 11 p.m.
The highest reading of the barometer for the week was 30.420 inches on Thursday at 10 a.m., and the lowest was 29.853 inches on Sunday at 11 p.m.
The highest temperature for the week was 54.1 on Thursday, and the lowest was 25.3 on Tuesday. The maximum and the minimum for the corresponding week of last year were 47.0 and 28.0 respectively.
The total amount of rain and snow was 1.06 inches, against 1.640 inches (rain and snow) for the corresponding week of last year.

NOTES FROM JAPANESE PAPERS.

The guests and subscribers to the grand wrestling match to take place at Fukiage Park on the 3rd inst. will be admitted by ticket only. Two thousand tickets have been issued.

Mr. Matsumoto, of the Naval Department, has resigned, in order to accompany Prince Sankai-no-Miya to Europe.

It is reported that Mr. Takei, Chief of the Forestry Bureau, will not go as Commissioner to the International Forestry Exhibition in London, as the Japanese Consul has been detailed for that duty.

The command of the Kiyôdoden Artillery will in future be held by a Lieutenant-Colonel (*Shosa*) instead of a Captain, as it has been made into a battalion.

The Nippon Bank gave a banquet to the high dignitaries of State on the 28th of last month.

There are no less than one thousand Japanese women in Shanghai, while the men number hardly two hundred.

The *Rikkan Seito Shimbun*, an organ of the Liberals, has been suspended by order of the Government.

The Court of Compromise (*Kankai Saibansho*) has hitherto been little else than a petty bill-collecting office. Now that the Stamp Regulations have been issued, each case of compromise requiring a 20 *sen* stamp, the plaintiffs in cases involving small sums only, such as petty money lenders, have decided to refuse lending small sums in future, as the expenses of the cases would more than take up the amounts claimed. The immediate result of all this is that poor people are no longer able to obtain small pecuniary advances, and are sadly inconvenienced in consequence.

In accordance with the instructions of the Minister of Education, that children under six years of age are to be sent to Kindergarten (*Yochi-yen*), an establishment of this kind has been inaugurated in the prefecture of Shidzuoka.

There are, at present, fourteen Koreans in the Military College. They are very industrious and make rapid progress in their studies, a remarkable fact, when one remembers that they are not perfectly acquainted with the Japanese language. One of these students is a Korean noble of high rank. The nobility in Korea usually lead a life of luxury and are rather effeminate, but this young noble is an exception to the rule, and much is expected of him after his return to Korea.

Although many prominent firms have of late failed at Shimonoseki, the Shurui Kiyoshiu Kwaisha—a company formed by brewers on the joint-stock system—paid last year a dividend of over 30 per cent. The tobacconists and ship-chandlers are taking steps to form similar companies with an eye to future successful trade.—*Choya Shimbun*.

A rumour is current to the effect that the Cabinet, a few days ago, finally decided to sanction foreign residence in the interior at an early date. It is also reported that serious difficulties have arisen between China and Japan, and that Mr. Soyeshima will be sent to China as Envoy Extraordinary, accompanied by a vice-minister.

Eight Koreans, said to be traders, arrived at Ashiya, Toka-gori, Fukuoka Prefecture, having been driven thither by stress of weather from their native province Chôl-la-do. Their junk was loaded with rice, beans, and other cereals. They left Chôl-la-do on the 12th of last December (lunar calender), en route for Pusan, but met with stormy weather and adverse winds on the second day out, being finally driven to Yudamaura, Toyoura-gori, Yamaguchi Prefecture. On the 9th of January the junk started on her home trip, but, meeting heavy weather again, drifted to Ashiya. At that place the Koreans engaged a Japanese pilot to navigate the junk, and bring her safely back to a haven of Korea.—*Jiyu Shimbun*.

LATEST COMMERCIAL.

IMPORTS.

There has not been any feature of special interest in the Market since our last report, but from all accounts the native trade seems to be going on steadily, and unattended by any excitement.

COTTON YARN.—Dealers appear to have satisfied their requirements during the early part of the month, as the Market is now quiet; the demand has been limited to small transactions in English spinnings, with a fair demand for Bombays.

GREY GOODS.—Small sales have been made of common make of both 8½ and 9 lbs. Shirtings, as well as 7 lbs. T.-Cloth, and some large sales of Bombay T.-Cloth.

FANCIES.—Turkey Reds have been sold to a fair extent at full rates. Velvets have become quieter. Victoria Lawns have been in good demand at rather better prices, and large sales of Mousseline de Laine are reported.

COTTON YARNS.

	PER PICUL.
Nos. 16 to 24, Common to Medium	\$26.00 to 28.50
Nos. 16 to 24, Good to Best	29.00 to 30.50

EXPORTS.

RAW SILK.

Our last was issued on the 21st instant, since which date we have seen more business in this Market, resulting in a list of Settlements giving a total of 250 piculs for the seven days. The approach of the American mail has apparently stimulated enquiries for *Filatures* and *Kakeda* sorts, nearly all the trade running on these kinds,

Telegraphic news is not particularly favorable at the moment, especially from European Markets; and it would seem that the threatened scarcity of prime qualities here during the next few months is the chief reason why prices are so well maintained. The native manufacturers are still in the Market to some extent, but on the whole things may be called easier, without much actual change in prices. Sellers have shown themselves more willing to meet buyers, and the result has been a fairly current business for the time of year.

The P. & O. steamer *Kashgar* on the 23rd instant took 60 bales only: of these 55 bales were destined for France and 5 bales for England. This vessel brings the total Export up to 27,153 bales, against 21,071 bales to same date last year, and 13,737 bales in 1882.

Hanks.—Again a week has passed with but very few transactions in this description. Settlements are given as 40 piculs only: embracing *Shinshu* at \$482½, *Foshu* \$480, and *Hachoji* \$465. Holders, without actually offering their Stocks freely, are decidedly more easy to deal with, and doubtless in some cases would concede a turn in price.

Filatures.—Something has been done in these, and purchases have been made in sizes suitable for the United States Markets as well as in finer kinds. Among the sales we notice *Shinshu* \$625, \$615, \$605, according to quality. *Oshu Yamagata*, \$610; *Mino*, \$610; *Hida*, \$600; *Koshu Best*, \$612; *Yechigo*, \$570; *Nihonmatsu*, \$645.

Re-reels.—No transactions reported. High class *Re-reels* are not plentiful at the moment, and demand for Medium grades has apparently gone off.

Kakeda.—These have again met with a fair enquiry, especially for "Medium to Good Medium." The demand for the better kinds holds off in spite of the fact that dealers are more disposed to be current. Business has been done in sorts costing \$580, 560, \$550, \$540.

At closing, demand has come with a rush, and dealers are holding their goods off the Market for extreme rates.

Oshu and Coarse Kinds.—With the exception of a few bales *Hamatsuki*, nothing has been settled for Export. The internal trade take a small quantity, and small supplies come to hand at intervals.

QUOTATIONS.

France and Italy	16,740	10,966	6,996
America	7,774	6,944	4,032
England	2,639	3,161	2,709
Total	27,153	21,071	13,737

WASTE SILK.

Business in this department has apparently taken a fresh departure, sales for the week being returned as 550 piculs. The most noticeable feature has been the transfer into foreigners' hands of nearly the whole stock of *Mawata*. Beyond this there has been a good current demand for *Noshi* and *Kibiso*, purchases being restricted by the paucity of the Stocks on offer. Considerable purchases are reported to have been made by natives from foreigners in *Kibiso*, but it is understood that these were at once transferred to other foreign godowns without the goods re-entering the native town. The figures of Settlements and Stocks are therefore not disturbed by these transactions. Arrivals from the interior have not been more than 150 piculs, and Stocks are accordingly reduced to a lower point than for many months past.

The English mail of 23rd instant carried 131 bales; outside steamers have taken something, and the total Export now stands at 20,144 piculs, against 18,063 piculs last year, and 16,266 piculs to the end of February, 1882.

Pierced Cocoons.—Nothing to report beyond the stereotyped phrase:—"No Stock." It would seem that this class may be left out of all calculations for the rest of the season.

Noshi-ito.—Settlements for the week reach 130 piculs at full rates, and Stocks are further reduced. In *Filatures* but little has been done beyond a few *Shinshu* at about \$135. For the parcel *Utsunomiya* mentioned in our last \$152½ has been offered and refused. In *Foshu*, "Best" are held strongly at \$115 per picul, perhaps \$112½, while "Fair to Good" assorted is in request at from \$88 to \$90. The trade done has been chiefly in *Foshu* with a sprinkling of Common at \$77½, and *Kawamuki* at \$55.

Kibiso.—Purchases in this class are fully 250 piculs, and some kinds show a marked rise on quotations ruling a month ago. Reported sales comprise all grades from *Tokosha Filature* at \$124 down to Common *Foshu Neri* at \$6½. The best qualities both of *Filature* and *Hank* curlies are now very scarce indeed. Among the Settlements we observe *Sendai*, \$87; *Zaguri*, \$108; *Sandan-shu*, \$60; *Foshu*, \$35; *Hachoji*, \$34 to \$27½; *Neri*, \$14½ to \$7. These prices are all for the rough Stock, while those given in our list of quotations below are for "picked and cleaned."

Mawata.—After a long period of stagnation we have to record an extensive purchase, one large buyer practically clearing the Market at prices ranging from \$164 to \$175 according to quality. Sales are about 140 piculs and arrivals have been very light.

QUOTATIONS.

Hanks	1,300	Pierced Cocoons	—
Filature & Re-reels	600	Noshi-ito	40
Kakeda	400	Kibiso	340
Sendai & Hamatsuki	350	Mawata	60
Taysam Kinds	50		
Total piculs	2,700	Total piculs	440

TEA.

Business began in earnest during the first half of the week, and at the close, there is no desire to purchase, buyers apparently seem to be satisfied with their transactions for the present. Telegraphic information from the Home Markets continue to be favorable. Settlements amount to 605 piculs, and including this week's business, the total Settlements to date now stand 157,531 piculs, against 165,505 piculs last year for the same period. All grades of Tea on offer have participated. Receipts during the interval have just about balanced the demand, and consequently Stocks at this port are about the same as they were a week ago from to-day. The Market closes very firm, and we must quote one dollar rise in Good Common and Medium sorts over our last week's quotations, as prices are regulated more by the actual requirements of buyers, than any regard to a recognised standard of value. The *Moray* left here on the 24th instant for New York, via Suez Canal and other ports, and will be the last steamer through that route for the remainder of the season, her cargo consisted of 207,672 lbs. Tea, distributed as follows:—For New York, 192,708 lbs., and for Canada, 14,964 lbs.

QUOTATIONS.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S
PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S FLORIDA WATER,

a most fragrant Perfume distilled from the choicest Exotics

ATKINSON'S QUININE HAIR LOTION,

a very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

ATKINSON'S
ETHEREAL ESSENCE OF LAVENDER,

a powerful Perfume distilled from the finest flowers.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other Specialties and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 8TH, 1884.

DEATH.

In Washington, D.C., on January 11th, ANNIE E., only daughter of Elisha E. Rice, formerly of Hakodadi.

SUMMARY OF NEWS.

A NEW war vessel, the *Kaimon-kan*, has been launched at Yokosuka.

THE question of treaty revision has been widely and ably discussed by the vernacular press.

A CHINAMAN and a Japanese woman have been detected in an attempt to smuggle opium.

THE formation of two sub-departments within the Council of State, is announced, the one for education, the other for commerce.

THE time of departure of the Mitsu Bishi steamers from Yokohama for Shanghai has been altered from 4 p.m. to 6 p.m.

A STEAMER built for the Union Navigation Company (*Kiyodo Unyu Kwaisha*) has been launched at the Kawasaki Dockyard.

THE plum blossoms in Tokiyo are now in their prime, and the comparatively genial weather has procured them large number of visitors.

A DECORATION has been presented to His Majesty the Emperor by the Spanish Minister on behalf of the King of Spain.

MR. EARNEST SATOW has been appointed British

Agent and Consul-General at Bangkok. Mr. Satow proceeds direct to his post without revisiting Japan.

SOME disturbances have taken place at Nagoya, owing to a quarrel between the Liberals and another political party known as the *Ai-doku Kojunsha*.

Six fires occurred in Tokiyo during the week, of which three are supposed to have been incendiary fires. The total number of houses destroyed was 587, and one life was lost.

SOME idea of the magnitude of the business carried on by Japanese druggists is furnished by the fact that, during the course of 1883, one firm employed 1,400 pedlars of patent medicines and paid a stamp duty of 34,900 yen.

RUMOURS, entirely without foundation, have been circulated by the vernacular press, to the effect that complications have arisen between China and Japan and that His Excellency Soyeshima is about to proceed to Peking on a special mission.

MR. SHIODA, hitherto Assistant Vice-Minister of Foreign Affairs, has been transferred to the Council of State. Mr. Shioda's services in the former post have made his name familiar to most foreigners in Japan.

IN Tonquin, General Millot has assumed command, and it was confidently expected, at the date of latest advices (18th February), that the assault on Bac-ninh would take place by the 5th of March, at latest. A desperate resistance was anticipated, and doubtless the Chinese forces may make a stout stand if they are so minded. But good authorities declare that China has no intention of offering any real opposition to French designs upon Bac-ninh.

A NOTIFICATION has been issued over the signatures of the Ministers of Home Affairs, and of Agriculture and Commerce, directing that growers of and dealers in tea throughout the empire shall form themselves into guilds, in each locality. The purpose of the guilds is to contrive a system for the prevention of adulteration, and their transactions are to be governed by regulations which shall have received the approval of the Department of Agriculture and Commerce.

THE Yokohama Gas Committee held its annual meeting on the 4th instant. The accounts showed a balance in hand of \$950.91. The total receipts for 1883 were \$5,146, against \$5,854 for 1884, and the total expenditures for these years were \$5,246 and \$5,542 respectively. It was explained that several people declined to contribute their quota to the lighting of the Settlement on various pretexts—another illustration of the painful state of helplessness to which all local government in Yokohama has been reduced by diplomatic obstructions. Lighting is certainly not among the duties that devolve upon the Japanese authorities. There ought, therefore, to be no doubt about the competence

of the foreign community to accomplish it, but in the present confusion of all competence and authority everything is doubtful. The duties of the Lighting Committee were transferred to the Committee of Land-renters recently appointed for purposes of municipal reform.

SEVENTEEN Japanese seamen, the crew of the British schooner *Otomé*, which vessel was seized by the Russian authorities off Behring Island last August, sued the owner, Mr. J. H. Snow, for wages said to be due to them from July 1st to November 14th, the latter being the date of their return to Yokohama. The owner contended that his responsibility ceased on the 25th of August, the day of the schooner's seizure by the Russian authorities, and the Court upheld this contention, but ordered that the men should receive the money which they had been obliged to borrow for the purpose of defraying the expenses of their journey from Vladivostock to Yokohama.

NOTES.

THE Society of Art Critics (*Kangwa-kwai*), recently formed in Tokiyo, is an undertaking which promises to be of great value. Its primary object will be to afford the public an opportunity of getting pictures criticized and certified by competent authorities. At its public meetings there will be arranged, also, a loan collection of selected paintings, exhibited and labelled in such a way as to cover special periods as adequately as may be. Later, it is proposed, we understand, to hold a course of lectures, historical and critical, which will be open to the public. The membership of the Club, though limited, comprises a number of specialists, among whom are the acknowledged heads of the Kano and Tosa schools; also an artist who has been trained to appreciate and practise both native and European methods of drawing; an accomplished scholar in the field of Japanese antiquities; and a young student of history of great promise, who has been trained in European methods of research and writes English like his native language. The declared object of the Society is to rescue criticism and taste from the pitfalls of blind tradition, on the one hand, and shallow enthusiasm on the other. It intends later to extend its influence in the direction of helping to form that public opinion which is to mould future artistic production. The encouragement of young artists of promise, if means permit, also forms part of the programme. It is possible, also, that the Society may publish its papers on history and criticism. It undertakes to correct confused genealogies, to collect full lists of seals and signatures, and to make catalogues of all known works of ancient artists. If success attends these early efforts, other lines of activity will doubtless be entered upon. At the first public meeting of the club to be held next Sunday, the exhibition of old paintings will be unusually large. It will cover, so far as as possible, the history of the whole Kano school from the beginning to the present day

The specimens will be arranged chronologically, and labelled. This will be the first time, we believe, that Japanese have had such an opportunity for systematic study afforded them. The opening exhibition will be limited to works of the Kano school; but at subsequent meetings other schools will be similarly illustrated. The Criticizing Committee, consisting of the two Messrs. Kano, Mr. Yamana, and Mr. E. F. Fenollosa, who occupies the first place among foreigners as a critic of Japanese paintings, announce that they will be prepared, on the 9th inst., to pass judgment on any old Japanese or Chinese pictures (*bunjin-gwa* excepted) that may be brought for the purpose. This verbal criticism will be the result of the joint deliberation of the Committee. If, however, certificates are desired, they will be supplied by either member of the Committee designated by the owner. The certificates, though given by individuals, will be distinguished from private certificates in the following respect:—first, they will be of uniform pattern; secondly, their phraseology will be special; thirdly, they will be granted only to paintings ranking as high as 2nd class; fourthly, they will be stamped with the Club seal and inscribed with the date of the public meeting at which they are issued; fifthly, they will be numbered and registered; and sixthly, careful miniature copies will be made of the pictures certified. In this way it is hoped that a general improvement may be effected in the standard of certificates, the giving of which has become so much a mere mercenary matter that inferior, and even false, specimens are often certified for fraudulent purposes. We understand that at the first meeting no charge will be made for certificates; but that there will be an entrance fee of 20 *sen* to cover incidental expenses. At subsequent meetings verbal criticisms will be given without charge; but for certificates, charges are to be made at the rates hitherto customary in the Kano family. The money so obtained is not to go to the individuals certifying, but to the common fund of the Club. On next Sunday it is announced that Mr. Fenollosa will deliver a lecture on the "Philosophy of Criticism." It will begin at two o'clock, and last probably an hour, being interpreted into Japanese sentence by sentence. In it, we understand, mention will be made of the aims of the Club; of the difficulties and dangers involved in the ordinary methods of criticism practised in Japan; of the value of European methods, and of the importance of considering spiritual depth and treatment of a subject in a picture as well as the technique of touch. We gladly welcome the formation of this Society, not only for the sake of the impetus it will probably give to Japanese pictorial art, but because it will afford the public some protection against the numerous frauds at present practiced.

ACCORDING to a London paper, the scarcity of recruits has led to an extraordinary proposition to obtain men as follows:—The War Office authorities have followed up their brilliant suggestion about employing the Post Office as a recruiting agency by proposing that the police should be used for the same purpose. The justices at the Oxfordshire Quarter Sessions were agreeably surprised the other day, by receiving a circular from his Royal Highness the Commander-in-Chief inquiring "if the services of the county police could not be utilized for the purpose of making generally known the advantages and

conditions of entering the regular army and militia. The fee for the regular army to be five shillings and for the militia half a crown." The notable suggestion was not received with much enthusiasm. One of the magistrates said that he could hardly conceive anything more objectionable than to employ the police as recruiting agents. Recruiting means public-houses and the drinking of beer, and all the other arts and artifices familiar to Sergeant Kite. It is hardly likely that a police-constable instructed to act the part of an amateur crimp, with his faculties stimulated by the prospect of possible half-crowns and five-shilling pieces, will have much attention to spare for burglars and pickpockets. An officer who gets hold of a too jovial drunkard will be distracted between his duty of locking his captive up and his own obvious interest—which is that of taking advantage of the gentleman's condition to press the Queen's shilling upon him. And how popular it will make the army, to be sure, when men know that they can pass into it *via* the police-station! The whole expedient is a pitiful one. The authorities will have to make up their minds to face the question of better pay, and abandon such miserable experiments as these.

THE final football match of the season was played on Saturday afternoon at four o'clock between the "Ojisans" (or residents of over 5 years in Japan), and the "Wakai-hitos" (or residents of under 5 years). The former had the advantage of the wind during the first half of the game and scored a goal and two tries against one try obtained by the "Wakai-hitos" just before half time. Unfortunately for the latter, the wind somewhat dropped after ends were changed, and although they rather pinned their opponents at times, no further score was made by them. Just before time was called Durant scored a third try for the "Ojisans," after taking the ball nearly the length of the ground. The game ended therefore in a win for the early settlers by one goal, dropped by Sutter, and three tries, obtained by Durant (2) and Hamilton (1), to one try obtained by Baggallay. The sides were:—"Ojisans"—Sutter (Captain), Hamilton, Merriman, Fraser, A. Vivanti, Durant, C. Martin, Snow, Hawkins, Abbott, and Hepburn. "Wakai-hitos"—Melhuish (Captain), Read, Bing, Baggallay, Wilson, Willoughby, Cameron, Thomson, McLaren, Ostermayer and another. The Club may be congratulated on having had a very successful season, notwithstanding that no foreign matches could be arranged. In all, nine matches have been played, exclusive of the opening game, and all have been well contested.

THE Government of Korea is said to have decided that the peninsula must have a standing army of respectable strength, and measures are accordingly in progress to raise the present establishment to ten battalions. It is, perhaps, inevitable that a country emerging from its isolation and entering the comity of nations should immediately prepare the means of defending itself against aggression, much as a child when it goes to school to be educated recognises the necessity of paying some attention to the pugilistic art. We do not know the strength of a Korean battalion, and cannot, therefore, tell exactly what force ten such bodies represent, but whether many or few, a standing army of these dimensions appears to overtax the resources of the country. The Japanese news-

papers gravely observe that Korea suffers from a temporary scarcity of circulating media, and is slightly embarrassed about the clothing and arming of her new badge of civilization. In this dilemma Japan has come to the rescue of her *protégé*, and Korea is to be supplied with the cast-off weapons and accoutrements of the Japanese army until such time as the sinews of war become plentiful in the peninsula.

IN the village of Jindaishi, Kanagawa Prefecture, there is an old shrine, known as Chinjiu-hikawa-jinja, and beside it grows a huge *criptomeria*, many hundred years old. The tree, despite its sacred character, has begun to show signs of decrepitude. Four or five years ago, an autumnal typhoon tore off one of its largest limbs, and in the wounded place there was gradually formed a large hollow. During the early days of the present year the snow and rain, lodging in this hollow, attracted the attention of some worshipper at the shrine, who, stirring the little cistern of clear water, fancied that he detected a peculiarly pleasing odour. Tasting the liquid, he found that it could scarcely be distinguished from the best *saké*. This marvellous discovery was soon bruited abroad, and the simple country folks, concluding that the god of the shrine had turned brewer in his old age, came from all directions to procure some of the holy liquor, so that the priests drove a roaring trade while the contents of the hollow held out. Strange as the tale sounds, it is not impossible that the resin of the tree, assisted by some fungous growth, may have imparted to the water a taste closely resembling that of *saké*, which, after all, is not unlike a decoction of toad-stools and pine-cones.

THE *Times* Ottawa special says:—A home member of Parliament for New Westminster, B. C., states that Chinese immigration into that Province has ceased. He estimates that during the past year fully 1,000 Chinamen have crossed over from British Columbia into the United States. He says that they, as a rule, smuggle themselves over in canoes, and when once on land and mingled with their countrymen it is impossible to distinguish them from those who have been residents for some length of time. During the hop gathering season they also cross over with the Indians into Washington Territory. The Provincial Legislature will shortly introduce a bill restricting Chinese immigration, upon which, however, he thinks the Dominion Government will exercise their veto power and disallow it.

THE temple of Monzeki in Tsukiji is one of the largest in Tokijo. Its immense roof constitutes the most remarkable feature in the district, and thousands of people assemble within its walls, from time to time, to listen to the homilies of the Monto priests. The Buddhist *sekkijo* is perhaps the most attractive form of moral discourse delivered by the representatives of any creed. It admits all sorts of anecdote and illustration, and combines the grave and the gay after a fashion that seldom fails to command the attention of an audience. Connected with the sermons preached in Monzeki, however, there is a feature of special interest. It has been remarked that of late the doctrines they inculcate bear a remarkable resemblance to the teachings one may hear daily in the churches and lecture halls of Tsukiji. Whether the proximity of their principal place of worship to the missionary colony has

exercised some subtle influence upon the exponents of the Monto creed, or whether they are gradually coming to recognise that the permanence of their faith depends upon the timely adoption of a nobler morality, it is certain that within the past year they have begun to speak to the people of the immortality of the soul, of the joys of heaven, and of a personal existence hereafter. We do not deny that there may be warrant for these doctrines in some of the diverse forms which Buddhism has received at the hands of its many manipulators, but it is a singular coincidence that, at the lectures delivered by the missionaries in the Meiji Kwaido, Buddhist priests are always to be observed among the most attentive listeners, and that in the sermons subsequently preached by the priests of Monzeki, not the least important principles of Christianity find unequivocal expression.

THE farmers living in the neighbourhood of Lake Biwa have conceived the idea of utilizing the lake for purposes of irrigation. At present the great sheet of water has no available outlet, and it is proposed to construct a tunnel, somewhat after the fashion of that by which Hakone Lake is made to communicate with the rice valleys on its southerly side. The expense of the work is estimated at a million yen. The Prefect of Kiyoto, in company with several delegates from the farmers of Omi, arrived in Yokohama by the *Gembu Maru* on the morning of the 28th ult., and proceeded at once to Tokiyo to consult about the best means of obtaining the necessary funds.

OUR Saigon exchanges, up to date of February 14th, bring no news of interest from Tongking. Everything is quiet, and reconnoitring parties are sent out rather to keep the troops occupied and in good spirits than to frighten the enemy. Reinforcements are anxiously awaited. The health of the garrisons at Hué, Thuân-an, and Tourane is in a bad way. Dysentery and low fevers have broken out, and many fatal cases are reported. The *Indépendant de Saigon* strongly condemns the want of proper sanitary precautions. A report is published that the young King at Hué intends sending an embassy to Paris, in order to arrive at a definite settlement of some important questions; but, as the *Indépendant* wisely remarks, the metropolitan government will probably have greater and more pressing affairs to look after than the solution of diplomatic problems in Annam.

GENERAL OYAMA and *suite*, which comprises 14 Japanese military officers of various ranks, arrived from Japan last evening (says the *Hongkong Telegraph* of the 23rd ult.) per the M. M. Co.'s steamer *Menzaleh*, en route to Europe to enquire into the different military systems in force there. The General and party, together with 11 Japanese students, who are also proceeding to Europe, and will be distributed amongst Paris, Berlin, Vienna, &c., landed about 4 o'clock yesterday evening, and took up their quarters in the new Hotel de l'Univers. There was a considerable "sell" in connection with General Oyama's landing. Colonel Barton, Assistant Military Secretary, Major Coffin, Brigade-Major, and Lieut. Porter, A.D.C. to General Sargent, assembled at Murray Wharf towards 10 o'clock this morning, in full uniform to officially receive the General, Lieut. Vyvyan, the Governor's Aide-de-camp, going off to the *Menzaleh* to take him ashore in the police launch.

The Governor had also sent down his carriage to the wharf to convey General Oyama to Government House, and four stalwart European constables and two mounted Sikh troopers were sent down to the pier to impart *éclat* to the reception, a Guard of Honor of 30 Sikhs, under the command of a Jemadar, being sent to Government House to meet the General when he should arrive. Lieut. Vyvyan, however, upon going on board the *Menzaleh*, learned, to his great chagrin, no doubt, that the General and his *suite* had landed the previous evening, and so there was a general break-up for the reception party at the wharf. Later, however, General Oyama, accompanied by his *suite*, paid a visit to Government House, and was received by the Sikh Guard of Honor, who were kept waiting there until the General arrived. General Oyama, goes first, we understand, to Italy to investigate the Italian military system, after which he will visit France, Germany, Russia, Austria, and England, winding up with the United States.

A FRENCH chemist says that the chemical knowledge applied to the concoction of spurious food and drinks is of a very high order, and would suffice to make the fortunes of the adulterators a dozen times over, if applied in an honest capacity. The matter which seems to have aroused him of late is a peculiarly ingenious thing in gooseberry jelly. It appears that the article is made entirely of seaweed. The coloring matter is fuchsine, and the flavor is given by a compound of acetic ether, tartaric acid, aldehyde and cœnanthic. Inspectors often recognize it from the fact that it is "a little more elegant than the genuine article." What a pity that it does not take more education to mix water and milk. The standard of popular education would rise perceptibly.

A FRIGHTFUL catastrophe has happened at Hongkong in the explosion of a boiler on the *Potsai*, a steamer plying between Canton and Macao, belonging to the Hongkong, Canton, and Macao Steamboat Company, which formerly belonged to the late Kwok Acheong. The vessel was proceeding to Macao from Hongkong, to take up her berth on the Canton River, and had just come out of dock after extensive repairs. The explosion occurred whilst the Secretary of the Company, the Captain, the Government Marine Surveyor, and a number of invited guests and officials from the Dock Company were at tiffin. These with the firemen and crew were all blown into the air and several killed. Excepting the case of the *Pesso*, whose boiler burst alongside Lapraik's wharf, on the 22nd November, 1877, and killed 86 Chinese passengers, no such explosion has ever occurred on a vessel at Hongkong. The full particulars are published in this issue.

THE New York *Shipping List* thinks that there must be ways to guard against such an enormous destruction of property by fire as that which is recorded in America the past year—\$103,000,000—which is larger than in any previous year, except those of the great Chicago and Boston conflagrations. A system of better and more faithful construction of buildings is one way, and the exercise of more carefulness on the part of employées is another. There are many conflagrations that will, from the nature of things, happen from unavoidable or unforeseen causes, but the great bulk of our conflagrations

might be lessened by the exercise of an additional amount of vigilance in large manufacturing establishments, and the erection of buildings with a view to safety as well as profit.

THE racing men in Hongkong were favoured with fine weather for the third day's sport, and Mr. Paul was again in great form, and of the nine items on the card he won no less than five and had four ponies "placed." This makes fourteen races in the three days' running, out of 26 events, that have been placed to the credit of the "straw jacket;" but it is apparent by a perusal of the racing as recorded in the Hongkong journals that Mr. Paul had this year a very strong stable, whilst the opposition was more than usually weak. There seems to have been some dissatisfaction with regard to the result of the Champion Stakes. The race, which was run in the dark, was won by Mr. Paul's Rose, but Mr. Brandt, who rode Odawara, lodged a complaint against Mr. Allen on Bandsman, the nature of which did not transpire. A local owner, however, who writes over the signature "Nunquam Dormio," publishes a letter in the *Daily Press* in which he says:—"There are so many rumours circulating round the colony in connection with the Champions' Race, which are scandalous, and likely to bring racing in this colony into bad repute, that I consider it is the duty of the Stewards of the Race Fund to make a thorough investigation into the matter, and sift it to the bottom. These rumours should either be proved or denied officially."

THE valley of the leech (*Hirudani*) among the diamond hills (*Kongōzan*) is the curious name of a place celebrated in Japanese history as the site of a castle where the great warrior Kusunoki Masashige was besieged, and where assailants and assailed alike performed prodigies of valour. The changes of time have induced men to look for something more than relics in the now desolate spot, and they have found what rumour describes as a very rich vein of gold and silver deposit. Trial diggings are now in progress, and the aristocratic valley is not unlikely to be put to vulgar uses before long.

SINCE France, writes M. Paul Leroy-Beaulieu, committed the unparalleled fault of silently abandoning the rights bequeathed to her in Egypt by her glorious history and confirmed by formal treaties, events have succeeded each other with wonderful rapidity. The facile victors of Tel-el-Kébir have found the means of disorganizing almost completely, in eighteen months, the grandiose work of Mehimet-Ali and the practical work of the Anglo-French control. One might have believed, three or four years ago, that the north-east of Africa was thenceforth finally won over to European civilization. France and England together had restored order and good administration on the banks of the Nile. Credit, the first proof and the indispensable condition of a state's prosperity, had been established. The Egyptian funds were capitalized at 4 per cent. Their redemption was proceeding energetically. Public works were in progress, and institutions were beginning to be founded which would have gradually emancipated the Fellahs, and substituted for loans contracted at usurious rates of 25 to 30 per cent., loans at the relatively moderate rates of 7 to 10 per cent. Egypt in short, was fairly on the way to prosperity. Suddenly the schemes of an obscure

plotter, seconded by "ignorance, pusillanimity, and absolute lack of political spirit on the part of the French parliament," compromised all these germs of well-being. England, "abandoning France to her puerile apprehensions," stepped in, dispersed Arabi's army, and took possession of the banks of the Nile. "We had lost Egypt," says M. Leroy-Beaulieu, "without making the slightest attempt to preserve this precious jewel. History will say that during the 19th century few political faults so grave and so inexplicable were committed by a great people." Master of Egypt, the English could not make up their minds what to do with it. They might have annexed it, given it independence, established a protectorate there, or reverted to the Anglo-French control. They tried a mixture of all these plans. Gladstone would gladly have abandoned an acquisition so inconsistent with his avowed principles, but English public opinion and English traditions forbid a British Government to give up an important position once secured. The troops were nevertheless recalled, little by little, till only 3,000 men remained to guard a country from four to five hundred miles long. Meanwhile, everything Egyptian was disorganized; the administration, the finances, the army. At the elbow of each Egyptian Minister was a British adviser, who, not knowing what course his Government would definitely adopt, did not attempt to reconstruct, but confined himself to daily demolitions. In the midst of this confusion the Mahdi made his appearance, raised the Soudan to rebellion, and is now marching upon Egypt proper, while Abyssinia takes advantage of the situation to renew a war which cannot be said to have ever terminated. In a word, it is plain that Egypt, disorganized as she is, must fall if left to herself, and that the responsibility of saving her from decomposition devolves entirely on the Power by which her capabilities of self defence have been paralyzed. "As for France's rôle," writes M. Leroy-Beaulieu, in conclusion, "it is clearly indicated. After having abandoned Egypt when it was so easy to maintain ourselves there, we could not well prevent England from establishing an effective protectorate, or even carrying through an annexation, more or less disguised. There remains to us, however, the duty of protecting our nationals. Arrangements have been made with reference to the Egyptian creditors. England, perhaps, will demand some modification of them. We must not grant it. If England desires to alter, however little, the conventions relating to the reserved revenue, let her do what we are doing in Tunis—buy up the Egyptian debt and take charge of it. Having been evicted by this wealthy country, we must not, in addition, let the rights of our nationals be disturbed."

ACCORDING to announcement the second, third, and fourth lectures of the course of free lectures now being given in Tokiyo were delivered in the Union Church, Yokohama, on the evenings of the 4th, 5th and 6th instant, the lecturers being Drs. Gordon and Verbeck, and Rev. Hugh Waddell. The attendance on each evening was large, and the last evening larger than any before. The effect of the lectures to give enlarged and liberal views on all the subjects treated of could not be doubted. The lectures on Buddhism and Confucianism, in the main, gave great satisfaction to select and intelligent audiences which listened with great attention to the course. The more difficult subject of science and religion, set off as it was by apt illustration

and finished speech, by Dr. Verbeck, who was taken by an English gentleman in the audience for a Japanese, was most highly appreciated by all classes—as enabling even the illiterate to see what are the true aims and necessary limitations of science and religion, and that, they so far from being mutually antagonistic, they treat of entirely different departments of human knowledge, and are necessary adjuncts to each other. The opening of the lectures by prayer and singing, and their closing by singing and the benediction, as befitting an assembly in a sacred edifice, as well as the absence of any expression of approbation or dissent, save some clapping of hands at the close of the lectures was somewhat in contrast with the reception the same lectures received in Tokiyo. Nor can this difference be owing to want of appreciation on the part of the Yokohama audiences. If any one observed closely the features of the intelligent gentlemen occupying the front seats during the lecture on Buddhism, for example, he would have seen that not a word or syllable escaped their notice; and if he cast a glance at the large number of young ladies, members of the Girls' schools of Yokohama, seated near the organ to aid in the singing, their puzzled look at Gotama's deliverances on Nirvana, and their amusement at his condemnation of woman to servile obedience to their husbands, showed plainly that they were interested listeners, and that a better-day had dawned upon woman in Japan than Buddhism could ever have imparted, and that the lecturer did well to emphasize the new state of things Christian civilization has inaugurated when H.M. the Empress herself is patroness of female education in the Capital. The introduction of the speakers by the native chairmen was very happy. That by Mr. Takahashi Goro of the lecture on Buddhism was very pleasingly and appropriately done, he himself being a writer of some note on Buddhism. He compared the claims of Buddhism and of Christianity to the Chinese and European Schools of medicine:—Both had supporters, but the practical test was in the cures effected. And their relative merits were best understood by comparison, nor was there need of this being done in a spirit of detraction. The closing of the lectures, also, by prominent gentlemen rising in the audience and moving a hearty vote of thanks to the lecturers must have been more agreeable to them than any amount of noisy demonstration. The announcement was made that an interval of some weeks might intervene before the remaining lectures of the course would be given, and a hope was entertained that a larger place might be obtained for the accommodation of the increased audiences which the subject of the remaining lectures and the fame of the lecturers, Rev. Mr. Eby and Dr. Verbeck, might reasonably be expected to attract.

SOME very interesting remarks are reprinted in the *Independant de Saigon* from an essay contributed by M. Le Myre de Vilers, ex-Governor of French Cochinchina, to the *Nouvelle Revue*. The essay deals with the position of affairs in Tongking. The writer is thoroughly acquainted with the subject, and can afford to speak authoritatively. His advice is sound, and it is easy to see that he appreciates the difficulties of the conquest of Tongking at their full value. "If the state of our finances," he writes, "the condition of Europe, the actual necessity for defending our own interests, and public opinion

are in favour of the massing of a large number of troops in Indo-China," if the probable result of our efforts is really worth all the great expenditure of men and money, then dare we hesitate no longer; for the lessons of the past have proved the utter uselessness of half-way measures. We stand in need of at least fifty thousand men, of numerous gunboats, and of a powerful fleet; in all probability we shall be forced to declare war with China, and we must be prepared to attack her vulnerable points. The annual cost will not fall short of *one hundred million francs*, and this outlay will continue for ten years at least. This sum is by no means exaggerated; Cochinchina cost us comparatively very much more, and even then we left the Chinese element out of consideration. To-day we hold all the ports of Tongking in our hands: Namdinh, Hai-duong, Kwang-yen, Hong-gay, Tourane, and Thuân-an. We cannot abandon these places without endangering the lives of those natives whose services we have either accepted or solicited; let us therefore still retain them in our possession. All these places can be easily defended, and as they are situated in navigable waters, our gunboats could readily keep them supplied with food and ammunition. We shall not conquer a great territory, but we shall be assured of an important stronghold in the delta. The expense of maintaining these posts will be inconsiderable: 1,500 to 1,800 men stationed in the garrisons, with an active corps of say 2,000; altogether about 4,000 troops, with a dozen gunboats and a few larger war-vessels. All this represents an annual outlay of eight to ten million francs, the larger part of which might be covered by the customs-revenue in Tongking and the surplus of the colonial budget. At least this is the way the English managed in the Straits Settlements. This plan may be condemned as insufficiently explicit; as nothing but a return to the invariable policy of the Foreign Office, a policy which leaves us in an unsettled state of neither peace nor war; finally, it may be urged that this plan will but renew the difficulties which attend the execution of the treaty of 1874, and that Tongking will be far from secure from harm. All these objections would be reasonable and based upon sound argument; but, as we must needs have Asiatic colonies, we must conform to Asiatic necessities, and, in Asia, everything rests upon vague traditions or is the outcome of mutual compromise, so that distinctness, or exactness, in the European acceptance of these terms, is something entirely unknown."

THE banking firm of Messrs. Ghislain, Cahn, Painvin, and Drion, at Antwerp, has suspended payment. The liabilities are stated to be 10,000,000 f., and the assets 4,000,000 f.

AMONG the six largest sugar-producing countries in Europe—Germany, Austria, France, Russia, Belgium, and Holland—Germany, during the campaign of 1882-'83 carried off the palm with 800,000 tons or 39 per cent. of the whole. Next comes Austria with 475,000 tons, France with 425,000 tons, Russia with 250,000 tons, Belgium with 75,000 tons, and Holland with 25,000 tons. Not only has Germany relatively the greatest number of refineries (357 out of 1,204, equal to 29.6 per cent.), but she has also the largest establishments, the annual production for each refinery averaging 2,235 tons, while the average of Austria is only 2,039 tons, and that of France as low as 895 tons.

THE telegram recently received announcing that an attempt on the life of the King of Italy had been made at a railway station, now appears to have been based upon insufficient data. The telegram was sent to the Foreign Office in Tokiyo by the Japanese Representative in Rome. It was not in French, as a local contemporary stated, nor was the French version published by that journal a translation of the message actually received. The telegram was, however, sufficiently clear to induce His Majesty the Mikado to forward a congratulatory message to the King of Italy. The latter's reply, received on Friday, intimates that the occurrence at the railway station was probably accidental. As to the details of the accident, no information is to hand, but it may be presumed to have been something of the nature of an explosion of gas or steam. The Italian Internationalist is doubtful just as much a reality as the Russian Nihilist, but the probability of his raising his hand against King Humbert seems exceedingly remote.

A SPIDER large enough to be the original of some of the traditional monsters that strangled warriors and performed other murderous feats in former days, is said to have been discovered near the village of Sawanuma, in Ibaraki prefecture. A farmer, by name Unosuke Kameda was engaged last December digging a pond when he came upon the insect and succeeded in effecting its capture. The spider's body is declared to be 1 foot 7 inches in width, and it measures 5 feet 9 inches across the legs. It is to be sent to Tokiyo for exhibition.

AFTER all, there is no better argument in favour of a system than its success. Political economists have always been puzzled to fix the limits of official functions, and some of the wisest of them subscribe to the general postulate that whatever can be accomplished by private enterprise ought to be independent of Governmental interference. The postal service is, perhaps, the only universally recognised exception to this rule, but the telegraphic service ought certainly to be added, if English experience may be taken as a guide. A message may now be wired from the South of England to the north of Scotland at a cost of about a cent per word, and yet the net profits of the post-office and telegraphic departments amounted, in 1882, to nearly nine millions of dollars. Such results as these could scarcely be shown if the services were in the hands of close corporations.

A CORRESPONDENT of *L'Italie* tells an amusing anecdote of Vignaux, the French champion billiard player, who recently defeated the American, Schaeffer. In Vignaux's youthful days he was challenged to play a partie with an amateur of great strength, on condition that both men should have their right eyes bandaged during the match. Vignaux accepted the challenge and was beaten. "Confound this bandage," cried he, "it prevents me from judging my cannons." "Take it off, then, for the return match, if you please," said his adversary. "I, however, will keep mine on." Vignaux thought himself in honour bound to forego this apparent advantage, and playing again as before, was beaten as before. Some time afterwards he met a friend of the conquerer and told the story of the partie. "My adversary was an uncommonly strong player," he observed. "Yes," the

other assented. "All the more so that since he was a child he has been able to use his left eye only."

THE second day's running at Hongkong Races has come to hand, and as was anticipated in this column on Friday, Mr. Paul made a big bid for a clean sweep of the items on the second day's card. Out of the nine events contested, Mr. Paul had one or more starters in eight races, with the result that he won five, ran a dead heat for the sixth, and had second place in the other two. This is rather warm for the other stables, and if the straw jacket is carried into the enemy's country at the Shanghai Spring Meeting, the northerners will have as much as they can do to hold their own on their own ground. The dead heat was for the German Cup, and was between Messrs. Kerfoot and Mouat's Cowboy and Mr. Paul's Ruby, and the owners agreed to divide. The weather, which had been wet previous to the opening day, cleared up on the second day, and large crowds of natives and foreigners found their way to Happy Valley. There was an accident in the first race, the Scurry Stakes, in which Mr. Hutchings, on Filbert, was forced over the rails, both pony and rider coming to grief, the latter getting a severe shaking and badly injuring his ankle.

It is worthy of note that the abolition of Consular tribunals in Tunis and the submission of British, Italian, Austrian, and German subjects to French jurisdiction there, has evoked from English residents complaints precisely similar to those we hear constantly in Yokohama with reference to a possible modification of extraterritoriality. "The Maltese colonists," writes a correspondent of the *London Times*, "regard with considerable apprehension the prospect of a surrender of their persons and interests to the tender mercies of the French tribunals. Many of them told me they would prefer to quit their adopted home rather than tamely submit to such a fate." It may be some consolation to the people of this country to learn that the prejudices which inspire so much dislike and distrust of Japanese tribunals, and which are ostensibly based upon the incompleteness of Japanese laws and the incompetence of Japanese judges, are not less openly expressed when French laws and French judges are concerned. The truth is that men everywhere prefer what they know to what they do not know, and think the institutions of their own country better than those of any other. From a Japanese standpoint nothing could be more unsatisfactory than Western justice as it is administered in Japan under the extraterritorial system. If the old saying, "the man who acts as his own lawyer has a fool for his client," applies to an Englishman in an English Court, how much more must it apply to a Japanese in a foreign Court? Yet a Japanese, appearing as plaintiff in Her Britannic Majesty's Court for Japan, must not be represented by a Japanese lawyer. The etiquette of the Court, more careful of form than of justice, refuses to permit anything so undignified as the pleading of a professional who does not hold an European or an American diploma. The Japanese must either conduct his own case or go to a foreign barrister. If he adopts the latter course, he knows that his preliminary outlay will be enormous, while the difficulty of explaining himself is scarcely less; if he adopts the former, he has to do everything through an interpreter, and probably finds him-

self, at the very outset, bewildered by the innumerable technicalities and formalities that have to be complied with. We doubt whether foreigners ever take the trouble of attempting to realize the great inaccessibility of Western justice by Japanese. We doubt whether they ever think how they would fare themselves if, when bringing an action against a Japanese, they had to choose between employing a Japanese lawyer at an expense twenty or thirty times greater than they have ever contemplated before, and conducting their own case through an interpreter. Most people scout at the notion that the difficulties and disabilities of which foreigners complain in their intercourse with the Japanese, exist in any corresponding degree for Japanese in their intercourse with foreigners. But this self-complacency disappears when we come to consider the actual facts of the case, as well as the nature of most of the tribunals which the Treaty Powers have set up.

A FEW days after the death of Mr. E. C. Kirby, the twenty-fifth steamer built at the Ono Iron Works during his connection with the establishment was launched and got ready to hand over to the owner, Mr. Nakamura Jiuichiro, an enterprising citizen of Kioto. The day before yesterday Mr. Nakamura went on a trial down the bay, and it was proved that the *Asahi-maru*, as the steamer is called, more than fulfilled all the requisitions of the contract. On this occasion an average speed of ten knots was maintained, although the agreement only called for nine, and this too with 60 lbs. of steam and 85 revolutions, while the boiler is intended to work at 75 lbs., being tested to double that pressure. The *Asahi-maru* has the distinction of being the first iron steamer built in Japan for deep sea work, the only other iron vessels constructed in this country having also been built by Mr. Kirby, but for plying on Lake Biwa. The dimensions of the *Asahi-maru* are:—Length on keel, 152 feet; beam, 23 feet; over all, 161 feet; depth of hold, 12 feet; between main and hurricane decks, 6 feet. She will carry 400 tons of rice cargo under the main deck, and will be placed on the berth between Kobe and Yokohama. The engines are of the usual compound surface-condensing type, and of 55 horse-power, nominal. It will be gathered from the particulars we have been able to furnish, that this last vessel built under Mr. Kirby's auspices has well maintained the reputation won by his shipbuilding establishment, and it is to be hoped that the present owners will be equally successful.—*Hiogo News*.

EMPEROR WILLIAM has written a letter in reply to the address of congratulation sent by the magistrates of Berlin upon the occasion of the recurrence of New Year's Day. The letter of the Emperor especially dwells upon the unveiling of the monument of Germania at Niederwald and the festival on the anniversary of the birthday of Martin Luther, and closes with the prediction that the maintenance of peace throughout the Empire is assured. The text of the letter is as follows:—"I praise God that in His goodness it has still been vouchsafed to me to inaugurate the proud monument on the banks of the Rhine, which is destined not only as a perpetual commemoration of the happily regained unity of Germany, but also as an earnest sign of the invigorated and true might of the united German Empire. The grand

festival in honor of Martin Luther's birth, in which after four centuries the whole of evangelical Christendom united with me, will not less ever remain for me an elevating reminiscence. It affords me the greatest gratification that the new year has come under circumstances which verify the hope of quiet, undisturbed times. I am convinced that under the blessed protection of peace, of the maintenance of which I have obtained fresh guarantees through personal intercourse with friendly princes, the nation will in the future find a prosperous development." Replying to an address from the Town Councilors, the Emperor said he had been able to devote himself to the constant services of the Fatherland with renewed vigor. In recognizing it as one of his missions to foster the friendship of foreign Powers, and thereby bring about a greater intimacy among the nations, he hoped those relations would not remain without a lasting influence for the safety and welfare of the whole country.

THE third lecture of the free series announced by the Evangelical Alliance, was delivered in the Meiji Kwaido, Tokiyo, on Friday last. The weather was everything that could be desired, and this, added to the interesting subject of the lecture—Buddhism and Christianity—as well as to the growing popularity and reputation of the gentlemen engaged in the work, attracted a very large audience. By three o'clock the hall was completely filled, even the galleries being so crowded that standing room could scarcely be found. The capabilities of the building are unfortunately limited, and when sixteen hundred persons had been admitted, it was found necessary to close the doors. Despite this very practical step, and the assurances of the door-keepers that every available spot was occupied, numbers of people remained for a long time at the outer gates, hoping against hope that some means of gaining ingress would be found. The Rev. C. E. Eby opened the proceedings with a forcible appeal to the audience to give the lecturer a fair hearing. He read from the *Fiji Shimpō* a letter recently addressed to that journal by an English layman on the subject of the disturbance made by some students during the delivery of the first lecture of the present series. The letter pointed out that Christian morality is just as much a part of Western civilization as steam or electricity, and that, while adopting the latter, to refuse even to examine the former, is inconsistent with the national intelligence of Japan. The writer then went on to say that freedom of speech and thought is one of the highest privileges of civilized men, and that although this privilege is not yet fully enjoyed in Japan, the interval which separates the people from its enjoyment is daily growing narrower. Probably none were more desirous of bridging that interval than the student class, yet by way of establishing their fitness to be freed from all restrictions, they displayed at the Meiji Kwaido something of the intolerance and bigotry which are everywhere regarded as evidences of the need of control. If Christian philosophy was unworthy to compare with Buddhism or Confucianism, the intelligence of the Japanese people might be trusted to discriminate without the assistance of such devices as the students resorted to. The letter concluded by observing that the world has been in search of truth for many centuries; that it would better become the Japanese to assist, than to impede, the search,

and that the people's title to self-government would not be strengthened did it appear that the effect of their contact with Western systems was to develop a spirit of intolerance and a disposition to stifle honest enquiry. The reading of this letter was received with many noisy demonstrations of applause or dissent, but it was plain that the unruly spirits were not in the ascendant, and when Mr. Eby told his hearers that nothing was asked of them but a fair hearing; that if any could not agree with what they heard, they were welcome to maintain their own views, and that the missionaries not only had no desire to control, but were even ready to respect, their opinions, the whole audience settled quietly down and listened to the lecture with the utmost decorum and attention. It was curious to compare the reception given to Dr. Gordon with that accorded to the Rev. Mr. Verbeck at the previous lecture. The former gentleman resides in Kiyoto, whence he had come for the purpose of delivering this lecture. He was consequently an entire stranger to the people of Tokiyo, and his appearance on the platform elicited no demonstration of any sort. Dr. Verbeck, on the contrary, whose blameless life and earnest labours have made his name as familiar to, as it is respected by, the citizens of the capital, was greeted with a storm of applause. We mention this difference, not by way of contrast, but because of the significance it ought to have for those who profess to think that missionary work has not yet begun to appeal to the Japanese through the example of the workers. Dr. Gordon's manner was very quiet and self-possessed. A little more deliberation would have improved his enunciation and imparted to it the distinctness aimed at by practiced speakers, but any defects that might have arisen from this cause were compensated by an excellent accent and great clearness of style. The lecture was, for the most part read. One might have expected to detect something of the Kiyoto mannerisms or dialect, but if these were present at all, it was in a degree too slight to be perceptible by ordinary ears. Nothing could exceed the attention paid to the lecture. Conspicuous in the front rows of the audience were several Buddhist priests, one of whom, a young man, exhibited at times great excitement; and once, springing to his feet, denied the accuracy of the speaker's views in two or three vehemently ejaculated words. His comrades, however, soon restrained him. They, on the contrary, appeared to be rather edified, than exasperated, by what they heard. Dr. Gordon began by disavowing all desire to speak ill of Buddhism, acknowledging frankly that it contains much which is worthy of admiration and respect, and that a religion so widespread is deserving of careful study. That study, however, is difficult, he explained, because the Buddhism of Ceylon, which most resembles that taught by Gotama, is very different from the Buddhism prevailing in more northern lands. Following the example of Dr. Oldenberg and Rhys Davids, the enquirer's first object should be to learn what Gotama really did teach. Only a small portion of the traditional accounts can be accepted as trustworthy, the northern Buddhists making, for example, a mistake of fully four centuries as to the time of Gotama's death. With regard to his teaching, there is clear evidence, first, that it inculcated self-deliverance coming from self-culture; secondly, that it did not recognise a soul in man; and thirdly, that it consequently denied any real personal existence

in the future. Without discussing at length the existence or non-existence of a saint who has entered Nirvana—a question which Shaka evaded—it may be safely asserted that the original teachers of Buddhism gave us positive hope of a future state. The Great Vehicle, of which Nagarijuna may be regarded as the founder, rose centuries later in a different part of India, where a different language was spoken and different conditions of life existed. The tenets of this new creed, which included salvation for others and was embellished by the addition of many fictitious beings, was taught in writings passed off as the work of Shaka. Thenceforth freer rein was given to the imagination, and there resulted the Japanese Buddhism of to-day, with all its diversities of doctrine, and its variety of Buddhas, of whom those worshipped by one sect were despised by another. The lecturer went into details of this part of his subject at some length, and deduced the conclusion that the Buddhists themselves feel the insufficiency of their faith, just as the physician, who goes about seeking new medicines for a disease, shows his dissatisfaction with the remedies he already possesses. Dr. Gordon anticipated a possible application of this same argument to the sectarian aspect of modern Christianity by pointing out that all the sects have virtually one Bible and all worship one God. Not even a Roman Catholic or a Greek Christian denies that the New Testament is God's revelation or countenances the worship of another deity. Buddhism leaves its followers without any satisfactory account of the origin of the universe: it does not recognise a benevolent creator, but bids its disciples look upon this world merely as a place of suffering, a world to flee from. Disbelieving in a creator, they necessarily have low ideas of sin, and are prone to lapse into immorality. The lecturer dwelt with much force upon the false relationship of Buddhism to women, and his reflections upon this point seemed to meet with the hearty approval of his hearers. Indeed, it would have been difficult to find a more attentive or appreciative audience, and it cannot be doubted that the depth of study and thought displayed by Dr. Gordon made a lasting impression on all those present. Probably the Buddhist priests themselves heard much that was new to them, and carried away a considerably modified idea of their creed. We are persuaded that these lectures will be found to have opened a route leading to very marked results.

THE Paris *Figaro* gives some interesting details respecting a Frenchman named Soulie, who is believed to be the Mahdi's right-hand man, and to have taken a leading share in the defeat of the Egyptian force under Hicks Pasha. Soulie is described as having haunted the cafés and beer-shops of the Quartier Latin some seven years ago. He was then a young fellow of about 24 years, very dark and wiry, loud in talk, and exuberant in gesticulation. He was born at Algiers, where his family still reside. When the war broke out his family, dreading lest his adventurous spirit should lead him into danger, summoned him home to the Algerian Capital, where he does not appear to have pursued any settled occupation. Devoured with impatience, restless from inaction, he endeavored to find a vent for the fury of his temperament by the most perilous exercises of the acrobat and circus rider. On his return to Paris, about seven years ago, he attended the lectures of the School of

Mining Engineering and studied law; but quiet life did not suit him, and he returned to Algiers, whence he wrote letters to friends in Paris, breathing a violent hatred to England and the English, whom he conceived to have used Germany as an instrument to "crush France." One fine morning he disappeared, and his friends were at a loss to know what had become of him, when they suddenly heard that he had joined Arabi, to gratify his passion by fighting the English. After the collapse of Arabi he migrated to Kartouan, and subsequently joined the False Prophet, in whose operations he is believed to have taken a leading part. The story, as told by the *Figaro*, may be pure romance, but there is this foundation for it, that there are many adventurers with the False Prophet, and that among them there is a Frenchman named Soulie.

A LONDON paper says:—It is a little disappointing to find that the efforts made by cultured Europe to civilize the natives of the United States are not always appreciated as they deserve. It is melancholy, but it is nevertheless true, that the public which came to hear Oscar Wilde in its thousands is hardly present in hundreds when Mr. Matthew Arnold preaches the gospel of sweetness and light to it. Moreover, while an American actress is filling Mr. Irving's own theatre nightly with enthusiastic crowds, the success of the eminent tragedian himself is not beyond cavil or question. He and Miss Terry are pronounced a great "social success;" but critical America is by no means convinced that they are supremely excellent on the boards. In Baltimore the Marylanders did not appreciate his "Hamlet" (there have been people in England who have shared these feelings), and they disrespectfully "roared" at the ghost. This was sad, but of course easily accounted for. "Mr. Irving said he was favourably impressed with the Americans, but they were not yet fully educated to appreciate true artistic ability." However, what with the missionary journeyings of chief justices, poets, eminent actors, æsthetes, and others it is felt that things are improving in the benighted land.

THE *Yeiiri Shimbun* says that accurate measurements have been taken of the various dimensions of the celebrated statue of Daibutsu at Nara, with the following results:—Length of back, 38 feet; length of face, 8 feet; breadth of face, 6 ft. 7 inches; long diameter of ear 2 ft. 3 in.; length of eye, 2 ft. 5 in.; length of nose, 3 ft. 5 in.; height of nose 2 ft. 6 in.; diameter of nostril, 2 ft.; length of mouth, 2 ft. 6 in.; length of hand, 4 ft. 8 in.; circumference of waist, 25 ft.

TUESDAY night was an unfortunate time for Tokiyo. Probably not one man in a thousand went to bed without an apprehension that he would be roused by the fire-bell, for the spring-like temperature of Sunday and Monday had been succeeded by a bitter wind from the north-east which blew throughout the day and showed no disposition to go down with the sun. One would fancy that in such a time the citizens would be doubly careful to guard against fires; and so they are, doubtless. But, on the other hand, the opportunity for incendiarisms is rare, and as this variety of trade has been under a cloud lately, owing to the vigilance of the police, the blustery weather of the 4th was speedily turned to account. At a little after eight o'clock,

flames were discovered issuing from an empty house in the rear of a cook-shop near Nihon-bashi. The firemen were soon on the spot, and the people, who have been taught by recent experience to think that a conflagration need not extend beyond one or two roofs, worked with a will. But the wind was too much for them. It carried the sparks to a neighbouring timber-yard, and, in little more than two hours, four hundred houses were in ruins. This is the most destructive fire by which Tokiyo has been visited during the present winter.

The *Nichi Nichi Shimbun* gives the following particulars:—The fire originated in a dwelling close to a restaurant known as Yoshidaya. A strong N.W. wind was unfortunately blowing at the time, so that the flames were speedily carried to Kawasogoku-cho, Sanai-cho, Shinyemon-cho, and thence to the creek. The fire at one time threatened to cross the river, and in that case there would no doubt have been a second edition of the fearful Hakuya-cho conflagration. But just at this point the fire-proof buildings of the Thirty-third National Bank effectually checked the progress of the flames. About 11.10 p.m. the fire was at last under control, after having burned fiercely for three hours. The Thirty-third National Bank distributed 200 yen among the sufferers from the fire.

A few hours later, at 20 minutes past 5 in the morning, another incendiary succeeded in setting fire to the lumber house of a maker of wine measures in Minami-Shimbô-chô, Kanda ward. The conflagration spread in both directions destroying 77 houses in the street leading to H'totsu-bashi and 102 in the opposite side. This fire was got under by half-past six o'clock, so that in little more than an hour's time, it reduced 179 houses to ashes and half destroyed nine. Unfortunately the affair was not without loss of life. A fireman who carried the *matoye* of one of the companies was caught by the flames and burned to death. Yet another conflagration occurred the same night in the suburb called Maye-no-mura. The flames broke out in a gate-house and destroyed five houses. Thus the total loss suffered in the capital between sunset on Tuesday and sunrise on Wednesday was 584 houses.

FROM what wonderful sources the vernacular newspapers derive their information, we are often at a loss to divine. The latest rumour circulated by them, and readily taken up by the foreign local press, is that trouble has occurred between this country and China, and that His Excellency Soyeshima is about to proceed to Peking for the purpose of negotiating with the T'sung-li Yamên. The whole of this story is a baseless fabrication. There is no trouble with China, and Mr. Soyeshima is not about to proceed to Peking.

SAYS the *New York Times*:—"Mr. Arnold dreamed of meeting the farmer in some pleasant field, guiding the plow with one hand and holding wide open in his other some such work as the 'Iliad' in the original Greek, the 'Prophecy of Isaiah,' in Hebrew, or perhaps 'Culture and Anarchy,' in exquisite English. With this man Mr. Arnold would engage in conversation, and, without once checking the progress of the plow, the farmer would speak with decorous enthusiasm of the Hellenic spirit, and would suggest—in a parenthesis—that alkaline soil might

be improved by treating it with sulphuric acid, or that zeit-geist is unequalled as a fertilizer. Sweetness and light would exude from every crevice of the farmer's straw hat, and Mr. Arnold would beg the favor of sitting reverently at his feet during 'nooning' and listening to the wisdom which, under the stimulus of snowy bread and golden honey, this king of men would impart." The *Times* adds that farmers like this don't grow in America.

ACCORDING to the records of the Police Department, the number of houses where thefts were committed in Tokiyo and its suburbs during the month of January was 1,063; the number of suicides was 41; the number of houses burned, 53; the number of murders, 2; of attempted murders, 1; of rapes, 2; of money-forgers, 1; of forgers of official seals, 1; of thieves arrested, 162; of houses robbed with violence, 38; and of burglars arrested, 20.

THE receipts on account of revenue, says a home paper, from April 1, 1883, to January 5, 1884, were £61,273,255, against £60,716,410 in the corresponding period of the preceding financial year. The net expenditure was £66,616,694, against £68,861,712 to the same date in the previous year. The Treasury balances on January 5 amounted to £1,801,152, and at the same date in 1883 to £1,758,096.

THE *Yomiuri Shimbun* says that the value of the deliveries from foreign firms to Japanese in Yokohama during last month (Feb.) was 1,355,293 dollars, while the deliveries to foreign firms from January 26th to February 27th amounted to 636,087 dollars, the balance in favour of imports being, therefore, \$719,206.

IT is said that the applications for railway bonds, up to the 20th instant, amounted to 8,300,000 yen, whereas the quantity to be sold was only five millions. One of the Tokiyo journals, mentioning this, says that if such a sum can be collected in less than a month, the railway will probably be completed in five years instead of ten.

IT is now stated that the trains have been crossing the new bridge over the river Karasu, on the Tokiyo-Takasaki line, since the 23rd of last month, and that the building of the station at Takasaki has been commenced, so that the road will be open for traffic throughout before the end of the present month.

HIS Excellency Tanaka, President of the Council of State, has presented to the Armoury at Kudan two swords; one by the renowned Masatsune and the other by the scarcely less celebrated Sukemune.

A TOKIYO newspaper tells of a wonderful *Tai* caught by some fishermen of Tobashiri in Higo. The fish measured six feet two inches from head to tail and four feet across the body. Such a *Tai* was never before heard of in Japan.

WE are informed that the P. & O. steamship *Kashgar* left Hongkong at 1 p.m. on Thursday for this port, *via* Nagasaki and Hiogo, and that the English mails of 25th January are on board the *City of Tokio*. The Pacific Mail steamer was to leave Hongkong on the 3rd inst. at 3 p.m.

WE read in a vernacular journal that Japanese kites have become fashionable in Europe and that 120,000, of various descriptions, were recently exported from Yokohama.

JAPAN TEAS.

THE Notification issued over the signatures of the Ministers of Home Affairs and of Agriculture and Commerce, for the purpose of encouraging the formation of guilds to deal with fraudulent practices in connection with the manufacture of tea, is perhaps the only step which can be officially taken in this most important matter. Among persons engaged in the production of both tea and silk, we have been accustomed to hear, during the past two or three years, constant complaints of the reckless adulteration carried on by unprincipled dealers, to the virtual extinction of honest commerce. The effort made by the Ito-gwaisha, in 1881, to accomplish a reform in the case of silk failed, owing to causes which need not be discussed now. It requires, however, no gift of prophecy to see that the greater part of the scheme contemplated by the promoters of the Ni-adzukurisho will, sooner or later, be carried out, and that the trade in the noble article will be freed from the clumsy abuses which at present disfigure it. But this result will probably be deferred for some time still. The initiatory experiment, made three years ago, exercised a sort of paralytic effect upon producers and dealers throughout the country, and left them neither strength nor inclination to recombine, whether for a good or a bad purpose. The false principles on which the tea trade is conducted are, if possible, more injurious to its development and vitality, while being, at the same time less capable of correction under purely private auspices. Tea producers have, at present, no effective incentive to improve or purify their methods. The better the parcels they send to Yokohama, the larger margin is left for profitable mixing. As a rule Japanese traders in the foreign settlements do not want the best and least adulterated article only. They want varieties which can be craftily mixed, and sold at a price considerably above the average of the united parcels. It does not much matter, either, whether a tea comes to market well fired or ill fired, well packed or ill packed, damp or dry. It must all undergo the same processes of re-firing, colouring, and re-packing. The identity of every Japanese, whether producer or dealer, concerned in preparing or bringing forward the tea, is completely obliterated before the staple leaves Yokohama. Whatever it was originally, it goes forward under a foreign chop and in a foreign name. Nothing more conducive to fraudulent practices could be conceived. Expediency is the parent of commercial probity. If merchants were not persuaded that honesty is the best policy, very few of them would remain permanently honest. History contains no instance of a national effort to check abuses in any particular trade. In the competition of individuals the public has its only guarantee against wholesale adulteration. But in the Japa-

nese tea trade the competition of individuals and the rivalry of districts have no practical existence. All distinctions disappear in the foreign godown. The scheme mapped out in the Notification of the two Ministers is evidently designed to correct this fault. Each prefecture is to have its central guild and branch guilds, in which will be enrolled everybody engaged in the tea business. The measures adopted by the guilds for the prevention of adulteration and the introduction of improved methods of firing and packing, are to be devised by themselves, and embodied in bye-laws which will be submitted for the approval of the Department of Agriculture and Commerce. Every parcel of tea will be stamped with the stamp of the guild and marked with the name of the producer or dealer, the intention evidently being to send it forward to the place of export ready for immediate shipment. The conception is very thorough. There will be no outsiders; no free-lances watching for an opportunity to shoot worthless rubbish upon the market. Parcels not properly stamped and marked will be effectually excluded. A spirit of rivalry will thus be quickly educated in the various districts, and we may soon expect to see guilds as jealous of their stamps as an European manufacturer of his trade-mark.

On the other hand, will the benefits of this system extend beyond the open ports? That is a question upon the answer to which depends in a great measure the ultimate success of the scheme. If the parcels of tea go forward without re-firing or re-packing, and bearing the marks of the Japanese producers in combination with those of the foreign exporters, the trade will be placed upon a sound and satisfactory basis. We have pointed out before now that the re-firing carried on in Yokohama ought to be quite needless. Unquestionably it is necessary at present, but the necessity arises entirely from the faulty methods of firing and packing employed by the Japanese, and it is precisely to correct these methods that the guilds are to be formed. Here, however, the Japanese must be prepared to encounter resolute opposition. They are probably prepared to encounter it. For they know as well as we that the tea-firing godowns in the open ports are a source of considerable profit to commission merchants. The money actually spent in re-firing, colouring, and re-packing the tea is often little more than a moiety of the charges entered against these operations. Apart from this, too, few houses will be willing to risk the experiment of shipping Japanese teas by muster. Confidence sufficient to justify this will be very slowly established and reluctantly acknowledged. That it will ultimately be established, we do not entertain the slightest doubt, because the true interests of both sides suggest the advisability of freeing the trade from a superfluous tax, for that is the only term properly applicable to the re-firing and re-

packing at the open ports. Even if these operations had not created an expensive custom, an immense saving could be effected by performing them once for all at the places of production, where labour fuel and wood are much cheaper than in Yokohama or Kobe. But habits which have become sources of profit are difficult to eradicate. The first experience of the Japanese in this matter will be disappointment. They will be told that their teas were good enough already, and that if they choose to spend money on guilds and reforms they cannot expect the tea to bear the charges. Probably their best plan will be to send some parcels forward on consignment, through foreign merchants of repute if they can find men willing to interest themselves honestly on behalf of the scheme. Once let the reputation of the pure, uncoloured tea, retaining its original aroma, fresh from the hands of the producer, and free from the dirty additions it receives in Yokohama—once let that reputation be established beyond the water, and the rest is easy. Of course there will be some outcry about official interference with commerce. We can easily foresee the peculiar directions interested criticism will take. But the tea trade has got into a groove which is fatal to its healthy development and from which nothing but governmental action can rescue it.

TREATY REVISION AND THE
"HOCHI SHIMBUN."

RIGHTLY or wrongly it is generally supposed that relations of an intimate nature exist between Mr. OKUMA, and the *Hochi Shimbun*. That journal, at all events, gets the credit of representing the political party which has acknowledged the leadership of the former Minister of Finance since the autumn of 1882, and internal evidence is not wanting that the paper is better versed in the mysteries of officialdom than most of its contemporaries. The article which we reproduce from its columns to-day may therefore be regarded as an expression of powerful opinion on the subject of treaty revision. Indeed it probably embodies the policy endorsed by the whole Liberal party, if not by the whole nation. A very simple policy it is; so simple that the gist of it may be expressed in half-a dozen words: namely, the country must not be opened to foreign trade and residence until Japan recovers her judicial authority. The writer surrounds this, the kernel of his ideas, with a great many shells of needless argument based on a false hypothesis. He assumes that there has been officially submitted to the Treaty Powers and accepted by them a scheme for opening the country on the condition that jurisdiction over foreigners in the interior shall be exercised by mixed courts. Enough has been divulged of the proposals advanced by the Japanese Government to enable us to know

that this is a wholly false conception. Mixed courts have never been contemplated. What has been proposed, we believe, is that a number of competent European and American experts should be appointed to the Japanese judiciary, and should constitute a majority of the judges in every case where a foreigner is concerned. This is something altogether different from mixed courts, a species of tribunal which, as the *Hochi Shimbun* justly points out, is open to many grave objections. The laws administered by these foreign judges, in conjunction with their Japanese colleagues, would be Japanese laws, though pending the promulgation of the civil and commercial codes now in course of preparation, there would necessarily be vested in the foreign judges a certain discretionary power sufficient to prevent any failure of justice as Westerns understand the term.

It cannot be denied that in making this proposal the Japanese Government concedes a great deal. The appointment of aliens to positions of such importance and involving the exercise of such powers is in itself a convincing evidence that there exists an earnest desire to guarantee justice and protect the interests of foreigners. The principal arguments advanced by those who oppose any modification of the existing extraterritorial system, are two: first, that the criminal codes, promulgated in 1881, however excellent in themselves, cannot yet have found efficient administrators; and secondly, that the civil laws at present existing are imperfect and not fit to be applied to Westerns. Both these arguments possess much validity from a foreign standpoint, but both are met by the measure mentioned above. If the very limited amount of criminal jurisdiction which it is proposed to entrust at first to Japanese tribunals were virtually controlled by Western experts, and if a foreign suitor in a civil case knew that the universally acknowledged principles of justice would be dealt out to him by lawyers of his own race, possible misapplications of the criminal, and failures of the civil, codes would cease to be worthy of consideration. A great deal of what is written on this subject is calculated to obscure the judgment of the public. People forget that half of the civil jurisdiction is already exercised by the Japanese, and that it is exercised in a way which for the past two or three years has elicited warm encomiums from foreigners themselves. If, further, its exercise were presided over by Western judges, there is difficulty in discovering any rational cause for apprehension. Were there no grave disadvantages resulting from the present system, to continue it until the laws of Japan and her judiciary were such as to satisfy the highest standard of civilization might be the safest course on the whole. But there are grave disadvantages, and not the smallest of them is well illustrated in the *Hochi Shimbun's* article.

The mediatization of the Government in 1868 was effected by men who had applied themselves to the work originally with a double purpose: namely, the overthrow of the Shogunate and the expulsion of foreigners. The latter object was motivated in part by traditions which had descended from the days of Spanish and Dutch intrigues, but chiefly by an altogether mistaken conception of Western civilization. Among the foremost promoters of this erroneous antipathy in the early times were some who, before the Restoration was accomplished, had happily learned by foreign travel how false were their notions, and what large advantages were to be gained by cultivating the intercourse their country had hitherto refused to permit. Made wise by experience, these statesmen lost no time in applying to their conservative colleagues the same medicine that had cured their own blindness. Thenceforth the utmost resources of an ill-furnished treasury scarcely sufficed to defray the expenses of foreign tours, which, were regarded by the superficial observer, as the mere gratification of a costly curiosity, but were in reality an important factor in the wise policy that so speedily dispelled the country's prejudices and led it to pursue the path of progress with eager feet. Our present purpose does not require that we should dwell upon this phase of Japan's history farther than to note the two deductions it suggests: first, that her anti-foreign feeling thirty years ago was mainly the outcome of ignorance; and secondly, that it was consequently a feeling which the Government could, and actually did, adopt successful measures to dispel. But for some time past there has been growing up among the people a different feeling; a feeling which is the consequence of knowledge, not the issue of ignorance, and which is entirely beyond the reach of any remedy the Government may devise. The Japanese are learning to think that whatever solid advantages the material civilization of the West may possess, its moral civilization is incompetent to endure the test of practice, and wholly powerless to regulate the intercourse of nations. The *Hochi Shimbun's* article is not singular in the epithets it applies to foreigners. Other journals of various political creeds have been telling us, during the past two or three years, that Westerns are selfish, masterful, and arbitrary in their treatment of Easterns; that they set might and profit far above right and justice in their international dealings. But the *Hochi Shimbun's* article, though not singular in the use of these terms, is singular in its manner of using them. It does not attempt to demonstrate their applicability. It does not even hint that there is need of demonstration. It quietly assumes that the description applied to foreigners and their moral fashions will be accepted by the public as an incontrovertible premise. Perhaps, on the whole, foreigners them-

selves will not be disposed to deny the propriety of this assumption. The most ardent advocates of the *status quo*, the most violent opponents of any modification that would permit extended intercourse, have never thought it necessary to base their objections on any higher ground than their own selfish apprehensions. Approach the question how we may, we always arrive at the same conclusion, the same terminus of every conservative contention:—"Your systems are not worthy of our confidence. Formerly you distrusted us too much to throw your country open; now we distrust you too much to let you throw it open." That, being the interpretation put upon their conduct by foreigners themselves, is, not unnaturally, the view taken of it by Japanese. The *Hochi Shimbun* reflects the opinion of nearly all the educated classes when it says, that the treaties which suited Japan's condition a quarter of a century ago are not suited to her condition to-day, and that if justice alone were considered, their provisions would have been revised long ago.

To some minds it may possibly seem a small matter that a conviction of this sort should take possession of the Japanese. It may seem a small matter that the progress of Western civilization in this country, and therefore throughout the Orient, should be checked by the unworthy aspects that civilization presents when justice demands any sacrifice of it. It may seem a small matter that there should spring into life again a desire to keep foreigners at arm's length, and a wish to circumscribe their intercourse. It may seem a small matter that the nation should revert to prejudices no longer prompted by ignorance, and no longer within reach of the remedies that formerly softened them. These, we say, are contingencies which many persons will point to with disdain as visionary and impractical. But we venture to think, on the contrary, that they are eminently practical. On the value attached to them now must depend, in a great measure, the nature of our political and commercial relations with Japan in the future. At present the policy of the nation is still moulded by the men who were chiefly instrumental in dispelling the traditional antipathies of former years. How long will the influence of these men remain paramount for good if the nation learns to believe that the conciliatory attitude they have adopted only encourages foreign arbitrariness, and that the reforms they have advocated receive no practical recognition abroad? Underlying the utterances of the conservatives who would withhold from Japan every independent power she does not already possess, there is an easily discernible conviction, that should her policy at any time assume an unsatisfactory aspect, the violent methods of former years will always be available to correct it. But if Japan's progress has not yet persuaded European States to treat with her on an equal footing, it has at last

deprived them of all willingness to revert to their masterful methods. We shall never again see English ships and English soldiers employed to support a policy such as that pursued towards Japan between 1860 and 1870. That resource may be finally dismissed as unavailable. Whether or no our relations with this country are to be mutually comfortable, must depend upon the spirit educated by our intercourse, not on any fresh exercise of the strength we once employed so freely. Under these circumstances it may be worth while to consider whether the illiberal policy so freely advocated by a section of the foreign community is even selfishly sensible, and whether the best way to make this country a pleasant place of residence is to justify the epithets applied to foreigners by the *Hochi Shimbun*.

THE "LONDON AND CHINA EXPRESS" ON TREATY REVISION.

THE *London and China Express* writes about Japanese treaty revision in a studiously moderate tone but with a lamentably small appreciation of the situation. "The desire to abolish the distinction" (between Westerns and Easterns in Japan) "is purely sentimental," says our contemporary, "and although we can sympathise with the sentiment, we are persuaded that the friction caused by disregarding it is less dangerous, than the friction that would be caused by subjecting foreigners, against their will, to a system of judicial procedure which they view with suspicion and dislike." The more this comparison is considered, the more wonderful does it appear. On one side we have the sentiment of a nation of 37 millions; on the other, the sentiment of two or three thousand aliens. For in whatever self-complacent garb the "suspicion and dislike" of foreigners be dressed, they are just as much matters of sentiment as the desire of the Japanese to recover their rights of jurisdiction. Nay more, the Japanese sentiment is a worthy sentiment; it is a sentiment which every independent people ought to feel and with which every independent people ought to sympathise. Can the same be said of the "suspicion and dislike" which constitute the ingredients of the foreign sentiment? Can it be pretended that these spring from any noble impulse or have their origin in any better instinct than race prejudice? By all means let us get our premises clearly defined, however hurtful to our pride the process may prove. Here are a handful of strangers declaring, in one breath, that they will not submit to the jurisdiction of the country in which they reside, because they have a suspicion and a dislike of everything Oriental; and, in the next, that they regard any attempt on the part of this country to assert its independent rights as a mere matter of sentiment unworthy to be classed with their own race

antipathies. This is our contemporary's humiliating version of the situation. Let us follow him a step farther and see what Japan's "pure sentiment" amounts to. "It is admitted," he continues, "that the system of extraterritoriality must be modified before either Japan or China can be fully thrown open; that foreigners cannot be allowed to travel and reside at will throughout a country by whose magistracy they decline to be tried. But that is a question for the future; and we are persuaded that it will, for some time to come, prove a stumbling block in the way of completely free intercourse." It appears, then, that until this "pure sentiment" of the Japanese is gratified, their country cannot be thrown open. That, too, is a small matter, we presume, not comparable with the friction that might be caused by preferring the rights of a nation to the "suspicion and dislike" of a few strangers, whose only interest in the country is a commercial interest. Japan is daily assured that the material gain which must accrue to her by the removal of all restrictions upon foreign intercourse would be enormous. She is daily assured that by its commerce alone can a nation acquire wealth and respect. She is daily assured that the speediest way to develop her commerce is to throw her ports open to the ships of the world and her territories to the capital and enterprise of all nations. She wants to follow this advice. She has an incontrovertible right to follow it. There is not a power in the universe that has any claim to perpetuate her isolation, or to limit the liberty she accords to her visitors. Yet when she tries to take this step so materially important, she is told that her endeavour is purely sentimental. Equally, too, it was pure sentiment that induced Western Powers to send fleets and envoys, a quarter of a century ago, to force foreign intercourse upon Japan. Material interests had nothing to do with that proceeding. From the first it has been a pleasant jest to tell this nation what a member of the Yokohama Chamber of Commerce told it the other day, that "it cannot aspire to be considered enlightened and civilized while it closes the land as it is closed at present." The more sedulous and importunate a country shows itself in its endeavours to remove the obstacles from its path to enlightenment and civilization, the more it is to be regarded as sentimental and impractical, especially if these obstacles take the form of foreign suspicion and dislike. Little by little we shall arrive at a correct definition of the situation. The *London and China Express* has helped us along considerably. It has shown that Japan cannot be opened, cannot have intercourse with the rest of the world, cannot carry on an unrestricted commerce, cannot attain civilization and enlightenment, because the dislike and suspicion of two or three thousand foreigners, who have nothing to do with the country except to make money out of it, might develop inconvenient friction in the process.

FRANCE, CHINA, AND JAPAN.

IN an article chiefly directed to show that Japan's recent refusal to take part with France in a war against China was a grave error, the *Echo du Japon* says that the *Japan Mail* is written by a "prostituted pen" and calls its editor a "reptile." This language, unknown among educated men, and scarcely becoming a professed vindicator of France's honour, would relieve us from any obligation to notice M. TRICOU's champion, did not our contemporary's excitement take the form of an accusation that we do "not let any opportunity escape to attack France and insult her representatives." The proximate cause of the *Echo's* outburst appears to be an article reproduced by us from the *Pall Mall Budget*, in which "that horrible nightmare of Sedan" is mentioned. This vicarious evidence of our "hatred for France" is of a piece with the other proofs advanced by our contemporary. He charges us, for example, with refusing to see any reason in China's claims of suzerainty over Riukiu, while fully recognizing the validity of similar claims advanced by her with regard to Annam. He might, with equal justice, have accused us of asserting that Annam belongs to Great Britain. We have repeatedly and in the most distinct terms declared that, in our opinion, China's suzerain rights over Annam do not deserve practical consideration, and are only to be regarded as worn-out traditions. But of her right to have a voice in the foreign occupation of a territory which touches her own, and through which runs the chief line of communication with one of her wealthiest provinces, we entertain an altogether different idea. That is a right connected with the integrity of her empire; a right which she has the strongest motives to defend, and which France has no title to ignore. If to entertain and express this opinion is to exhibit "sentiments of hatred" against the French nation, we regret the inference but cannot, for that reason, alter our views. It would appear, however, that the gravamen of our offence is contained in our occasional criticisms of M. TRICOU's policy. That official, as his champion, the *Echo du Japon*, acknowledges, expended a great deal of diplomatic energy in an attempt to entangle Japan in an offensive alliance with France against China. "He essayed," we quote from the *Echo du Japon*, "to make the Japanese Government comprehend that there was an advantage to be gained by seizing this favorable opportunity to force China to recognize, as an accomplished and definitive fact, the annexation of the Riukiu Islands." Such an essay, and above all the methods adopted to further it, were unworthy of the representative of a great nation. France is able to fight her own battles with China. She has no need of Japanese aid. If M. TRICOU knew anything of the sentiments Japan

entertains towards her neighbour, his scheme was a deliberate attempt to convert wise friendship into profitless enmity. If he knew nothing, nor took the trouble to ascertain anything, about those sentiments, he made the strange error of attempting to deal with materials which he did not understand. Japan is not in any way concerned to obtain from China a recognition of the present status of Riukiu. She might as well ask the Court at Peking to authorize the recent conversion of Yezo into a prefecture. The Riukiu Islands had formed an integral part of the Satsuma fief for more than two and a half centuries when the rulers of this country brought them, in common with other fiefs, under the administration of the mediatised government. What happened was simply a change of polity, not an "annexation" of territory. The plan, attributed to M. TRICOU by the *Echo du Japon*, of persuading Japan "to force China to recognize the annexation" of the islands, showed a ludicrous misconception of the situation. Japan's action with regard to Riukiu was an exercise of her own sovereign rights. It needed no recognition at the hands of any foreign Power. It is true that, in deference to China's request and General GRANT'S mediation, she consented to a settlement proposed by the former. But China having withdrawn from her own proposition, and the Riukiu Islands having been part of a Japanese fief for 268 years and a Japanese prefecture for 9, this country neither is under any obligation, nor has any need, to consult the Peking Government about their status. So far as the Riukiu question was concerned, M. TRICOU could not have offered Japan any counsel more opposed to her interests than to assume an aggressive attitude towards a passive neighbour about a matter in which she has always denied that neighbour's right to interfere. On the other aspect of his counsel; on its reckless indifference to the friendly relations that ought to exist, and which Japan earnestly desires to establish, between the two empires, and on its cruel callousness to everything but the selfish interests of his country's aggressive vertigo, there is no necessity to dwell. We are informed now that Japan will rue her lost opportunity when she finds the Black Flags sweeping down upon the Riukiu Islands; for that, according to the *Echo du Japon's* prediction, is to be the final escapade of those valiant free-booters. They are to be headed for Riukiu by a process which we cannot pretend to appreciate. China will not dare to take them in, we are told, and yet cannot refuse to give them asylum. Therefore she will bid them go and take what they can get in Riukiu. This is the chimæra to guard against which Japan ought to have waged a precautionary war on her neighbour! With France's assistance she might have contrived to beat back the onset of these few hundred bandits: single-handed she

will be helpless. Such is the apology offered for M. TRICOU'S policy; a mischievous policy of intimidation and intrigue; a policy as unworthy of the great name of France as it is suited to the intemperance of its advocates. We believe, and have always expressed our belief, that every province added to the French possessions in Cochin-China, will be a distinct gain to the cause of civilization. For this reason, and because of the friendship Englishmen in general bear for their natural ally, our inclinations are all in favour of the speedy and complete consummation of French plans in Annam. But between our wishes for France's success and our ideas of the abstract justice of her proceedings, there is a wide interval; while, so far as M. TRICOU is concerned, in his attempts to plunge the Orient in war and in his diplomatic tactics generally, we recognise nothing that Frenchmen are concerned to defend. The *Echo du Japon* apparently thinks that it can establish M. TRICOU'S reputation for statesmanship and sagacity by calling the editor of the *Japan Mail* a "reptile." We have no objection whatsoever to the process. It is harmless, characteristic, and not altogether unbecoming to the principles which our contemporary advocates.

THE TOKIYO HARBOUR SCHEME.

CONSTANT allusions are made by the vernacular press to the projected construction of a harbour at Shinagawa. The idea has been entertained for many years, but hitherto its practical fruits have been confined to occasional desultory discussions and surveys. So far as we know, the plan is feasible enough. Its main feature is the banking off of the River Sumida, which constantly carries down inconvenient quantities of mud and silt. If this were effected, ships of considerable size could come alongside wharves built at Tsukiji and Shinagawa. One consequence of such a work would be a great appreciation in the value of the foreign concession at the former place. Lots on the sea front especially would command high prices. Owners of real estate there may find in this outlook some consolation for the certainty that so soon as the interior of Japan is thrown open to foreign residence, the present colony at Tsukiji will be scattered to the four winds of heaven. It is essentially a missionary colony, held together only by the difficulty of living outside treaty limits. Many of the houses have been built under the auspices and with the funds of American or English missions, while others have been purchased by missionaries from merchants who found that foreign trade declined to take root in that part of the capital. There is at present a certain air of comfort and compactness about the place. The southerly breezes blow in freshly enough from the sea in the summer, and in the winter the north wind expends half

its bitterness among the streets and alleys of the city before it reaches the little congregation of churches and churchmen. The residents, too, though few of them receive, for lives of untiring toil and wearing brain work, salaries that would compare favorably with the stipend of a clerk in a merchant's office, nevertheless manage to banish from their neighbourhood every evidence of the financial struggle in which one fancies they must always be engaged. Thrift and economy go a long way when they are supplemented by the absence of any desires which the plainest fare will not satisfy. Still, though at first sight it looks as though the missionaries had settled permanently at Tsukiji, and would reluctantly exchange the conveniences they have accumulated there for the hardships of life in a remote Japanese village, the truth is that they are eagerly watching for the time when it will be possible for them to make the change. Tsukiji will then be virtually untenanted, unless, in the interim, the harbour scheme has sufficiently matured to offer fresh attractions to the mercantile class. We have our own doubts about the latter contingency. Many a year of stout opposition will be needed to rob Yokohama of its present supremacy as the centre of Japan's foreign trade. If it were less accessible from the capital, the case might be different; but communication of every sort between the two places is now so easy that the mere addition of a harbour would scarcely elevate Tokiyo to the position of an invincible rival. If, again, the anchorage at Yokohama were unsafe or inconvenient, Tokiyo's chances would be better, but in the course of years the harbour regulations will probably find their way through the seventeen-chambered labyrinth of diplomacies which now obstruct the passage of any useful measure, and it may reasonably be hoped that Kanagawa Bay will not have silted up entirely in the interim. Therefore, on the whole, we incline to the belief that Yokohama will hold its own for many a year to come, and that its monopoly of foreign trade will not be seriously challenged even by such a combination as Tokiyo plus a harbour at Shinagawa. On the other hand, looking at the question in the abstract, there appears to be more speculation than sapience about this plan of bringing the deep sea up to the streets of Tokiyo. The instinct of all nations has been to place their capitals beyond immediate reach from the coast. Tokiyo, indeed, may be quoted as an apparent exception, but Tokiyo was not born to the greatness it subsequently attained. In its origin it was only the castle town of a powerful feudal chief, whose stronghold, virtually impregnable in the days of spears and matchlocks, was nevertheless well retired from the water's edge. Nature, too, has been kind to the city, for the three great rivers that water the plain in which it lies, have gradually filled up the bay until the near approach of vessels of war is

impossible. But the citizens are not content to profit by the protection nature provides for them. They wish to have wharves where big ships can lie comfortably, and for the sake of this gain, they are willing to bring their warehouses and streets within easy range of floating batteries. We live in what is called a commercial age. There will doubtless be found many practical persons ready to laugh at the notion that a city should weigh the chimera of bombardment against the acquisition of quays and an anchorage. It is not, however, a question of harbour or no harbour, but of choosing between two harbours. Yokohama is the natural harbour of Tokiyo; neither too far away to be inconvenient nor too near to be dangerous. If Tokiyo is resolved to fight against nature and have a harbour of its own, it can, of course, indulge the freak, but while the profit is problematical, the loss of security is certain. Considered strategically, the capital of Japan is well circumstanced now; and so far as commercial convenience is concerned, if the port of Yokohama is not sufficiently accessible, a canal can easily be added to its means of access. But we find it a little inconsistent that the Japanese, while busying themselves about coast defence and erecting batteries to command the approaches to the capital, should at the same time proceed to demolish the defences which nature herself has provided for Tokiyo and which furnish a better guarantee against attack than the most elaborate system of fortifications.

REVIEW.

The Protestant missionaries have added to their numerous publications a carefully compiled translation of the Heidelberg Catechism. The preface, written by Dr. G. F. Verbeck, whose name is sufficient guarantee for the thoroughness of the work, says that there has long been felt the want of "a small hand-book containing the fundamental doctrines of the Christian Religion, stated in clear and precise language, with prominent passages from the word of God, upon which such doctrines are founded." This want the Heidelberg Catechism is excellently adapted to satisfy. It consists of 129 questions and answers, setting forth all the essence of the Christian faith, and to each answer is appended a number of carefully selected texts, bearing directly on the subject under consideration. The questions and answers have been translated into easy colloquial Japanese by the Rev. Ambrose Gring, and revised by the Rev. E. R. Miller and his assistant Mr. Tsune Ishikawa, while the translations of the proof texts are taken from the Japanese Standard Edition of the New Testament and the *Kunten* edition of the Old Testament. There are also added an index of subjects, and the names of the books of the Bible with their Japanese pronunciation. The translation seems to be done with great care and accuracy. The style is simple and the printing of the characters, with the *Hiragana* attached, is exceedingly clear. An idea of the methods adopted in translating the Catechism may be

gathered from the following example selected at random:—

ORIGINAL.	TRANSLATION.
Question 114. Can those who are converted to God keep these commandments perfectly?	Kaishin sh'te Kamisama ni kisuru mono wa kayo naru imashime wo jibun ni mamoru koto ga dekimasuka.
Answer. No: but even the holiest men, while in this life, have only a small beginning of this obedience; yet so, that with earnest purpose they begin to live, not only according to some, but according to all the commandments of God.	Iye. Mottomo kiyoki h'to nite mo kono yo nite wa tada wadzuka kono sunao naru koto wo hajimemasu bakari de gozarimasu. Shikashi sono h'to-bito wa aru imashime bakari de naku isshin ni Kamisama no subete no o-imashime ni shitagau yo ni yo wa watari-hajimemasu.

We have never seen any religious work translated into Japanese after such a fashion as to conceal the fact that it was a translation. From this defect, if it be a defect, the Heidelberg Catechism is not free. Even the extract we have quoted seems capable of being recast so as at once to render the original more fully and to better conform with the canons of colloquial Japanese. But it seems wiser, on the whole, to preserve the utmost simplicity in work of this description: greater elegance and fullness may only be obtainable at the risk of liberties which a thoroughly conscientious translator of religious books would scarcely care to contemplate.

Of a somewhat different character from the Heidelberg Catechism is another volume just issued by the Religious Tract Society. It is a collection of lectures delivered in Japanese by the Rev. S. G. McLaren, M.A., to the students of the Union Theological Seminary in Tokiyo. The Heidelberg Catechism scarcely touches on the miraculous aspects of the Christian faith. It passes over the marvel of the Immaculate Conception by simply saying that "the eternal Son of God took upon Him the very nature of man, of the flesh and blood of the Virgin Mary, by the operation of the Holy Ghost," and its explanation of that not less wonderful doctrine, the Atonement by blood, is equally a collection of postulates. Dr. McLaren, on the other hand, deals directly with the miracles. To explain the standpoint from which his book is written, he tells us that he "regards the account of the creation, of paradise, the temptation and fall of man, the longevity of the earliest generations of men, and the flood, contained in the beginning of the Book of Genesis, as authentic history and neither allegory nor fable." That this view involves a belief in the miraculous character of the narrative, he does not consider any objection. On the contrary, "the Bible," he says, "is a miraculous book from beginning to end. It is like our Saviour's coat, woven of a piece throughout. It begins with an account of the stupendous miracle of creation; it culminates in the no less wonderful miracle of the incarnation of the Son of God; it closes with a prophesy of his second coming to judge the world. It is not surprising that around these greater miracles lesser miracles should cluster, and while the greater are acknowledged, it is ridiculous to strain the text of Scripture in the anxious endeavour to get rid of a few of the minor." This statement has at least the merit of thorough candour. Mr. McLaren asks for implicit belief in the whole Bible from cover to cover. We know not whether to admire his courage or to regret his temerity. The miracles, we believe, will be the great obstacle to the spread of Christianity in Japan. It is true that the earth and the sky are full of miracles, and that the power which works them is as illimitable as it is incomprehensible. But the miracles that have descended from the mythological era of our faith neither ennoble nor

strengthen Christianity. As proofs of the omnipotence of God they are wholly unnecessary, because incomparably greater and more sublime exercises of creative and governing power are daily before our eyes. Moreover, their character and conception are, for the most part, essentially human and petty. They are, in short, just such tokens as semi-civilized teachers would offer to minds still preferring superstition to science. The growth of intelligence and the progress of research have revealed a deity whose existence does not depend on the evidence of supernatural traditions. Christianity will gain, not lose, when it acknowledges that religion, like all other sciences, is progressive, and that the marvels which were needed to prop up men's creeds thousand of years ago were only suited to the age that conceived them. Holding these views, we cannot sincerely welcome the appearance of Dr. McLaren's *Kiuyaku-Seisho-Rekishi*, great as are the evidences it affords of the author's industry and research. Yet, at the same time, it cannot be denied that Old Testament history had to be presented to Japan under some aspect, and in Dr. McLaren it has found an exponent of no common ability. His work is of the greatest interest, and can scarcely fail to find readers, but whether, on the whole it will much help the cause he has at heart, is a question about which we feel very doubtful.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

A WARNING VOICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—According to the prognostics of the *Japan Herald*, the extra-territorial privileges that have been enjoyed by the foreigners in Japan are about to be abrogated, by and with the consent of the Governments having treaty relations with this empire. It does certainly appear as if that dire calamity would overtake us. There is great cause for fear in this direction, and it stands us in stead to lift up our voice and declare that this thing shall not be. Our fellow sufferer in the flood of evils to follow the abolition of the exemption from Japanese jurisdiction, Mr. Wilkin, has tooted his horn, and the *Echo* is being reverberated by the *Herald*. Why is it that the entire community, beginning with the constituency most largely represented, the Chinese, followed by the other nationalities, do not make haste to do battle against the infamy that is contemplated by their respective governments with the passive consent of the ministers resident? Is all public spirit dead? Are we content that this thing should be? Why is it that a remonstrance is not formulated wherein would be set forth the burning wrongs we all must submit to at the hands of the Japanese should our extra-territorial rights be swept away? Surely we might be able, if we could show to a candid world the horrors in store when Japanese laws are extended over us, to arouse a sentiment that would cause the directors of affairs all over Christendom to pause and reflect, and hesitate to perpetrate the contemplated infamy. Why do we not detail the horrible tortures we will surely have to endure to make us declare the truth before the courts? For surely we shall all be made to appear before the tribunals of justice. We cannot expect that there is a man, woman, or child that will not be wantonly made to feel the galling tyranny of the inhuman monsters who have control of the courts established throughout the land. We shudder as we contemplate the depth of misery to which we shall be consigned. The merchant should leave his business; the me-

chanic, his tools; the banker, his finance; the frequenters of Blood Town should forsake their pastimes; keepers of unlicensed places where debauchery is practised should forego their trade; the missionary should forget his mission, and lovely woman and prattling child should devote themselves to the defeat of the nefarious crime that may be perpetrated. It is full time that we were up and doing. Let the tocsin be sounded. Let the Bluff and the Settlement raise such a howl of angry determination that the sound thereof shall extend to all the open ports and arouse the supine denizens who reside therein. We should prepare a petition written with blood, and sign the same, with the purple fluid from our veins, and send it to the foot of the throne, that we be not molested in this way. At the same time we should frame a defiance so plainly worded, and truly constructed, that the most obtuse could not misunderstand its import; declaring that we will all, each and every one of us, leave the country, shaking the dust from our feet, in the event that our petition be passed unheeded. Yes, let us declare that we will abandon this home of heathenish rites, not our own; that we will withdraw ourselves, and the Christian influences flowing from our presence; that we will leave this people to their own devices, and the ruin that will overtake them from the presence of the men who will surely take our places—when we vacate them. A crusade should be preached. The *Herald* should be the Peter to lead the hosts in the battle of words. We should cry aloud and spare not. The bastions of the citadel of Extra-Territoriality should be filled with patriotic defenders. Surely there are other men than Mr. Wilkin who will put on the armor of offence and defence to do valiant service in the good cause. Certainly there must be others besides the *Herald* staff, who can be found to pour contempt and contumely on the Japanese; who can charge them with vice and corruption, and hold them up as wanting in all the essential attributes of a well ordered community. If it is not so, then indeed, extra-territoriality is doomed to become a legend of the past.

Yours, &c.,

ANXIOUS WARNER.

Yokohama, March 3rd, 1884.

[Our correspondent is scarcely just to Mr. Wilkin. It is that gentleman's misfortune, having publicly enunciated views which identify him as a supporter of the present system, to be indirectly associated with writers who have laboured to make English generosity a by-word in Japan. But, for the rest, there is, and can be, nothing common between him and them.—Ed. J.M.]

A FRIEND IN NEED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In undertaking to act once more as the guiding star of Japanese politics, the able Yokohama editor does not exhibit those winning and engaging qualities which—as indicated in my letter of February 19th—were understood to distinguish his early efforts in the same honourable pursuit. It has, perhaps, occurred to him that the garb of perfect *suaviter in modo*, which used to pinch in the back and strain his shoulders even when his frame was most pliant and supple, could not by any effort be made fitting and becoming in these later days; and that he may gain a point or two by trying to dovetail the functions of stern censorship—which he has been practising for the past six or eight years—upon the processes suited to the bestowal of frank and sturdy counsel. The objects now in view are undoubtedly different from those which seemed attainable at a former period. Then, the intention was to inspire such unlimited faith as to enable the trickster, in his character of genial philanthropist, to roll comfortably through existence upon a gilded inside track of salaried sympathy and subsidized support. Now, the idea appears to be, to produce a state of feeling which shall facilitate the release of at least one foreign resident from all the burdens that have accumulated upon him during the last dozen years of his career. Therefore, the accent of critical severity is to a certain extent sustained,

though modified into a tone of earnest admonition. The rod of chastisement continues to be waved with one hand, while with the other a new way of pleasantness and a purchasable path of peace is pointed out. There is one course left, we are informed, by which the Japanese authorities may yet retrieve the woful errors of the past, and in following which they may enable themselves to start afresh upon their task of Government, wholly untrammelled by alien obstacles of any description. In plain words, the plan proposed is to buy the foreigners out;—bribe them to vacate;—pay the troublesome fellows whatever they may ask as a riddance fee, and have done with them. Let them be offered "compensation for their landed properties, their goods, and their incomes. . . . A commission, composed of a member of each nationality, could determine a basis for calculating such compensations,—say, by so many years' purchase for real property, so much per cent. on invoices for goods; and so many years' purchase for incomes, with a valuation for anything that might be thought not to come within this category." There is the scheme,—simple, broad, and comprehensive. Or, if you choose, intricate, narrow, and exclusive. All depends upon how it is looked at. In any other country, such a proposition, emanating from a mind to which ordinary measurements of morality might be applied, would be set down as a barefaced bid for hard cash, payable in exchange for the voluntary withdrawal of an obnoxious individual from a locality where he has long been regarded as an encumbrance. One of the most effective devices for raising the wind, in Western lands, consists in converting one's premises, one's vocation, one's personality, into such aggravated forms of nuisance as to enable the crafty operator to command his own terms for "vamosing" the vicinity. The consideration given and received in transactions of this kind certainly goes by very ugly names. Sometimes it is called "black-mail;" sometimes "hush-money." In almost all cases it is an imposition upon the one who pays, though it is disgraceful only to him who receives. Society is familiar with infinite varieties of the latter species,—from the organ-grinder who declines to "move on" under a shilling, to the obstinate statesman who refuses to resign for less than a peerage. They are all of the same kidney,—alike derided, detested, and despised.

I take it for granted that the most innocent of readers could not for a moment be deluded by the pretence that the "buying out" proposal is really applicable to the whole foreign community in Japan. It is better to believe that no such sweeping imposture was contemplated. The promulgator of the scheme is not so utterly and irredeemably a fool as to suppose that everybody else in the world is a fool. Among the milder, and perhaps less interesting, of the two great constituencies into which cynics divide the human race, he has not usually been classed. In order, therefore, to get at the true meaning of his published plan for clearing foreign obstacles away from the course of Japan's progress, it is necessary to narrow down all his broad generalizations until they are concentrated upon his personal identity. The vast mass of barnacles which he professes a desire to see removed from this fine ship of the Orient must be reduced to the single shell which contains his fortunes. The "Gordian knot of the treaties" which, he says, needs cutting, is simply a snarl in the twine that ties up his insignificant baggage. The landed estates he magnificently refers to, resolve themselves into the thinnest kind of air, and the "properties" to be transferred to Japanese possession are composed of a second-hand printing press or so; a few founts of old type, and a limited supply of paper and ink. These are the real goods and movables which the author of the project wishes to see handed over to this Government, in exchange for a comfortable balance to his credit. That they have any value worth speaking of, he probably would not attempt

to prove. The real inducement he would offer, if it were possible that his plan could ever be contemplated, would be quite independent of the marketable worth of all his "landed properties," "buildings," "invoices," "merchandise" and other articles "not within this category." His demand for compensation would rest upon precisely the same base as that of the organ-grinder aforesaid, who calculates his "squeeze" according to the amount of annoyance he can inflict. If we could examine the current of his thought, it would doubtless be found to run thus:—The Japanese certainly hate me. They ought to, for I have lost no opportunity of giving them cause, and during half a dozen years have heaped upon them all the contumely, outrage, and insult I have been able to invent on my own account or borrow from the invention of others. Not knowing, so well as my own countrymen, the utterly contemptible character of my proceedings, they would be likely to give a good deal more than I am worth, to get rid of me. I can't offer to sell myself outright, and be shot out of the country like a heap of condemned rubbish; but I can set forth a pondrous project of wholesale transfer, including foreigners of all sorts and conditions, and if they are as keen as I used to find them when they got the better of me in my confidence games, they will at once see my hidden purpose, and meet me half way. If I know myself at all, my merits are of a kind to which distance lends the greatest possible enchantment. A very little of me goes a great way and lasts a long while. Twelve years of me ought to be enough for any country, and if the Government do not jump at the chance of "buying me out," they don't know their own interest. For my part, I would give such a fellow as I esteem myself to be all he could ask, to get him ten thousand miles away."

There, Mr. Editor, in a nut-shell, is the essence of this pompous and bombastic contrivance for "cutting the Gordian knot" of foreign complication, and solving the mighty problem of Japan's relations with the Western world. There is the "*ridiculus mus*" which emerges from mountainous columns of editorial labour. I do not think much time need be wasted in exposing the fallacy upon which the projector's hopes are based. Moralists in all ages have tried to teach the lesson that the power to disseminate mischief and propagate evil is measured not by the desire or intention of the agent, but by the strength and ability which nature has conferred upon him;—and mankind in general has recognized the truth of that axiom. But there are yet a few by whom the useful fact is not appreciated, and for such, the only proper treatment is to let them alone. The farmer who, when clearing new ground, finds a corner of it occupied by one of those curiously endowed creatures which resent an approach of less than eighteen feet, and which, like the ghost recorded by Aubrey, celebrate their exploits with "a quaint perfume and a melodious twang;"—the farmer who encounters one of these undesirable neighbours, does not, as a rule, proceed to build him a snug domicile; to supply him with artificial warmth in winter, and cooling moisture in summer; to provide him food, and otherwise gratify him with the various comforts and luxuries appropriate to his appetite. He does not conciliate him in any manner. He never thinks of "buying him out." He knows that the animal's ejaculatory pungency extends over a range of only six yards, and that his most pointed utterances possess no piquancy outside of that limited circulation. Therefore, he simply lets him alone. This, it will generally be admitted, is the only rational course to pursue; and those who regard it as wise and judicious will have little difficulty in divining the treatment in store for the ingenious inventor of the latest device for eradicating the ills which foreign contact has brought upon this empire of Japan.

I am, Sir, yours &c.,

GOOD MEMORY.

Yokohama, February 25th, 1884.

TRANSLATIONS FROM NATIVE JOURNALS.

TREATY REVISION.

(Translated from the *Yubin Hochi Shimbun*.)

On the sixth inst. the British Parliament was opened, when H. M. Queen Victoria, according to an ancient custom, made a speech recapitulating the principal events at home and abroad, to which the attention of the representatives was called. In the Royal message we find the following words:—"The revision of the treaty with Japan has been nearly completed." This news reached us by Reuter's telegram and was published in our foreign news' column. As regards our international relations, treaty revision is a most important question; all the more so as it is closely associated with our national interests and honour, as well as with a stigma and certain disadvantages. It is not to be wondered at that, as the news has come unexpectedly from a far-distant country, announcing, as it does, the near completion of the treaty revision—a source of consuming anxiety to both our government and our people—it should be received with some incredulity, and that there should have been speculations as to its truth. Although we give the closest attention to the domestic and foreign policy of the government, yet we cannot always attain a certain knowledge of the course pursued, as a thick curtain of clouds separates us from the Cabinet. This is particularly the case with regard to external relations. And occasionally when we do penetrate into the secrets of the Government it is necessary to refrain from divulging what we know; but, in this instance, we are at a loss to account for the real meaning of Her Majesty's words.

The position of Japan is that of a petitioner, and the Treaty Powers must either reject, or comply with, our demands. But now that the British Government announces that the treaty negotiations have very nearly been concluded, it seems reasonable to assume that they have agreed to our proposals. What proposals were made by our Government? Was the right to fix the tariff and exercise jurisdiction over aliens among the postulates? Or was the abolition of extrterritoriality alone complied with? Or was the present five per cent. *ad valorem* tariff altered to a higher basis? And, if the right to regulate the tariff has been conceded us, can we use that right without any restriction? These are questions we cannot answer. Apart from enquiry into the proposals put forward by our Government, we are anxious to know whether the British Government has fully consented to our demands; whether counter-proposals were made, and, if so, what is their nature; whether the mixed residence of foreigners and natives in the interior was required; and whether an intention to restrict Japanese jurisdiction was expressed. The Royal Address, delivered at the opening of the British Parliament, is usually of no great length, and in this instance it has been still further curtailed in order to admit of transmission by telegraph. But so long as the Queen has informed Parliament of the approaching completion of treaty revision, we may confidently look forward to details.

The public has been hitherto told that the treaty nations have refused to comply with our demands under various pretexts, and that, persistent as the Government has been in its efforts, the question of mixed residence under certain defined conditions was constantly being brought forward. This state of affairs came to our knowledge during the course of last year, but, until quite recently, we did not know whether or not the Government was in favour of mixed residence. A recent number of the London *Daily News* contained a doubtful paragraph, said to have been telegraphed from Tokiyo by a special correspondent of that journal. "The Japanese Government," says the paragraph, "has drawn up

a scheme for the installation of Courts of Justice, where, in the event of the opening up of the interior, foreigners may be tried." These are understood to be mixed tribunals, with a Court of Appeal, in which foreign judges will be in the majority. This scheme has been confidently submitted to the Western Powers. America and Germany are said to have replied favorably, though Great Britain has not yet answered. The arrival of Mr. Plunkett is, therefore, anxiously awaited. The *Daily News* telegram is nothing more than the upshot of a private conversation between the Minister for Foreign Affairs and the correspondent in question, and so we cannot state whether the report is really true or not. The similarity between the Royal Speech and the report in question, however, excites our curiosity. Should the above telegram be a faithful representation of facts, then must our Government have resolved to throw open the whole country to foreigners, and to establish Courts of Justice in which foreign judges will be in the majority, and Japanese judges in the minority.

What we demand from foreign powers is the right of tariff regulation, and that of jurisdiction over aliens. We aim simply at the recovery of these two rights, which are, and should be, the legitimate claim of every independent nation. We offer the opening-up of the whole country for foreign residence and trade in return for the restoration of these rights. Should we open up the country and give the same privileges to foreigners as we ourselves enjoy, before the complete abolition of extrterritoriality, then shall we never be able to recover the rights of an independent nation, while aliens can obtain all and what they will. Foreign residence and trade in the interior can only be allowed simultaneously with the entire abolition of extrterritoriality. So long as foreigners cling tenaciously to their extrterritorial privileges, we cannot permit them to live and trade in the interior. But if the country is once opened before this baneful custom is done away with, then can we never obtain the right to regulate the tariff, nor will our jurisdiction ever extend to foreigners. Far-seeing as our functionaries are, they cannot but be aware of this fact, and there is no reason why the Government should recklessly throw open the land. Hence the impossibility of arriving at the true import of the telegram published in the *Daily News*; and even with regard to the Queen's Speech we cannot discover a satisfactory explanation.

Considering the course of action taken by the Japanese and British Governments in reference to treaty revision, we find that unless extrterritoriality is abolished by the latter, the former will not permit foreign residence and trade in the interior; and that the latter will not concede this abolition unless the privilege of residence and trade in the interior be sanctioned. We have thought hitherto that, tenacious as is the Government of Great Britain of the interests of its subjects, it would object to the recovery of our legitimate rights, even though the prohibition of internal residence and trade were removed, unless an improvement take place in our internal administration. In the event of the said restriction being withdrawn and mixed courts established, aliens will be the gainers alone; for, even if the few paltry rights contemplated under those circumstances are restored to us, our gain as compared with theirs is a mere bagatelle. As this is the case the Government of Great Britain can hardly raise any objection, and we can thus grasp the true import of the Queen's Speech. Our gain would be far from counterbalancing our loss. Treaty revision was proposed only in order to recover the rights which were wrested from us at the outset of our intercourse with foreign nations, and to restore us equal rights with them by removing certain illegitimate and undeserved restrictions. If we cannot vindicate and maintain our rights, it is far better to let treaty revision alone. This is particularly the case when it is found that the attempted vindication of our rights leads to

the real aggravation of our wrongs. Our Government cannot surely agree to such a preposterous bargain, if the establishment of mixed courts and the withdrawal of all restrictions on residence and trade in the interior lead to the surrender of our just claims and the non-abolition of extrterritoriality. Implicit as is our confidence in the Government, we cannot believe that it would permit the revision of the treaties to be based on such an agreement. And for this reason we doubt the accuracy of the information supplied by the correspondent of the *Daily News*.

Freedom of residence and trade in the interior are the last concessions we can make to foreigners, and, once given, they have nothing more to demand from us. These concessions we must employ as a weapon against extrterritoriality. If once we accede to their requests before our rights are thoroughly restored, they will never, selfish and egotistical as they are, listen to our demands. Applying this case to individuals, we see that it is because our neighbour makes sundry demands of us that we, in return, can make requests of him. For if we ask a favour of a man who wishes nothing of us, we are then nought but begging petitioners. If we but once bend our knees before foreigners, then shall we have lost our right to stand with them on an equal footing. If we ask others for a favour, we must be possessed of something which they desire of us, or else we lose our dignity. How much more forcibly is this the case in reference to international relations! The right of residence and trade in the interior is the one thing we possess which European nations want to see in their hands. When they have this there will be nothing else which they can ask for. And in that case, how can we expect to stand on a par with them? Even though we should kneel down and bow our heads before them, they would then be deaf to all our entreaties. The restrictions on residence and trade must not be removed until extrterritoriality is abolished. Our honour as a nation is at stake, and if the government is seriously interested in the country's welfare, it must avoid all such one-sided negotiations. Hence is the information sent to the *Daily News* misleading and probably without foundation. The burning question still arises,—on what conditions is the treaty revision, now so nearly completed, based? The British Government is eager to promote the best interests of its people, and will not surrender their extrterritorial privileges unless they receive a more than sufficient compensation. This compensation, so far as we are concerned, means only the withdrawal of all restrictions imposed upon residence and trade in the interior. As a matter of strict justice they should long ago have given up extrterritoriality in exchange for the freedom of trade and residence. But, self-willed and arbitrary as they are, they will not, we fear, admit this obligation. This, we presume, is because they consider that our laws are different from those of foreign nations in point of severity; that our rights and privileges as a people are small, while theirs are great; and that the protection afforded to life and property in this country is not so perfect as in Western nations.

Treaty revision is a question which should not admit of much argument. In a word, the rights of tariff regulation and jurisdiction over aliens are the legitimate property of every independent nation. If foreigners deem our laws imperfect and no true safeguard of life and property, they had better not come to this country at all. Since they derive benefit from sojourning in this land, they must observe and come under its legislation. We did not ask them to come here: they themselves requested us to open our ports. During the time of national isolation we wanted nothing of them, but they asked a great deal of us. That they now should refuse to submit to Japanese jurisdiction is extremely unreasonable. The treaties stipulated a future revision of their provisions, but more than ten years have elapsed since their ratification, and yet

nothing has been done. The existing treaties were compiled at the time of the downfall of the Tokugawa régime, when the country was in a state of chaotic confusion, and so they are necessarily unfit for the present condition of the country: a fact which cannot be denied by any man of ordinary intelligence. With the Restoration, all national institutions underwent great improvement, an improvement recognized and acknowledged by all foreigners alike. The present treaties are as unsuitable for Japan as is a child's dress for a full-grown man. As the subject is, however, really outside the limits of reasonable discussion, we must be prepared to meet the argument of foreigners advanced from purely selfish motives. Let us look at the position of foreigners. We find that the withdrawal of restrictions on trade and residence is not sufficient to make them yield up their extraterritorial privileges. The Chinese, indeed, would derive signal benefit from Japanese jurisdiction, for their government is despotic. On the other hand, Europeans and Americans firmly believe that they are safe only under the jurisdiction of their own governments, and that their laws are excelled by none. If extraterritoriality is abolished, they must observe the laws of this country, in which case they would have to abide by the Press and Public Meeting Regulations, the violation of which might involve both fines and imprisonment. We have Criminal Codes; but compared with the codes of western nations there are necessarily differences, nor would it be easy for foreigners to exchange the systems and laws to which they have always been accustomed for those of Japan. The English and French say that their law is vastly superior to that of our country; and the instincts of mankind forbid one to abandon things superior for things inferior. We have no Civil Code, no Commercial Law, no Law of Property: foreigners have all these. We can easily understand, therefore, that the reluctance they feel to abandon the protection of these various laws and come under systems where that protection is not available, may be even greater than we are capable of appreciating. As a question of justice the position they take is untenable, but as a question of feeling, its rationality must be admitted. Foreigners, being essentially self-willed and arbitrary, will not budge for right's sake, though they will move readily enough for the sake of passion or profit. It is to be feared, therefore, that the opening up of the country to trade and residence will not suffice to obtain the abolition of extraterritoriality. The Government, also, seeing that to remove the existing restrictions upon trade and residence would not be thought an equivalent for the abolition of extraterritoriality, and yet desiring above all things to compass that abolition, may possibly have concluded that some additional concession is necessary, and in consequence devised the scheme of establishing mixed courts.

The advocates of that scheme, however, not only mistake the true purpose of the Government, but also ignore the proper spirit of international intercourse as well as the relative positions of the parties concerned. We will endeavour briefly to explain our reasons for this assertion.

Even though extraterritoriality be abolished, if mixed courts be established and lawsuits tried by a bench of foreign and native judges, the position of our country, so far as its independence is concerned, will not be one jot improved, and the difficulty of recovering our judicial rights will be seriously augmented. Though Europeans and Americans be subject only to their several jurisdictions, so long as we withhold the privileges of unrestricted trade and residence, we have something to offer in exchange, but if once we surrender those privileges, and at the same time establish mixed courts, we shall be absolutely without anything to offer, and the difficulty of recovering our jurisdiction will be far greater than it is at present. This is

self-evident. No lengthy demonstration is required to show that our Government would never consent to such an arrangement. Even supposing, for the sake of argument, that the establishment of mixed Courts were better than the preservation of the existing extraterritorial system, it can be shown that when those Courts come into operation, they will give rise to more serious evils than any we have now to contend with. This, indeed, follows directly when we consider the reasons which foreigners advance against submitting to our jurisdiction. If freedom of pen and speech were enjoyed by us; if we had civil codes, commercial codes, and property laws, it would be hard for foreigners to refuse to submit to our jurisdiction. But with our laws as they are now, it is a difficult task to overcome the selfish prejudices of foreigners and to persuade them to come under our systems. Or even granting they did submit to our jurisdiction, the result might be dangerous to the security of our foreign relations. For if, hereafter, some question arose, involving the applicability of this or that code, the foreign judges, relying on the strength of their country, might pervert our laws; or the foreign residents might complain to their governments of the severity of our codes, and we, on our side, intimidated by the strength or instance of our opponents, might consent to alterations or renderings which would have the effect of utterly confusing the administration of law, or, refusing to consent, might find ourselves involved in endless disputes with self-willed, obstinate men who would take views diametrically opposed to our own, so that in the end our relations might be disturbed and our foreign intercourse imperilled. For these reasons we are persuaded that the Government has not agreed to the establishment of mixed Courts, and that persons who spread such a report are entirely mistaken. That foreigners would agree to abide by our laws because we established such courts, is quite uncertain. If they did agree, the plan might be feasible. If they did not, the resulting complications would not be confined to those we have outlined above.

If aliens refuse to submit to Japanese law on account of the imperfections they see in its present condition, it would be necessary to frame special laws suitable to their ideas. In that event Englishmen would desire to have laws as like those of England as possible; Frenchmen would want French laws; Germans, German; Russians, Russian; Dutch, Dutch; Austrians, Austrian, and Americans, American. Which of these various systems would be found to satisfy the people of all the treaty countries? Would it be possible to satisfy them if we copied the Civil Code from Great Britain, the Criminal Code from France, the Code of Criminal Procedure from America, Commercial Law from Germany, and the Law of Property from Holland, making our laws a *mélange* of those of all the world? Or might we hope to avoid their dissatisfaction by framing laws for the Government of our country in accordance with the advice of all the Foreign Representatives? Were we indifferent to our own honour and interest, and concerned only about conciliating foreign opinion, it might not be impossible to accomplish these things. But such is not the object with which our Government has undertaken the revision of the treaties.

Let us assume for the moment the mere feasibility of enacting special laws suitable to foreign opinion and not repugnant to the reputation and interests of our country. It would certainly not redound much to our credit that we had enacted various codes, civil, criminal, commercial and so forth, simply for the sake of foreigners; while, on the other hand, the confusion that would ensue when those laws went into operation would be interminable. Just suppose, for the sake of argument, that the restrictions upon trade and residence had been removed, and that a number of foreigners were travelling or living in the interior. And suppose,

again, that for the protection of these foreigners special codes of law had been enacted, and mixed courts established. And suppose again, that these codes, enacted for the sake of foreigners, were more liberal than the original codes applicable to Japanese. Then in these days of equal rights, we should have created a specially privileged class of foreigners whose rights would not suffer comparison with those of our own people. We should have for foreigners, for men whose social intercourse with us is of the most intimate nature, a code of laws which would place them in a far higher position, and confer on them larger liberty and rights, than our own people occupy or enjoy. What sort of effect would that produce upon the feelings of our countrymen? Men of even a little spirit would be angered by foreign arbitrariness, and finally come to regard foreigners with bitter hostility; while spiritless people without any sense of shame, would become subservient to foreigners and think of nothing but the security of their own persons. In the former case, our foreign relations might be seriously disturbed; in the latter, our people would lose their patriotic feelings, would come to respect foreign merchants and artisans more than their own officials, and would invoke the protection of strangers against their own rulers. Such a state of affairs, if it attained large dimensions, would prove subversive of law and order. It is characteristic of low-minded men to sacrifice right to profit. So soon as the vulgar shameless classes saw that the laws applied to foreigners were lenient and the protection they enjoyed complete, they would become eager for foreign protection, would carry on trade in the name of foreigners, and would even change their nationality for the sake of eluding the operation of Japanese law. Such would be the disgraceful results, both for rulers and ruled, of having two different systems of law in operation. Is anything further needed to show that if liberal codes were framed for the control of foreigners, and severe codes for the control of Japanese, the people would learn to feel envious and discontented? Granting even that the laws for the jurisdiction of the various nationals were to be drawn up without difficulty, and that no abuse would arise from their enforcement, we foresee fresh trials in the selection of the judges presiding over mixed courts. If all foreigners belonged to one great nation there would be little difficulty in picking out a fair company of representative jurists; but we have to do with no less than *seventeen* different nationalities, each one of which would insist upon the appointment of judges from their own lands. If we appoint an English judge, it would be impossible to refuse the requests of France, Germany, Russia, and other countries, for similar appointments. This trouble might be avoided by drawing up an international agreement among European Powers, to the effect that England and America alone should be represented in the mixed courts, and that all the other powers should entrust the rights of their subjects to the jurists of these two nations. Should, however, each country insist upon being represented by its own judges, we could not do otherwise than yield to this demand. There is still one important question in connection with the establishment of mixed courts,—the question of expenditure. If the establishment of mixed courts were beneficial to this land, and truly necessary to our national interests and honour, we should not grudge the cost, however great it might be. But since their establishment, so far from contributing to our national reputation, would have the very opposite effect, the Government will never consent to a heavy outlay for such a purpose. [The writer then recapitulates the evils he has demonstrated in his article, and concludes by urging the absolute necessity of not opening the country, until Japan recovers complete jurisdiction over foreigners residing within her limits.]

THE NEW TEA GUILDS.

(Translated from the *Nichi Nichi Shimbun*).

The Ministers of Home Affairs and of Agriculture and Commerce, with the object of preventing the preparation of spurious and adulterated teas, which are detrimental to honest trade and injurious to the public health, issued a Notification on the 3rd instant, urging persons engaged in the tea trade to form Guilds, in accordance with regulations specially enacted by the Government for that purpose; and directing the Guilds, so soon as their bye-laws shall have received official sanction, to forward detailed reports to the Department of Agriculture and Commerce. This Notification, embodying Regulations for the formation of the Guilds, was addressed to all Cities and Prefectures throughout the Empire.

According to the Regulations, all persons engaged in the tea trade, whether producers or dealers, must establish associations, under the title "Tea-trading Guild," with the name of the locality prefixed. The members of the Guild are forbidden, first, to manufacture or sell teas coloured or mixed with spurious leaves or other adulterations; secondly, to perform the processes of drying and packing in an honest and thorough fashion; thirdly, to provide that every package of tea shall be marked with the names of the Corporation, the manufacturers, and the dealers; and fourthly, to appoint committees to oversee and keep a record of the circumstances of the Corporation, and to establish offices in convenient places for purposes of control.

These provisions make it plain that the primary object of the organizations is to check the manufacture of spurious and adulterated teas. How the Guilds will set to work and what methods they will adopt to correct existing abuses, it is impossible to predict, pending their actual organization. Persuaded as we are, that the abuses in question must be corrected, if the tea-trade is to prove a profitable enterprise, we are not disposed to criticize adversely any measures that may conduce to that end. Tea occupies a prominent place among our staples. Its importance may be judged from the fact that it is annually exported to the value of fully five million *yen*. The growth or decline, increase or decrease, of such a trade bears a significant relation to our foreign commerce. In the year 1878, the export of this staple realized 4,280,000 *yen*; in 1879, it reached 7,440,000 *yen*; and in 1880 and 1881, respectively, the figures were 7,490,000 *yen* and 7,020,000 *yen*. During the past two years the returns, though less satisfactory, did not fall short of five millions. From Yokohama alone the quantities exported since 1876 were as follows:—

YEAR.	CHESTS.	YEAR.	CHESTS.
1876	123,779	1880	196,497
1877	111,848	1881	181,081
1878	117,999	1882	169,392
1879	167,797	1883	157,531

This table shows that, in 1880 and 1881, Yokohama alone exported teas to the amount of nearly twenty million catties. Even during 1883, a year distinguished by reduced production, the export from that port reached fifteen million catties. The steady increase in the quantity of tea sent abroad is a sufficient proof of the demand that exists for it. America offers the largest market to our teas and is our best customer for them.

Despite a gradually increasing export, much anxiety was recently expressed by some of our contemporaries with regard to the decreasing value of the staple. We, however, were of opinion that no pernicious results were to be apprehended from a temporary depreciation, and we are now persuaded that one of the consequences of depreciation has been to develop the American demand and increase the area of consumption. America not only wants more tea but wants it of better quality. To this circumstance is doubtless due the increased export, as well as an augmentation of gross returns.

The Government of the United States issued, last year, a law forbidding the import of coloured and spurious teas. This law, enforced at the Custom-houses, was not without effect upon the Japanese tea trade, though we now know that its chief, if not its main, purpose was to check the influx of adulterated teas from China. Ultimately, therefore, it cannot influence our export. Yet we have to note that the practice of colouring teas with deleterious drugs is not confined to China. It is resorted to in Japan, also, to satisfy American orders. Probably, too, the inferior grades are often mixed with willow leaves or old teas. To these classes of adulteration the two Ministers allude in their Notification, when they say that of late teas are coloured, or appear to be coloured, in the process of preparation, and that spurious leaves are sometimes added. At all events, it is certain that some fraudulent methods have been employed of late years, and that to them is due the loss of reputation Japanese teas have suffered. Beyond doubt these practices, if left unchecked, will have the effect of diminishing the export of the staple to America and of discouraging foreign consumption. The inevitable result will be the loss of a trade from which we derive an annual revenue of from five to ten million *yen*. In view of such a prospect, it is scarcely necessary to insist on the importance of adopting precautionary measures to check these evil practices. The subject demands immediate and earnest attention. Some persons, indeed, assert that the colouring is the work of foreign merchants, not of Japanese. Whether or no this be the case, it is certain that, under the present system, our teas are first bought by foreigners in Yokohama and then re-fired and packed by them for export. These processes are said to be unavoidable, because the teas sent to Yokohama from the various producing districts are of too uneven quality, as well as too badly fired and packed, to be shipped at once. If, therefore, the teas be properly fired and packed in the interior, so that their quality may be judged by the samples, and their sale effected on the credit of their manufacturers' names, not only will the foreign merchants be saved a great deal of trouble, but the evils which are tending to destroy the trade will be checked. We cannot too much emphasize the necessity of immediately adopting active measures to put an end to fraudulent processes of manufacture, and we trust that the tea-producers in the various districts will spare no pains to attain that end in accordance with the Notification issued for their benefit.

(Translated from the *Meiji Nippon*.)

(The article, having referred briefly to the recent Notification and its import, proceeds as follows:—) No demonstration is needed to show that tea occupies the same position as silk among our exportable staples. It follows, therefore, that the prosperity of our foreign commerce depends, to a great extent, on the export of tea alone. In view of this fact, thinking men have, from time to time, urged the advisability of trying to gain the confidence of consumers by correcting abuses and introducing improved methods of preparation. Regulations enacted last March, in the United States, forbidding the import of spurious teas, had a considerable effect upon the trade in this country, and the action of the American Government served, further, to given weight to the opinions which had been expressed by far-seeing merchants on the subject of adulteration. More earnest steps were consequently taken to encourage improved methods and maintain the reputation of Japanese tea. Writing at that time, we showed the close connection that exists between American consumption and Japanese production, and drew the attention of our authorities as well as of producers to the necessity of adopting improved methods. The Government subsequently issued several proclamations on the subject to cities and prefectures, and

repeatedly recommended growers of tea to devote their energies to raising the quality of the staple. Some years ago, England, too, passed a law prohibiting the import of teas medicinally coloured; and this example was followed by the Government of Victoria, in Australia, in 1881. But as the export of Japanese teas to both these countries did not reach any considerably amount, the restrictions had little or no effect on our trade. When, however, a similar step was taken by America, last year, the effect was immediately felt here. Indeed, it could not well be otherwise, for America is our best customer. Our producers have to compete against the black and green teas of China and India, and did they lose the custom of the United States, their trade would be virtually monopolized by the merchants of those two countries. Upon this point we wrote at length last April. * * * It behoves producers to export leaves of such excellent quality that no inspection, however rigorous, need be shunned. If this object be kept in view, the more careful the examination our teas receive, the more will their reputation be augmented. * * * There can be no doubt that, as the Ministers say in their Notification, the manufacture of coloured teas and the sale of adulterated leaves are detrimental to honest commerce. A further reason for dealing with evil practices is to be found in the fact that they are deleterious to the public health. From a moral, as well as an industrial point of view, improved methods of production and preparation are indispensable. Japanese traders must spare no pains to bring this about. Individual effort is scarcely competent to correct the abuses that have sprung up. Union and coöperation are the only efficient agents. This consideration doubtless motivated the first article of the new Regulations, wherein it is provided that traders and producers alike must enter the guilds. To produce superior tea, efforts must be made to maintain the colour as well as the flavour of the leaves by directing attention to the method of fertilizing and of plucking. Colouring and blending with foreign matters or spurious leaves must be strictly prohibited. The same is true of sun-drying, for which proper firing should be substituted. All these points having been duly observed in the preparation, it is necessary to adopt such precautions in the packing that no loss of colour or aroma may be suffered. * * * The arrangements with regard to marking and stamping are doubtless intended to promote competition among producers and dealers. All these regulations show that the Government has devoted much care and attention to the improvement of the tea trade. We trust that the local authorities, on their side, will urge the various persons engaged in the trade to lose no time about forming guilds, and that the members of the guilds will observe the regulations, and devise measures which will be at once conducive to their own profit and in sympathy with the purpose of the Government.

LIGHTING OF THE FOREIGN SETTLEMENT.

A meeting of the Gas Committee was held on the 4th inst. at No. 3, when there were present, Messrs. Gay, Evers, Brooke, Wolff, and Wilkin. The Hon. Treasurer, Mr. Wolff, submitted a statement of accounts for the past year, showing a balance in hand of *yen* 950.91. The entire statement is subjoined.

It was proposed by Mr. WOLFF, seconded by Mr. BROOKE, and carried:—"That the Gas Committee hand over the charge of the lighting of the foreign settlement to the Municipal Committee, if they will accept it."

It was moved by Mr. BROOKE, and seconded by Mr. GAY:—"That the present assessment be reduced 15 per cent., on subscriptions due from the 15th instant." Carried.

A list of persons who refuse to contribute their

quota, upon various pretexts, towards the expense of lighting the foreign settlement, was submitted, but a hope was expressed that, as the benefited in common with the rest of the community, they would no longer cast upon other contributors a burden which ought, in common fairness, to be shared equally by themselves, and which they would have to bear if rating were compulsory, and not voluntary.

A cordial vote of thanks was passed to Mr. Wolff for his services as Hon. Treasurer:—

STATEMENT OF RECEIPTS AND EXPENDITURE OF THE YOKOHAMA GAS COMMITTEE, DURING THE THIRD YEAR, FROM 16TH FEBRUARY, 1883, TO 15TH FEBRUARY, 1884.

RECEIPTS.		YEN. SEN.	YEN. SEN.
To Balance brought over from second year.			1,050.31
To Subscriptions for 1st and 2nd months.	916.70		
To Subscriptions for 3rd and 4th months.	832.35		
To Subscriptions for 5th and 6th months.	892.35		
To Subscriptions for 7th and 8th months.	837.00		
To Subscriptions for 9th and 10th months.	881.90		
To Subscriptions for 11th and 12th months.	785.45		
		5,146.25

Amount due to Gas works per month.....	310.00		
Surplus	51.34		
being about 12½ per cent. on the amount of subscriptions now collected, but as it is hoped that the number of subscribers will be increased, the reduction on the present assessment will no doubt be larger than 12½ per cent. only.			

SIR RICHARD TEMPLE ON FOREIGN MISSIONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Apropos to the very emphatic testimony borne by Cheshub Chunder Sên, to the commanding influence of Christian Missions in India, referred to in your journal recently announcing that great religious reformer's death, may I ask the reproduction in your columns of an "Address by Sir Richard Temple, Bart. G.C.S.I., D.C.L., before the Board of Missions of the Presbyterian Church in the United States, New York, Nov. 7th 1882." Not less than twenty five years' experience in India in connection with the India Civil Service in which he held office in nearly every province, having been governor of both the Bombay and the Bengal Presidency, gives the greatest possible weight to Sir Richard's testimony both for its impartiality and thoroughness of knowledge. Stirred by the injustice and misrepresentation which the haters of Christianity have put upon the mission work, he has felt called upon to come to the defence of the truth. He has repeatedly spoken on the

subject in Exeter Hall, London, and elsewhere. On a visit to America in 1882, at the invitation of the Board of Missions of the Presbyterian Church, he met them at their rooms, and addressed them as follows:—

I take pleasure in meeting your Missionary Board on this occasion, and in giving my testimony to the value of Christian missions in India.

And in what I have to say I would speak of Protestant missions in their totality. While we trust that the Church of England will be found to have taken her full share in the missionary operations, yet we fully appreciate the great work done by the Presbyterian Church, and especially by the Free Church of Scotland, which I regard as having done as much in proportion to its numbers and resources for the cause of missions in India as any community in Christendom. We regard with gratitude and respect the assistance obtained through the piety and generosity of the several Protestant churches of America. Certainly the American missions of all denominations in India are working thoroughly well. That I can testify, having seen them. At the same time I would give full credit to the Roman Catholic missionaries in India who certainly are earnest laborers, and have devoted themselves to the heathen. Whatever they may be in Europe, they show their best side when laboring as missionaries in India. I would not desire to disparage them, and yet even they cannot keep pace with Protestant missions so far as the result can be gauged by statistics. I apply my remarks, then, to Protestant missions in their integrity, their totality, in which the Presbyterian Church, on both sides of the Atlantic, has borne so prominent a share.

ANSWER TO DISPARAGEMENTS.

1st. In the first place I would allude to the disparaging reports often made by travellers with regard to the missionary work in India, which reports are often current in England, and have, I am sorry to hear, found their way to America. Some gentlemen, and ladies, too, returning from India after travelling or residing in the country, deride the results of missions. Now, statements like these are made either by persons who never took the trouble to obtain information, perhaps never enjoyed the opportunity of obtaining it, or by those who have no interest in religion and no care for religious work. You well understand how difficult it would be for a person passing through your great city (New York) to form a just estimate of its various institutions of charity and public beneficence. How imperfect is the knowledge of one just residing only for a time in city or country! How much more does this hold good of the observations by European travellers or temporary residents in a country so vast as India. The work of missions does not strike the casual observer. You have to inquire and investigate, not only at the great centres, but in the interior of the country. You must not suppose that because a lady or gentleman has happened to reside or travel in India, he or she must necessarily know all about the missionary work going on in that land.

Those who undervalue missions will belong to one or other of two categories, either persons who do not care for religion, or persons who, while caring for religion, are not experienced in the interior in India. On the other hand, those who have examined the work are those who give a favorable testimony. The favorable witnesses are not mere casual or superficial observers, but men of the highest character, statesmen, civilians, politicians, and soldiers, men on whose judgment their government and the civilized world depend with confidence on other subjects, and whose opinion may be safely trusted on this great subject of missions.

The evidence depends, moreover, not on mere personal statements and impressions, but on statistics and facts, liable to be checked by witnesses with local knowledge and subject to verification in many collateral respects by official men who are not likely to deceive themselves.

ACTUAL SUCCESS.

2nd. Objectors are fond of saying, what, after all, is the actual success of missions? Have they done anything in India? The answer to this must come from well-verified figures and facts. No blow is so effective as one given straight from the shoulder, and no argument is so effective on this subject as that drawn from the official documents. I have not my papers and figures with me while travelling in America, but I could give you an array of facts of which all Christendom would be proud. They read like the statistics of some great governmental undertaking, but they really constitute the result of private enterprise undertaken in the most sacred of causes. The fear is not that we shall be discouraged by the small result already attained, but that the result is becoming so great, and increasing with such rapid

growth as might be well styled, in view of the rapid development of your great country, an American growth, that it may ere long so grow on your hands that you cannot cope with it. It is now advancing fifty per cent. every ten years during the generation (thirty years) ending with the year 1880. If it goes on at that rate, during the present generation there will be by the year 1910 about 2,000,000 of native Christians on your hands, and any organization you can make with European agency will be inadequate to deal with them. Your only hope will be in organizing a native church. And this work is already receiving due consideration. Natives of acknowledged ability and piety are entering the Christian ministry, and the government have already had to sanction, in conjunction with the English missionary societies, three additional bishops to examine and ordain the native ministers and deacons. There are now in India three hundred native ministers with four hundred European missionaries, and we hope that ere long the natives will outnumber the foreign missionaries.

But for a long time to come the prime movers in these operations must continue to be European. And we hope that a great Christian, and if we may use the term, ecclesiastical army will be raised, the rank and file consisting of natives while the leaders and generals are highly qualified Europeans.

3rd. Again we are sometimes asked by objectors—Is there any chance for Christianity to make headway against these antiquated systems of false religion?

THE BATTLE WITH ANCIENT SYSTEMS.

(a) In the first place with regard to Buddhism, that religion is not extensively prevalent in India, but it is met with in the mountainous regions of the eastern Himalayas, and however excellent and attractive the poetic accounts of Buddhism, as given in the well-known poem, "The Light of Asia," the actual Buddhism of India is as degraded and degrading as can well be imagined. It is liberal toward other faiths, but when you have said that you have exhausted the catalogue of its merits. It is very picturesque to the fancy in its ceremonial rites, but is far otherwise in doctrine and discipline.

(b) Then, as to Mohammedanism. It is a much more formidable adversary, and yet converts have been made from among the Mohammedans, and these converts are among the best yet made in India. Mohammedanism presents us a nut which is hard to crack. It had the advantage of Christianity in coming after it, and it borrowed many of its teachings. The Mohammedans say willingly that they revere "the Book" as they style the Bible. They have the idea of God, of one God. No uninspired book has so fully formulated the attributes of Deity as the Mohammedan writings in the Arabic language, and that is perhaps the most elaborately constructed language ever known.

Yet as a religion Mohammedanism establishes a narrow exclusive character. It withers human character as with a blight, warps all the feelings and sentiments, crystallizes everything which it touches, and rivets all customs and opinions in a groove. Though it inculcates the duty of almsgiving, it is in several respects uncharitable. It is utterly intolerant. Anything more sanguinary than its fanaticism cannot be imagined.

Benevolence toward those who differ from us, love to our neighbor, and charity in the Christian sense of that most noble term, are wholly alien to the Mohammedan religion. I know the Mohammedans well, from long and familiar acquaintance, and their peculiar character only convinces me the more of the necessity of giving them the freedom of Christianity.

(c) Then as to Hindooism. The Hindoos number one hundred and fifty millions of souls, about two thirds of the population of India.

Do not suppose because you hear and read of the pristine purity of the early Vedic faith that this is the Hindooism of the nineteenth century. The Hindoos who strive in our day to purify their faith are thinking themselves out of Hindooism. Though the educated classes are soaring toward the light, yet the masses of the people to-day are as devoted to a corrupt religion as in the darkest ages of the East. I cannot give you an exact idea of the vicious orgies which occur constantly in the Hindoo temples. There is a considerable amount of abominable immorality, which is practically the outcome of the religion; though, on the other hand, there are many domestic virtues practised by the people, showing how much of goodness would be produced, if the religion were purer.

The practical instruction given by Hindooism to the young is grossly defective. All the ideas of truth and honor are not inculcated. The parent in training the child does not say, Never tell an untruth but rather says, in effect, Do the best you can, in the circumstances, thus teaching expediency, not morality.

When contemplating the Hindoos you recall the

absurdity of their superstitions, and the immorality of many among their practices, you will see the need of carrying on missionary work in India.

I have heard in England and even in this country, that many think there is not much need for Christianity in India, and even if there were need that there is no chance for its success.

There is the need as seen by the character of the three great religions of the land, and that there is a chance of success is abundantly proved by statistics of the work already done.

CHARACTER OF THE MISSIONARIES.

4th. Again I have been asked what is really the character of your missionaries in India. I have heard at times the other side of the Atlantic as well as here, the remark that the missionaries of our day are far from being of the apostolic type, that they only go to earn a living and draw salaries without zeal for doing good, and with little hope of accomplishing anything.

Now all these insinuations are incorrect. They are the careless and thoughtless remarks of men who do not know the qualifications and idiosyncrasies of the missionaries now becoming an extensive body of men. I have, during my life in India, been the local governor of 105,000,000 of people, in different provinces. Thousands of Europeans have served under me, and I ought to know something of the value and the character of men. I have also been acquainted with the missionary stations throughout the length and breadth of the country. I believe that a more talented, zealous, and able body of men than the missionaries does not exist in India. In a country abounding in talent and learning they fully hold their own.

But it is said, the present missionaries are not equal to those of former years. Now, is it likely that the present and future missionaries will be less able than the past, when they now profit by all the experience of that past, and beside have professional and technical instruction to give them especial preparation for their work, thus possessing advantages which their earliest predecessors never enjoyed? In England we have excellent missionary training schools at Islington, at St. Augustine's, under the very shadow of Canterbury Cathedral, and at other places. Of course, genius is not to be evoked by examinations, and whether some of the historic originators of the missionary work will, as individuals, be equalled, we cannot say. But, with the means of preparation now in use, I can promise confidently that the average missionary in the future will be equal to if not better than the past.

I have seen the missionaries in every province, from Cape Comorin to the Himalayas, and I know their high character. I do not say that there are no failures; but the percentage of failures is as small as in any other department of the public service.

5th. Remember that you want two kinds of missionaries. In the first place, you need practical "parish priests," to do the work of visiting and directing several thousands of simple-minded people, namely, native Christian peasants—missionaries always prompt, thoughtful, patient, able to despatch details rapidly, and yet in a work not requiring the highest intellectual exercise. A man highly qualified intellectually might not succeed in this labor.

Next you need men of another kind thoroughly versed not only in the religion, but also in the literature, philosophy, and poetry of India, to enter into the subtle fallacies and twistings of Oriental reasoning, and also versed in religious dialectics and trained in Christian theology.

Just as in an army there must be men of all arms, cavalry, infantry, and artillery, so here in this Christian warfare, we need men of varied gifts and culture.

In the mother land there are the Oxford Mission to Calcutta and the Cambridge Mission to Delhi, which are organized to train missionaries of this higher kind. These efforts are specially connected with the two ancient universities.

CHARACTER OF THE CONVERTS.

6th. Inquiry is naturally made regarding the character of native converts. It is often carelessly said that they are no better after than before their conversion. These taunts may have come from some lady or gentleman who, at some time has been deceived by a native Christian in the capacity of a domestic servant or a camp follower. But the native converts in India must not, as a whole, be judged by the casual misconduct of individuals. Those who attempt to apply such a test should remember that the efficacy of Christianity even among ourselves would be discredited by the application of so unreasonable a standard. The native Christians are no longer obscure and unknown, scattered here and there like "Rari natu in gurgite vasto," but they are numbered by tens of

thousands and occupy whole tracts and districts of country. You should see them in their rural homes, but such a visitation takes time and trouble, and is seldom undertaken by those who disparage missions. You then would find these Christian communities remarkably well conducted. I do not claim for them any unusual display of Christian graces, but they behave as well on the average as Christians in any land. If you appeal to the magistrates in India, they will give the native Christians everywhere a good character. These Christians are obedient to their religious guides, attend faithfully the ordinances of religion, the services of the church, the Holy Communion and Confirmation, and send their children to school, during the week and to the Sunday-school on the Sabbath.

It would be well, if all white Christians contributed as well as the native Christians for the support of the Gospel, and their religious institutions. In their villages you see the rustic chapels and the little schools which they have reared by their own contributions.

Again, they have never scandalized their Christianity nor put their religion to open shame. We must admit that India, like other countries, has had scandals reflecting unfavorably on Christianity. But unhappily these scandals which have been brought on the faith have been chiefly from white men calling themselves Christians. We do not hear of apostates among the native Christians. When the Sepoy revolt and the consequent war spread over the land, and many were tempted to apostatize, were threatened, and exposed to danger, yet they stood firm to their faith, and there was no noteworthy instance of apostasy whatever.

7th. You sometimes hear that the Christians in India have become so for pecuniary gain. They have been called "rice Christians," as if they became Christians to be fed with rice. They are rice Christians no doubt, but in a different sense from what the term was intended to convey. Truly, they are rice Christians, because they work industriously and produce the finest rice crops for themselves! They are largely of the peasant class, peasant proprietors who cultivate the land they own and hand it down to their children. They are by nature attached to everything ancestral; and those whose families have been Christian for more than one generation, begin to feel an hereditary attachment to Christianity. Everything hereditary is by them steadfastly cherished.

I have often heard the native Christians speak affectionately of the missionaries who first instructed their fathers in the Christian faith.

CONVERTS FROM ALL CLASSES.

Again it is said that the Christian converts are only the humbler classes. "Show us one of the higher class!" I accept that challenge. Let us go through the list of the native ministry and we shall find that most of the able preachers who have done most to vindicate Christianity have been of the high caste.

Yet we should remember that the mass of the people belong to the humbler castes, and the majority of the Christians must be of the lower caste if Christianity be diffused as it ought to be among all castes equably. And the humblest people are after all the most needy and most appeal to our Christian sympathies. We believe that their souls are as valuable as ours, and we should gladly labor for their salvation.

Then there is a body of men in India who belong to no caste at all. They are regarded by all others as out of caste. They are the aborigines and the Pariahs. They number, according to the census, twenty-three millions of souls, and it may be encouraging to recollect that while in a large part of India you encounter, caste, priestcraft, and bigoted hostility, yet among these you have a clean surface on which to write; hearts unsullied by guile and superstition, and presenting a "tabula rasa" on which you may inscribe the doctrines of eternal truth. Here then you have a field on which may be won an encouraging success.

Believing in the inviolability of the Divine command to "preach the Gospel to the every creature" you would doubtless persevere even in the absence of present success, trusting in the ultimate fulfilment of the Scriptural promises. Yet we cannot but feel our energies stimulated if we see success attending our labors. Now you have in India a success before you which will be certainly augmented in proportion to the labors put forth and to the resources brought into play.

THE EFFECTS OF EDUCATION.

8th. It will occur to you to ask what effect is the system of public instruction to have on the temper and disposition of the Indian people? You will be told it is producing discontent and irreligion, taking away from the people the religion of their forefathers and giving them nothing in return.

As to loyalty or disloyalty, England will do her best without fear. I believe education will produce loyalty. But, be the political consequence what it may, we must be just and fear not, and give India the education in those arts and sciences which have made England herself what she is. Even if a certain sort of disloyalty were to be the consequence we must persevere, for we could not consent to keep the people ignorant in order to keep them loyal.

As regards religion, the government has to be very careful not to mix religion with the State education. But we give the same educational grants of State aid to the schools of all communities alike, and the missionaries come in for their share, the pecuniary assistance being given on the well-known system of "payment by results." Thus indirectly the missionaries obtain a modicum of public aid which they win in open competition.

Irreligion might be the consequence of the secular teaching under the State, but the contrary is the case. The highly educated Hindoos almost invariably break away from their heathen religion. I do not say this is true of Mohammedans, but the Hindoos on receiving western education do, with scarcely any exception, cease to believe in the ancestral faith. They do not, however, become atheists. They rather become theists, believing in the immortality of the soul and in human accountability to a Supreme Judge for deeds done in this life.

If you look at the sermons of the Hindoo religious reformers, styling themselves the Brahmo Somaj, and the addresses of welcome lately given by them to the missionaries of the Oxford Mission to Calcutta, you can judge whether they are not on the high road to Christianity. Then if you can send out missionaries intellectually able to cope with these men, a rich harvest may be reaped.

THE ELEVATION OF WOMEN.

I must now say a few words regarding female education; the importance of this is acknowledged by the British Government in India. We encourage the opening of female schools in every direction. Formerly females were kept in degradation and seclusion, yet there have been manifold instances of female heroism and genius in Indian history. Even to this day, widows would be quite ready to burn themselves on the funeral pyres of their husbands, were they not prevented by the strong hand of the British Government. They certainly are not lacking in what we call grit of character. Hence we may infer that a great future is in store for the women of India, when properly educated. Both the high and low are anxious to go to school. But the daughters of the rich and noble do not attend school, as they cannot break the bar of public opinion which prevents girls of more than eleven or twelve years from appearing in public. Hence you must teach them in their homes, in the Zenanas or female apartments. For this reason, European ladies of special training are becoming teachers in the households of the wealthy and the great. I suggest to you that American gentlemen cannot do better than advise some of the young ladies now being educated in the ladies' colleges and the normal institutions of the United States, to go out as teachers to the daughters of the great Indian houses, and so carry western enlightenment into recesses heretofore secluded from the light. Female education is already advancing in India. I know hundreds of educated natives whose grandmothers could not read at all, whose mothers could read but slightly, and whose wives can read and write imperfectly. But their daughters are being brought up with an education conducted upon the western models.

In conclusion then, gentlemen, the result thus far in India is relatively inconsiderable, though absolutely it may be large. But the smallness of its proportion arises from the vastness of the country and the immense population, a consideration likely to be fully appreciated by Americans. Still there is every ground for encouragement. A shining goal invites your Christian efforts. Such efforts are not indeed put forth with a view to political effect. Still, as matter of fact, the political effect of the Christian missions in India is excellent. The spectacle of private enterprise undertaken in this disinterested manner, does not render the natives jealous, but rather edifies them. The natives are but too apt to imagine that British policy is governed by political ambition or national aggrandizement. Let them see in our missions something higher and nobler, a benevolence disinterested and pure, a sunny spot with no shadows or earth-born cloud to rest upon it.

The result of missions thus far is nationally and politically good. We Englishmen feel our responsibility. We thankfully acknowledge the aid sent from the religious world in the United States with a truly disinterested liberality, and we cordially welcome the co-operation of our American kinsmen in this noble work.

FEARFUL DISASTER AT SEA.

THE STEAMBOAT "YOTSUI" BLOWN UP.

The following is taken from the *Hongkong Daily Press* of the 25th ultimo:—

The Hongkong, Canton, and Macao Steamboat Company's steamer *Yotsui*, which had had her preliminary trial trips, passed through the harbour yesterday about one o'clock on her way to Macao to resume her station on the line between that port and Canton. The vessel was in command of Captain Hoyland, and had on board as passengers Mr. J. S. Brewer, Mr. D. E. Caldwell, Mr. and Mrs. Fraser-Smith, Mr. and Mrs. Stuart Smith, Mr. P. A. da Costa, Mr. G. Frizell, and Messrs. Scott and Pinker, of the Dock Company. After the vessel had been under weigh about half-an-hour it was observed the boilers were priming, but that irregularity was corrected. The passengers sat down to tiffin shortly after two o'clock, when the Cap Shui-mun was passed. During the meal a large escape of steam from the steam pipe was remarked, and Messrs. Brewer and Pinker left the table to investigate the cause. They came back shortly afterwards and ten minutes past three a frightful explosion of one of the boilers took place, which blew away the whole of the after part of the vessel, including the after deck house where the captain and passengers were seated, with the result that the whole of them were hurled into the air, and of the number of those named only Captain Hoyland, Mr. and Mrs. Fraser-Smith, Mr. Brewer, and Mr. Caldwell were saved. The survivors were saved by climbing out of the water upon the roof of the after deck house, which had been precipitated some distance from the vessel, except Mrs. Fraser-Smith, who was rescued by a Portuguese sailor who had found his way into a boat. Amongst the crew there was also a large mortality, comprising Mr. Woods, the chief engineer, two stewards (Chinese), six firemen, and one seaman. Two Chinese fishing junks bore down to the scene of the disaster, and picked up the survivors, whom they brought on to Hongkong, where they arrived about half-past ten o'clock last night. Before leaving the wreck two or three small native boats were seen to go alongside the main portion of the hull, which lay grounded with the roof of the upper fore deck awash, and commenced to pillage. The funnel was blown clean away, and the sea around was a mass of floating debris. Mr. da Costa was unconscious when rescued, and died on board the junk about seven o'clock. Every attention possible was bestowed on him both by the survivors and junk people, but he never regained sensibility.

FURTHER PARTICULARS.

We give to-day further particulars and detailed narratives, by some of the survivors, of the disastrous explosion on Sunday afternoon of the boilers of the Hongkong, Canton, and Macao Steamboat Co.'s steamer *Yotsui*.

The *Yotsui* was, it appears, making about eight knots at the time of the disaster, and was, as nearly as we can determine, some fifteen miles from Hongkong, a little beyond the West Brother island and almost abreast of the island of Chulakok. With regard to the causes of the disaster, we do not intend to speculate. The evidence at the inquiry, which will doubtless shortly be held, will probably clear this up, and we suspend all judgment meantime. The *Yotsui* was only insured against fire, and stood on the Company's books at a valuation of \$25,000, to which must be added the cost of her repairs. Last night Captain Benning, who had been despatched to the scene by the directors, returned from the wreck of the *Yotsui*, with the bodies of Messrs. Frizell, Scott, and Pinker, and that of the Chinese steward. He left a boat in charge of the wreck, and will to-day see what can be done to recover the other bodies. A gunboat was, at the request of the Company, sent by the Commodore to the wreck yesterday afternoon. The following is a complete list of those killed:—

Mr. P. A. da Costa, Secretary to the Hongkong, Canton, and Macao Steamboat Company.

Mr. G. Frizell, draughtsman to the Hongkong and Whampoa Dock Company.

Mr. W. L. Scott, Superintendent Engineer to the Kowloon establishment of the Hongkong and Whampoa Dock Company.

Mr. Stuart M. Fraser-Smith, sub-editor of the *Hongkong Telegraph*.

Mrs. S. M. Fraser-Smith.

Mr. G. F. Pinker, foreman engineer, Hongkong and Whampoa Dock Company.

Mr. Jno. Wood, chief engineer, steamer *Yotsui*. The Commodore of the steamer.

Two Chinese Stewards.

Nine Chinese Firemen.

One Chinese Sailor.

The news of the untimely death of Mr. P. A. da Costa, the able and indefatigable Secretary of the Steamboat Company, has been received with widespread and profound regret. Conscientious, hard-working, devoted to his work, to which he brought excellent capabilities, Mr. da Costa was invaluable to the Company, whose interests he served so faithfully and well. He was also exceedingly popular among his community, his amiable character and courteous manners endearing him to all who knew him. His charitable disposition was well known and scores of the poor of this Colony will have good reason to mourn the loss of a benefactor and friend. Mr. da Costa had literary abilities of no mean order, and always took a keen interest in education. A few months ago, in recognition of services rendered by Mr. da Costa, the King of Portugal conferred upon him the distinction of the Order of Our Lady of the Conception and Villa Viçosa, and about the same time he was made a member of the Geographical and Anthropological Society of Stockholm. Mr. da Costa was a Portuguese scholar of eminence and only recently examined the pupils of the Victoria School in that language. It is not too much to say that all his countrymen were proud of him for his abilities and uprightness and esteemed him for his good disposition. Nor was Mr. da Costa less respected by the other sections of community, who have not been slow to recognise his good qualities and talents. The funeral will take place this afternoon with Masonic rites, according to a wish once expressed by the lamented gentleman. The brethren will assemble at the Masonic Hall at 3.45 p.m. It is to be regretted, in this connection, that the Catholic clergy should have intimated that they intended to refuse to perform the last rites of the church over the body of this estimable gentleman because he belonged to the Freemasons.

In the deaths of Messrs. Frizell, Scott, and Pinker the Dock Company have sustained the loss of three valuable assistants. Mr. Scott leaves a widow and one child. His two colleagues were single. Mr. Frizell was a young man of great promise. He joined the service of the Company in April, 1883, and was a very skilful draughtsman. He had, during his brief residence here, made many friends. Messrs. Scott and Pinker were also very popular at the docks.

Of the survivors, Captain Hoyland, Mr. R. Fraser-Smith, and Mr. J. S. Brewer are the most injured, all of them having sustained several severe cuts and contusions, and numerous bruises. Mrs. Fraser-Smith, though very much bruised, is doing fairly well. Mr. Caldwell was very severely shaken, but only slightly cut on one side of the head. He is, however, covered with bruises. All of the survivors are in sad need of rest and quiet, the shock having been so violent and the scene so harrowing.

The occurrence of the disaster has thrown quite a gloom over the Colony, and has led to the postponement of the Race Ball to Thursday next.

Captain Hoyland was taken to the Government Civil Hospital on his arrival at Hongkong, and his friends were much disturbed by a rumour set in circulation by some unaccountable means, during the morning, that his injuries had proved fatal. We are happy to state, however, that such is very far from being the case, having seen that gentleman during the forenoon. He is bruised, and cut and strained very considerably, and is compelled at present to keep to his bed, but no bones are broken, and it seems that no serious injury has been done. He was cheerful when we saw him, and expects to be about again in a few days.

During the morning we visited Mr. Brewer, Government Marine Surveyor. That gentleman was compelled by doctor's orders to keep to his quarters, but he is able to get about the house, though very stiff and sore. His face and head are much cut, and his body and limbs greatly bruised, but he hopes to be able to go out again in a day or two. Mr. Brewer has kindly supplied us with the following narrative:—

The *Yotsui* had been undergoing repairs for some time past at Kowloon Dock, and was fitted with two boilers that were purchased by the Company from the steamer *Yottung*, her old ones having been condemned. Those boilers were thoroughly overhauled by the Dock Company, additional stays were put in, and they were entirely re-tubed and strengthened, and fitted with a new superheater. The Dock Company's engineers tested the boiler by hydraulic pressure to the extent of 60 lbs. and I tested it myself up to 50 lbs., which I considered certainly ample for the working pressure to be put upon the boiler, which was to be limited to 25 lbs. The vessel was tried about a week ago, and the trial not proving quite satisfactory, some slight alterations were made, after which another trial took place on Friday, when it was reported that the steamer would be ready to run over to Macao on Sunday to take

her place on the Canton and Macao line. This trip was also to be a trial trip to test the steaming qualities of the boilers, and also to adjust the Government safety valves, for which purpose I was on board. The boat left Kowloon Docks at a quarter to one, and took a party of guests invited to go with her from the launch *Hilda* at T'sim T'sa T'sui Point. As the *Yotsui* was proceeding through the harbour, there was a strong tide against her, and the boilers were not steaming well for the first hour, which caused her to go very slowly, and it was decided to take her through the inner channel, where there was smoother water, and this would give her speed a better testing. It was also decided not to take tiffin until after we were through the Cap-shui-mun Pass. When near the pass a large quantity of steam escaped through the waste steam pipe behind the funnel, accompanied by a quantity of water, which fell all over the deck like rain. Mr. Scott, of the Dock Company, was standing by the funnel at the time, looking into the engine-room, and he said this was due to the boiler priming, and that it would soon be all right. Things went on smoothly in a little time, and at two or two fifteen the captain and guests went into the deck-house aft to tiffin. At this time the engines were working slowly, and the pressure gauge in the engine room, which could be seen from the upper deck, only indicated twelve or thirteen pounds of steam. About three o'clock, or a little before, steam was again heard rushing out of the waste steam pipe, and Mr. Pinker, of the Dock Company, left the table and went down to help Mr. Wood, the engineer of the steamer. I also went out with him, but did not go down, merely looking down the skylight. The roaring of the steam ceased, and after a few minutes Mr. Pinker and I went back. The roaring soon commenced again, and Mr. Pinker again went down to the engine-room, but I remained in the saloon. Shortly after he had gone there was a fearful explosion, and we were all hurled away for a considerable distance. I think we must have been all blown through one side of the deck-house from the way we are bruised and cut. We were all thrown a considerable distance into the water, and I went down a long way below the surface; it seemed a long time before I came to the top, but I was much stunned by a blow I received on the back of the head, and do not recollect the matter well. When I came to the surface I saw the top of the deckhouse floating close by, and a large amount of debris covered the water all around. I saw one or two men on the roof of the deckhouse, and was pulled on to it by Mr. Caldwell and Mr. Fraser-Smith, and then we helped Capt. Hoyland up. I saw Mr. da Costa lying there, but I do not know how he got there. I saw the steamer 200 or 300 yards away; it might even have been 500 yards away. The whole after part of the vessel was shattered, the deck, awning deck, and deckhouse aft of the engines being carried away, and all the gear. I also saw one boat which had been blown off, and a Portuguese seaman had got into it, and was drifting away, having no oars. The crew on board the wreck lowered a boat, into which two or three got and came to us. It took us on board a junk which came up, and also took the other people off the wreck. In the meantime another junk picked up the man who was drifting off in the boat, and also picked up Mrs. Fraser-Smith, whom I saw floating away with her arm over a piece of wreckage. This boat came alongside ours, and I got on board with the Portuguese boatswain of the *Yotsui* to act as interpreter to the Chinese. I found Mrs. Fraser-Smith lying on the deck almost insensible, and very much bruised and shaken. We took her down below, and got what things we could from the crew to make her as comfortable as it was possible to do; the crew of the junk were very good to us; they made hot tea for us and gave us samshu, and what clothes they could let us have they gave. The quartermaster took his own coat off and put it on one of the sailors who had been picked up. Before I left the first junk Mr. da Costa had been carried into the cabin, and Capt. Hoyland and Mr. Fraser-Smith were also there; Mr. Caldwell was then walking about. There were two Hongkong sampans alongside the wreck, the crews of which were looting it. We arrived in Hongkong after ten o'clock, the wind having nearly failed until we got into the harbour, and we were all extremely cold in our wet clothes. Capt. Hoyland, at the head of the table, sat nearest to the engines, and on either side were Mrs. R. Fraser-Smith and Mrs. S. M. Fraser-Smith. Mr. da Costa and myself were the next in order facing each other, then Mr. R. Fraser-Smith and Mr. Caldwell, Mr. Frizell and Mr. S. M. Fraser-Smith, Mr. W. L. Scott, and Mr. Pinker, the latter being down the engine-room at the time of the explosion. As to the cause of the explosion, I think it may, perhaps, be made apparent, but at present I would rather say nothing

about it as the matter will probably be investigated officially, and I shall have to give evidence, I suppose.

M. R. Fraser-Smith is perhaps the most battered of all the survivors; he is cut and bruised from head to heel, and sustained a most severe blow on the head, which caused a large scalp wound, and gives some ground for anxiety as to its effects. His legs also are much hurt, though fortunately no bones are broken, and he is unable to walk. Mrs. Fraser-Smith is confined to her bed, and her condition yesterday morning was such as to cause some grave uneasiness, but we are glad to learn on inquiry yesterday evening that the patient was progressing as favourably as could be expected considering the shock she had sustained, the bruises and cuts inflicted, her long immersion in the water, and subsequent exposure to cold. Mr. Fraser-Smith has a clear recollection of what took place; he says he was the first to rise to the surface of the water, and to scramble upon the roof of the deck house. He assisted Mr. Brewer, Mr. Caldwell, and Capt. Hoyland on to the wreckage, and also helped to drag Mr. da Costa on to it. The deceased gentleman was then floating helpless and insensible on the water. How he was able to do all this, Mr. Fraser-Smith says he cannot now think, for before he was taken off the wreckage his limbs failed him, and he was helpless.

An inquest was opened on the bodies of Mr. da Costa and the two Chinese at the Government Civil Hospital yesterday afternoon, and after viewing the bodies the inquiry was adjourned, no evidence being taken.

No more bodies of victims of this sad calamity were recovered up to last night, but it is reported that one body has been seen. Mr. Murphy, Chief Engineer of the steamer *White Cloud*, informed the police that while on the passage from Macao to Hongkong yesterday morning, he saw the body of a woman floating in the water outside Green Island. It was face upward, and the face appeared to be that of a European, and some white clothing was seen about the corpse. The second engineer also stated he saw the body. Strangely enough, neither took any further notice of the matter then; they did not inform the captain, and he, not seeing the corpse, came on to Hongkong and left it behind. The body was probably that of Mrs. S. M. Fraser-Smith, the only lady who fell a victim to the disaster, and it is most unfortunate Mr. Murphy did nothing more in the matter, for though the police, acting on his information, were searching about the place indicated for the rest of the day, they did not succeed in finding the body, which may now never be seen again. The bodies discovered on Monday were not found near the wreck; some gentlemen sent out by the Dock Company found them in a bay some three miles or so distant, whither they seemed to have drifted on a piece of wreckage. All the bodies were considerably knocked about, but not scalded, and those of Messrs. Scott, Pinker, and Frizell had been under the hands of Chinese, for their watches and jewellery were missing with the exception of the sleeve links, which appeared to have been overlooked.

We understand that the survivors of the occupants of the saloon are doing as well as can be expected.

THE INQUEST.

The inquest on the bodies recovered on Monday was resumed at the Magistracy yesterday afternoon before the Coroner, Mr. H. E. Wodehouse, and a jury composed of Messrs. Hormusjee, C. E. Hyndman, and J. S. Judah.

Mr. Wotton stated that he appeared to watch the case on behalf of the Hongkong, Canton, and Macao Steamboat Company, and he understood his Worship did not intend to proceed with the inquiry then.

His Worship—No. Gentlemen, we yesterday took the preliminary step of viewing the deceased bodies—those of Mr. da Costa and the two Chinese male adults—supposed to have met with their deaths in the accident which occurred to the *Yotsai*, and we are therefore now in a position to go on with the inquiry at once. I have some doubts, however, as to whether as Coroner for the Colony of Hongkong, I possess any jurisdiction to inquire into the causes of deaths occurring on the high seas in the way these deaths are supposed to have occurred. I therefore think it would be better for me to adjourn this inquiry in order to ascertain my position on this point, and as soon as I get an authoritative answer we will proceed with this inquiry, supposing I find I possess the jurisdiction to hold it. Under any circumstances, of course, an occurrence of this kind would have to be inquired into, and whether it is for the Coroner to do it or not is a matter of small importance. The matter must in any case be the subject for a close investigation.

The inquiry was then adjourned to Wednesday next at 2.30.

THE FUNERAL OF THE VICTIMS.

The bodies of Messrs. da Costa, Scott, Frizell, and Pinker, who lost their lives in the lamentable explosion, were buried yesterday afternoon, and the wide-felt sorrow their sad fate has created was evidenced by the large crowd which assembled to pay the last mark of respect to them. In Mr. da Costa's case the ceremony was conducted entirely according to the Masonic ritual, and under the auspices of the Perseverance Lodge, of which the deceased was a member. The brethren assembled at the Masonic Hall at a quarter to four o'clock, and the body of the deceased having been placed in the lodge room, the lodge was opened by Wor. Bro. E. Georg, Master, who then handed over control to Right Wor. Bro. C. P. Chater, the District Grand Master, who read the funeral service, assisted by the Very Wor. Bro. W. S. Adams, M.D., Deputy District Grand Master, and Wor. Bro. J. S. Cox, District Grand Chaplain. Bro. J. Orange presided at the organ. On the conclusion of the preliminary part of the service, a procession was formed and the body was conveyed to the cemetery. The order of the procession was as follows:—

Members of the		
ST. JOHN'S LODGE, 618, S.C.		
Members of the		
UNITED SERVICE LODGE, 1341.		
Members of the		
VICTORIA LODGE, 1026.		
Members of the		
ZETLAND LODGE, 525.		
Members of the		
PERSEVERANCE LODGE, 1165.		
Oldest member (Bro. J. M. Armstrong) with		
HOLY WRITINGS.		
MASTER PERSEVERANCE LODGE.		
SENIOR WARDEN.	THE BODY.	JUNIOR WARDEN.
TREASURER.		SECRETARY.
SENIOR DEACON.		JUNIOR DEACON.
PRINCIPAL MOURNERS.		
GRAND LODGE OFFICERS		
D.G. MASTER.		DEPUTY D.G. MASTER.
D.G. Steward.		D.G. Steward.
D.G. Pursuivant.		
OTHER MOURNERS.		

Borne on the coffin were the crossed swords of the Knights Templars, the jewels of the deceased, and his apron and collar with his badge of office as Past District Grand Secretary. The coffin was also covered with floral wreaths and a cross. All the brethren present were provided with sprigs of oleander, which they threw upon the coffin after it had been lowered into the grave. The impressive service was brought to a close by the singing of the dirge "Solemn peals the funeral chime."

Messrs. Scott, Frizell, and Pinker were buried according to the rites of the Church of England, the service being impressively read by the Rev. W. Everingham, the funeral taking place immediately after the conclusion of the service over Bro. da Costa's body. Messrs. Scott, Frizell, and Pinker were also Masons, and the District Grand Master, Deputy District Grand Master, the Grand Lodge Officers, and the members of various lodges met the bodies at the gate of the cemetery and followed them to the grave. The coffins were borne by employes of the Dock Company and friends of the deceased gentlemen.

In addition to the Masons there was a large number of other persons present, amongst whom we noticed the Hon. F. B. Johnson (Chairman of the Hongkong and Whampoa Dock Company), Mr. E. R. Belilios (Chairman of the Hongkong, Canton, and Macao Steamboat Company), Hon. F. Stewart, and Mr. Justice Russell. The Hon. P. Ryrie was present as a Mason.

NOTIFICATION NO. 4 OF THE IMPERIAL GOVERNMENT.

TO CITIES AND PREFECTURES.

Whereas: there is a quantity of coloured, impure, and otherwise adulterated tea in the market, not only interfering with legitimate trade, but injurious to the public health, those engaged in the tea trade are ordered to conform with the following bye-laws, and to report the establishment of Tea Guilds to the Agricultural and Commercial Department.

BYE-LAWS CONCERNING TEA GUILDS.

Art. I.—Those engaged in the tea trade, be they producers or sellers, must establish Tea Guilds in each of the urban or rural wards in which they reside.

N.B.—The production of tea for individual consumption does not come under these bye-laws.

Art. II.—The Guilds shall bear the name of the prefecture, city, urban, or rural ward in which they are established.

Art. III.—The Guilds shall frame rules with a view to achieving the following objects:—(1) that tea adulterated with bad and impure stuff shall not be manufactured; (2) that tea-leaves shall be properly fired and packed; (3) that the names of the producers and, or, sellers shall be marked on every package.

Art. IV.—Every Guild shall appoint a Committee to regulate and manage its own affairs.

Art. V.—The members of a Guild must be furnished with certificates proving their membership. These certificates must bear the stamp of the local authorities.

Art. VI.—A Committee shall examine into, and report upon, the condition of all the Guilds.

Art. VII.—A head Guild for the supervision and control of all other Guilds shall be established in each prefecture.

Art. VIII.—The officers of the head Guild shall be elected by vote from among the members of the subordinate Guilds.

Art. IX.—The expenses consequent upon the maintenance of the head and sub-Guilds shall be mutually determined by all the Guilds.

Art. X.—Each Guild shall be at liberty to frame such rules as may be considered expedient for the attainment of the above objects.

YAMAGATA ARITOMO,

Home Minister.

SAIGO YORIMICHI,

Minister for Agriculture and Commerce.

March 3rd, 1884.

NAVAL COURT.

On the application of Mr. William Mackie, Master of the British ship *Ben Nevis*, a Naval Court sat at H.B.M.'s Consulate on Monday and Tuesday last. The constitution of the Court was:—James Troup, Esquire, H.B.M.'s Consul, President; Walter Strugnell, Esquire, Navigating Lieutenant, H.B.M. *Sapphire*; and John Charles Felgate, Esquire, Master of the British steamer *Lord of the Isles*. The hearing of the various matters brought forward occupied a great deal of time, and on Wednesday the Court made the following order:—

The Court finds that William Mackie, Master of the British ship *Ben Nevis*, has omitted to enter in the Official Log the fact of Antonio Matthews being more or less deranged on the passage out, before arriving at Yokohama, and his having been put in irons, as also to enter or procure an entry of the conviction of the first mate, Martin J. Burke, the second mate, Kelly, Dennam, Stenson and Murphy, at Yokohama, and Nagasaki.

The Court finds that the evidence does not support a charge against the Master for assaulting Matthews, while the latter was in irons after leaving Yokohama; and that the ship was not in port when Matthews was put in irons.

It is further shown that Matthews disappeared from the ship on the 30th December last in Kaneda Bay.

There is evidence to show that in Yokohama Matthews had made an attempt to desert; also that on several occasions he had suicidal thoughts in his head.

The Court does not feel in a position to pronounce a decided opinion as to what became of him.

The Court warns the Master to be more careful of making the necessary entries in the Official Log in future, and directs that he pay two-thirds of the costs of these present proceedings, amounting to \$38.40.

The Court convicts Robert Moran, steward, of an assault on the Master on or about the 2nd October last, and finds further evidence to prove that his duties as steward were not satisfactorily performed by him.

The Official Log does not show to what reduction of pay it was the intention of the Master to disrate him.

Robert Moran is sentenced for the assault to be imprisoned for fourteen days, and it is directed that he be discharged from his ship and pay the expenses of his imprisonment.

The Court convicts Michael Stenson, James Murphy, and Charles Dennam of drunkenness and absence without leave, and finds that they were previously convicted of similar offences in Yokohama and Nagasaki.

The Court sentences each of them to thirty days' imprisonment with hard labour, to be discharged

from their ship, and to pay the expenses of their imprisonment.

The Court convicts Martin Joseph Burke, first mate, of drunkenness in the port of Nagasaki, on the 9th February, 1884, and also at this port on the 25th February, and finds that he has been convicted at Nagasaki of absence without leave.

The Court directs that his Master's Certificate, No. 011502, now in the hands of the Court, be cancelled and transmitted to the Board of Trade, with a recommendation that it be returned to him in two months, on his producing certificates satisfactory to the Board of Trade of good conduct for that time.

Further, that he be discharged from the ship, and the balance of wages found due to him be paid into the hands of H.M.'s Consul, and he be treated as a distressed seaman.

Further, that he pay the expenses of his confinement yesterday at this place, amounting to 80 cents, and pay one-third of the expenses of this Court, amounting to \$19.20.

The total expenses of this Court are fixed at £10. 16s., or \$57.60.

Given under our hands, at the British Consulate at Hiogo, this twenty-seventh day of February, 1884.

JAMES TROUP,
H.M. Consul, Hiogo and Osaka,
President of the Court.
W. STRUGNELL,
Navigating Lieutenant, R.N.
H.M.S. *Sapphire*.
JNO. C. FELGATE,
Master of the British steamship
Lord of the Isles.

—Hiogo News.

NOTES FROM JAPANESE PAPERS.

The work in connection with the construction of the new Imperial residence is making rapid progress. As one of the sawing-machines has been found defective, three others have been ordered from England.

Up to the 29th of last month, four hundred applications had been made for shares in the Infantry Drill School, recently established in the metropolis. The subscriptions amount to 20,000 yen.

A Chinaman and his Japanese consort attempted, on the 1st inst., to smuggle a quantity of opium, but their little plans were frustrated by the vigilance of the police. The man was handed over to the Chinese Consulate, while the woman found shelter in the snug quarters of the police station.—*Fuyu Shimbun*.

The Fashions are very changeable. In 1870-71, gold and silver mounted swords both large and small, were high in the popular estimation; but with the abolition of the custom of wearing swords, European dress, and the European style of cutting the hair came into fashion. The mercantile community subsequently enjoyed greater influence than did any other class. In 1874-75, the *sencha* (a tea ceremonial) became quite fashionable, and, in connection with the popular taste, tea bowls manufactured by Shutei were in great demand. Soon afterwards the public had an art-craze, and pictures by Minbatsu Shosei, as well as sketches in sepia (*bunjin-gwa*), were all the rage. With the outbreak of the cholera plague, patent medicines and quack nostrums began to be highly fancied. Shortly after the suppression of the Satsuma rebellion, the *Cha-no-Yu* at once reasserted its former wide spread influence. With the arrival of General Grant, the halcyon days of actors and singing girls seemed to have returned. In 1880-81, the game of *go*, sword-collecting, and a taste for ballad writing, as well as lyric poetasters, came into vogue. Kano's excellent pictures also enjoyed a large portion of the public esteem. The latest popular fancy has manifested itself in the revival of fencing and wrestling.—*Nichi Nichi Shimbun*.

Mr. Shioda, of the Foreign Office, who has been transferred to the Sanji-in, has been assigned to the foreign department of that body.

The province of Osumi is noted for the production of vegetable wax. The quality of the article has, however, considerably deteriorated, seriously affecting the sales. Some public-spirited men have lately attempted to restore the former excellence of the article by opening a competitive exhibition. Their efforts met with a satisfactory degree of success.

The Tramway Company have built thirty-six new carriages. Forty strong horses are to be bought in Awomori.—*Tokyo-Yokohama Mainichi Shimbun*.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, FEBRUARY 29TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
Percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 32.3 miles per hour on Tuesday at 3 p.m.
The highest reading of the barometer for the week was 30.373 inches on Saturday at 9.27 p.m., and the lowest was 29.523 inches on Tuesday at 6 p.m.
The highest temperature for the week was 59.1 on Friday, and the lowest was 28.1 on Thursday. The maximum and the minimum for the corresponding week of last year were 50.0 and 27.5 respectively.
The total amount of rain for the week was 1.002 inches, against .695 inches for the corresponding week of last year.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Europe, via Hongkong, per P. M. Co. Monday, March 10th.*
From America ... per P. M. Co. Tuesday, March 11th.†
From Shanghai, Nagasaki, & Kobe ... per M. B. Co. Thursday, March 13th.
From Hongkong, per P. & O. Co. Friday, March 14th.‡

* City of Tokio (with English mail) left Hongkong on March 3rd.
† City of Peking left San Francisco on February 21st. ‡ *Kashgar* left Hongkong on March 6th.

THE NEXT MAIL LEAVES

For Hakodate ... per M. B. Co. Monday, March 10th.
For Kobe ... per M. B. Co. Wednesday, Mar. 12th.
For Shanghai, Kobe, and Nagasaki ... per M. B. Co. Friday, March 14th.
For Europe, via Hongkong ... per M. M. Co. Saturday, March 15th.
For Europe, via Hongkong ... per P. & O. Co. Saturday, March 22nd.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

SUNDAY CHURCH SERVICES.

Khiva, British steamer, 2,609, P. Harris, 8th March,—Hongkong via Kobe and Nagasaki, General.—P. & O. S. N. Co.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Ise Maru*, from Hakodate:—36 Japanese in steerage.

Per British steamer *Khiva* from Hongkong via Kobe and Nagasaki:—Miss Kashiwara and servant, Mrs. Wallace and two children, Mr. and Mrs. L. W. Cutter, Messrs. A. G. Botelho, Koch Sin Chin, Poon Gin, Fuld, Letourner, Wauchope and servant, J. Ruyter, T. Schluter, O. Voigt and servant, J. Doring, Underhill, Ah Sing, J. Burton, Morita Tami, in cabin: 20 Japanese and 7 Chinese in steerage.

Per Japanese steamer *Niigata Maru*, from Kobe:—Captain Hubenet, Messrs. J. D. Hutchison, Abi, and Yamawaki in cabin; and 84 Japanese in steerage.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—80 Japanese.

Per French steamer *Menzaleh*, from Hongkong:—Mrs. Sugizaki Taki, Messrs. Yegi, Futamatsu, and Wadagaki in cabin.

Per Japanese steamer *Hiogo Maru*, from Hakodate via Oginohama:—Miss Shaw, Miss Fukushima, Miss Hoya, Miss Tanaka, Messrs. Jensen, Fukushima, Tanaka, Narikawa, and Kibara in cabin; and 75 Japanese in steerage.

Per Japanese steamer *Horai Maru*, from Kobe:—28 Japanese.

Per Japanese steamer *Mikuni Maru*, from Kobe:—68 Japanese.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Captain and Mrs. Wilson Walker and child, Mr. and Mrs. Farrell and child, Mr. and Mrs. Hori, Mrs. Dithlefsen and 2 children, Miss E. Sugiura, Dr. Ernest Norfleet, U.S.N., Messrs. William Barrie, Yoshikawa, Shima, Okura, Nomura, Sasaki, Tsunekawa, Imoto, Furuta, and Nishi in cabin; 2 European, 5 Chinese, and 159 Japanese in steerage.

Per British steamer *Arabic*, from San Francisco:—Mr. and Mrs. W. H. Conrad, Miss Conrad, Messrs. G. H. Rhodes, W. J. Manifold, W. R. Dunn, James Quick, and G. Takagi in cabin. For Shanghai: Miss Lucy Hoag and Miss Mary C.

Robinson in cabin. For Hongkong: Mr. R. D. Wilson in cabin; and 171 Chinese in steerage.

Per Japanese steamer *Asahi Maru*, from Kobe:—20 Japanese.

Per Japanese steamer *Owari Maru*, from Kobe: date:—12 Japanese.

Per Japanese steamer *Onoura Maru*, from Fukuda:—24 Japanese.

DEPARTED.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—Mr. and Mrs. T. Mayo Blackwell, and Mr. Fong Sue Long and servant in cabin; and 14 Europeans and 70 Chinese in steerage. For Honolulu: 602 Chinese in steerage. For New York: Lieut. L. P. Jouett, Lieut. Ridgely Hunt, Lieut. W. L. Field, Rev. and Mrs. W. C. Davison, Rev. and Mrs. W. S. Walker, Messrs. Y. Tajiro, Y. Bronisans, and Y. Sicart and servant in cabin. For Liverpool: Mr. J. C. Syme in cabin. For Paris: Messrs. Chas. Ziegler, A. Alioth, and F. Abegg in cabin.

Per Japanese steamer *Takasago Maru*, for Kobe:—Mr. and Mrs. F. C. Bishop, Messrs. E. J. Maunson, J. D. Huchison, T. Orita, M. Kozaka, T. Nakamikado, M. Inouye, S. Shibayama, and S. Oshimaru in cabin; and 65 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, for Hakodate via Oginohama:—Mr. and Mrs. Kurahashi, Mr. and Mrs. Kubo, Messrs. Y. Nakamura, N. Ogura, T. Nakajima, and S. Tsuda in cabin; and 85 Japanese in steerage.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—Mr. and Mrs. Tai, Mrs. Mori, Mrs. Hioka, Messrs. J. Martin de Pallières, A. J. L. R. Mulder, Max. Vorwald, M. Marians, J. Gergen, Kawano, Oura, Hoshiyama, Uchida, Sato, Tamba, Ugawa, Murakami, and Sato in cabin.

Per Japanese steamer *Taganoura Maru*, for Yokkaichi:—75 Japanese in steerage.

Per British steamer *Arabic*, for Hongkong:—Messrs. N. Kakimoto and R. D. Wilson in cabin; and 171 Chinese in steerage.

Per British steamer *Khiva*, for Hongkong via Kobe and Nagasaki:—Mr. and Mrs. F. S. James, 2 children, and 2 servants, Mr. and Mrs. Bissett, Miss Murray, Miss Vincent and servant, Miss Kashiwagi and servant, Rev. Gordon, Mr. S. Straus and servant, Messrs. E. Whittall, G. B. Berrick, E. J. Nanson, Popp, Letourneur, and J. L. Ruyter in cabin; and 2 Chinese and 11 Japanese in steerage.

CARGOES.

Per French steamer *Menzaleh*, from Hongkong:—Treasure, \$300.00; 6,303 packages.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Treasure, \$112,000.00.

Per British steamer *Khiva*, for Hongkong via Kobe and Nagasaki:—Silk, for France, 77 bales.

REPORTS.

The British steamer *Khiva*, Captain P. Harris, reports leaving Hongkong on the 22nd February at noon, with fresh monsoon to Turnabout, then light N.W. and S.W. to Nagasaki, arrived at 10.30 p.m. on the 26th February and left at 3 p.m. next day, between Nagasaki and Shimonoseki fresh N.E. winds and thick rainy weather, hove to 3 hours off the Siro Sima, the weather being too thick to proceed. Fresh easterly winds and cloudy in the Inland Sea to Kagitori Saki, then calm and hazy; arrived at Kobe on the 29th February at 7 a.m., and left at 4 p.m. same day; light northerly winds in the Kii Channel, fresh N.W. and westerly winds to Omai Saki, and the rest of the way moderate and fresh easterly winds and cloudy weather.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Kobe on the 29th February at 5.15 p.m., with fine weather throughout. Arrived at Yokohama on the 2nd March, at 6.40 a.m.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Hakodate on the 3rd March, at 10 a.m., with moderate to fresh northerly wind and snowy weather to Oginohama, where arrived on the 4th, at 0.30 p.m., and left on the 5th, at 6 a.m. with moderate N.W. to S.N. winds and fine weather throughout the passage. Arrived at Yokohama on the 6th March, at 9 a.m. On the 5th March, at noon, passed the company's steamer *Niigata Maru*, 64 miles south off Oginohama.

The British steamer *Arabic*, Captain W. G. Pearne, reports leaving San Francisco on the 10th February, at 2.45 p.m. with heavy westerly gales throughout the voyage. Arrived at Yokohama on the 6th March, at 6 p.m.

LATEST COMMERCIAL.

IMPORTS.

Quietness has prevailed throughout the Market without any marked change in quotations.

COTTON YARN.—The business has been small of all descriptions of English Yarn as well as Bom-bays, but holders seem very firm in their prices.

GREY GOODS.—Few transactions have been reported, and prices may be quoted more or less nominal.

FANCIES.—Mousseline de Laine are the only goods that have been sold to any extent. Small sales have been reported in Italian Cloth, Turkey Reds, and Victoria Lawns.

Brown Formosa	3.70 to 3.75

EXPORTS.

RAW SILK.

Our last issue was of the 28th ultimo, since which date there has not been quite so much doing in this Market, and the list of Settlements does not exceed 200 piculs. There have been enquiries for various kinds of Silk, but with one or two exceptions the ideas of sellers and buyers have been divergent. As we expected there was considerable business done for the American mail of the 1st instant but the French mail of the same date took an insignificant quantity and the demand for Silk suitable for Europe has been very small: telegraphic news from thence not being encouraging.

The demand has been chiefly for *Filature* and *Kakeda* descriptions: *Hanks* again giving rise to no business whatever. Prices are much as last advised; while some parcels continue to be held off the Market altogether, in other cases dealers have shown themselves fairly current.

The M.M. steamer *Volga* which sailed on the morning of the 1st carried but 11 bales—all for France. The P.M. steamer *City of Rio de Janeiro* which left port also on the 1st, had a shipment on board of 314 bales for the United States markets—of these 44 were entered as "Direct shipments" on Japanese account. The cargoes of these vessels bring the Export up to 27,478 bales against 21,955 bales to same date last year and 14,091 bales to 6th March, 1882.

Hanks.—We have no transactions to chronicle during the week. In the absence of business to test prices all quotations must be considered as more or less nominal.

Filatures.—More than half the business of the week has been in this class at prices ranging from \$650 to \$560. The principal demand has been in coarse sizes, the enquiry for Europe holding off. Among the sales we observe a small parcel *Yamagata*, \$650; *Tokosha*, \$630; *Shinshu Kaimeisha*, \$627½; *Hida*, \$615; *Mino*, \$607½; *Ueen*, \$605; with *Koshu*, sorts \$575; and *Bushu*, \$565.

Re-reels.—Very little has been done in these. Some few No. 1, reported sold at about \$600 with a few Common at \$560. Good *Re-reels* are scarce and supplies are not expected before the end of the month.

Kakeda.—This class has again divided honors with *Filature* kinds and some considerable parcels have been settled. Best kinds are still neglected and sellers would probably abate something of their pretensions to bring about real business. Demand has continued to run on sorts at \$580, \$560, \$540.

Oshu and Coarse kinds.—Again no business on foreign account. The internal consumption still requires a few and the Stock in Yokohama gradually decreases. Arrivals have been next to nothing.

Export Tables Raw Silk to 6th March, 1884:—

	SEASON 1883-84.	1882-83.	1881-82.
	BALES.	BALES.	BALES.
France and Italy	16,751	11,324	7,221
America	8,088	7,441	4,032
England	2,639	3,190	2,838
Total	27,478	21,955	14,091

WASTE SILK.

Business in this article has been fairly brisk for the time of year, reported Settlements being nearly 350 piculs. In addition to these figures there has been another purchase by natives from foreigners in *Kibiso* of about 150 piculs. On this occasion the purchase has found its way into the native town, and has increased the Stock accordingly. Without this contribution the Stocks on offer would have been again reduced, as Settlements have exceeded arrivals by more than 100 piculs: as the matter stands the figures show a slight increase.

The French mail steamer of 1st instant had on board 64 bales only, and the total Export now reaches 20,338 piculs, against 19,046 piculs last year, and 17,605 piculs to same date in 1882.

Pierced Cocoons.—Again a dead letter, I though in recent seasons business has continued until April.

Noshi-ito.—This has continued of current sale at about late rates. Some few parcels have come in, but the Stock is practically unchanged, even

the fresh arrivals being reported "under offer." In *Filatures* some little done at \$137½, and *Shinshu* kinds are wanted at \$135. A little *Utsunomiya* reported sold at \$155. In ordinary *Noshi*, business is noted in *Shinshu* at \$100, Fine *Foshu* at \$95, *Foshu* Assorted at \$87 to \$84, according to quality, which at present is capable of some improvement. With milder weather better reeling is expected.

Kibiso.—There has been some business done, but good qualities are exceedingly scarce; the bulk of the present offerings are very low quality, and full of spent cocoons. On the whole we think that sellers have not quite succeeded in establishing the desired rise in prices. Settlements include *Shinshu* at \$65, *Yechigo* and *Foshu* at from \$40 to \$37½, *Hachoji* \$27½ to \$20. Nothing done in *Neri* beyond a small parcel at \$15. In *Kuzuito* a purchase or two at \$75.

Mawata.—The buyer mentioned in our last has continued picking up stray lots and the Stock is yet further reduced. Arrivals very small and but little more is expected.

TEA.

The purchases for the week have been on a very limited scale, the total Settlements reaching only 315 piculs, for which buyers have been found at unaltered quotations. Receipts from the producing districts during the interval have been more liberal and consequently Tea in Stock at [this port is now somewhat augmented and may be estimated at about 1,200 piculs. Buyers at the close are purchasing freely for the American mail, which is advertised on the 12th, and we will probably see a larger business than the past week. The cargo of Tea shipped on the P.M. steamship *City of Rio de Janeiro*, despatched on the 1st inst., took 134,090 lbs. Fired Tea to the United States and Canada, and is distributed as follows:—757 lbs., for New York; 13,203 lbs., for Chicago; 18,834 lbs., for Portland (Oregon); 64,393 lbs., for California; and 36,903 lbs., for Canada.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Faker that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S
PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL-PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 15TH, 1884.

SUMMARY OF NEWS.

A VIOLENT epidemic of small-pox is said to be raging in the Riukiu Islands.

It is stated that a submarine cable is soon to be laid between Kagoshima and the Riukiu Islands.

BAC-NINH has been captured by the French with a loss of only 72 wounded.

SIR HARRY PARKES has been appointed to represent Her Majesty at the Korean, as well as the Chinese, capital.

It is stated that the railway from Tokiyo to Takasaki will be opened for traffic in the beginning of April.

AN outbreak is reported to have occurred among the prisoners employed in the Miike Mine, on the 9th instant. Order was restored without much difficulty.

OFFICIAL returns show that, during 1883, the number of daily newspapers suspended by order of the authorities throughout Japan was 49 and the number of periodicals 3.

THE construction of a Japanese Consulate at Pusan, as well as the rebuilding of a part of the Japanese Legation at Sôul, are said to have been contracted for by Messrs. Okura & Co., of Tokiyo.

AN instance of the want of additional educational machinery in Japan is afforded by a recent re-

port from the Prefecture of Shidzuoka, where, out of 300 candidates who applied for admission to the normal school, only 30 were admitted.

THE obsequies of Brother H. N. Tileston, of the Yokohama Lodge, were performed by his fellow Masons, with Masonic honours, on the 10th instant. Mr. Tileston had formerly been in the service of the Pacific Mail Steamship Company. His death took place a few days after his return to Japan from America.

THE latest addition to the Japanese Navy—the *Kaimon-kwan*—which was recently launched at the Yokosuka Dockyard, has made her trial trip, attaining an average speed of 12.37 knots with four boilers and 8.79 knots with two. The *Kaimon-kwan* will be completed in a few days and transferred to the Marine Bureau.

THE foundation stone of a new Theological College was laid at Osaka by the Right Rev. Bishop Poole, on the 3rd instant. The College is to be erected by means of a donation of £72,000, made by Mr. William Charles Jones, of Warrington, in Lancashire, for the extension and development of the native churches in China and Japan.

PUBLIC attention has been much directed, of late, by notes and articles in the vernacular press, to an apparent revival of the taste for many customs which fell into disuse after the Restoration. Prominent among these is wrestling, an exhibition of which was given at the Yenriyokwan on the 16th instant, in the presence of His Majesty the Emperor, and many high officials both Japanese and foreign.

KOREA, having spent the money she borrowed from China, is said to be again in embarrassed circumstances, and to be casting about for economical devices. Among her projects one is to replace the foreigners employed in her Customs service by Japanese, on account of the lower salaries which would suffice for the latter. It is thought that steps of this nature will soon cease to be optional and become imperative.

THE returns of Korean trade show—according to the vernacular press—that the total value of the exports and imports during 1883 was 852,695.74 *yen*, against 1,400,237 *yen* during 1882. The decrease was entirely on the side of imports, these having fallen off by 695,117.49 *yen*, while exports increased by 147,575.49 *yen*. Commercial depression is said to be severely felt, though fair profits were realized on the trade of the year.

FORGED *Kinsatsu* of small denominations are said to be in circulation in Yokohama in some numbers. The most favorite method of counterfeiting is to change the Japanese numeral 10 into the ideograph signifying "half." This can easily be effected by the addition of four strokes. A recolouring of the obverse of the note is also necessary, however, and the consequence is that the forgery is easily detected. A vernacular paper states that notes of this nature are frequently

presented at the Osaka railway station, and that as many as three persons offering them have been arrested in one day.

A COMPANY with a capital of 150,000 *yen* has been formed to promote emigration to the Hokkaido. The programme of the projectors is to pay the expenses of persons willing to emigrate, on condition that the latter agree to work for a certain time at fixed wages and in employments determined by the Company. Great difficulty is experienced in overcoming the reluctance of the Japanese to emigrate, though Yezo offers remarkable inducements and could, doubtless, be soon converted into a thriving colony.

ON the 13th instant, an action was commenced in the Ministerial Court of the United States in Tokiyo at the suit of the United States Consul-General Van Buren against Dr. T. H. Tripler of Yokohama for libel, the gist of the charge being that the defendant had wilfully misrepresented the circumstances under which General Van Buren came into possession of the buildings now occupied as the U.S. Consulate. The case for the prosecution was concluded on the 13th instant, and that for the defence, postponed until the 17th instant.

THE British barque *Sattara*, which went ashore at Omaye-saki and was subsequently abandoned, has been refloated and towed safely into Yokohama harbour. She is said to be quite uninjured. The affair has excited much comment. The master of the *Sattara* had reported to the underwriters that the vessel's back was broken and that there was no hope of getting her off. She was consequently sold by auction as a wreck, and her hull was purchased by Messrs. Kildoye and Robertson for \$1,750. It appears now that she is perfectly sound, and worth a good many more thousands than there were hundreds paid for her.

THE Hongkong journals have published some official correspondence which took place between the Colonial Office, the Admiralty, and the local authorities at Hongkong, with reference to the disposition of Her Majesty's naval forces in Chinese waters. The Lords of the Admiralty record their opinion that "Vice-Admiral Wiles has shown good judgment in arranging for the adequate protection of British interests, while duly exercising the squadron under his command at sea." The correspondence shows that in June last the British Consul at Shanghai requested the Admiral to detach a corvette and a sloop to guard the settlement during the visit of the Viceroy Li Hung Chang. With this extraordinary requisition Vice-Admiral Wiles wisely refused to comply, saying that he considered such a measure would be an "insult to that distinguished and enlightened statesman."

THE annual meeting of the Yokohama Cricket Club was held on the 11th instant. The accounts showed that the expenditure of the Club during 1883 had been \$844.66 and the income \$974.66. The rules were amended so as to

permit practice on Sundays. Some opposition was made to this change, but the feeling of the members was evidently in favour of removing restrictions which have no rational basis. The Rev. E. C. Irwine justly pointed out that the probable result of the modification would be to deprive of their usual holiday many Japanese bettoes, gardeners, &c. It may fairly be assumed, however, that the members of the Cricket Club and others interested in the sport will take care, when extending their own sphere of recreation, not to abridge the legitimate leisure of their employes.

NOTES.

THE vernacular papers, from which we take the following report, are full of accounts of the great wrestling exhibition which was held in the Yenriokwan on the 10th inst. The matches had been arranged by the members of the Senate, and everything was conducted after the fashion of the olden time when the champion wrestler Kiyobashi held his athletic court at the Imperial residence at Nara. The arrangements and decorations were very fine, and more than three thousand dignitaries and persons of rank were present. The ring was marked out in the garden of the Yenriokwan, the seat of H.I.M. the Mikado being in full view of the arena, facing southwards. One step below and on either side of the Imperial seat, were galleries for the Princes, Ministers of State, the Foreign Ministers, and Privy Councillors. A little farther to the right were the seats of the *Chokunin* officials. The eastern and western galleries were reserved for the *Kwazoku* and *Sonin*. Red blankets were spread over the ground around the ring, where at least 2,000 spectators were seated. Perfect order was observed from first to last, and the quiet, manly carriage of the wrestlers was a matter of admiring surprise to all present. The umpire first called out the names of the rival wrestlers, and as they entered the ring again repeated their names. As soon as the one or the other proved victorious, a second umpire advanced and presented the umpire in the ring a bunch of flowers on a fan; this umpire then called out the name of the winning wrestler, and handed him the flowers in token of his prowess. The same ceremony was observed in all of the sixty bouts. The principal winners were as follows:—Yawatayama, Idzutsu, Ichinoya, Takachiho, Chiwagatake, Tsurugiyama, Umegatani, Kashiwado, Inenohana, Tomotsuma, Tomonohira, Takamiyama, Onaruto. The presiding umpires were Kimura Shozaburo, Shogara, and Kiyoji; all wore the ceremonial dress of olden time.

A HOME paper says:—A really exciting ceremony was that carried out beneath the Mersey yesterday (Jan. 17.) In making a tunnel between Liverpool and Birkenhead the contractors have been boring from both ends. At the early part of the week it was made known that very few feet of the rock remained to be drilled, while at mid-day yesterday but a single foot of obstruction remained to separate the two parties. Shortly before noon a number of gentlemen connected with the Mersey Railway Company descended the shaft on the Liverpool side, and proceeded along the tunnel as far as it had been cut. The jarring noise of the boring machine could be heard driving away at the partition on the Birkenhead side. In a few minutes the

intervening layers of rocks fell away, and the face of Col. Beaumont, the engineer, was seen peering through. A loud and hearty shout from all present echoed through the long corridor as the opposite parties grasped hands. Then, struggling through the opening, the chairman got into the opposite tunnel and ascended the Birkenhead shaft with his friends—the first human beings who ever walked under the Mersey. The boring has thus been successfully completed, and nothing now remains but to put the tunnel into ship-shape, and the busy boring machine which has been delving and grubbing away in the dark bosom of the rocks for so many months will have a rest. The engineer may well feel proud of his work, for it is no little feat to drive a headway from opposite sides of a big river like the Mersey, and meet in the middle exactly to a foot.

IN the year 1491, three or four designs for the façade of the Dome of Florence were presented to Laurent le Magnifique. He put them aside saying, "*J'examinerai cela, rien ne presse.*" Laurent appears to have been right. The work was so little pressing that it waited four centuries. For one reason or another nobody thought it worth while to complete the monument commenced by Arnulf and Brunelleschi. After the establishment of Italian independence in 1860, people began to think of finishing the great cathedral. A large sum was raised by private subscription, and the façade was built, with the exception of the crown, which remains to be added. But a tremendous dispute then arose about the form of this crown-piece. One party wanted to have it basilic; another, tricuspidal. Both were equally resolute in maintaining their views, and the difficulty of deciding seemed so great that they were on the point of submitting the question to the Government when a third party stepped in, declaring that it made very little matter whether the cathedral at Florence had one cusp or three, but a great deal that the Government should not be betrayed into meddling with matters which did not concern it. So there is another delay about the Dome, and some persons suggest that as "*rien ne presse,*" three or four centuries more may be employed in determining the shape of the crown-piece.

AN event which reminds one of mediæval times and the horrors of the inquisition is said to have occurred recently in Madrid. A carriage with two gentlemen drove up to the house of a mason, and desired the man to accompany them immediately on pressing business. He complied, and made no objection to have his eyes bandaged on consideration of an ample *douceur*. Ultimately he found himself in a room where a lady was lying, gagged, bound, and weeping piteously. The mason was then threatened with a terrible death unless he built up with bricks the alcove in which this woman was lying. His story is that he had no choice but to consent, and that he was afterwards conducted back to his house with the same precautions as before. He lost no time in informing the police who are now searching for the place of the crime.

FOR the past two years or so the attention of stenographers and shorthand writers in general has been attracted by the performances of a little machine called the stenograph. This instrument, the invention of an old Pittman reporter, Mr. M. M. Bartholomew, of Belleville, Ill., is operated by means of ten keys, nine forming

the characters, the tenth being the space-key, separating each word similar to the type-writer. By placing the hands in a natural position on the table before you, fingers spread a little apart, thumbs close together, you will get a tolerable idea of the working plan of this machine. As these nine keys are joined together at one end forming a V-shaped rod, it will be seen that only five characters are thereby formed. These are all that is necessary, however, to form the thirty-one different letters and combinations used in writing. The other four keys are merely used to obtain speed by alternating the movement of the hands. It writes on a strip of paper the same as the stock and produce machines, the letters being determined by their position on the strip. It is claimed to have been used successfully as a medium for verbatim court reporting, lectures, sermons, speeches, etc., and to require much less time in learning than any other system. It is very simply and neatly constructed, being about 7½ inches long by about the same width, and weighs only 3½ pounds, case and all.—*Bradstreet's*.

IN connection with the establishment of the Customs' Service in Korea, it is very evident that the Government authorities are regretting that they paid so dear for their whistle. The correspondent of the *Mainichi Shimbun* throws considerable light on the present situation, which seems to savour strongly of a muddle. "In November last," he writes, "many foreigners were engaged in the newly-established Customs' Service. Owing, however, to the great falling off in trade, the Customs' revenue has not sufficed to cover the working expenses, and the salaries of the foreign employes are sadly in arrear. The Korean Government has, in consequence, proposed to engage Japanese employes instead of European, on account of the lower wages. But Mr. von Möllendorff has positively refused to sanction this idea, stating that it would be most unfair to cast off the foreign employes after only six months' service. No further steps have been taken in consequence."

* * *

This is, however, not the end of the matter. Only a few weeks ago we were informed that Mr. von Möllendorff's popularity was decidedly on the wane; and, despite his influential position as Vice President of the Foreign Office, his authoritative interference in the little plans of the Korean Government is certain to become decidedly distasteful to the authorities. The Chinese loan of \$200,000, brought mainly by the exertions of the energetic Vice President, has "softly and silently vanished away" in the establishment of a Customs' Service and a few other ornamental etceteras. The people are suffering severely from the great decrease in trade, and the foreign trade is gradually coming back to its one-time status—Zero. *Ex nihilo nihil*: 'tis a wise saying, and not without a moral.

REFERRING to the new Chinese Restriction Bill, the San Francisco *Chronicle* says:—We are not disposed to be too captious about the new Chinese Restriction bill, though it may not embody every feature which we might wish therein incorporated. As approved by the California delegation it was in some respects better than in the form reported to the Senate, with the changes inspired by philanthropic and not very well informed members from the Eastern States. Still, it is a great improvement on the present

law, which has proved so inefficient, and if the *New York Times* is to be believed, it will, if passed, have the peculiar effect of compelling the Americans to do their own washing. We should have no particular objection to this, for if we were brought back to the laundresses and laundry appliances of 35 years ago—that is to say, before the Chinese invasion commenced—we might still succeed in maintaining our reputation as a clean and wholesome people. The new bill endeavors to obviate the difficulties of the present day by requiring every Chinaman, other than laborer, who intends to come to the United States, to be identified thoroughly by the Chinese Government or the Government of which he happens at the time to be a subject. The identification must take the form of a certificate in which the name of the intending emigrant is written, together with his age, his family, his occupation, and a description of his physical peculiarities. This must be vided by the diplomatic representative of the United States at the port of embarkation, who must be satisfied by personal investigation that the allegations contained in it are correct. The efficiency of this portion of the law will depend on the honesty of the Chinese officials of the provinces and the intelligent activity of the Consul whose vise is required; but we believe it will prove generally satisfactory. This certificate so given, and with its consular indorsement so appended, is to be received as prima facie evidence of the right of the holder to enter an American port. Should it be found after a person has effected an entrance into the country that he has done it fraudulently, he is liable to arrest, with a fine of \$100 or six months' imprisonment. He is then to be sent back at the expense of this Government. Shipowners or shipmasters proved to have violated the law are to be fined, but this may be attended with difficulty, since once having landed a lot of fraudulent emigrants they may never again enter a port of the United States. The only other new provision of importance is that providing for the return of those Chinamen who were in the country between November 18, 1881, and August 4, 1882, which is also to be effected through the medium of certificates. The coming of emigrants is hedged around with so many difficulties that few probably will be able to evade the law, while the fact that most of the immigration is, and must continue to be, by regular lines, precludes the escape of most of the offending shipowners or shipmasters. The Chinese laborers who here and there manage to creep into the country in spite of its prohibition will not affect its general welfare. The bill as it stands is probably the best we can hope for, and we shall be glad to see it speedily become a law.

"*La France*," says a telegram dated at Paris, February the 1st, "reasserts that Admiral Courbet lately attacked Bac-ninh and was repulsed with losses equal to those sustained at Sontay. The same paper says that the French met 25,000 well armed and strongly posted Chinese regulars under the walls of Bac-ninh." There is just one possibility that this rumour is correct. Admiral Courbet's natural desire to terminate the campaign before his successor's arrival may have induced him to deliver an assault prematurely and therefore unsuccessfully. But Admiral Courbet has shown himself too good a soldier to justify us in believing such a theory without very strong proof. In determining the dis-

tribution of the troops under his command, it would have fallen well within his province to learn as much as possible about the actual state of affairs in Bac-ninh, and with that object he may have ordered a reconnaissance in force. Without assuming that the troops employed in this operation allowed themselves to become unnecessarily engaged, their appearance and retreat may easily have been misinterpreted; while, on the other hand, it is very conceivable that the officers in charge, ready enough to seize Bac-ninh at once if any occasion offered, may have slightly exceeded their instructions. Now that the French have directed themselves in earnest against the place, the result may be foretold with tolerable assurance.

THE story of General Gordon's last week in England before starting for the Soudan has been compiled by a correspondent of the *Overland Mail*, and, together with various intemperate comments on the policy of the Government, is given to the public in the following interesting form:—

MONDAY, Jan. 14.—Chinese Gordon having sent in his resignation of his commission in her Majesty's army with a view to taking service under the King of the Belgians, the Government decides to accept it.

TUESDAY.—The Government change their mind, and recognising the public scandal of turning so distinguished a soldier adrift after thirty-one years' service without a pension, decide not to accept his resignation, but that he may take service with the King and go to the Congo. The King informed accordingly.

WEDNESDAY.—Gordon having bade adieu to his friends, leaves England for Brussels to make final arrangements with the King previous to his departure for the Congo. Arrives in Brussels and sees the King, who is much pleased with the decision of her Majesty's Government, which has enabled him to secure Gordon's services.

THURSDAY.—Her Majesty's Government telegraph to Gordon at Brussels to ask if he would go to Egypt, and if so when? Reply returned, "Ready to go at once." Her Majesty's Government telegraph orders to him to return to England. King informed that her Majesty's Government have changed their minds, and as they require Gordon themselves he cannot go to the Congo. King very much annoyed, and with much reason. Gordon leaves Brussels by evening express.

FRIDAY.—Gordon arrives in London at 6 a.m.; at noon has an interview with members of her Majesty's Government; at 4 p.m. receives instructions to proceed to Egypt; at 8.30 p.m. leaves Charing Cross for Souakim and Soudan; the Duke of Cambridge and Lord Wolseley being at the station to see him off and wish him God speed on an expedition which, in consequence of delays, waste of time, and injudicious public utterances by some of the members of her Majesty's Government, may be regarded almost as a forlorn hope, and beyond the powers even of the unselfish, resolute, and courageous Gordon. The object being to save the lives of thousands of human beings, including all nationalities, to say nothing of the English Consul and a good many British subjects, Gordon has not hesitated to respond to the call of his country. God grant him success and a safe return, and that thereby Mr. Gladstone and his Council may be spared from the blood-guiltiness which will attach to them if the garrison of Khartoum and other places in the Soudan fall into the tender clutches of the Mahdi.

SATURDAY.—Chinese Gordon crosses the Alps and enters Italy.

THE Marquis of Hartington, addressing his constituents, said in reference to the Ilbert Bill:—"We are greatly attacked for the Indian policy embodied in what is known as the Ilbert Bill. I have already, on the part of the Government, in my place in Parliament, taken the responsibility of that measure, and have, to the best of my ability, defended the policy of Lord Ripon's Government in regard to it; but knowing the obloquy and the unfounded abuse to which Lord Ripon is exposed, not only in India, but, I am sorry to say, also in this country, I can scarcely reconcile it to myself to allow any opportunity to pass without once more protesting against the injustice of that abuse, and of assuming on the part of the Government the responsibility of that policy. The European British subject has had, continues to have, and will have numerous

privileges, judicial privileges, as compared with his Native fellow-subjects, and the Government of India have not proposed to touch one of those privileges. We have for a considerable time past been admitting Natives to a share in the administrative offices of India, and the question is whether, having adopted this policy, we shall trust those selected Natives whom we have invested with large powers, whether we will entrust them with equal powers with those which are possessed by their comrades of the same rank, of our own race."

RECENT experiments in illuminating railway trains in the United Kingdom with the incandescent electric lamp have proved very successful. So much so has this been the case that the one company on which the new light was tried (the London, Brighton & South Coast) will use the system to the exclusion of all others. The *Daily News* says the system employed is a combination of dynamo machines and accumulators. When the train was in motion the electricity was stored and given out as required. Thirty twenty-candle incandescent lamps were used. The apparatus was entirely under the control of the "front guard," who, by means of a handle, turned the current on and off at pleasure. For example, while the train was running in broad daylight the electric light was not used, but the moment a tunnel was entered it was employed to great advantage. The electricity was generated by means of a belt connecting the dynamo machine with the axle of one of the wheels. The system is the invention of Mr. Stroudley, of Brighton (locomotive department), and Mr. Edward Houghton, the superintendent of the telegraph department. It is said to be "much cheaper than gas and only a trifle dearer than oil." The *Daily News* also makes the announcement that the first town to be lighted entirely and have its street railway cars driven by electricity will be Montreux, on Lake Geneva. A company has obtained a concession for the purpose, and motive power will be derived "from the water of the lake." Extensive works "will be erected immediately."

ONE of the main features of a new literary periodical called the *Révue Internationale*, which is published in England by Messrs. Trübner and Co., will be a regular literary correspondence from Paris, London, Berlin, Vienna, Pesth, Bucharest, Constantinople, Prague, Sophia, Athens, Zanté, Geneva, Brussels, Leyden, St. Petersburg, Kieff, Moscow, Warsaw, Stockholm, Christiania, Copenhagen, New York, Lisbon, Madrid, South America, India, China, and Japan. Each correspondent will closely follow the literary productions of the country relating to which he writes, and will give numerous extracts and translations, so that the readers of the *Révue Internationale* will have placed before them every fifteen days "a perfect mirror of the current literature of the world."

THE following story of the origin of Worcestershire sauce is given by "Atlas" in the *World*:—Although inferior in money-making power to a pill, a sauce, too, can make the guineas roll briskly in, and notably has this been the case with Lea & Perrins' Worcestershire. A scrutiny of the label will show that it is prepared "from the recipe of a nobleman in the county." The nobleman is Lord Sandys, and Messrs. Lea & Perrins' connection with the sauce came about

rather curiously. Many years ago, Mrs. Grey, author of *The Gambler's Wife* and other novels, well known in their day, was on a visit at Ombersley Court, when Lady Sandys chanced to remark that she wished she could get some very good curry-powder; which elicited from Mrs. Grey that she had in her desk an excellent recipe, which her uncle, Sir Charles, Chief Justice of India, had brought thence and given her. Lady Sandys said that there were some clever chemists in Worcester, who perhaps might be able to make up the powder; at all events, when they drove in after luncheon they would see. Messrs. Lea & Perrins looked at the recipe, doubted if they could procure all the ingredients, but said they would do their best, and in due time forwarded a packet of the powder. Subsequently the happy thought struck some one in the business that the powder might, in solution, make a good sauce. The experiment was made, and by degrees the thing took amazingly. All the world, to its remotest ends, now knows of Worcestershire sauce as an article of commerce; and, notwithstanding that, in common with most good things, it is pirated, an enormous trade is done in it. The profits, I am told, amount to thousands of pounds a year, and I cannot but suppose that liberal cheques, bearing the signature of Lea & Perrins, have passed from that firm to Mrs. Grey, to whom it is so heavily indebted for its prosperity.

An inquest has been held at Bath on the body of Mr. George William Herman, aged nineteen, the brother of the last Senior Wrangler. The deceased took part in a football match recently between Oldfield Park and the Bristol University. The game, which was played under Rugby rules, was an exceedingly rough one, no less than four men receiving injuries, and Mr. Herman had several falls. The medical evidence showed that a large artery had given way within the skull, producing apoplexy. The jury returned a verdict in accordance with the evidence, and strongly condemned the Rugby rules.

At a meeting of the Chamber of Commerce at the Mauritius, amongst the subjects which came before the Chamber for consideration was the following in relation to His Excellency the Governor:—"An address of welcome voted by the Chamber was presented by a Deputation to His Excellency the Governor, on his arrival, in which hopes were entertained that His Excellency's experience and ability in Colonial Administration would greatly aid in solving satisfactorily those questions which awaited His Excellency's decision and in which the vital interests of the Colony were involved. It is with extreme satisfaction that the Chamber has to record that all the representations which it has considered necessary to make to Government for the benefit of commerce, have met with prompt and favorable consideration from His Excellency Sir John Pope Hennessy, and that several impediments to Commerce and Shipping have been promptly removed by legislative enactments, whilst a favorable consideration has been promised by His Excellency to the important question submitted by the Chamber to Government of a further reduction of Harbour Dues. His Excellency has also been pleased to ask the opinion of the Chamber on several important points including the question of Ocean Telegraphic Communication; and the Chamber desires to record its

respectful thanks to His Excellency for the evident desire manifested by him, during his short term of residence in Mauritius, to further by all means in his power, not only the interests of Commerce, but those of the Colony in general."

MR. MIN-YONG-IK has been having a good time in Paris. The ladies there elected to call him "Mignon," having persuaded themselves that he is destined one day to reign over a country very rich in gold and silver mines and all sorts of precious metals, without counting that on his return there he is to marry the King's only daughter. The King, not being yet twenty years of age, could not have a marriageable daughter if he were an European, but being a Korean, nobody knows what he may not have. It has been a blow to the people of Paris that Mr. Min-Yong-Ik dressed *à la Européenne*, and a blow that he could not speak a word of French. Nevertheless, he was interviewed successfully, when the following conversation is said to have taken place:—

Mignon—I am enchanted at being interviewed. It enables me to tell the gentlemen of Paris how wise I find them, and the ladies how pretty they look. I am neither a Chinese nor a Japanese, but a Mongol. I fear nothing nor anybody, and I defy my enemies as I respect my friends. If I am not dressed in the robes of silk and gold that men of my rank wear in Korea, it is because I was robbed of them at the station at Lyons, where a man took them to carry to my carriage. For the first time in my life I am to-day wearing European clothes. They are convenient, but they lack distinction, and the trousers are very uncomfortable.

Interviewer.—May I be permitted to ask whether your Imperial Highness is not charged to propose a treaty of commerce with France?

M.—We have treaties with Germany, England, and America. The French have not yet asked for one. We have not yet seen any Parisians in Korea. It is a pity, for they are very amiable. They are not tall, like the Koreans, but they have superb houses. I don't mind telling you, however, that the Parisians have done well to stay at home, for we used not to like strangers in my country. For four centuries we cut off their heads when they risked them among us, and impaled the Ministers who let them in.

I.—And to what does your Highness attribute this change of attitude towards strangers and your Ministers?

M.—To the rivalry which exists between us and the Chinese. They are very annoying. They have been trying for several years to absorb us under the pretext of civilizing us. But we claim to be quite as well educated as, and infinitely braver than, their long-tailed Mandarins. Our King has decided, in his wisdom, that we should place ourselves *en rapport* with the nations which carry on commerce with China, and that we should see what must be done to secure our independence and preserve the integrity of our nation. But I wish they had not stolen my portmanteau from me at Lyons. These trousers do not suit me at all.

An American contemporary gives the following as a full, particular, and true account of an incident that recently occurred at San Francisco:—While five of the Pioneer Club six-oar crew were sitting in their shell and swearing vigorously at the non-appearance of the sixth man, who was half-an-hour late, a well-dressed and modest young stranger strolled into the boat-house and began inspecting the equipments with great interest. "I'll tell you what we'll do, fellows," said the stroke; "as No. 4 isn't coming, suppose we coax that dude there to take a row and bust him all up." The perpetration of this time-honoured joke upon a "softy" was received with approbation, and the newcomer was, with a grand show of hospitality, invited to take the vacant oar. "Well, I don't know, gentlemen," said the young man, looking at his watch doubtfully, "I'm a stranger here. I do need a little exercise, though." "Oh, get in," said No. 2, winking at his companions, "a little spin will do you good," and they finally persuaded the victim of their kindly scheme to take off his coat and assume a club cap. "Now keep your eye on me, and try to keep time," said the captain. "You'll never, never make

an oarsman unless you watch the stroke." "I'll do the best I can, gentlemen," said the guest, meekly. "I'm always willing to improve." The boat went down towards Hunters' Point a couple of miles at an easy, three-quarter stroke, the new comer pulling away manfully with the rest, and when they eased off to turn back they were surprised to observe that the stranger did not appear to be quite so much blown as they expected. "Now, then, young feller," said the stroke, with a grin, "try to keep up with the procession. Hit her up, boys. Hard all!" But, somehow, the stranger scratched along with the rest, and though the pace was something like forty-six as they passed Butcher-town, the victim serenely sawed away, and the bowman even imagined that he splashed less than any oar in the boat. When they finally drew up to the float, and while they were panting for wind, spitting cotton, and wiping their dripping faces, the "passenger" looked around, with a childlike smile upon his unflushed face, and softly remarked, "Why didn't you spurt her!" "Spurt!" panted the stroke; "why—er—what the—er—I say, young feller, where did you come from?" "From New York, gentlemen," replied the stranger, modestly, as he slipped on his coat and started up the wharf. "My name Hanlan—Edward Hanlan—and I hope to see you all at Vallejo on Thursday. Good morning."

A new book on Japan has just been published by Messrs. Hodder and Stoughton, in noticing which the *World* says:—"This is a history of the travels and researches in Japan, undertaken by Professor Rein at the cost of the Prussian Government. It is more comprehensive, exhaustive, and satisfactory than the work of Mr. F. D. Adams, hitherto the best on the subject; it is, moreover, up to date the journeys of which it treats having been undertaken in 1874 and 1875. It does not profess to be a pocket compendium of information, but it is a solid valuable work of reference."

THE *St. James's Budget* says:—An ingenious method of putting a check upon untimely chatter has been devised by a schoolmaster, who was charged recently at the Thames Police Court with assaulting one of his pupils. The defendant, it appeared, being displeased with a boy who persisted in talking during lesson-time, fastened a strap with a slip-knot around the tongue of the offender, and then tied the other end of the strap by a piece of string to a chair, thus effectually preventing a continuance of the nuisance. After hearing the evidence, the magistrate dismissed the summons on the ground that the tying of the boy's tongue was not any real punishment. The boy seemed to have been much given to talking, and it was therefore thought advisable to degrade him the same as by putting a fool's cap on his head or tying the arms of a boy given to fighting. "The degradation of the boy was intended as an example to the school." There is some common-sense in this view of the case, and it would be interesting to try the effect of the tongue-tying system in the House of Commons. The spectacle of several Irish members with their tongues tied to the Speaker's chair would, there can be little doubt, tend to shorten debate, and for the moment at least put an end to "obstruction;" but, on the other hand, it is not pleasant to consider what would happen when the tongues were at last loosened.

A CURIOUS reminiscence of Japan as it was thirty years ago is incidentally furnished in the story of one Zeniya Gohei, a merchant who, in the days of the Bakufu Government, was guilty of the heinous crime of engaging in unlicensed commerce with foreigners. Zeniya, for this offence, underwent a term of imprisonment, and on his release disposed of any property that remained to him to procure the means of livelihood. This, however, is not the episode in his career which recently made him a subject of interest to the vernacular press, but the fact that among his belongings was a celebrated chattel called "the barometer stone" (*Sei-u-Seki*). This piece of rock is naturally of a pinkish white colour, but it has a chameleon-like property of altering its hue whenever a change of weather is imminent. Should rain be overhead, it begins to look green as much as two days beforehand, and should a storm be brewing it assumes a dark aspect. So far as we are aware, no mineral recorded in Occidental catalogues exhibits this wonderful sensibility to atmospheric influences, and if Mr. Zeniya's stone be a veritable affair, it is indeed a curiosity. The *Yomi-uri Shimbun*, from which we quote these details, says that, after Zeniya's mishap, the stone came into the possession of the House of Mayeda (in Joshiu), and that it is to be presented to His Majesty the Emperor on the completion of the Imperial Palace.

SOCIALLY, New York is under a spell which exceeds and includes beauty. Poker possesses us. The game of the club and the bar room has been taken into half of the parlors of the city. It has all but driven whist from the tables of wealth and fashion. Women are especially infatuated with it. The daintiest and most circumspect girls bluff and bet like old gamblers. Playing for money is no longer an indulgence in wickedness, to blush for and whisper about, but a common and reprehensible diversion. A five-cent ante and a dollar limit are the usual conditions, and you are ignorant of the game if you don't know that \$10 may easily be lost or won in an evening at that rate. The belle without her box of poker chips is nowadays poorly outfitted for the entertainment of friendly callers; and it will no longer do for a young man to go out for evening visits with only car fare in his pockets. The excitement of gaming is naturally greater to women than men, and yet I think they do better playing, as a rule, by reason of their habitual self-control, quickness of perception, and concealment of purpose. It may be said of this new rage for parlor gambling that very often it goes beyond mere sport. A five-dollar pot has too much in it for the feminine mind of any but an heiress to contemplate without sordid emotion. And there are the fellows to whom \$10 is the sum and substance of a week's spending money, if not of wages. Think of the mental struggle requisite to render them smiling losers.—*New York Letter*.

Now that Mr. Holloway, of pill and ointment fame, has joined the great majority, a good deal of attention has been attracted to the trade in which he made so colossal a fortune. From the multiplicity of advertisements of patent medicines and from the immense quantity of such drugs in the market, one can get a fair idea of how many people there are who are ready to swallow any amount of glaring testimonials in reference to the efficacy of patent nostrums, as well as the

nostrums themselves. It has hitherto been believed that the United States held the rather equivocal honour of being the principal representative of the quack medicine trade, for nearly one and all of the writers who have devoted their time and abilities to writing such compilations as "The Truth about America," "The United States Unveiled," and tomes of like nature, are unanimous in their outspoken criticism of the manner in which patent drugs are thrust before the attention of the public. Statistics show, however, that the trade in Great Britain has grown to surprising dimensions. Official returns prove that, during the twelve months ending March 31, 1881, stamps were sold for 16,627,131 packages of patent drugs, yielding a revenue of £140,000. "If all these medicines were made of bread and coloured water," says the *Whitehall Review*, "there would be little fault to find; but inasmuch as a great many of them contain poisons in various forms, it seems a fair contention that the Government should step in and cause each nostrum to be analysed, and the sale of such as are poisonous to be regulated by the act applying to the sale of poisons."

* * *

Proper precautions with regard to the sale of patent drugs are undoubtedly very necessary. Every now and then one hears of fatal cases arising from over-indulgence in "infallible specifics;" and statistics show that, although they may not meet with much public attention, these cases are by no means of unusual occurrence. The *Whitehall Review* takes a sound, common-sense view of the situation, but appends a few clauses that are somewhat remarkable. For example, in speaking of the necessary precautions to be adopted, Japan is classed with "barbarous countries," although the journal in question applauds the methods pursued in this country to limit the sale of patent drugs. In Japan during 1883, it states, there were applications to prepare and sell 148,091 patent and secret medicines, of which 8,592 were prohibited, 9,918 ordered to be discountenanced, and 70,943 still remain to be reported on. We do not know whether to be more surprised at the rate with which statistics travel or the profound knowledge of the *Whitehall Review*. The issue before us is dated January 10th, 1884, so that the information published cannot but be regarded as a most laudable example of editorial—and telegraphic—enterprise.

* * *

But to return to the advertisements of patent medicines, one finds that this branch affords employment, especially in the United States, to a perfect army of sign-painters and bill-posters. Pears' soap has found an illustrator in a Royal Academician; Eno's fruit salt prints testimonials from the "leading members of the medical fraternity;" Wright's coal tar soap is a specific for all "ills to which human flesh is heir," and is "recommended by the entire medical profession," probably with one or two unimportant exceptions; while Price's rheumatic oil is equally efficacious in "curing broken hearts or restoring a lost limb." Not to quote from the flaring announcements of a perfect host of others, we would simply recall the once highly honoured "Buchu." It is well-known that no place is sacred from the vandalistic paint-brush of the enthusiastic sign-painter, and that even the grand "Pali-sades" of the Hudson River and the rocks in the Falls of Niagara have borne evidences of

their tireless energy. But there are some times and some places when and where even the most long-suffering of mortals is disposed to rebel. After travelling for some days in the picturesque wildernesses of Kentucky, passing on the last day of the trip through primeval forests and meeting only occasional log cabins, one arrives finally at the rude hotel built close by the entrance of the famous Mammoth Cave. Nothing can exceed the wild beauty of this place, and the freedom from social conventionalities and the total separation from the busy life of the work-a-day world render the spot in every way attractive. And so it does seem almost too hard, after just having congratulated one's self on escaping from the staring evidences of modern civilisation, on strolling through the forest gloom to the mouth of the great Cave to find painted in glaring capitals, just above the main entrance, the stern *memento mori* "USE HELMBOLD'S BUCHU."

JUDGES SAWYER, Hoffman and Sabin, sitting in bank in the United States Court on the 26th ult., rendered a decision on several questions arising from the Chinese habeas corpus cases. The first point touched on was the right of the Chinese to habeas corpus, which was conceded. When produced in Court the petitioner is in the custody of the Court, and may be admitted to bail. If examination discloses him to be without the right to land, then he shall be committed to the custody of the master of the vessel which brought him into port, provided the vessel is here. The Court has no right to detain a ship on account of having brought passengers here who had *prima facie* evidence of their right to come here, when such right was not a right in reality, but a fraudulent assumption. As soon as the President's order for their return can be received, the remanded prisoners must be returned to China. They have no right to a jury trial, no more than the passengers of a quarantined ship. In conclusion, the Court remarked that it considered a commission from Congress necessary to dispose of such cases, if they continued to come as they had, for the Court could not hear them all, and would not. The decision, if such it can be called, settles the cases of about fifteen bogus "traders" who have been remanded.—*Alta*.

A Boston telegram in the San Francisco papers, dated 6th February, says that the funeral of Wendell Phillips took place to-day from Faneuil Hall. Many people passed reverently by the coffin, before the guard of honor, and then quietly departed from the hall. After the public had withdrawn, and just previous to the removal of the remains, a plaster cast of the head was taken at the request of the family. The funeral procession then reformed and the coffin was borne to the old Granary burying ground, on Fremont street. The streets were again crowded and the streets in the vicinity of the burial ground were densely packed with people. There were no formal ceremonies in the graveyard, and the coffin containing the remains of the dead philanthropist was placed in the Phillips family tomb, which is also the final resting-place of Phillips' father, mother, and brother.

THE Tokiyo Tramway Company finds its business so profitable that it contemplates laying a new line from Asakusa-bashi to Yododzu-yo-bashi. It is pleasant to learn that enterprise of this nature is successful, but, at the same time,

one cannot help thinking that if the Tramway Company is to spread itself abroad to an unlimited extent, some steps should be taken to protect the streets against the destruction its operations involve. The main street of Tokyo, from Shimbashi to Asakusa, which used to be a firm, well metalled, road, is now a mottled causeway of stony hillocks and muddy lakelets. At the time of laying the tramway, we predicted that this would be the result, and indeed very little engineering acumen was required to foresee it. Before long a great part of the line will have to be relaid, and then the company's ledgers will not tell quite so happy a tale. The pity is that these sort of enterprises in Japan are not open to foreign coöperation. Westerns have paid for their experience, and might save the Japanese the necessity of buying theirs dearly. Of the many lucrative operations now struggling into a tardy existence, there is not one which does not offer a most promising field for foreign capital and intelligence. Railways, tramways, mines, fisheries, manufactures, banking—all these things and many others, might be developed with immensely increased rapidity and to much greater advantage were it possible for foreigners to unite with Japanese. But unfortunately, it is not possible. The grotesque chimæra that when Japan offers to open her country and let all comers share alike with her own people in whatever industrial or commercial opportunities they may find here, she is only laying a plot to get them into her power in order that she may ill-treat and despoil them—this ridiculous chimæra, unworthy to be discussed by children out of the nursery, effectually bars the path of prosperous enterprise.

THE year 1883 is remarkable in astronomical annals as having a record the most prolific in sun-spots that has been known since the invention of the telescope. Not only the number but also the size of these spots were remarkable. Many of them were quite visible to the naked eye, and attained diameters four, five, and six times as large as that of our planet. Never before, too, were so many measurements taken of solar eruptions and flames. Every day these were observed raising themselves to considerable elevations above the sun's disc. A coincidence worthy of attention is the exceptional frequency and violence of earthquakes during the same period. It is strange to look back, by the light of these solar fires, at the theories that obtained during the first half of the present century. Sir William Herschel believed the sun to be habitable and habited. By him and by Wilson alike, the great planet was supposed to consist of a globe as massive as that of the earth, enveloped in an immense atmosphere crowned by an eternal dome of resplendent clouds. The red protuberances which showed themselves on the edges of the moon at periods of total solar eclipse were, in those days, either not attributed to the sun, or supposed to be mere optical delusions. Many scientists thought that the sun had no more caloric than a block of ice, and that the luminous heat we receive from him was a subjective phenomenon. Such theories are never likely to be revived again. In 1883 more than 5,000 spots and protuberances were observed for a single meridian. Their dimensions were variable. The inferior envelope of red resting upon the white solar surface is about 5,000 miles thick. From this envelope, which is called the chromosphere, immense tongues of

flame shoot up to heights of from fifty, to two or three hundred, thousand miles. Young, in October, 1880, observed a protuberance which, in the course of an hour, raised itself to a height of three hundred and fifty thousand miles, and then, separating into filaments, vanished. The temperature of these flames is so tremendous that no chemical combination known to us could exist there. They represent "a fire so hot that it no longer burns." Measured by terrestrial standards they may be said to have a temperature of 10,000°—a temperature compared with which molten iron would seem like a mass of snow.

CONTRABAND goods, stated to be ship's stores, have come under the observation of the Custom House authorities in such large quantities lately (says the *Alla* Feb. 7), that the Surveyor has determined to seize all excessive lots in future. Yesterday, Deputy Surveyor Brown and his men found fifteen bags of live turtles and a lot of eels on the steamer *Arabic*, and confiscated them because they were not on the manifest. They were brought from China by a member of the crew, who attempted to retain possession on the ground that they were ships' stores, but without avail. Since the haul of opium Tuesday afternoon, there has been nothing of note discovered beyond fifty handkerchiefs and the turtles and eels. In the latter capture, the Custom House people have a sort of family of white elephants, as the Appraisers' Building does not boast of an inmate who is either a "turtologist" or an expert on eatable snakes, and what the illicit animals ought to be fed on during their appaise-ment is a puzzle for all hands. After effecting this seizure, Deputy Brown filed informations with Collector Sullivan against Captain Pearne of the *Arabic*, Captain Berry of the *City of Peking*, and Captain Rogers of the *Newbern* (from Mexican ports), for violation of the revenue laws in bringing into port certain articles which were not specified on the manifests of their respective cargoes. The Collector has not yet determined upon his action in the premises, and until he has the nature of the contraband stuff will not be made known.

THE *Alla* says:—A "Cobden Free-Trade Club" has been organized in Sacramento. Its members profess to be animated only by a desire to study the tariff question; but they must not be surprised if they find sundry intelligent newspaper organs of public opinion barking at their heels and accusing them of being "bribed with British gold." That is a lie which was told a great many years ago and can now be urged against anybody without any sort of moral responsibility. At least, that is the conclusion to be deduced from the practice of some of our (otherwise) esteemed contemporaries.

AN Emergency meeting of the Yokohama Lodge No. 1092 E.C. was held at the Masonic Hall on Monday afternoon to perform the funeral rites over the body of Bro. H. N. Tileston, an old and highly respected member of the Lodge. The meeting was attended by a large number of visitors from the other Lodges in the District. After the opening ceremony the procession, which included more than fifty Bretheren, was joined by numerous friends of the deceased. The cortege passed up Main Street to the Cemetery, where the impressive service for the dead was read by the Right Worshipful District Grand Master, Bro. C. H. Dallas. After the cere-

mony the procession was reformed and returned to the Hall when the Lodge was closed. Bro. Tileston came to Japan in 1868, and was in the employ of the Pacific Mail Steamship Company and the O. & O. Company. He left Japan in 1882, and returned a few days ago. By his kindness of heart and genial disposition he endeared all those with whom he came in contact, and the Masonic fraternity by his untimely death will lose a good friend and Brother.

CONSIDERABLE jealousy and ill-feeling has existed for some time in the bosoms of certain Shanghai horsemen, which culminated at the conclusion of the recent meeting at Hongkong in a case in the Police Court of the Crown Colony. It was alleged by Mr. Brandt that he was crossed, and his pony and himself struck by Mr. Nickels in the Champions' Race, and it is to be inferred from the report of the case that by these means he lost the race, in fact Mr. Brandt in his evidence referred to the occurrence as a "highway robbery." Mr. Bidwell, who was called as a witness for the complainant, said he saw nothing of the occurrence alleged by Mr. Brandt, although it was stated that Bidwell had told several persons that he saw the affair, and described what he saw. Mr. Wise, the magistrate dismissed the case in the following words:—"Under the circumstances, Mr. Brandt. I must dismiss the summons. The reason I do so is not so much because I consider the charge disproved, but that the evidence is too conflicting. I think you were quite justified in taking out the summons under the circumstances. I think the evidence of the witness Bidwell is most unsatisfactory. He admits that he went round to various people and made statements relating to this matter, and then he comes here and states in evidence that those statements were untrue. I do not think that under any circumstances his conduct can be looked upon with approbation."

A RECENT Baltimore journal publishes the following comical paragraph:—A scandal in which some very unusual incidents appear was brought to light by the filing of an application for a divorce by Henry Clark, a conductor in the employ of the Baltimore and Ohio Railroad. Clark left his residence one evening lately, after telling his wife that he was going to leave that night for Martinsburg, W. Va. He did not go, however, but returned home at a late hour and retired to bed, his wife having already done so. Soon afterwards Mrs. Clark complained of a severe cramp, and begged her husband to get up and go to a drug store for medicine. He hastily drew on a pair of trousers and hurried upon his errand. His surprise may be imagined when, on looking down while in the drug store waiting for the medicine, he discovered that the trousers he wore were several inches too short for him. He felt something bulky in one of the pockets and putting his hand in he drew forth a roll of bills amounting to \$350. This settled it. He was sure they were not his trousers. It suddenly struck him that his presence at home was far more urgent than his wife's necessity for medicine and he hastened there, but the man who had invaded his home and with whom he had unwittingly changed clothing, had beaten a hasty retreat. The trousers which the latter had taken away belonged to the husband and contained only a few dollars. As the wife was not able to explain matters with satisfaction, the

husband ordered her to leave the house also, which command she immediately obeyed. The tell-tale trousers and contents were sent to the wife of the gay Lothario, who is a dignified old fellow of the best society and the head of a large family of grown children.

THE Pusan correspondent of the *Mainichi Shimbun* writes very despondingly of the state of affairs at that place. Trade has fallen off in a most unprecedented way. The export of rice, which constitutes the chief business at Pusan, was suddenly stopped owing to a great increase of the demand in the country, as the long drought of last year had effectually prevented any rice from reaching the great marts. Such universal depression in commerce has never before been experienced, and there is no end to bankruptcies among the Japanese merchants, while the people are starving. The natives in the neighbouring districts have suffered extreme want, and crowds of hungry beggars have flocked to Pusan. The authorities have done, and are doing, all in their power to relieve the great distress of the people; but all they can do fails to fill the mouths of the countless paupers.

A TELEGRAM has been received at the Foreign Office, Tokiyo, announcing the fact that a revolt has taken place in Canton. No particulars are given, but it seems probable that the affair is connected with the operations of the French in Tonquin. Popular feeling may have been excited either by a defeat sustained at Bac-ninh or by the withdrawal of the Chinese garrison without fighting. The latter appears to us the more likely contingency. The telegram is dated at Shanghai, March 7th, and as no intelligence has been forwarded since then, we may fairly assume that the revolt has not attained serious dimensions or caused any inconvenience to the foreign residents.

SIR HARRY PARKES has been appointed to represent Her Majesty at the Court of Söul as well as that of Peking. We may conclude, therefore, that the treaty with Korea has been ratified, and Sir Harry will present the ratification as well as his credentials to the Korean Government some time in May or June. The news of the appointment will be received with satisfaction by Sir Harry's many friends in the East, and will further have the effect of removing all doubts as to Korea's national status in Great Britain's eyes.

A FRIGHTFUL mining accident is reported from Colorado. A telegram in the *Alta* from Denver, on January 24th, says:—A terrible explosion occurred at Crested Buttes, Gunnison county, at 7 o'clock this morning, in the Crested Buttes coal mine, in which from twenty-five to fifty miners are believed to have been killed. The explosion blockaded the entrance to the mine. The full extent of the disaster is at present unknown. The mine is owned and operated by the Colorado Coal and Iron Company of this city, and employs from eighty to ninety miners in the shaft. No further particulars are at present obtainable. A *Times* Gunnison special says:—So far only meagre details have been received of the terrible explosion which occurred at 8 o'clock this morning in the Colorado Coal and Iron Company's mine, Crested Buttes. So far only the most meagre details have been received here, but the loss of life is supposed to be

terrible. There were sixty-seven men in the mine at the time. Of these, eleven, who were just entering, were thrown back to the entrance by the force of the explosion and have been rescued. One of these is dead and the others are badly injured. There are fifty-six men yet in the mine and they cannot be reached. They are all supposed to be dead. The explosion was of such force as to entirely wreck the engine and engine-house, which stood fully 100 feet from the entrance. It is supposed the explosion was caused by a leak in the air-compressor. The Crested Buttes people are doing all things possible to rescue the miners. Two specials have gone up from here with doctors and others on board.

"EACH of the projections on this piece of coral is a separate individual," said Professor Albert S. Bickmore, Superintendent of the American Museum of Natural History, in a lecture on "Corals and Coral Islands." "The coral animals do not grow separately," said Professor Bickmore. "They gather together in a hemispherical form at first. Only those on the outside are alive; the rest within are dead, and so it grows. Between two coral animals a third one grows, and when one gets bigger than its fellows a branch begins to grow. The sea rolls in and brings them their food. A natural break-water ground of a coral reef is stronger than any that can be made by the hand of man, for the stronger the sea that beats upon it, the more food is brought for the coral animals to gather with their little tentacles."

THE fire on the morning of the 12th inst. in Hikage-cho, Tokiyo, ranks among the most destructive by which Tokiyo has been visited this year. There seems to be no doubt that it was an incendiarism, since it broke out in the lumber-room of a bath-house. The flames spread in both directions and fully two hundred houses are said to have been destroyed. Hikage-cho is a narrow street running parallel to, and on the west of, Ginza, from Shinbashi to Shiba. It is an exceedingly populous part of the city, and the houses, though small, are occupied by thriving tradesmen. The loss of property on Tuesday morning was very serious.

ON the evening of the 16th instant a farewell dinner was given by the members of the Tokiyo Club to Mr. W. H. Denison, who proceeds to America by the mail of the 28th. Among the guests were their Excellencies Judge Bingham and Mr. Davidow, the Honorable P. Le Poer Trench, Chevalier E. M. Lanciareze, Messrs. Yoshida, Ishibashi, Saito, &c. Covers were laid for twenty-four. Mr. Denison's health was drunk with great enthusiasm and the party broke up after a most agreeable evening.

OPINIONS vary considerably amongst the judges of the U.S. Courts in regard to Chinese claiming residence in America. The *Alta* of the 7th ult. has the following:—Wong Chi Hong, a passenger of the *Oceanic*, claiming previous residence, was discharged by Judge Sabin yesterday on the evidence of his Consular certificate and his bare unsupported oath to the effect that he was formerly a wood-chopper in the northern part of the State. The Court's holding was that the Chinese Government appeared to be dealing honestly with the United States in the matter of the issuance of certificates, and he saw no reason

why the Consular certificates brought by Chinese emigrants should not be considered as good as the paper of any other Government. At any rate, there was no proof in Wong Chi Hong's case of the certificate having been fraudulently drawn up, and he would order the release of the petitioner. There will probably be a rush of Chinese habeas corpus cases to Judge Sabin's Court in the near future.

ONE of the most useful discoveries made to benefit shipowners is that of the anti-fouling paint for vessels' bottoms which a Mr. Dennys has invented. Mr. Dennys, at one time a newspaper editor in Hongkong, and more recently connected with the Civil Service at Singapore, first started a company at this latter port to take over his patent, and now an English company is being organised. Prior to these steps being taken, full and complete experiments had been made, so as to efficiently test the value of the paint. These experiments successfully proved that, while barnacles and sea-tangle stick to ordinary paint, the anti-fouling composition contains matter which wholly prevents this. The test was made of merely painting patches of the new stuff on the hull of an ordinarily painted vessel. The result, after a voyage, was that, while the hull had generally become coated with barnacles, none of these adhered to the anti-fouling paint. The value of a discovery like this—one that has long been anxiously awaited—is of vast value to the shipping world.—*Whitehall Review*.

THE visitors to the Tokiyo Library (*Toshokwan*), during February, numbered 9,512, and the volumes lent, 39,231. The visitors to the Zoological Garden (*Dobutsu-yen*) of the Uyeno Museum, during the same period, numbered 7,854; the visitors to the Museum, 5,332; the visitors to the library of the Museum, 404; the visitors to the Museum of Education (*Kioiku Hakubutsu-kwan*), 5,429, of whom 4 were foreigners; the visitors to the library of that Museum, 501, and the number of books lent, 2,611.

WE read in an Italian journal that, during 1883, the number of applications made for dispensations to marry within the prohibited degrees in Italy were 2,031, of which 1,569 were granted and 462 refused. Of these applications 1,373 were for marriages between brothers and sisters-in-law, and 145 for marriages between uncles and nieces. Dispensations were granted to only 29 of the latter class of applicants.

THE effective army of France for the current year is stated to consist of 518,642 men, of whom 27,726 are gendarmes. This total shows an increase of 2,397 men as compared with that for 1883. Algeria absorbs 53,306 men; Tunis, 15,000, and Tonquin, 16,000, so that the number actually remaining in France is 434,336.

A FIRE broke out at half-past twelve on the 11th inst., at Neribeicho, Kanda, resulting in the destruction of ten houses. One child from a neighbouring school was reported missing, but it has not yet been ascertained whether or no it was killed.

Two years ago, when I was in Nice (says the correspondent of an Indian paper), Signor Garcia visited that favorite watering place, in order to enjoy the delights of the neighbouring Monaco, and its Monte Carlo gambling table, the last disreputable refuge of the gambling

table in Europe, that is, of the official and lawfully-constituted gambling table. Few men had a reputation equal to that of Signor Garcia in that particular line. Rumour reported his immense wealth, chiefly the result of gambling, and now rumour has it that he is about to hand it all over to a Trappist Monastery in France, and to become himself a brother of the order. On one occasion, Signor Garcia is said to have won eighty thousand pounds in one night at Homburg, before the suppression of the German gambling-tables. On another occasion, he is said to have lost more than a hundred thousand pounds at a single sitting, and all this he did, gains and losses, with the same imperturbable countenance, as if neither gain nor loss affected him in the slightest degree, not a muscle of his countenance betraying either joyful or sorrowful emotions throughout! So admirable, indeed, was the self-control of Garcia that the Duke de Morny, one of the most noted gamblers of modern times, said to him on one occasion that he did not believe another man in existence could win or lose so much with such perfect equanimity. The Trappist Communities are amongst the most severe in asceticism. The brothers rise at four in the morning, in winter as well as in summer, assemble in the chapel for devotion, partake of nothing but the most plain fare, wear hair shirts for mortification of the flesh, work hard at manual labor all day, and take their repasts in absolute silence. Religious works are read for them at their meals, and the usual services are sung and recited in the chapels, but, with these exceptions, they do not hear the sound of a human voice? There is only one Monastery of the order in Great Britain.

JUDGING by the provision of transports which the French Government is making, there is every intention of keeping the army of occupation in Tonquin up to its full strength. The *Petit Provençal*, of Marseilles gives a list of vessels recently chartered to carry men and material to Cochin China. They are, the *Ville-de-Metz* (2,310 tons), at a rate of 86 francs per ton for the voyage out only; the *Chalons* (3,053 tons), at 175,000 francs a month; the *Cormorin* (3,546 tons) at 175,000 a month; the *Poitou* (1,926 tons); the *Saint Germain* (3,019 tons); the *Savoie* (2,574 tons) and the *Volga* (1,513). Besides these, seven English troopships, first class steamers of from two to three thousand tons, have been chartered at 43.75 francs per ton for the voyage out. They are the *Ashbrooke*, the *Oakfield*, the *Standard*, the *Roxburg*, the *Cilurnum*, the *Brescoe*, and the *Mascotte*. This makes, in all, a fleet of fifteen large transports capable of carrying fully ten thousand men.

CYCLING, says the *St. James's Budget*, has grown into the proportions of a national recreation with unprecedented rapidity since the invention of the modern tricycle; and, if we are to believe the president of the West Kensington Tricycle Club, it now numbers among its votaries not merely poets, professors, legislators, and Ministers, but also her Most Gracious Majesty herself. But it does not need fashionable or august patronage to commend an amusement so well suited, as Sir Charles Dilke observed, to the needs of the middle-class Englishman of the present day. For that individual is more and more becoming essentially a town-dweller; and, if he is to take exercise at all, must do it in a form which can be pursued on what Mr. Austin Dobson calls "paven stones," or at any rate

suburban lanes. Herein the tricycle has advantages over the outrigger, or the football, or even the leather and willow. A horse, it is true, will do as well; but the "stomach of a horse is too heavy for the half-pay establishment," as Captain Clutterbuck put it, and also for the middle-class urban resident, who is not always wealthy. Tricycling is eminently cheap; it is healthy; it is in some respects an athletic sport, and it can be carried on, as Englishmen and Englishwomen like their diversions to be carried on, in the open air; for all which reasons there is no ground to suppose that its popularity will not become greater than ever—especially if certain of our roads, in the home counties and elsewhere, at present justly avoided of tricyclists, be put into a condition more suited for wheeled carriages.

It will be seen from our telegraphic advices that Bac-ninh has fallen. The defence appears to have been a mere fiasco. The French losses are stated at 72 men wounded. It will probably turn out that, as we recently predicted, the Chinese garrison evacuated that place so soon as it became quite plain that the French meant to take it. This was found to be not an unfrequent propensity of Chinese garrisons in former wars with Western Powers. In the case of Bac-ninh, too, it is more than probable that the Chinese commanders were under orders to avoid fighting, since a too energetic resistance might be followed by results which the Government at Peking is naturally anxious to avert. We shall doubtless have the particulars in a few days. Nothing could be more satisfactory than the news in its present form. Two things were to be desired, the speedy fall of the place, and its capture without severe fighting. Both have been accomplished, and if China can now control her own people sufficiently to pursue her policy of inaction, and France persuade herself to refrain from harsh demands, there is no apparent reason why the trouble should not end here.

We published a telegram from London on Thursday which announced that a battle was imminent near Suakim. Our telegraphic intelligence this morning gives the welcome news that the engagement resulted in a decisive victory for British arms with "inconsiderable" loss. It is to be hoped that the tide has turned in Egyptian affairs, and that the result of this battle will have some moral weight with the hostile chiefs.

THE American bark *Pearl*, Captain Howes, arrived at San Francisco on the 6th ultimo, after a passage of thirty-five days from Hakodate, via Otaru. She had a cargo of timber and brimstone.

THE Pacific mail steamship *City of Peking*, Captain Berry, bringing the American mail, with dates from San Francisco to the 21st ultimo, arrived here this morning.

THE German bark *Marie*, Captain Ipland, sails for Takao this evening.

THE Rev. J. C. Davison will preach at the Union Church to-morrow (Sunday) 16th inst.

THE American ship *Ranier*, of Bath, from Philadelphia to this port with kerosene, was wrecked on the 2nd January, on the Marshall Group of islands. It is believed that the gun-

boat *Monocacy* has been sent to look for the crew.

A TELEGRAM from London has been received in Hongkong announcing the abandonment by the crew of the ship *Georgie*, from Cardiff to that port.

WE have to acknowledge the receipt of the "List of Japanese Lighthouses, Lightships, Beacons, and Buoys for 1884," issued from the Lighthouse Department.

THE American ship *Carondelet*, Captain Stetson, sails for Nagasaki on the 14th inst., where she will load coals for Hongkong.

THE British barkentine *Guam* is reported to have been chartered to load rice at Kobe, for Auckland, New Zealand, at £2 per ton.

THE British steamer *Bengloe*, Captain Webster, left Hongkong for this port on Sunday, the 9th instant.

THE *Sapphire*, corvette (12), Captain J. R. T. Fullerton, arrived here on the 13th inst. from Kobe.

MR. SATOW'S PROMOTION.

THE appointment of Mr. ERNEST SATOW to be HER MAJESTY'S Agent and Consul-General at Bangkok is announced by the London journals. To Mr. SATOW's friends in Japan the news is, in some respects, a surprise. As a sinologue his attainments are of so admirable, we had almost said so wonderful, a character, that there seems to be something contrary to the fitness of things in his removal from a sphere where his labours were long employed to such excellent effect. On the other hand, it was always felt that the official rewards within his immediate reach in Japan were not commensurate with his merits. He might have commanded, years ago, anything the Consular service in this country had to offer, but his value at the Legation was too thoroughly appreciated to leave any doubt as to the expediency of keeping him there. His nomination to the local rank of Second Secretary of Legation, in 1876, was an exceptional expedient, adopted to render his services available in a position otherwise incommensurate with his claims. It was welcomed, at the time, as a fitting, though somewhat tardy, acknowledgment of his great merit, and as an evidence that HER MAJESTY'S Government understood their obligation to open for him some route to promotion more rapid than the monotonous path of a Consul in Japan. In the sequel of this step his new appointment seems natural enough, though it is difficult fully to endorse any course which removes him from this country.

Mr. SATOW came to Japan in 1861, that is to say, at a time when the polity of the country defied the comprehension of foreign statesmen, and when conditions had to be dealt with for which no precedent was found in any blue-book. It happened very often, as we now know, that they were dealt with in

the rough and ready way which commends itself to strong men in perplexity, and that a great deal of matter was consequently provided for the criticism of future historians. Want of information was the chief stumbling block. Her Majesty's Legation did not then possess the equipment of finished linguists it can boast now. Men who could speak even a smattering of the language were few and far between. Indeed, as an interpreter, one only, Mr., now Baron, ALEXANDER VON SIEBOLD, might have been called competent, and even he was versed in the spoken language alone: neither his studies nor his inclinations had yet led him to grapple with the bewildering intricacies of Chinese idiographs. Under these circumstances, Mr. SATOW'S wonderful powers of assimilating linguistic knowledge soon brought him into prominence. His notions of mastering the language were so thorough that he is said to have conceived and accomplished the highly unattractive project of living more than a twelve-month after the most rigorously Japanese fashions. Whether or no this be strictly correct, it is certain that he soon attained a standard of scholarship which very few, inside or outside the British Legation, have ever aspired to approach; scholarship so perfect that it could afford to be liberal, and to recognise in others merits which by comparison were inappreciable. Before many years he was universally acknowledged to be the first sinologue in Japan, and was able to procure information invaluable to those charged with the care of British interests in this country. It is generally supposed, indeed, that his influence upon the policy of the Legation was almost creative; but without going so far, we may certainly say that it must have been very large. In one point, perhaps, tradition has exaggerated both the incentive furnished by Mr. SATOW'S researches and the initiative taken by the chief whom he served so well and by whom his services were so fully appreciated. We allude to Sir HARRY PARKES' policy of seeking a higher treaty-making power than the TAIKUN; a policy which led him, in 1865, to demand the MIKADO'S ratification at Osaka; and, in 1867, to visit Kiyoto itself as the guest of a sovereign whose power to consummate the scheme of mediatization was openly doubted by most of the Foreign Representatives. Mr. HARRIS' recently published diary has shown, what accurate scholars, indeed, already knew, that from the first the SHOGUN never disguised his real status, but always acknowledged in the throne a power without whose endorsement his acts were not binding on the nation. Apart from this, however, there can be no question that Mr. SATOW exercised a large influence on the official procedure of those difficult days, and it is not on record that his influence was ever exercised in a mistaken direction. Undoubtedly, therefore, the Government has

only given him what he deserves in nominating him to a post from which subsequent promotion will be easy. Japan must consent to dispense with his services until he can come back here to a position worthy of his attainments and record. We are sincerely sorry to lose him, and will not here attempt to estimate the loss, but it was impossible that he could have remained always in Japan without some departure from routine even more considerable than the step taken to keep him in Tokiyoin 1876.

GENERAL GORDON IN THE SOUDAN.

AFFAIRS in Egypt begin to wear a highly interesting aspect. To understand the telegrams that reach us, it is necessary to get a clear idea of the programme which General GORDON proposes to carry out, and which he has already partly fulfilled. His mission is both diplomatic and military, and he has gone to Egypt to pursue a policy which is eminently distasteful to him and which he regards as distinctly unwise. Before he left England, before, indeed, the QUEEN'S Government had asked him to return to the scene of his former labours, he declared that the Eastern Soudan was indispensable to Egypt, and that the real danger to be apprehended was not an advance of EL MAHDI northward, but the influence that would be excited throughout the whole of northern Africa by the spectacle of a conquering Mahomedan Power established on the frontiers of Egypt proper. "If the entire Eastern Soudan is surrendered to the MAHDI," he said, "the Arab tribes on both sides of the Red Sea will take fire," and "the whole of the Eastern question may be reopened." Much the same idea is entertained by General STONE, who lectured on Egyptian affairs, early in February, in New York. He pointed out that the Arabs came into Egypt in the 7th century, and held it for eight hundred years before they became, in their turn, subject to the Ottoman conquerors. The latter had only ruled during four centuries when they were put down by France and England, the tenacious Arab all the while clinging to his old home and always hoping to recover his old power. Had the French and English stepped resolutely into the place of the Turks whom they supplanted, General STONE thinks we should have heard little of EL MAHDI. But their vacillation was the Arab's opportunity; an opportunity which he desecrated after centuries of patient waiting, and which he has seized with an ardour that will not be easily quenched. General GORDON'S statement of the case bears out this theory, but stops short of General STONE'S inferences. The former says that EL MAHDI is not a religious leader, but that he merely personifies popular discontent, and that the terrible oppression and corruption of Turkish rule, completely restored

after the Soudan ceased to have an English Governor-General, are at the root of the insurrection. If this view be correct, and there is no man living worthy of more credence on such a subject than GORDON, the apparent contradictions of Mr. GLADSTONE'S policy are in a great measure explained. It has been laid to the English statesman's charge that while invariably denouncing Turkish rule and seeking to circumscribe it, he is nevertheless ready to see the sway of another semi-barbarous Power established throughout a wide region of Africa. But if the followers of EL MAHDI are rebels against the villainies of Turkish Government; if, as GORDON declares, "nobody knowing the treatment to which the people of the Soudan were subjected can deny their justification to rebel," then, indeed, the direction which Mr. GLADSTONE'S sympathies have taken is easily comprehended.

To return, however, to General GORDON. He proceeded to Egypt under orders to effect the evacuation of the Soudan with the least possible delay, but entrusted with a discretionary power to modify his instructions according to emergencies. That he would modify them, there could be very little doubt, for he had declared that one of two courses alone was possible—to defend Khartoum at all risks, or to surrender to the MAHDI at discretion. His first object was to reach that place. This, in itself, was a matter of no little difficulty and peril. He decided to proceed by steamer up the Nile nearly as far as the Second Cataract. Disembarking there, he proposed to proceed, across the Nubian desert, to Abu Hammed, a distance of 200 miles; and from thence, up the Nile, past Berber to Khartoum. This route had been approved by Sir SAMUEL BAKER, but when it was known that the Sheikhs and other tribes between Suakim and Berber, whose friendship had been counted on, were fiercely hostile, grave fears were entertained for the General's safety. Ultimately, it was resolved to send a brigade of Bashi-Bazouks, 2,000 strong, to support him. Orders were then sent to Colonel COETLOGAN, the commandant at Khartoum, to hold that place at all risks until GORDON'S arrival, and to concentrate all the troops in the Soudan there. By these means it was expected that the General would find 17,000 troops there, and he was then either to evacuate or defend the place, treat with or fight the MAHDI, as he saw fit. Meanwhile, it was announced that EL MAHDI had left El Obeid, at the head of an army of 37,000 men, nine days before GORDON set out from Cairo, so that it became an open question which would reach Khartoum first. GORDON, however, sent a telegram to COETLOGAN instructing him to despatch a trusty messenger to meet EL MAHDI. It is said that the General's wonderful confidence seemed a little shaken when he started from Cairo. He was afraid, he

confessed, that he had come too late. If all went well, he expected to reach Abu Hammed on February the 9th and Khartoum two or three days later. His difficulties appear to have commenced at Korosko, between the First and Second Cataracts. Arriving there on the 2nd of February, he immediately entered the desert, but was evidently checked for a time, as a telegram, dated at Cairo February the 6th, said that "the tribes beyond Korosko were in full retreat and that General GORDON was unable to proceed." He did proceed, however, leaving his specie at Assouan, and on the 19th his safe arrival and cordial reception were telegraphed.

Then followed the recognition of EL MAHDI as SULTAN of Kordofan; a measure which, to imperfectly informed people at this end of the world, seemed inexplicable, but which was quite consistent with GORDON'S previously declared policy, that Darfur and Kordofan must be abandoned, but that the provinces lying to the east of the White Nile and North of Senaar should be retained. So far, events have not contradicted the theory that the movement in the Soudan is in its origin simply an uprising against oppression and corruption, though, if left unchecked, it may develop into something much more formidable. On the other hand, if England has to deal with it—and whatever may be said, she has now accepted the responsibility—she must adopt one of two alternatives—crush it by main force, or so far recognize its justice as to remove the irritating causes. Undoubtedly the latter is the course she will elect. GORDON, at any rate, has not left the world in any doubt as to the sympathy he feels for the Arabs in their revolt against Turkish misrule. His whole chance of success lies in his ability to convince the MAHDI of that sympathy; or, at any rate, of his Government's resolve to restore and guarantee the permanence of the juster régime which he himself was formerly instrumental in establishing. This, however, means that not Turkey, nor Egypt, is henceforth to be the chief Power in the Soudan, but Great Britain. Everything, in short points to an English protectorate on the banks of the Nile. The German Press plainly advocates that course, and it is said that the next Budget presented to the House of Commons will contain a provision for keeping 6,000 troops in Egypt.

With regard to the re-establishment of communication with Khartoum, General BAKER'S plan, as formulated at the beginning of February, was to operate from the line of Massowah and Kassalah. The nucleus of his army was to consist of black troops drawn from the various garrisons at the Red Sea ports. These, together with Bashi-Bazouks, Turks, and new levies would give him a force of 11,000 good fighting men. Moving *viâ* Massowah, he would have a friendly coun-

try in his flank and rear, instead of the deserts of the Suakim-Berber route. This scheme pre-supposed Abyssinian co-operation, and contemplated the relief of Khartoum by June. Meanwhile, as the telegrams explain, BAKER has failed signally in his attempt to relieve Sinkat. His black troops became disaffected owing to the removal of their leader ZOBEL Pasha, and the Egyptian contingent was quite useless. Seven English officers fell in the massacre that followed his disastrous advance from Trinkitat. It is to be sincerely hoped that this is the last we shall hear of similarly hopeless essays. If Englishmen are to fight in the Soudan, we trust it may no longer be in the company of such soldiers as HICKS and BAKER have had to lead.

THE OLD METHODS.

In a recent number of the *London and China Express* we find the following:—"Japan has for years past been crying out in all tones against the unfairness of the treaty stipulations binding her to Western Powers; every argument that could be drawn from morality, justice, self-interest, and all the other modes of appealing to a nation's feelings and interests have been employed to discredit the present treaties and tariff between Japan and the West. England, France, America, and the others are represented as highwaymen and bullies who broke into the calm and blissful seclusion of the land of the Rising Sun, and rudely demanded 'your trade on our own conditions or your life,' and who secured what they wanted as a burglar armed with a couple of revolvers might get what he wanted from an unarmed householder. We have heard much of this declamation for ten years past. The truth, however, is that the treaties almost as they exist now—the tariff was of course subsequently altered under a provision of the treaties themselves—were made by Mr. HARRIS, the American negotiator, during a residence at Shimoda, where he had neither force, nor show of force. With none but his interpreter, from his solitary post in the peninsula of Idzu, he obtained from the Japanese the treaties which are now represented as being extorted from an innocent, a terrified, an unwilling people at the mouth of the cannon by acute and unscrupulous envoys."

The methods employed in opening relations with Japan thirty years ago, and in extending those relations subsequently, have been discussed over and over again. Yet, since the Treaties are so much before the public just at present, and since a contemporaneous writer has shown himself so remarkably misinformed, it may be worth while to devote a few moments to a recapitulation of facts.

There is one very simple and decisive mode of approaching the question dealt with in the above quotation. Was Japan willing to make the Treaties, or

was she not? If the former, then indeed neither force nor menace was required. If the latter, by what means was her reluctance overcome? In answering these questions it is unnecessary to draw any deductions of our own from past events. The despatches of HER MAJESTY'S Representatives in Japan furnish all the information that is required. Lieutenant-Colonel NEALE, writing to Earl RUSSELL, Feb. 10th, 1863, said:—"The TAIKUN and his Government, as an undeniable fact, have fallen into national discredit by assenting to the much dreaded renewal of intercourse with Western people, *though indeed the assent was obtained under irresistible pressure.*" And again Sir R. ALCOCK, in a despatch to Earl RUSSELL, dated November 19th, 1864, wrote:—"All Treaties made with Japan have been forced upon it; and until great changes have taken place in the character, institutions, and government of the people, it is in vain to expect that Treaties so entered into can be maintained by a religious abstinence from the use of force as a means." We are not obliged, therefore, to concern ourselves about what Japanese writers or Japanese advocates have asserted. We have the unequivocal statements of HER MAJESTY'S Representatives at the Japanese Court, that this country's assent to the Treaties was obtained, in every case, by "force" and "irresistible pressure."

So much for the methods employed to secure the conclusion of the Treaties, in the first place. Let us now consider briefly how their ratification was brought about. Incidental to this part of our subject, and, indeed, inseparable from it, is the question of tariff revision. It will, therefore, be convenient to consider the two together, and to note, as preliminary to a proper understanding of the matter, that the Trade Regulations of 1858 contained the following provision:—"Five years after the opening of Kanagawa, the import and export duties shall be subject to revision, if either the British or Japanese Government desire it." The port of Kanagawa was opened on July the 1st, 1859, so that the tariff became subject to revision on July the 1st, 1864. It was a tariff fixed on a twenty per cent. basis.

On the 5th and 6th of September, 1864, the allied fleets of the Treaty Powers bombarded and destroyed the fortifications in the Strait of Shimonoseki, and in the sequel of these operations a Convention was signed, on October the 22nd, 1864, between the TAIKUN'S Government and the Foreign Representatives, by which the former undertook to pay "a gross sum of three million dollars for indemnities and expenses occasioned by the hostile acts of the Prince of NAGATO."

Eight months later, a portion of this money having been paid, Earl RUSSELL wrote as follows:—"HER MAJESTY'S Government are inclined to consider that the general interests of trade and of foreign relations with Japan would be best con-

sulted by an arrangement which should absolve the Government of the TAIKUN from two-thirds of the whole sum of three million dollars payable under the agreement of 1864; provided, first, that the port of Hiogo and the City of Osaka are opened for the trade and residence of the subjects of the Treaty Powers on the 1st of June, 1866; secondly, that the sanction of the MIKADO is formally given to the treaties already concluded by the TAIKUN with the Treaty Powers; and thirdly, that the duties on imports into Japan are generally reduced to 5 per cent., and shall in no case exceed 10 per cent."

In forwarding these instructions to Sir HARRY PARKES, Earl RUSSELL said:—"The reports recently received by HER MAJESTY'S Government from Japan, lead to the conclusion that a great social revolution is taking place in that country, and that a civil war may be the consequence. It would seem that these internal commotions arise almost exclusively from the relations that have of late years been established between Japan and foreign nations."

The position, then, was simply this. On the one side were the Foreign Representatives, entitled to ask for a revision of the tariff at any time after July 1st, 1864, as well as to compel payment by Japan of a large sum of money by way of indemnity for war expenses; but willing to remit two-thirds of that payment in exchange for three concessions, of which the MIKADO'S ratification of the Treaties, and a reduction of the tariff from twenty, to five, per cent. were two. On the other side was the TAIKUN'S Government, known to be threatened with a civil war as the result, almost exclusively, of its assent to the Treaties whose ratification was now sought.

Sir HARRY PARKES, thus instructed, and himself acknowledging that "the option of accepting the new proposals or continuing to pay the indemnity would, of course, be still reserved by the TAIKUN," resolved, nevertheless, to formulate those proposals from the flag-ship of the English Admiral, and to emphasize them by the presence of eight other vessels of war, the combined fleets of three Western Powers. We need not point to the inference this policy suggests: we need not point to Sir HARRY PARKES' own explanation that "the appearance at this moment, in Osaka Bay, of the Foreign Representatives, attended by a considerable naval force, is a proof of the determination of the foreign Governments to insist upon the performance of the Treaties": we need not point to the fact that in opening negotiations with the TAIKUN'S Ministers, he concluded his despatch by saying, "the Undersigned also takes this opportunity of informing their Excellencies that he is accompanied by Admiral KING, C.B., the Commander-in-Chief of all the naval forces of HER BRITANNIC MAJESTY in China and Japan, and that this letter is dated from his Ex-

cellency's flag-ship": we need not point to his subsequent declaration that "my colleagues and myself are fully sensible that we are indebted, for whatever success has attended our efforts, to the efficient and generous aid of our naval commanders:" we need not point to the despatch he addressed, also from the Admiral's flag-ship, to the TAIKUN, urging that Potentate to obtain the ratification of the Treaties by the MIKADO, and containing these words:—"A happy accord between the MIKADO, your MAJESTY, and the Daimios would ensure the maintenance of satisfactory relations between your people and foreigners, without prejudice to the interests or the independence of Japan. But disunion must bring upon your country the most grave disorders, as our Governments are firmly resolved to insist upon the faithful and complete observance by all parties, whether our enemies or our friends, of every condition of the Treaties concluded with your MAJESTY." None of these things need be specially mentioned, because the whole ground is succinctly and unequivocally covered by Sir HARRY PARKES' language to Earl RUSSELL after the successful termination of the negotiations at Osaka:—"In reporting that this important advantage has now been secured, I am very sensible, my Lord, that it would be presumptuous in me to lay claim to any other credit than that of not neglecting an opportunity of completing, in co-operation with my colleagues, the work to which they and my predecessors had so long devoted themselves, and which had been signally advanced by the affair of Shimonoseki. That blow, however, proved insufficient in itself alone to gain the end that is now attained. It will be in the memory of your Lordship that, after CHOSHU'S batteries were destroyed, ABÉ BUNGO NO KAMI was sent by the TAIKUN to Kiyoto, at the instance of the Representatives, to move the MIKADO to give his sanction to the Treaties. The opposition, however, was still too strong to allow of these representations being effectual. On this occasion, however, the presence of the TAIKUN himself at Kiyoto, attended by his Ministers and a considerable force, furnished a most favorable opportunity for the consideration of the question. He saw also that the double dangers by which he was threatened—those arising out of his civil struggle with CHOSHU, as well as prospective difficulties with foreign Powers—rendered some decisive effort to strengthen his position indispensable. And the appearance of the allied fleet in the Bay of Osaka gave him an opportunity of taking up the foreign question with a degree of energy which he otherwise would not have ventured to exert."

A careful perusal of these words renders the whole situation perfectly plain. First, we have the Treaties concluded by the TAIKUN under duress, as Sir R. ALCOCK and Colonel NEALE frankly admit. Then,

we have an anti-foreign party urging the MIKADO to refuse his ratification, and hoping to stir up a civil war by the aid of that refusal. Next, we have the first blow struck at that party by the bombardment of Shimonoseki. And finally, we have a fleet sent to Osaka for the purpose of convincing both MIKADO and TAIKUN that the only way to secure Japan from "grave disorders," if not from a loss of independence, was to ratify and observe every condition of the Treaties.

To guard against any misconstruction, it will be well to record here our firm persuasion, that the policy pursued by Sir HARRY PARKES in this instance was the most sagacious and humane he could have followed. It was too late to think of abrogating the Treaties. Whatever the method of obtaining them originally, their ratification was no longer a matter of choice but of absolute necessity. Japan was threatened by a civil war through the machinations of a party which sought to make the MIKADO'S anti-foreign attitude a pretext for revolt. The only way to avert that peril, as well as to assist the TAIKUN against enemies whom his relations with foreigners had ostensibly created, was to secure the MIKADO'S sanction to the treaties, and thus brand with the stigma of rebels all those who continued to advocate the expulsion of foreigners. Sir HARRY PARKES' despatches show that he was fully aware of all these things, and that his display of force was in reality designed to serve the best interests of both sides. The result justified his forecast. But, on the other hand, it is merely playing with equivocal expressions to deny that force was used in procuring both the conclusion and the ratification of the Treaties.

It will naturally occur to our readers to enquire what reason Japan has to complain of pressure which was put upon her with results beneficial to all parties. Here it is that foreign writers, so far as we can judge, misinterpret her contention. With the fact that the treaties were concluded and ratified under duress, the people of this country, or, at any rate, the intelligent classes, do not find any fault. They have long ago recognised the advantage and necessity of foreign intercourse. But they urge, and justly, we think, that the provisions of treaties obtained under such circumstances, ought not to be permanently binding. Let us see, for a moment, how this argument applies to the question of tariff. The three proposals, formulated at Osaka as alternatives for the payment of the Shimonoseki Indemnity, were, the sanction of the Treaties by the MIKADO, the opening of Hiogo and Osaka, and the revision of the tariff on a five per cent. basis. With regard to the second proposal, "the Japanese Ministers," we quote Sir HARRY PARKES, "did not hesitate to state, with great frankness, in their verbal discussions, that they believed themselves unable to protect foreigners from outrage at the

hands of that armed and dangerous class who might be prompted to commit aggressions, either by their own fanatical feelings, or at the instigation of that faction who were opposed to the TAIKUN," and that, although "it would severely tax their resources, they preferred paying the indemnity to the responsibility of the protection of a foreign community in the vicinity of Kiyoto." The first proposal they acceded to with great difficulty, and the third appears to have obtained their assent at once. They agreed, in short, without comment or objection to a request that the tariff should be changed from a twenty per cent., to a five per cent., basis. There is not in the history of the world another instance of such sweeping complaisance. The reason of it is not far to seek. In the eyes of the TAIKUN'S Ministers, tariff questions sunk into utter insignificance by the side of the incomparably greater issues that were at stake. "We can perceive," Sir HARRY PARKES wrote, on his arrival at Osaka, "that the internal affairs of the country are seriously disturbed, and that we have arrived at a critical period in the history of the TAIKUN'S administration. He is about to enter on a struggle with a powerful Daimio, CHOSHIU, on the successful issue of which the maintenance of his supremacy may depend, and while embarrassed with these hostilities he has to contend, at the same time, with a strong opposition to his policy at the MIKADO'S Court, which may at any time take an active form and add materially to his difficulties." It was not likely that at such a moment as this, and with only ten days to answer proposals formulated by Foreign Representatives having a powerful fleet at command, the TAIKUN'S Ministers would pause to chaffer about rates of import duty. They sanctioned the five per cent. proposal with almost contemptuous indifference, and Sir HARRY PARKES was able to tell his Government, "we have relinquished no portion of the indemnity, although two of the three conditions we were willing to receive in exchange have been secured." On the 1st of July, 1864, the original tariff became subject to revision at the request of either of the high contracting parties. On the 24th of November, 1865, the Treaty Powers obtained its revision on their own terms, which they dictated from behind the guns of a powerful fleet at a time when the Government of the country was within appreciable distance of civil war. On the 1st of July, 1872, the revised tariff again became subject to revision at the demand of either of the high contracting parties. We are now in 1884, and Japan has not yet succeeded in obtaining any modification of the terms obtained from her under such exceptional circumstances. These comparisons speak for themselves. It is impossible to misinterpret their language.

BI-METALLISM.

Comparing, recently, the advantages that might accrue to Japan from borrowing abroad, instead of employing her own capital to build railways, we said that when the time came for paying her foreign creditors, she might find herself in a position to discharge her debt with money from ten to twenty per cent. less valuable than the gold originally borrowed. This hypothesis was founded on the probable remonetization of silver, and it may not be uninteresting briefly to review the arguments which seem to warrant that hypothesis.

Among all the advocates of bi-metallism no one is so earnest or untiring as M. CERNUSCHI. Numerous articles on the subject have appeared from his pen in the *Siècle*, and he is also the author of many pamphlets and other publications. Italians, for the most part, are in favour of a single standard, and in adopting the route from which he has never deviated, M. CERNUSCHI knows that he is in opposition to the opinions of the majority of his countrymen. Yet he maintains to-day, just as stoutly as ever, more stoutly than ever indeed, that bi-metallism is inevitable, and that the day is not far distant when the world must adopt a double standard, whatever may be its wishes or theories. Certainly this courageous economist has a powerful ally in history, which shows that, from time immemorial, the two noble metals have been used as money, and that their character as such has become unchangeably established. History, in short, seems to assert with assurance that gold alone is not sufficient to perform the exchanges of the World. There exists at the present day an enormous mass of silver which the nations would be embarrassed to dispose of if they desired to demonetize it, or even to relegate it to the rank of subsidiary coin. It is this difficulty that has arrested Germany half way on her route towards mono-metallism. She has fifteen hundred million silver thalers, which cannot be demonetized except at enormous loss. France's position is even more difficult. She has four thousand millions in pieces of five francs, of which a thousand millions belong to the Bank of France alone. Already, owing to the effects of mono-metallism, silver has depreciated nearly twenty per cent. It would probably depreciate to forty or fifty per cent. if France demonetized her five-franc pieces. As for the Bank of France, it would be completely ruined, since its capital and reserves barely amount to 300 millions. In America the situation is very similar. In Italy the state of affairs is less marked, as the country has only 500 millions in five-franc pieces. It is evident, therefore, that the universal adoption of a single standard is out of the question. There would result a financial disturbance which no one dare face. England, with her mono-metallic system, is of all countries

most concerned in preventing others from following her example. Such, at any rate, is M. CERNUSCHI'S opinion. He counts on England for the triumph of his theory, that is to say, for the restoration of bi-metallism as it existed before Germany began her monetary reforms. The British Empire consists essentially of two parts, Great Britain and India, of which the latter though governed by, is more populous and not less important than, the former. Now, in India the silver standard alone exists. It was established by England herself in 1835. In the British Isles, on the contrary gold alone has a legal value. In British India, from time immemorial, silver has been the money in constant use, and in 1835 it became the only legal tender. Until 1873 England experienced no inconvenience from this dual *régime*. Before that date Europe and the United States also employed the silver standard without restriction. Whoever possessed a bar of silver was at liberty to carry it to the Mint, and get it converted into five-franc pieces, paying only the fixed seigniorage. Thus silver was, in effect, equally valuable whether coined or in bullion. But when Germany commenced her so-called monetary reforms, the Latin Union, unwilling to absorb the silver which the former had for sale, suspended the coinage of silver five-franc pieces, permitting Italy only to coin twenty millions, which were actually put into circulation. The United States adopted the same policy. Four years ago, however, by a measure known as Bland's Bill, they authorized the annual coinage of a limited number of ingots.

The result of all this was that silver became a mere article of commerce, as compared with gold, and suffered a considerable depreciation, which must continue, since production goes on and consumption is arrested.

It is easily comprehensible that this fall in the value of silver is a constant factor of disturbance in the Indian Budget and in English commerce. The resulting embarrassments are already very great. At the monetary conference, the relative pressure of these embarrassments, and the perplexity of Englishmen themselves, were illustrated by the fact that the delegates from the mother country and those of the great colony took diametrically opposite views.

If the depreciation of silver attains much larger dimensions, there may ensue a crisis which would compel England to recoil before the prospect of enormous losses. That crisis will arrive, M. CERNUSCHI thinks, so soon as the United States repeal Bland's Bill and refuse to coin another dollar. Upon India will then devolve the duty of absorbing all the silver in the universe. Thus England's hand will be forced. In spite of herself she will be converted to bi-metallism, and Germany will go with her. As for France and the

United States, they will certainly be of the party, since their inclinations already point plainly in that direction. Silver and gold will then circulate side by side, as they did for centuries upon centuries before modern theorists thought of disturbing their functions.

M. CERNUSCHI thinks that, for the sake of simplicity, the wisest course would be to maintain the ratio of 1 to 15½, which existed between gold and silver at the commencement of the present century. Fluctuations in production may give temporary predominance to one or other of the two metals as circulating media, but from this no inconvenience need be apprehended. By rich individuals gold will always be preferred. For purposes of home trade people employ bank-notes representing whichever metal is in the strong room. Whether that metal weighs more or less is a matter of no moment. For purposes of international trade, contrary to general opinion, silver is preferable. The cost of carriage by rail, and especially by steamer, is insignificant in the case of either metal, since the charges are regulated with reference to risk of loss rather than to difficulty of handling. Silver is more bulky than gold, but it is more difficult to lose, and above all to steal, and the latter advantage fully compensates the former drawback.

M. CERNUSCHI declares his conviction that the universal adoption of a gold standard is materially impossible. Nor does he believe in the permanence of the present *régime*, which he pronounces vicious, because the five-franc piece is becoming a conventional money, worse than paper money, being more difficult of production, and having, like paper, the defect of being arbitrary. He further demonstrates that any attempt to legalize the ratio of 1 to 18, or 1 to 20, at present existing between the precious metals, would involve inextricable complications and entail immense losses.

We do not pretend to endorse or controvert these opinions, but merely to state them for the information of those among our readers who desire to grasp the salient points of a question daily assuming greater importance. From a purely scientific point of view, the doctrines of the mono-metallic school command respect, but the same may be said of free trade, which, though its logical claims are much better established than those of mono-metallism, has hitherto failed to obtain more than one disciple among all the nations of the world. The considerations urged by M. CERNUSCHI with lucidity and perseverance, and supported by M. LAVELYE with cleverly compiled statistics and subtle deductions, cannot, in our belief, fail to force bi-metallism into prominence, and to restore silver to the place which nature seems to have destined for it.

ENGLAND IN EGYPT.

Never was fate more ironical than when she imposed on such a statesman as Mr. GLADSTONE such a task as that of acting in accordance with his principles and promises in such a crisis as the Egyptian. An American comic journal sums up the situation shrewdly enough in a cartoon representing an immense white elephant, labelled "for sale or rent," before which stands a perplexed Briton in knickerbockers, with flowing whiskers, an eye-glass, a stiff collar and a large umbrella. "I never was in such a blawsted dilemma before," says JOHN. "I cawn't afford to stay here and take care of the beastly brute, and I've got too much money invested on him to go away and leave him, ye know." That is just how it is with Mr. GLADSTONE. Gladly would he abandon Egypt and preserve what he justly considers more valuable—English truthfulness—but there comes between him and his good intentions a crop of unforeseen circumstances not amenable to any refined treatment. It is in truth a pity that, in the last days of a splendid career, his principles should be submitted to so cruel and test, and that he should be compelled to recognize how little the practical problems of even these enlightened days are capable of solution by the rules of high morality. How grossly he is misinterpreted will be apparent from the following, which we quote from a leading Italian journal:—"What interest has the GLADSTONE Cabinet in prolonging a farce by which no one in Europe is duped? What ruins is it again preparing? What hard duty is it going to impose on the new creatures of its creation? It is not easy to see what fresh damage Mr. GLADSTONE can inflict on Egypt and on European interests there. MACHIAVELLI, in his works, says that a Frenchman covets his neighbours goods, but that, having obtained possession of them, he willingly shares his own belongings as well as those he has seized with the man he has despoiled; while the Spaniard, on the contrary, seizes all and shares nothing. MACHIAVELLI would have classed Englishmen with Spaniards had he extended his analysis. The proof is before us. France took possession of Tunis, but the French have the courage of their opinions. Once masters of the Regency, they behaved with the utmost frankness. Having benefited by the situation, they accepted the responsibilities, proclaimed a protectorate, and set themselves energetically to develop the prosperity of the conquered country. To-day there is not a Tunisian who would change the situation France has created there for the situation England has created in Egypt. Why, then, does not England proceed on the banks of the Nile as France has proceeded in Tunis? Nobody in the world believes in Mr. GLADSTONE'S sincerity. Everybody knows that England will never abandon Egypt, and that she is

absolute mistress of it, despite all the hypocrisies behind which she dissimulates her act of seizure. Let Mr. GLADSTONE, then, take off his mask. He deceives no one. And since he personally has done the harm, despite his false puritanism, despite the principles which he has professed all his life and to which he has so rarely conformed, let him take steps to repair that wrong by acting openly, frankly, and with that loyalty which ought never to be wanting in the policy of so great a nation as the English." How completely incapable such a writer seems of appreciating a man-like GLADSTONE, and how impervious his prejudices are to any glimmer of reason or logic! We have no desire to draw comparisons, believing, as we do, that England's political morality does not need the justification of foreign backslidings. But we shall be curious to see history's verdicts with respect to England's action in Egypt and France's action in Tunis. The former, we are told, seizes all and shares nothing with anybody else. Doubtless it was with that intention that she invited the other European Powers, and especially France, to act in concert with her in Egypt. If they voluntarily declined to take a share in the work when it involved some danger and trouble, it would better become them to keep silence now than to revile the selfishness of the worker. Is it forgotten, too, that France went to Tunis with the very same professions on her lips as those made by England when she interfered to save Egypt from anarchy and rebellion? There never was any avowed intention to occupy Tunis. The troops sent there were only destined to restore order and punish a handful of rebels. Once there, however, France immediately made herself mistress of the place, and all Europe rang with reproofs of her insincerity. We do not deny that what she did was the wisest and best thing she could have done, but we do say that it will require a very long record of successful results to restore the world's faith in the loyalty of her professions. England, too, disavowed any intention of occupying Egypt finally. People doubted her good faith, because they understood the vital nature of the problem she had to solve. They understood that she had interests at stake incomparably greater than France had in Tunis; so great that her abstinence with regard to Egypt had always been spoken of with contempt by old-fashioned statesmen. They even said, and do still say, that she never really intended to leave Egypt, and that her professions of such an intention were a mere blind. Yet Mr. GLADSTONE was so true to his word that when the trouble in the Soudan suddenly assumed alarming proportions, all the English troops, with the exception of three thousand, had left Egypt. If HICKS PASHA, instead of suffering, had inflicted, defeat, and if the Soudan, with all the contingencies which its unrestrained condition implies,

had passed definitively under Egyptian control, we should probably have heard less and less about English hypocrisy and vacillation. Not that anything Great Britain could have done on the banks of the Nile would have escaped hostile criticism in Europe. Men who could clamour against her for going to Egypt because they suspected that she meant to stay there, and afterwards clamour against her for not justifying their suspicions by avowing her resolve to stay there, would not have been likely, under any circumstances, to admit her sincerity or wisdom. But now that events have forced Mr. GLADSTONE'S hand, people forget altogether the resolute effort he made to be consistent, and would fain hold him responsible for all the disasters that occur outside Egypt Proper, because he has hitherto hesitated to break faith with Europe, and to expose his country to the same reproaches which were showered upon France's head when she took Tunis.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

ANOTHER WARNING VOICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Oh, the apathy of this generation. The warning notes we sounded have, seemingly, had no effect upon those interested. Why is it! Can it be possible that hope is dead within our bosoms? Are our hearts faint in view of the overwhelming disaster threatening us? Woe be unto us, and our house, if we fail to give due warning to our fellows. We supposed, when we gave to the public our first bugle-note of danger ahead, that Yokohama would be convulsed with the urgent importance of immediate action commensurate with the issue under consideration; that meetings would be called, and all necessary platform strategy provided; orators engaged; banners painted, bearing the legends of our fears and, declaring our determination, never, never, never to submit to outrage in this matter. We can see why it is that tariff regulations may be allowed to be amended in accordance with the wishes of the Japanese, because, although they will suffer great hardship thereby, our withers are unwrung, but in this matter of extra-territoriality is wrapt up our most vital interests; interests we should not forego if we can maintain possibly them. We know that the *Mail* has spoken favorably, nay, encouragingly of the abolishment of extra-territoriality. But let that pass. We will pardon the delusion for the time, but shall expect a recantation when sober second thoughts are allowed full sway, consequent upon the presentation of our views. Can it be possible that anyone can be deceived as to the result that may follow the abrogation of extraterritorial rights? Can it be that anyone is so obtuse as not to discover the deep and devilish insincerity of this people, and the duplicity with which they are animated? Oh! the cunning of this people is so deep it cannot be fathomed; just look about you and see the manifold evidences of the fact. Observe the vast outlay of treasure that has been made to effect the introduction of the arts and sciences into the land; witness the colleges and universities the Japanese have established; count the number of learned professors they have brought from Western lands to instruct the youth of the empire in the most advanced knowledge of the schools. Contemplate the vast machinery of their postal arrangements, and the clean work-

ing of their telegraphic system; then contemplate the iron roads they have laid, and those about to be constructed at the expense of millions of money; the Courts they have established, Custom Houses they have erected, and in fine, remember all the vast changes of governmental methods introduced with the era of the present Emperor. Do not all these things alarm the thinking observer? Can you not, as well as others, see a deep and ulterior scheme in all this to bring ruin and desolation upon foreigners who may be venturesome enough to trust themselves in the land? Can you be blind to the inference that all this has been the subtle outgrowth of a disguised determination to make practical use thereof at the needed moment, when it shall be determined that the day has arrived in which the full measure of wrath shall be launched upon the heads of the foreigners here? Besides this; can you suppose that the army, organized as it is, and so well equipped, was brought into being for any other purpose than as an instrument to effect the extirpation of our kind? Or that the navy has been created for other objects than to bombard and destroy our property, or that the local government have placed an elaborate system of sewers for other intent than to fill them with our gore in that supreme moment when extra-territoriality shall be a thing of yesterday? Can it be that you observe in the macadamised streets so lately finished by the native authorities anything but highways for the conveyance of our trunkless bodies, that they may be cast into the sea, while our heads shall decorate the lamp posts and telegraph poles in the settlement? Go to, you are blind indeed if you cannot see all this. Learn of the *Herald* and be wise. Heed it as your friend and be wise in time. We noticed the other day that General Oyama and suite left Japan for Europe. Cannot you imagine the object of his visit there? Do you not see at a glance that it is a further elaboration of the delusion and the snare by which we are being entrapped? Good gracious, it is enough to make an angel weep to look at the devilish stratagem that is played so often by the government in the elaborate style it entertains its foreign guests. To begin as late as the demonstration of friendly feeling exhibited when General Grant visited the empire, how many instances have we of the devilish cunning of these entertainers—oh, yes, they understand deluding us and putting us to sleep in a way that cannot be surpassed. The very genuineness of these appearances of heartfelt courtesy is enough to give the whole thing away to those who know all about it. But it is time to come back to our muttons. We have a duty to perform to ourselves and to the men who may come after us. We must tell the men and women of Japan that they are not competent to deal justly with foreigners; that the Government is corrupt, that officials are without honor; that Judges are venal; that virtue is an unknown quantity with the peoples of the East, and truth without an abiding place in the Land of the Rising Sun. We can do more than that, we can brand any one who thinks he can discover any good appertaining to the country a dastard and traitor to the interests of his fellows, and if he dare utter his thoughts, scout him as an ingrate and Judas among men. We should be as brutal as possible in this matter.

Yours, &c.,

ANXIOUS WARNER.

Yokohama, March 5th, 1884.

MR. EBY'S NEW SCHEME.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A wish has been expressed in some quarters to have Mr. Eby's University scheme thoroughly discussed from all points of view, and by others than those directly engaged in Christian work in the country. As we are interested in the question we venture to offer a few remarks in your journal.

In the first place, we have tried in vain to discover any example of the successful co-existence of two universities in one city. All experience seems to teach that however large a city may be, one, and only one, university can flourish there. There are indeed two examples of such attempts to found rival universities. The Roman Catholic University of Ireland, with plenty of money and learning at its back, has been nothing but a failure; and the same is to be said of the Roman Catholic University which was inaugurated some dozen years ago at Kensington, London. Every advantage that patronage and a cultured and learned staff could give was present; the whole undertaking wanted but one thing, and that was life. It seems to us that a University grows but is not made. To found a University without knowing exactly what class of students will come, what has been their previous education, and what is to be their subsequent career, is a very rash proceeding. We must remember that none of the large business houses in our great cities have been commenced on their present scale; all have grown like a living organism by assimilation and development. Now universities and colleges are every whit as dependent on supply and demand as are commercial undertakings. That the Higher Education is not self supporting in no way contradicts this principle. A Government which can provide careers, may found an institution which will attract students, but this only at great expense. Tokiyo is already supplied with a national university which has grown with the growth of the Capital, suiting itself to the conditions, social and political, of the country. Why then found another?

Because, it is urged, the present university is hostile to Christianity. This would be a valid argument if Christian students were debarred from its lecture halls, or Christian professors not admitted to its chairs. Now we know that such is not the case. Christian missionaries have been professors in Tokiyo University, and a Christian minister might at any time hold a chair there if he were considered the man best qualified for the post. If Mr. Eby, therefore, succeeded in founding a new university on a Christian basis, he would raise a religious antagonism that is at present non-existent. The test system is everywhere dying out, as it has been found fruitful in the nursing of incapable professors and indifferent students, and injurious to the true vitality of a university. Where, further, does Mr. Eby hope to get a supply of properly qualified entrants? The Mission Schools here, though doing a good work, are as yet not thoroughly organised for the work for which they are intended. Their students are in too many cases casuals, who drop in for three months or so, in order to get an understanding of English "as she is spoke." The work is acknowledged to be very disappointing by the teachers themselves. The Government colleges are the goal of nearly all aspiring scholars.

Again, the Government colleges are mere gateways to Government posts. No man in Japan can set up as an engineer, architect, lawyer, or doctor, unless he is a functionary of the Government. Independent careers are impossible in the present state of the country. Though we may deplore a strong anti-Christian feeling among the students of the Daigaku, as well might we deplore the spirit of any body of young men at any national university, who happened not to be Protestant Christians. As many Christian students as are capable of proving themselves fit for admission into the Daigaku can enter there, and there is nothing to prevent the tone of Tokiyo university being Christian in half a dozen years. The Daigaku in that case would only be, as it is now, a reflex of the tone of feeling in the country. That Christian students at present have to undergo a considerable amount of ridicule and wordy persecution is no new thing, and is no argument for providing them with a separate nursery with specially adapted food and the latest improvements in fire-guards. Special Colleges where Literature, Science, and Philosophy are taught

explicitly from a theological point of view, are miserable institutions.

This proposed university would therefore have religious tests for its professors, a barbarous relic of the past which is happily absent from the present university. It would depend for its supply of students on a number of mission schools which have no prospect of yielding such a supply. It could offer no career to its graduates; and lastly, and perhaps this is the most important objection of all, it would be under the dictation of foreigners, and the exponent of a religion which has been hated for centuries. How such an institution could form an university in the remotest way national it is hard to understand. The mere fact that 12 or 14 professors would teach there in English is a very small attraction to balance so many repulsive forces. A high class Seminary *may* be founded and prove useful, for such does not need to be national or even non-sectarian. We therefore rather hope to see the present Mission Schools elevated into good secondary schools, from which the present University may be fed. The difficulties in attaining even this stage are by no means few.

We remain, &c.,

FERREX AND PORREX.

Tôkiô, March 10th.

"FERREX AND PORREX."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Before "taking up my pen" to answer the letter of "Ferrex and Porrex," I would like to ask you one or two questions. You, sir, have some knowledge of Japan, and are not "directly engaged in Christian work in the country" so far as I know, and would therefore come under the category of those whose opinions are asked for. Your experience may help to thoroughness.

1. Taking this letter of "Ferrex and Porrex" as a whole, do you think it properly states "Mr. Eby's scheme" or the outline proposed by the Conferences as published in a little pamphlet? If this letter indicates the prevalent impression about our "scheme," we must try some how or other to restate the matter, so as to meet the comprehension of others, for to me the whole presentation of the letter is a "Man of Straw" in no wise related to the "Christian University" proposed.

2. Are the views of your correspondents correct, as far as they have ventured to make statements about this country and its institutions? (1) Are the Government colleges "mere gateways to Government posts"? If so, we have a new reason for some colleges that will aim at educating young men in a broader way. (2) Can no man in Japan "set up as an engineer, architect, lawyer, or doctor, unless he is a Government functionary? What are the facts? (3) Is it true that "independent careers are impossible in the present state of the country," or are not careers as open for independent men in Japan as in Scotland?

3. Is it on account of the test system which prevailed until a few years ago, or of having a rival university in the same country, that Oxford, Cambridge, and Trinity College, Dublin, have been "fruitful in nursing incapable professors and indifferent students."

4. Can you distinguish any difference between a university giving instruction under Christian influence, where there are no tests for the students, and none but the broad one of Christianity vs. paganism for the professors, and from which all theological questions are explicitly excluded, and "Special Colleges where Literature, Science, and Philosophy are taught explicitly from a theological point of view?"

I should be glad of an answer to these questions, and thankful for any further light that you may be able to throw on a question, in the *thorough* discussion of which no one is more interested than

Yours truly,

C. S. EBY.

Tokio, 13th March, 1884.

YOKOHAMA CRICKET CLUB.

The annual meeting of the Yokohama Cricket Club was held yesterday afternoon at the Club Hotel, when there were present about forty members. Mr. Barlow was voted to the chair and opened the meeting by asking Mr. Kilby, the Hon. Secretary to read the minutes of the last annual meeting. This having been done, the Chairman said they were open for discussion.

No remarks being made upon them they were taken as passed.

The HON. SECRETARY then read the following report of the Committee of the Club and the Accounts:—

YOKOHAMA CRICKET CLUB. ANNUAL REPORT.

During the past Season the Club has had to contend with the disadvantage of Saturday Mail-days, which has naturally affected the Club's Matches, and the flying visits of the Men of War have also made outside matches difficult to arrange, but still a fair number of games were played.

Mr. W. B. Thomson secured the highest averages—In Batting for 19.2 runs per innings and bowling, 1 wicket for 3.5 runs.

The special Cricket practices on Tuesday evenings were fairly successful and usually produced a good attendance. Considerable interest has been shown in Lawn Tennis and the Bye-laws for the game suggested at a meeting of those interested, on the 10th August and approved by the Committee are found to work satisfactorily.

The Subscribers to the Spring Athletic Meeting, 1883, were authorized to use the ground for practice and for their Meeting on 7th June, and the Committee here beg to acknowledge the receipt of a donation of \$16.10 from the Athletic Committee towards the funds of the Club.

In accordance with the proposition carried at the last General Meeting, colours have been ordered for the Club from England and flannel and ribbon of these colours are shortly expected. A roller has also been imported at a cost of \$65.69, which should prove a useful addition to the Club property.

The ground, though in fair order, is not in that condition that the Committee would desire to see it, and apparently requires a considerable expenditure to make the whole of the ground in playing order, but further than keeping it in general repair the Committee have not seen their way to authorize unusual expenditure, as the cost of levelling and relaying a great part of the turf would probably amount to from \$200 to \$250.

The funds of the Club show a balance in hand of \$130.00, which is \$27.81 less than the balance carried forward from last year. With 70 members now on the list the receipts for the coming season are not likely to be diminished, and as the buildings and gear are in good order the ordinary expenses are likely to be on a moderate scale.

The Committee here beg to thank the local press for so kindly inserting notices of matches, and to Messrs. Hamilton and Murray for auditing the accounts.

YOKOHAMA CRICKET CLUB IN ACCOUNT WITH E. FLINT KILBY, HONORARY TREASURER.

CR.	
By Balance from last account (27 March, 1883)	\$157.81
By Subscriptions 1882, 3 Tokiyo Residents	18.00
By Subscriptions 1883, 4 Tokiyo Residents	24.00
By Subscriptions first half Season, 63 members	315.00
By Subscriptions second half Season, 62 members	310.00
By Entrance fees 11 members	55.00
By Donation from Athletic Committee	16.10
By Kobe Cricket Club 12 balls sold them	23.00
By Kobe Cricket Club 2 bats sold them	8.50
By Hongkong and Shanghai Bank Interest on Deposit \$300, 3 mos.	2.25
By Yokohama Foot Ball Association, rent of ground	45.00
	\$974.66

DR.	
To Advertising and post-cards	\$ 7.40
To Gear purchased	87.40
To Match expenses	26.80
To Collecting subscriptions	17.50
To Repairing Lawn mowers	15.00
To New Roller	65.69
To Fire Insurance on Pavilion \$600	12.00
To Ground Rent to 31st December, 1884	275.26
To New hat for Mr. Hearne	2.00
To Coolies rolling and weeding	Yen 89.45
To Chalk for marking Tennis Courts	35.05
To Sundries per Momban	21.05
To Mould, etc., for ground	28.50
To Wages Momban and assistant	138.00
To Wages Tennis boys	25.32
To Carpenter, repairs to fence and pavilion, alterations to dressing-rooms, etc.	72.23

At average exchange 1.22 per \$1.00 Yen 410.80 335.61
Balance carried forward 130.00

1884. March 5th—By Balance brought forward, Cash in hand \$130.00

E. & O. E. Yokohama, 5th March, 1884.

(Signed) E. FLINT KILBY, Honorary Treasurer.

Examined with the vouchers and found correct.

(Signed) GEO. HAMILTON.

E. D. MURRAY.

Mr. COPE proposed that the report be accepted and the accounts passed.

Mr. SHAND seconded the motion, and it was carried.

The CHAIRMAN said that this being the annual meeting any member had a right to propose the improvement of any of the Bye-laws so long as it did not alter any general rule of the Club. In accordance with rule XXV. notice had been given of

several alterations and additions to the Rules intended to be brought forward at this meeting. These were printed and in the hands of the members.

Mr. F. W. PLAYFAIR proposed that Rule XIII. that the Club Ground be open for practice during the season every day, except Sundays and such other days as the Committee may appoint, should read:—That the Club Ground be open every day during the season, except on certain days for sufficient cause shown by the Committee. He also proposed that Rule XXV. as follows, be expunged:—

XXV.—That any member intending to bring forward at the Annual General Meeting any proposition altering or adding to these Rules, shall give notice to the Honorary Secretary in writing on or before 1st March, stating the nature of such alteration or addition, and that the same be circulated amongst the members.

Mr. G. W. F. PLAYFAIR proposed that the words "Sundays and" and "other" be expunged from Rule XIII.

Dr. WHEELER proposed as an amendment that the old Rule XIII. should stand. He presumed that the majority of the members were Christians, and therefore thought they would support him.

Mr. E. J. MOSS seconded the amendment.

Mr. COPE said he agreed with what Dr. Wheeler had said, they might not all be Christians, but he thought it would be a bad precedent. Moreover he wished to point out that Mr. Playfair's motion would give the Committee power to close the ground on Sundays as well as any other day.

Mr. PLAYFAIR said it was not a matter of Christianity or of sentiment, "it was simply a question whether they could get a little healthful recreation on a holiday or not. He did not ask others to play, but there were members who might wish to use the ground. The members of the Rowing Club went out on a Sunday and no objection was offered. The Club was private ground, and many people play in their own grounds at Lawn Tennis on a Sunday, others go shooting, etc. "The Sabbath was made for man and not man for the Sabbath."

Mr. GORDON thought that if Mr. F. W. Playfair, it might meet the case.

Mr. KIRBY considered it would be a pity to take a double vote.

Mr. KIRKWOOD said the Committee had put the Club in such a prosperous condition and had such a knowledge of its working that he wished to know whether they had formed any opinion on the question, as the members would no doubt be partially guided by them.

The CHAIRMAN said it was hardly a question for the Committee to discuss, each member must vote as he thought fit.

After some remarks from Mr. KINGDON and Dr. WHEELER,

The Rev. E. C. IRWINE said that sentiment, so called, had brought together a larger number of members than had even met before. The question of opening the ground on Sundays or not might be a matter of sentiment, but he considered it had a wider drift. The Cricket Club was an English institution, and it ought to be looked at from an English point of view. If the ground were opened for practice then it would be opened for matches. Sabbath was made for man some one had said, but it was made for all men, Japanese as well as foreigners, and if matches were played there would be so many more employed, not only on the ground, but by people coming down in their carriages, etc.

Mr. PLAYFAIR replied that his proposition said nothing about matches, it was simply a matter of exercise.

The CHAIRMAN put the amendment that Rule XIII. remain as it was, remarking that two years ago the Sunday question was raised and lost, but perhaps the members had changed their minds.

The amendment on being put to the meeting was lost by 23 to 16.

Mr. G. W. F. PLAYFAIR then withdrew his proposition.

Mr. F. W. PLAYFAIR withdrew his proposition as

to Rule XXV., and amended his proposition as to Rule XIII. which was put to the meeting and carried. It now reads as follows:—"That the Club ground be open every day during the Season, except on such days as the Committee may appoint."

Mr. KILBY proposed the five following alterations in the Rules:—

- 1.—That the Subscription to the Club, be \$5 half-yearly, payable on 1st January and 1st July.
- 2.—That members joining after 1st April or 1st October pay half of the current half-yearly subscription.
- 3.—That Tokio Residents be eligible for membership under Rules IX. and XI. at half the Subscription of Yokohama Members.
- 4.—That 1st March be substituted for 1st June in Rule XIV.
- 5.—That Members desiring occasionally to introduce Residents, not Members of the Club, may do so by putting names and dates on a notice paper posted in the Pavilion.

The existing Rules Nos. XII. and XIV. read as follows:—

XII.—That the subscription to the Club be Ten Dollars per annum; half payable on the 1st April, the other half on the 1st August.

XIV.—That all funds of the Yokohama Cricket Club be lodged in the Hongkong & Shanghai Bank, and that any Member failing to pay his subscription for the first half season before 1st June, and for the second half before 1st September in each year, shall be no longer entitled to the privileges of Membership, and shall be posted in the pavilion as a defaulter, unless he can give satisfactory reasons for the delay to the Committee.

He remarked that the rules as at present were very vague as to whether a member joining in the middle of the year should pay for the whole year. He proposed to change the date of the subscriptions as at present, this year's subscriptions went to pay next years' ground-rent, and by altering the date it would give the in-coming committee a little in hand to carry on with and each year would pay for itself. As to Tokiyo members, at present they come in under the visitors rule, the same as people from the men-of-war, and pay \$1.00 a month without any entrance fee and therefore have no vote in Club matters. By his proposition they would have a status in the Club.

Mr. ABBOTT seconded the propositions.

The CHAIRMAN said he only agreed with Mr. Kilby in the principal that it was a bad thing for the treasurer to be out of pocket at the end of the year. He thought if the date for the payment of the ground-rent was altered that it would do away with all difficulties. January, he believed, would not be a good time to collect Cricket money. Again according to Mr. Kilby's second proposition a member joining in April would pay \$2.50 for the half of the first half of the year and \$5 for the second half of the year, in all for the season \$7.50 whereas the regular members paid \$10.00. A Club that had been built up as this had should not let new members in at a cheaper rate than old ones. He proposed that (1) "The subscription to the Club be \$10 per annum, half payable on the 1st April and half on the 1st August. (2) "That members joining after 1st August to pay half of the current yearly subscription."

Seconded by Mr. MILNE and carried.

Mr. MILNE also seconded No. 3 of Mr. Kilby's propositions which was carried.

Mr. KILBY withdrew No. 4, and said that as to No. 5 the idea was to get people to come down and join in a game after which they might be induced to join the Club. There was no rule on the subject at present and it might save trouble if one were made.

Mr. SHAND seconded the proposition, but it was lost.

Mr. HAMILTON asked whether any proposition had come before the Committee as to holding an Athletic meeting. The members of the Boat-Club would like to know, being interested.

The CHAIRMAN said he did not know of any such proposition.

The Ballot was then taken for a Committee for the ensuing year which resulted in the election of Messrs. Milne, Durant, Groom, Cope, and Hearne.

The meeting then adjourned.

TRANSLATIONS FROM NATIVE JOURNALS.

WRESTLERS AND UMPIRES IN JAPAN.

(Translated from the *Choya Shimbun*.)

Wrestling matches date back as far as the sixth year of the Emperor Suinin (B.C. 24), when, for the first time on record, a match was arranged between two court nobles; one of the combatants, Taima-no-keha, being a man of immense stature, and the other wrestler an athlete known as Nomi-no-sukune. On one occasion, the ascension to the throne of Japan was decided by a wrestling contest. This happened in the days of the Emperor Buntoku (A.D. 858). His two sons, Koreshto and Koretaka, both claimed the right of inheriting the imperial power, but finally resolved to test their mutual claims in a wrestling combat, the winner to be the sole inheritor of the throne. The match terminated in favour of Koreshto, who succeeded his father under the style of Seiwa. In the eighth century, when Nara was the capital of Japan, the Emperor Seimu instituted wrestling matches as a part of the ceremonies observed at the Autumn Harvest Festival. Strong men came from all parts of the country to contend in these famous matches, and one Shiga Kiyobashi was crowned champion. In the meantime, rules for the ring had been drawn up, and wrestlers divided into two classes, Eastern and Western. The former chose the wisteria as their badge or emblem, while the latter took the gourd-flower (*hiyotan-no-hana*). Forty-eight legitimate grips were recognised, but no trickery or cheating was allowed. Any grips other than the recognized forty-eight were, and are still, considered foul and illegal. To decide upon, and prevent, disputes, the office of umpire was established, and the first holder of this office was the champion Kiyobashi. Shortly afterwards, civil wars broke out, which very nearly put an end to the noble game. Soon after its re-establishment under the Emperor Toba, the famous Kiyobashi died, and Yoshida Iyetsugu was called upon to assume the important position of umpire. From that date the office of umpire became an honorable one, as well as one of great responsibility. Yoshida Bungo-no-kami Iyetsugu, the successor of Kiyobashi, was a vassal of Kiso Yoshinaka, and a native of Yechizen. He was famous for his athletic prowess, was granted the rank of *Goi*, and received the title of *Oikaze*, "Running Wind." The honorary emblems of his office consisted of a fan and a wooden sword. This period—the second year of Bunji (1186)—is renowned in the annals of athletics. Matches were annually arranged in the month of July, under the direct supervision of Oikaze. His office was made hereditary, and for many generations was held by his descendants. Oikaze died on the 20th of April in the first year of Tempuku, at the ripe age of eighty-two. His second, third, fourth, and fifth successors adopted the same name; the sixth was known as Chozayemon; the seventh, Chokichiro; the eighth, Chohachiro; the ninth and tenth, Chodayu; the eleventh, Chojibei; the twelfth, Chozayemon; and the thirteenth, Chosuke. All of these famed umpires lived in Osaka. Later on, although wrestling exhibitions were still given at Nara, the game lost much of its former renown, the ring having become demoralized. Disputes were of frequent occurrence, much to the injury of wrestling. At the age of 18, Chosuke went to the then capital Kiyoto, and, with the aid of certain officials, did much towards mending matters. Some little time after his arrival, in the era Yeiroku (1558), the Emperor Ogimachi inaugurated wrestling matches at his Court, under the direction of Chosuke, who appeared in the ring under the style of Bungo-no-kami Oikaze. Still, wrestling had lost much of its pristine attractions. One day, Nijo, a privy councillor attached to the Court, invited Cho-

suke to his house, and presented him with a fan on which four characters were engraved: *Ichimi sei fu*. Konoye, another privy councillor, presented him with a fan and a court dress. During the era Ten-sho (1573), Nobunaga instituted military wrestling matches, which were presided over by Oikaze. Hideyoshi followed his example, and was a famous patron of the game. Iyeyasu was another enthusiastic supporter of wrestling, and by the interest he took in it did much to further its success. At this time wrestling was in the zenith of its popularity. Oikaze died on the 11th of October, in the 17th year of Keicho (1612), and was succeeded in office by his grandson Chozayemon-no-kami Oikaze, his immediate heir Toyosuke having died before him. Chozayemon, the fourteenth descendent of Yoshida, was then seventeen years old. He lived in Kiyoto, and always presided over the matches held at the Court. The Emperor presented him with a fan, in recognition of his services, and the councillor Nijo gave him a roll of brocade. In the era Genwa (1615), the Toshogu festival was celebrated by the Earl of Wakayama, when, as a matter of course, wrestling matches formed an important part of the festivities. Oikaze presided as usual, and received a sword and a hempen *Kamishimo* as a reward for his able management. He died on the 11th of May of the second year of Meireki (1656), at the age of fifty-five. As he had never married, he had no direct heir to succeed him, and so had adopted the second son of Oya Hachizayemon. But as this adopted son was still very youthful, he was placed under the guardianship of Shakushi Shigetayu. By this time wrestling had lost much of its former popularity, and matches were no longer held at the Imperial Court. Oikaze's heir accordingly entered the service of the House of Hosokawa, under the name of Zenzayemon. He still, however, held the right to preside over the ring, and reward successful wrestlers with the accustomed insignia. He died on the 3rd of February in the 13th year of Genroku (1700). The sixteenth, seventeenth, eighteenth, and nineteenth descendents of Yoshida were all named Zenzayemon. In June of the 3rd year of Kwansei (1791), Tokugawa Iyemochi held a wrestling match at Fukiage Park, and gave a silver box to the umpire as a token of his favour. In the sixth year of the same period, a wrestling exhibition was given at the Hama Palace. On the 8th of October in the first year of Bunsei (1818), the nineteenth descendent of the great Yoshida Zenzayemon, departed this life, the twentieth, twenty-first, and twenty-second successors held the same name. The twenty-third descendent, the present representative of the House of Yoshida, is named Zenmon. This family is thus above six hundred and ninety years old. The presents given to his ancestors by the Emperors Toba and Ogimachi, as well as the gifts of the privy councillors Konoye and Nijo, are still preserved among the family heirlooms.

MIXED RESIDENCE.

(Translated from the *Meiji Nippo*.)

Nearly ten years ago the propriety of permitting foreigners to reside anywhere in the interior was earnestly discussed by thinking men. Ere long, however, the public ceased to interest itself in the subject, and little was subsequently heard about it. But of late the question has been again brought upon the *tapis*. Not only is it discussed by journalists and lecturers, but even in private circles it furnishes a constant topic of conversation. Doubtless the origin of this revived interest may be traced mainly to foreign correspondence and items in the foreign press. Specially worthy of note is the fact that the President of the United States said, in his annual Message on the 3rd of December last, that the United States Government is disposed to accede to the proposals of Japan; to restore to her the right of regulating her own tariff, as well as jurisdiction over foreign residents, and, in short, to

revise the treaty with her so as to bring it into accord with those of other civilized nations. (The writer then recapitulates the reference to treaty revision made in the Queen's speech; the telegram referring to the German Government's assent to Japan's proposals, and the telegram from the special correspondent of the *Daily News*). The above announcements, with, perhaps, the exception of the last, have an important bearing upon the subject of treaty revision, and although they do not specially refer to the question of mixed residence, it seems probable that they have again directed the attention of our countrymen to that problem. Whether or no they are based on facts, we cannot say. Neither are we disposed to comment on them before they are officially announced, since they refer to points of diplomacy which demand the utmost circumspection. Nevertheless the question of mixed residence is of great moment, and the interest the public feels in it will plead our justification for examining it,—always, however, without prejudice to the secrecy which ought to be observed in referring to diplomatic matters still under discussion.

As we before stated, some ten years have elapsed since this question was first discussed, and although it then elicited various criticisms and arguments, a definite and satisfactory solution was never arrived at. The advocates of mixed residence confined themselves to enumerating the benefits that would accrue from such a policy, while its opponents did not travel beyond the disadvantages that might result from it. This, indeed, is the legitimate method of considering a question on its merits. We have nothing to say against it. But it behoves us at present to enquire, in the context of the good or evil of the idea, how it has originated; what are its principal bearings; and what will be the probable consequences of promoting or opposing it.

With regard to the origin of the idea, we are disposed, looking at the matter from an outside point of view, to refer it to the announcements quoted above, though of their correctness or incorrectness we know nothing. If this surmise be admitted, it is plain that the idea is connected with treaty revision, though of the exact nature of the connection we are, again, ignorant. Judging, however, from the tenor of the announcements, our inference is that the Government has agreed to exchange the opening of the country for the satisfaction of certain claims advanced on this side. Rumours, current during the past three years, are to the effect that the claims of the Government in connection with treaty revision point to the abolition of extritoriality and to a modification of the tariff. Our countrymen have long and vigorously pursued their purpose with regard to these two points, and have frequently urged the Government to take decisive action. We conclude, therefore, that the project of mixed residence must have originated in a desire to accomplish a revision of the treaties, and that, should Western Powers consent to revise them in the sense we desire, the opening of the country is offered as a *quid pro quo*. The opponents of mixed residence have, accordingly, to take this circumstance into consideration, and to determine whether treaty revision can be effected without conceding the right of residence to foreigners, or whether any other satisfactory compensation can be offered for the proposed modifications. If no other compensation exists, and if treaty revision becomes, therefore, impossible, they have to decide which will be more beneficial to them—to open the country or to dispense with revision.

It has to be noticed that the existing treaties between our country and Foreign Powers were not concluded on equal terms, inasmuch as they were negotiated at a time when we were still unfamiliar with the outer world. It is clearly comprehended, both by aliens and natives, that one of the contracting parties was in a position to obtain, by stipulation, greater advantages than the other. Yet as those stipulations were entered into by mutual consent, we are bound to observe them patiently.

There is no alternative for us but to obtain a revision after mutual consultation. But that men should be unwilling to resign advantages they have once acquired, is perfectly natural. To obtain justice in the face of prejudice is a difficult feat. Therefore it is that Western States devise various pretexts with a view to postponing the revision of the treaties, although, as a point of abstract justice, they ought to restore our fiscal and judicial rights at once. Whenever the question comes to be logically discussed, right is on our side. But the world of our day is, for the most part, ruled by prejudice. Reason and right have but a limited sway, and it often happens that the demands of justice cannot be satisfied. All this has been well illustrated in the story of the efforts made by our Government to secure treaty revision. To obtain for ourselves the benefit of having our fiscal and judicial powers restored, we must adopt some means of conferring benefits on the Treaty Powers. If, without contriving such means, we were simply to assert that the desired revision of the treaties is based on principles of justice, and that whatever profit may accrue to us, we are in no way equitably bound to give an equivalent, our contention would present, indeed, a noble and commendable aspect, but from a practical point of view, it would be nothing better than an abstract opinion, nor have any more solid character than a castle in the air. The time may come, perhaps, where such an argument will command attention, but its present impotence is patent to all those who have any knowledge of the relative conditions of Japan and foreign Powers. Treaty revision, however, is a thing of the present, and must be dealt with according to the actual circumstances of the time. Since no means exist of obtaining our object without offering foreigners some *quid pro quo*, measures must be adopted to that end. What, then, shall those measure be? That is the question we have to answer. We learn that, from time to time, foreigners have complained of the difficulty of obtaining passports when they desire to visit the interior. Shall this restriction be removed, so as to allow them to travel freely without passports? Doubtless they would gladly accept the privilege, but certainly they would not be satisfied with it as a compensation for treaty revision. This will need no demonstration in the eyes of those who are at all familiar with foreign ideas. Complaints, again, are made about the small area of the treaty limits. Shall the limits be extended, so that foreigners may travel freely throughout the enlarged districts? This, too, they would regard as a boon, but it would not satisfy them as a *quid pro quo*. Some are disposed to think that the desired equivalent is only to be found in trade privileges, and that as the benefits specified above refer to freedom of personal travel alone, they will not meet the prime purpose of foreigners, namely, commercial gain. The expediency is, therefore, mooted of opening two or three more ports, and thus extending commercial opportunities. This idea deserves attention, because it is evidently suggested by familiarity with western sentiments. Beyond all question, the object for which foreigners chiefly strive is trade profit. In addition to the present ports, the opening of a few others,—say Tsuruga, Shimomoseki, Shimidzu, and Nobiru—is earnestly desired by them as a means of promoting the mutual advantages of foreign commerce. Should, then, the opening of these ports be accepted as an equivalent for the revision of the treaties, we might congratulate ourselves heartily, because whatever prosperity results from the proceeding would not belong to foreigners alone, but would evidently be shared by us. In short, while the recovery of our independent rights would be a distinct gain, the price paid for it, namely, the opening of the ports, would be a gain also. A most happy result in truth! In the interests of our country we hope that foreigners would be content with such an equivalent. And, indeed, having regard to the actual conditions under which trade is carried on with the

present number of open ports, we cannot doubt that foreigners will be disposed to ask for the opening of more. But that they would be satisfied with this concession, we do not for a moment believe.

Doubtless foreigners would desire to see additional ports opened, as likely to promote their commercial prosperity, and any request from us for a revision of the treaties would certainly be met by a request from them to that effect. But we are inclined to think that they would not be satisfied with the opening of a few ports only. For it is by no means sure that trade would be much influenced by an addition to the number of ports already open. That such a measure would confer some benefit need not be questioned. But since trade prosperity depends as much on the volume of productions as on purchasing facilities, an approximate idea of the results that would be produced by opening new ports may be formed by examining the commercial condition of those already open. Foreigners are too shrewd to have failed to draw their own deductions from the circumstances already before them. They have, without doubt, considered the question deeply. We will set down here a table, taken from the Annual Statistical Report, showing the amount of the exports and imports at the various open ports from 1874 to 1881:—

YEAR.	YOKOHAMA. YEN.	KOBE. YEN.	OSAKA. YEN.
1874	28,056,026	7,825,283	884,435
1875	35,000,437	8,117,275	830,534
1876	40,352,505	7,178,982	510,968
1877	36,658,075	8,866,847	699,611
1878	40,137,133	12,422,820	651,500
1879	42,479,585	12,518,101	898,737
1880	44,921,023	13,171,566	140,209
1881	42,726,692	12,655,050	1,722,366
Average	38,592,192	10,344,490	950,098

YEAR.	NAGASAKI. YEN.	HAKODATE. YEN.	NIIGATA. YEN.
1874	3,416,652	295,323	8,909
1875	3,534,879	433,759	20,647
1876	2,648,658	497,194	1,470
1877	3,652,898	497,675	23,999
1878	3,902,751	735,633	591,696
1879	3,708,724	696,950	48,405
1880	3,598,259	970,986	493
1881	3,383,428	971,901	891
Average	3,480,781	637,427	87,056

YEAR.	TOTALS. YEN.
1874	40,486,528
1875	47,943,558
1876	51,189,837
1877	50,399,155
1878	58,441,533
1879	60,350,509
1880	61,004,906
1881	61,460,328
Average	54,292,044

From the above table it will be seen that trade has been most prosperous in Yokohama and Kobe, and that Nagasaki comes next, while virtual stagnation is noticeable in the case of Osaka, the figure for which place only reached a million *yen* in one year, a fact which is probably attributable to the unfavourable situation of the port as well as its vicinity to Kobe. As to Hakodate, its annual average does not exceed seven hundred thousand *yen*; and Niigata's case is the most significant of all, its maximum figure during the eight years under review being less than seven hundred thousand *yen*, and its minimum 400, with correspondingly small figures in the interval. We may say, therefore, that Niigata is not worthy to be called an open port, while with regard to the whole six ports, the average annual value of their total foreign commerce is only fifty-four million *yen*. Of this total the united trades of Yokohama and Kobe constitute more than ninety per cent. In other words, if we suppose, to fix our ideas, that the total foreign commerce of Japan is represented by 100, then Yokohama and Kobe together are represented by 90, and the other four ports, by 10, while of this latter figure, again, Nagasaki alone contributes 6.4. The insignificance of the trade at ports other than Yokohama and Kobe is thus clearly demonstrated.

Such being the case with regard to the six ports already open, it is exceedingly doubtful whether any other ports, if opened, would attain the same degree of prosperity as Yokohama and Kobe. In fact we see no reason why more ports should be opened, unless the resources of the country be developed and the amount of exportable products increased.

On that hypothesis alone could the prosperity of the new ports be expected to compare with that of Yokohama or Kobe. For our own part, we cannot persuade ourselves that the time is ripe for such a measure. We believe that the opening of new ports would have no specially beneficial effect, but that their trade would remain much in the same depressed condition as that of Niigata is at present. In all probability foreigners, now that they are familiar with the actual circumstances of our

commerce, have concluded that it will never attain the dimensions they originally hoped and contemplated. A German writer, recently discussing the commerce of the Orient, said that Japan's trade is of little international importance, and that the extent of her country as well as the number of its inhabitants being far inferior to those of China, or British India, it is not to be expected that her commercial importance will ever be comparable with theirs. According to another German statement, the average annual value of Japanese exports and imports between 1868 and 1871 was 74 million gulden; between 1872 and 1875 it reached 88 millions; from 1876 to 1880, it rose to 115 millions, while the customs returns show that in 1881 it increased to 120 millions. The increase was insignificant, and in the latter years a decline, even, was perceptible. The author of these statements goes on to say:—"We have hoped that matters would mend in this respect, but the facts before us oblige us to confess that the foreign trade of the country has always been without vitality, and that up to the present it has failed to show any improvement. The cause of this is probably to be found in financial conditions. The depreciation of the paper currency as well as its severe fluctuations have, on the one hand, seriously impeded the operations, of commerce, and, on the other, tempted prominent merchants to engage in speculative operations which, in many cases, have eventuated disastrously. These things, we say, are in all probability the reason that Japan's trade with the West is considerable. She has an abundance of products which are in demand in China and America, but her exports to Europe do not exceed one third of the total she sends to the two former countries, while from them also she chiefly receives her imports. The insignificance of her foreign trade is probably the cause of her imperfect relations with Western States. For many years, too, she has been purchasing foreign goods to a considerable amount, in connection with the many reforms she has made, so that her exports and imports have not been in equilibrium. The excess of the latter over the former between 1868 and 1880 reached a hundred and fifty million yen, and she has still to pay interest on foreign loans, so that, since 1872, she has exported specie to the amount of 120 million gulden. Under these circumstances the expectations formed about Japan's prospects must be pronounced fallacious. Her financial affairs have not been managed as satisfactorily as was anticipated, and her foreign commerce shows no tendency to assume dimensions of consequence."

Without commenting on the correctness or incorrectness of these assertions, it is enough for our present purpose to observe that similar opinions are expressed by most foreigners, as will be seen by perusing their journals. The views embodied in the above quotation may therefore be regarded as universally entertained by aliens. If, then, they consider the commercial prospects of our country so unpromising, while the actual condition of her trade is so dull, they will not, so long as profit is their chief object, consent to a revision of the treaties in exchange for the opening of some new ports.

Assuming this to be the case, and also that they will not be content with additional concessions as to free travel and extended treaty limits, how can we acquit ourselves to their satisfaction? Possibly it may be among their desires that we should reform our laws and improve our judiciary so that they will be able to submit to our jurisdiction without apprehension. To obtain the abolition of extraterritoriality and induce foreigners to submit to our laws so that existing abuses may be remedied, it is certainly necessary that measures be taken to amend those laws and the method of their administration, for extraterritoriality is only justifiable when people of one nationality, detecting imperfections in the laws and incompetence in the judiciary of another, consider it dangerous to entrust their lives and property to the protection of those laws, and accordingly desire to remain under the protection of their own codes, which are framed in a more enlightened spirit and secure a more disinterested administration of justice. To ask foreigners, in short, to surrender their extraterritorial privileges and come under our jurisdiction, would be equivalent to asserting that our laws as well as our judiciary have been brought to a perfectly satisfactory state, and that they are quite competent to protect life and property. The fact is, therefore, that if we desire to recover our rights of jurisdiction we must amend our laws and improve their administration. But we may conclude with certainty that foreigners will not themselves claim any such amendment by way of compensation for treaty-revision, but will simply wait till we take steps with that object. If we fail, on the other hand, to take such steps, we may expect to have claims preferred against us, not with any reference to treaty-revision, but on the ground that justice must be made accessible.

What, then, is it that foreigners most desire? A moment's reflection will show that under the present arrangements their residence is confined to the settlements, and that although they enjoy freedom of travel within a circle of a few miles radius, they are not permitted to proceed a step farther without passports. This is what they find most inconvenient. Again, whatever amount of capital they may possess, they are forbidden to invest it in houses and lands in the interior. They may not establish manufactories or open shops for purposes of trade on the same conditions as natives; neither may they lend money to Japanese on the security of fixed property; neither may they work mines. In a word, they are debarred from all opportunities of making profits in speculations which the Japanese have not essayed. They are cooped up within the narrow limits of settlements where no chance of employing their capital and enterprise exists. Such circumstances might not be painful to persons who cared little for gain; but they are intolerable to men so enthusiastic as foreigners in the pursuit of profit. Their great aim, therefore, is to procure increased commercial and industrial facilities, and this can only be compassed by obtaining the right of mixed residence in the interior. Mixed residence may, therefore, be called the goal of their desires: if that privilege were granted they would probably be content, and would consent to the revision of the treaties.

For this reason we say that the privilege of mixed residence in the interior has a distinct relation to treaty revision. If it be thought that the privilege cannot easily be granted, then it follows that treaty revision cannot easily be effected. Among ourselves we may say that we wish to obtain the revision without conferring the privilege, but in foreign ears such a statement would have no meaning. And our *vis-à-vis* in this matter is a foreigner, not a Japanese. To discuss the question from a standpoint that does not appeal to foreigners is mere waste of time. Therefore when people set out to comment on mixed residence, they had better begin by observing the relation it bears to treaty revision, and by examining whether revision can be effected without granting residence, or whether any other means of satisfying foreigners exists. If it is impossible to get the treaties modified without conferring the privilege of mixed residence, must revision be postponed, or must it be procured by conceding the privilege? It behoves us to reflect well what benefits will accrue from the revision and what evils, if any, may result from the privilege. It is to be regretted that those who discuss the question of mixed residence appear not to look beyond the advantages or disadvantages that may be connected with it, and neglect to consider it with reference to its very important bearing upon treaty revision. It is for this reason that we have drawn attention to this aspect of the question, hoping that what we have said may serve to promote a truer appreciation of the problem.

THE PRESENT STATE OF MEDICINE IN JAPAN.

The following interesting article in the form of a letter, written by a well-known physician residing in Yokohama, appears in a recent number of the *American Medical News*. It is to be understood that the article was written for the readers of a foreign Professional journal:—

SIR,—As the word Japan seems to open visions of El Dorado to all non-resident aspirants to fortune, and lest the heading of my letter should incite some of my brethren to its perusal in hope that it may prove in some sort a directory to the, presumably, overflowing wealth of the Orient, let me begin by a word as to the status and prospects of European and American physicians in this portion of the Far East. As to present status, those medical men now here, save of the small and rapidly decreasing number in government employment, are doing, and must do, more work for less remuneration than in even our small cities at home, while the expense of living in decent comfort is far greater in Japan than in the United States.

This country is now passing through a severe financial crisis; business of every kind is at a standstill, and as the foreign practitioner must depend almost exclusively upon the foreign residents for his support, the depression of trade affects him severely. It is but rarely that the services of a foreign doctor are called for by the natives, first, because the majority of these much prefer their own physicians; second, because they are rarely able to pay for his services—in fact, cannot understand that a physician's time or advice has any money value, the old custom—still almost univer-

sally in force—being to pay the medical attendant for medicines furnished, for which alone the physician has a legal claim to remuneration, and to pay, or not to pay, in addition, an honorarium generally ridiculously small, and entirely a voluntary matter; third, because in the large cities of the Empire there are foreign medical officers attached to the Government hospitals, whose advice can be had by the richest at an expenditure amounting to little more than the wholesale cost of the medicines prescribed. The number of foreign doctors thus employed is now small and diminishing, their places, at the expiration of their contracts, being filled by natives educated abroad, or at the Imperial Medical School mentioned hereafter. Our services—I speak as one of the resident foreign physicians—are even less in demand by the natives than formerly, for Japan has, perhaps, made more real and solid progress in medical science than in any other branch of western learning, and has now a considerable number of fairly good men—either educated in foreign countries, where some have won honors, or under foreign instructors in the Government hospitals and medical schools at home. In addition to these better men, who, of course, are found only in the Imperial service or in the larger cities, there is to be found in almost every town of the Empire at least one native physician practising, so far as his education will permit, according to the modern system.

The Government offers every encouragement for the advancement of the native practitioners in modern science. The innumerable appointments in its gift are bestowed only on men of the new school, while, as regards those practising privately, a system of examination and graduated license has been put in force throughout the Empire, which would afford no bad model for adoption in some of the United States.

Japan has now a considerable literature of modern medicine, which is rapidly increasing, and there are also something like a dozen medical periodicals, well supported. It is true that the execution of the translations, which compose the bulk of the literature in question, leaves much to be desired, yet the essentials of the original are generally preserved, and gross errors infrequent.

Ten years ago, the number of books on modern medicine in the Japanese language could have been counted on the fingers of one hand, while the writer at that time established, under Government auspices, the first medical journal of the country. A few months ago, a shipment of some four hundred volumes of medical text-books was sent to the library of the Surgeon-General, U.S.A., at Washington, and nearly as many more will shortly follow. Many of these are really beautiful reproductions of expensive illustrated works from the presses of Europe or America, though original treatises of almost equal mechanical execution are not wanting. It follows that, should any of your readers wish to investigate for himself the state of medical literature in Japan, he will find material within reach, the library mentioned containing, in addition to the above-mentioned books, full sets of the leading medical journals of this country.

The exquisite workmen of Japan have, of course, undertaken the manufacture of surgical instruments and apparatus—almost all known surgical appliances, of native manufacture, being found in the shops of the dealers in medical supplies. In appearance and finish, the instruments of domestic manufacture are indistinguishable from those imported, and, with the important exception of those whose value depends upon the quality and temper of the steel employed, are equally useful. It is difficult to understand the failure of the native artisan in the construction of small articles of steel, for the Japanese metal is second to none in the world, as will be readily granted by anyone who has seen the tests endured by a Japanese sword of good quality. When this difficulty in the management of small articles of steel shall have been overcome, as no doubt it speedily will be, the Japanese surgeon will be able to furnish himself more cheaply than in any other country.

It will be seen, then, that so far as material goes, the means are not wanting for the theoretical education or the equipment of every native student, while the many and often admirable hospitals maintained by the Imperial Government, or by subscription, afford good opportunities for clinical study.

Facilities for anatomical work are, however, sadly lacking. Though Japan has an anatomy law, which many of our benighted States would do well to copy, its operation is so hampered by the prejudice and mistaken benevolence of the people, that even in the great city of Tokio (Yedo) the Imperial School of Medicine is unable fully to supply its students with anatomical material, while in the provincial hospitals and schools opportunities for dissection are rare indeed. Realizing the value of anatomical study, and the difficulties in the way of its pursuit,

efforts have been made to compensate for the want of actual dissection by the publication of elaborate atlases and anatomical wall-plates, and even by the reproduction in fac-simile of Auzoux's great manikins at a price of about one-third the original. The lack of facilities for the study of practical anatomy is the more, perhaps, to be regretted from the fact that the Japanese excel in many of the qualities which go to make a successful operative surgeon. Steady nerve, marvellous dexterity, mechanical tact, and a power of mentally reconstructing form that is absolutely astonishing, are qualifications to which, if a knowledge of anatomy were added, the product should be a surgeon above the average.

Appropos of this power of recalling form, which is almost universal among the better class of Japanese, I am inclined to attribute it to the personal and hereditary influence of training in the use of the Chinese character, a knowledge of several thousands of which complicated and arbitrary forms is necessary to every Japanese who would either read or write anything esteemed of value. The æsthetic sense of the race may also have influence in this direction.

I have spoken of the Imperial School of Medicine at Tokio (Yedo), and of the larger hospitals throughout the country, as affording opportunities for instruction under foreign teachers. The former is under management exclusively German, and, in fact, of late years, German physicians have had almost entire control of the medical education of the country.

That Germans now have the preference in Japan, as teachers, in almost all branches of science and literature, is probably due to the fact that the more conservative members of the Government feel that the country has progressed rather too rapidly toward free thought and free institutions, and believe the political system of Germany to be more in accord with that desirable for Japan, than those of England and America. The students themselves, however, much prefer the English language and English and American books, even as regards medicine, and it is chiefly from these sources that the present literature is derived.

The old school of medicine in Japan was nearly identical with that of China, a mélange of superstition and an absurd and utterly artificial system of anatomy and physiology, with the results of ages of empirical practice—the latter having led to a more or less correct appreciation of the use and value of many medicines used by ourselves, *e.g.*, mercury, antimony, and aconite. In addition to a vast number of plants and minerals, animal substances form an important element of the old pharmacopœia. Whole cargoes of dried foetal deer are yearly shipped from the island Yezo to southern Japan and China; while dried lizards, tigers' claws and teeth, bears' galls, monkeys' skulls, and other even more repulsive substances, are largely used. In fact, the Chinese practitioner of to-day is working with much the same armament as did our predecessors in the not very long past time when treacle of mummy was a panacea. But absurd and disgusting as the materia medica of the old school of medicine in Japan and China may at first glance appear, it is probable that in their immense, and to us little-known, field of natural resources, the empiricism of a shrewd people has discovered some therapeutic agents of value, and such as would repay a thorough investigation of their pharmacopœia by some medical Sinologue. I will return to this subject further on.

Although trained in the same school and holding allegiance to the same ancient authorities, the essential difference between the stolid conservatism of the Chinese and the active and progressive disposition of their insular neighbors, was shown even before the opening of Japan to foreigners generally, by the attainment of a partial emancipation from the thralldom of the old school through the voluntary efforts of native practitioners, and this, too, at a time when even to read a foreign book without the special permission of the Government was a capital offence. A native doctor, having accidentally seen a volume of anatomical plates at the Dutch settlement of Nagasaki, returned to his distant home disquieted and anxious, realizing that if the drawings he had examined were correct, his whole system of science, based as it was on different premises, must fall to the ground. Unable to prosecute research upon the human cadaver, he carefully dissected all the quadrupeds he could obtain, and finding, throughout, close similarity to each other, and to the pictures he had seen, he at last, after great labor and no little danger, obtained permission to dissect a criminal. This dissection settled the question for himself and friends, for the science of the western foreigner was vindicated. From this began a movement, resulting in permission being given that a limited number of natives might study under the Dutch surgeons at Nagasaki, and in the translation of a few medical treatises of an elementary character.

Another instance of progress is even more remarkable, as it was entirely independent of assistance from without. A native physician, belonging to a family with whom the practice of the obstetric art was hereditary, for male accoucheurs have long existed in Japan, though in small number, after many misfortunes in the line of his practice, and a long time devoted to study and investigation, elaborated a fairly complete system of midwifery, and published an illustrated treatise on the subject. Kagawa Shigen found the obstetric art of Japan in a condition little, if any, better than among the American Indians of to-day; he left it almost upon a par with that of Europe before the invention of the forceps. He invented a number of convenient and practical instruments, which, though in some respects resembling others of European origin, differ sufficiently from these to prove independent evolution, while his book, which affords intrinsic evidence of originality, contains a series of really valuable precepts and clinical observations. Unfortunately, like the Chamberlens, Kagawa attempted to keep his improvements secret within the limits of his own family, and, unlike the Chamberlens, succeeded, until recently, in so doing. A descendant of the reformer is to-day practising in the capital, and exhibits so little of the ancestral spirit as to ignore all science save as contained between the covers of his inherited manual.

The aged Solomon's grumbling remarks, that there is nothing new under the sun, seems to derive much confirmation from the Orient, and it need hardly surprise one greatly to learn that any of our supposed recent discoveries were anticipated ages ago in the Far East. Am I wrong in believing that the extract of malt is esteemed by many as one of the most recent triumphs of restorative medicine? The Japanese and, to some extent, their Celestial neighbors have used this article, or something closely related thereto, for centuries. The experience of my foreign colleagues and myself in the medicinal use of the native preparation has been so favorable that I cannot refrain from a few remarks upon it, even though quite aware that this long and gossiping letter should ere this have been brought to a close.

The article in question is known in Japan as "ame" or, in its better form, as "midzu ame," and as it is the latter which is most convenient and valuable for medicinal use, it is of this variety that I shall chiefly speak. Midzu ame, of the best quality, is a clear, transparent, faintly brown, or amber-colored syrup, or may have the consistence of candy, according to the amount of water contained. If properly prepared, it ferments only with difficulty, and long keeping changes it only by inspissation. The flavor is pleasant; so much so that some of our foreign residents prefer it, for table use, to the best imported syrups, while, when used medicinally, it rarely becomes distasteful, even after prolonged administration.

To describe in detail the manufacture of midzu ame would occupy too much space at present. Suffice it to say that it depends upon the now generally known fact that starch, in the presence of malt in solution, is converted into a saccharine body (maltose). The malt used is, as elsewhere, derived from barley, germination having been allowed to proceed to a greater extent than is usual with us; the starch is that of rice or millet, preferably the former, of which a peculiarly glutinous variety is chosen.

The consumption of ame in its different forms is enormous in Japan. The cheapness of the article, as compared with sugar, renders it the basis of a large proportion of the confectionery used. I have spoken of its use by the natives medicinally; it is, however, only as a digestible and strengthening food for the aged and for hand-fed or weakly infants, that it has, until very recently, been prescribed, and from this point of view alone midzu ame will be found well worthy of trial elsewhere. So far as children are concerned, I know nothing more useful for the feeble or bottle-fed than the article in question. During the past five years, the writer having been first to call attention to the subject, midzu ame has been largely used by both foreign and native practitioners in cases of dyspepsia and malassimilation, of almost every variety, with such success that the consumption of the better qualities has considerably increased, while several manufacturers are now devoting themselves to the production of special grades for exclusively medical use.

Midzu ame ranks as a food close to cod-liver oil, for which it will often be found to be an efficient substitute. In many cases of phthisis it has proved so useful that I shall not be surprised should the lapse of time show that ame is quite as valuable in this disease as is the oil. It is, however, of its use in dyspepsia that I would specially speak. An experience of several hundreds of cases, both native and European, and in conditions varying from mere sluggishness of digestion to

almost total and fatal inanition, has demonstrated that ame is far more than an easily assimilated food. This it certainly is; but it has, in my opinion, a power to assist in the conversion of other food beyond that of any agent heretofore employed, and is to be relied upon to exert the action which we hope for from pepsin, artificial gastric juice and the like, but in which we are so often disappointed. It is probably this power which, in cases characterized by active fermentation, acetic or butyric, enables the ame, saccharine body though it be, to act as an anti-ferment, for it is in this class of cases that the benefit derived from its use is most speedily manifested.

Granting the foregoing statements to be correct, it will be seen that we have in the article under consideration a nourishing, agreeable, and easily digested food, which can often be taken, and duly appropriated, after cream, raw beef, acid emulsions, and the like, have failed, and which will frequently secure the digestion of more or less other food, almost from first administration. I would not be understood as asserting that this contribution from the Far East is either infallible or specific, but that it has often saved life and, in an immense number of cases, restored health, even after the failure of approved treatment, I am certain, as well as that the experience of most of my colleagues has been equally favorable.

It is to be hoped that an opportunity may soon be given for a thorough and unprejudiced trial of ame in the United States, and that, in order that such may be secured to it, whoever undertakes its introduction will put it in the hands of the profession only, in proper manner, and without the clap-trap and advertising falsehood which repel every honest physician from what may, perhaps, be a really valuable and much needed article.

STUART ELDRIDGE, M.D.,

Medical Director of Imperial Hospital of Kanagawa Ken,
Surgeon in Charge of the Foreign General Hospital of Yokohama.
Yokohama, Japan, December 30, 1883.

IN THE MINISTERIAL COURT OF THE UNITED STATES OF AMERICA IN JAPAN.

Before the Honorable JOHN A. BINGHAM, Envoy
Extraordinary and Minister Plenipotentiary.
March 13th, 1884.

THOMAS B. VAN BUREN V. THOMAS H. TRIPLER.
SLANDER.—\$5,000 DAMAGES.

General Van Buren conducted his own case.
Mr. Weiller appeared for the defendant.
Mr. Weiller moved that Mr. Litchfield, Barrister-at-Law in H.B.M. Court, be allowed to assist him in the case.

Plaintiff said that with all due deference to the Court, he thought that he should have been notified before of this proceeding. Although he entertained the greatest regard for his learned friend Mr. Litchfield, he objected on the ground that recently an American lawyer had not been permitted to practise in the English Court in Yokohama, and if such a display of legal talent was to be brought against him, he should have been notified.

The Court after hearing the parties, ruled that inasmuch as Mr. Litchfield had been recognised as a practitioner before the U.S. Consular Court at Kanagawa, he would be allowed to appear to assist in the defence, but if any prejudice to the plaintiff's rights could be shown in consequence thereof, the question would receive further consideration.

Mr. Weiller then called attention to his motion that the plaintiff should deposit security for costs under Rule 253 of the Court Regulations.

The plaintiff said that defendant had not filed an affidavit to that effect, and it appeared that the defendant had declared in his answer that the plaintiff was in possession of sufficient property within the jurisdiction of the Court.

The Court overruled the motion as he thought it did not apply in the present case.

The Court being informed that the parties were now ready to proceed said the statute enjoined him to try and settle all cases of the present nature outside of the Court and to cooperate in bringing about an amicable settlement either by bringing the parties together or by referring the matter to another party. He hoped that they might arrive at a settlement without further legal proceedings. If they thought proper they might retire to the adjoining room for that purpose.

Plaintiff said he had most unwillingly brought the case and had written a letter to that effect to the defendant which he was ready to produce in evidence.

Mr. Weiller said he had no objection to the parties arranging it between themselves.

The plaintiff said he had charged the defendant with using scandalous language, etc., and if he would withdraw the expressions and say they were false he would not press the suit. He was not actuated by any vindictive feelings.

The Court said that, if it was the wish of the defendant, they could retire to settle the matter.

Defendant said he had no retraction to make whatever.

Plaintiff called attention to errors in the answer to the petition, such as misnomer of the plaintiff as Thos. H. van Buren instead of Thos. B. van Buren (the plaintiff's copy of the answer was erroneous), and frequent abbreviations such as Deft. Pltf. and Hon. U.S. which were totally inadmissible in a legal paper. Also the signature Thomas H. Tripler M.D. There was no such person named in the pleadings, if it was intended as a title he could suggest a more appropriate one. It was entirely out of order and improper in a legal paper.

The Court said the question was of no importance and the M.D. might be struck off.

Defendant said he had authority for using the title, and it was his usual way of signing his name.

Plaintiff then read the petition and answer as follows:—

IN THE MINISTERIAL COURT OF THE UNITED STATES OF AMERICA IN JAPAN.

THOMAS B. VAN BUREN, plaintiff, against THOMAS H. TRIPLER, defendant.

The petition of the plaintiff in the above entitled cause respectfully shows to the court that he is, and for some years last past has been, Consul-General of the United States of America at Kanagawa, in the Empire of Japan, and, during that time he has resided and still resides at Yokohama, in Kanagawa-Ken, in said Empire, where he has his offices and performs his official duties; that, by virtue of his said office as Consul-General, he is and has been, while so holding said office, Judge of the Consular Court attached thereto.

That the defendant is an American citizen, residing in Yokohama aforesaid; and within the jurisdiction of this Court.

That said defendant wickedly intending to injure the plaintiff, heretofore, to wit: on the thirty-first day of December, last past, and also on several days immediately preceding that date, at the then "Yokohama United Club," at number five B, in the foreign settlement of Yokohama aforesaid, in a certain discourse, which he then had of and concerning the plaintiff, did, in the presence and hearing of divers persons, maliciously and falsely speak and publish of and concerning the plaintiff the following false, scandalous, and defamatory words, that is to say:—"He" (the plaintiff meaning) "went to the Kencho and in an underhand manner got them (the Japanese authorities meaning) to sell him (the plaintiff meaning) 'the Consular buildings' (meaning that the plaintiff, in an unfair and improper manner, that is by unfair and improper statements, or representations, induced the Japanese authorities to sell to him—the said plaintiff—the building occupied as offices of the United States Consulate-General, and for the use of the court and jail attached thereto), 'for twenty-two hundred yen.' " "He" (the plaintiff meaning) "had no right to, buy 'them' (meaning the consular buildings aforesaid)" at all. It is contrary to law" (meaning that the plaintiff in making such alleged purchase, had violated law). "He has swindled the government" (meaning that the plaintiff, in making such alleged purchase, had defrauded the Government of the United States, of which plaintiff was and is an official, and that the plaintiff had been thereby guilty of a criminal offence.) "The Department of State has been informed of it, but has taken no notice: but old Frelinghuysen will not be there forever, and, when he goes, we will get him out" (meaning that an accusation has been prepared by defendant or some other person accusing the plaintiff of the alleged act on his part heretofore referred to and forwarded to the department of state of the United States of America at Washington, of which said department had taken no notice whatever; but that the Honourable F. T. Frelinghuysen, Secretary of State of the United States, would, before long, cease to continue in that office, and some other person would become Secretary of State, and that then the plaintiff should be deprived of his official position through the efforts of the defendant and others assisting him).

By means of the committing of which grievances of the said defendant, the plaintiff has been brought into public scandal and disgrace and greatly injured in his good name and otherwise injured.

Wherefore plaintiff prays that the defendant may be adjudged to pay to the plaintiff the sum of five thousand dollars, as damages, and costs of suit, as some compensation for said injuries, and that such other remedy be granted to the plaintiff for the great wrong done him by the defendant as to the Court may seem right and proper.

(Signed) THOS. B. VAN BUREN.

Sworn and subscribed before me this 15th day of January, 1884.

(Signed) JOHN A. BINGHAM,
U. S. Minister.

In the Ministerial Court of the United States of America in Japan.

I hereby certify that the foregoing is a true copy of the original petition filed in this Court.

(Signed) JOHN A. BINGHAM,
Envoy Extraordinary and Minister
Plenipotentiary of the United
States of America.

Attest.
(Signed) GUSTAVE GOWARD,
Secretary of Legation.

IN THE MINISTERIAL COURT OF THE UNITED STATES OF AMERICA, IN JAPAN.

Before the Hon. JNO. A. BINGHAM, Envoy Extraordinary and Minister Plenipotentiary of the U. S. of America, in Japan, Acting Judicially.

THOMAS B. VAN BUREN, plaintiff, against THOMAS H. TRIPLER, defendant.

The answer of Thomas H. Tripler, the above-named defendant, to the petition of the above-named plaintiff shows as follows:—

That the said defendant admits so much of the said petition as alleges that the plaintiff is Consul General of the United States at Kanagawa, Japan, and that he is resident in Yokohama.

That the said defendant denies that he spoke and published of and concerning the said plaintiff, the alleged defamatory words in the petition set forth or any of them, and says that he is innocent of the grievances alleged in the said petition.

The said defendant further says that some time during last year he wrote and sent a letter to the Hon. Secretary of State of the United States, at Washington, D. C., U. S. of America, of and concerning the purchase by the said plaintiff, as Consul-General of the United States at Kanagawa aforesaid, of the premises and buildings occupied by the Consul-General of the United States there, as he, the said defendant lawfully might do, believing, as the said defendant then believed, that it was in the truth and in fact the case, that the said plaintiff had purchased the premises and buildings aforesaid as Consul-General, and that it was to the interest and benefit of the people of the U. S. that the said fact should be known.

And the defendant further says, that he admits that he, on or about the time of the alleged grievance set forth in the petition of the plaintiff, in the said letter to the Hon. Secretary of state aforesaid, did criticise the acts of the plaintiff as such Consul-General aforesaid, and that he, the said defendant, as a citizen of the United States, resident of Japan, may and might justly and properly criticise the acts of said plaintiff as an official of the United States, believing as the said defendant then and still believes, that it was true, that the said acts, namely, the purchase of the before-mentioned Consular premises and buildings by the said plaintiff as Consul-General aforesaid, were committed by him the said plaintiff, and that the same were improper, and that it was for the interest and benefit of the people of the United States that the same should be made known.

Therefore the defendant prays that the petition of the plaintiff be dismissed, that the said plaintiff be adjudged to pay all the costs of this action, and that the defendant receive such other relief, as from the nature of the case and in the discretion of the Court may seem right and proper.

Plaintiff said before proceeding with his evidence he wished to make an amendment in his petition by inserting the words "as Consul-General aforesaid" in paragraphs two and three, after the word plaintiff.

Mr. Weiller distinctly opposed the alteration, as the plaintiff had had the answer for some days and any alteration should have been applied for in writing.

The plaintiff said that if it took the defendant by surprise he would agree to an adjournment.

Mr. Weiller replied that they did not wish to adjourn.

The Court asked the plaintiff under what rule he applied for an amendment to the petition without previous notice.

Plaintiff said under the general rule of procedure, but he left it to the discretion of the Court.

The Court observed that the proposed alteration would materially limit the operation of the petition.

Mr. Weiller said his objection was based on purely technical grounds, not that it would make any material difference.

Plaintiff then withdrew his motion for leave to amend.

Plaintiff then said the whole issue appeared to be whether the words were spoken or not, the rest was mere impudence. The fact of the defendant writing to the Secretary of State had nothing to do with the issue.

Mr. Weiller requested that the witnesses for the prosecution be asked to withdraw.

Plaintiff said the witnesses were gentlemen well known to the community. It was rather an implication and he did not see the propriety of asking honourable gentlemen to leave the room.

Mr. Weiller replied that he had no desire to imply anything against any of the witnesses, but everyone knew how the influence that the testimony of one witness had with another.

His Honour said it was a matter within the discretion of the Court, and granted the application.

Gilman H. Prichard stated that he was a clerk in the employ of Messrs. Smith Baker & Co., of Yokohama. He had known the defendant for about five years. On the 30th or 31st, he thought on the 31st, of December last he was in the company of the defendant in the hall of the Yokohama United Club, No. 5B, Yokohama. He heard the defendant say that the General, or old General, had purchased the United States Consular buildings in an underhanded way for yen 2,200. That it was unlawful: that the Department of State had been notified and had taken no notice, that old Frelinghuysen would not always be there and then they would get him (the General) out. The General had been to the Kencho and bought them in an underhand manner. He had swindled the Government (meaning the U.S. Government).

General van Buren, Dr. Fisher, R.N., and Mr. Litchfield had been mentioned as candidates for the Presidency of the Yokohama United Club. The ballot box was on one side of the hall and the conversation took place on the other side. He told Dr. Tripler that he thought he was making a mistake in talking about the General in this manner. He was doing himself no good. People knew there had been a disagreement between them, but were surprised at his conduct, as at a previous election he had worked for the General.

To Mr. Weiller—The conversation took place between 5 and 7 o'clock in the evening and lasted for about half an hour. Mr. J. Douglas was present and defendant asked him had he voted. Numerous other members passed through including Mr. Beato, Mr. Walker, and Mr. C. de B. Stewart. He thought Mr. Beato heard a portion of the conversation, also Mr. C. de B. Stewart. Mr. Douglas was there all the time. The conversation arose through my remonstrating with the defendant for working against General van Buren. Witness commenced the conversation, and during it the words complained of were spoken. Mr. Douglas and witness were talking together and some one was voting. Dr. Tripler was in the bar, and rushed up and asked him not to vote for General van Buren. He then took up the list and seeing we had voted said he hoped we had not voted for the General. Mr. Douglas said he had voted for Mr. Litchfield as he was an old friend, otherwise he should have voted for the General. Witness said he had voted for the General. Defendant then spoke about the purchase of the Consulate. It was difficult to remember the exact words used in a conversation, but to the best of his recollection he said he (the plaintiff) had swindled the Government. He could repeat much more of the conversation which he had not communicated to the General. There was no more excitement about this election than usual. Plaintiff was not the only man that was abused, there was more or less talk. The ballot-box stood on the table on the right hand side of the hall facing the Bund, the conversation took place under the bulletin board on the left hand side. Mr. Beato was present during part of the conversation. Mr. Walker also heard part. On the Sunday following he (witness) was at the plaintiff's house and communicated the conversation. He did not go there with the special intention of doing so. Plaintiff said he had heard about the conversation, and about his remonstrating with the defendant so he (witness) then repeated the conversation.

Plaintiff here asked witness to repeat the conversation he referred to as not having been communicated to him.

Mr. Weiller objected as it should have been brought out in the direct examination.

After some discussion plaintiff asked the witness whether any other words were used during the conversation.

Mr. Weiller objected again as the plaintiff had no right to try back on the direct examination.

The Court asked plaintiff what point in the conversation he referred to.

Plaintiff said he did not know what the conversation had been about, but the door being once opened by the defendant he desired the whole conversation to be given.

The Court sustained Mr. Weiller's objection.

In reply to the question what led the witness to understand the United States Government was referred to, Witness replied that the defendant's reference to plaintiff's being an American citizen and to Mr. Frelinghuysen as Secretary of State, and his reference to what plaintiff's position would be if he were at home. He said plaintiff would have been imprisoned for it.

Felix Beato stated he had been in Yokohama for 21 years, and had known the defendant for 8 or 9 years. In the latter part of December he met him in the hall of the old Club, to the best of his recollection about 5 or 6 o'clock in the evening. He heard the defendant say that he had discovered how to smash the General to pieces. That he had bought the U.S. Consulate from the Kencho for nothing, and was swindling his Government. He had got it in an underhand way and was getting too much rent, and that he (defendant) was going to write to America about it. Witness had heard the same conversation about a month before. Defendant mentioned the price paid for the buildings but he had forgotten the amount.

To Mr. Weiller—It was in the afternoon that the conversation took place between 5 and 7 o'clock in the hall of the Club near the voting place. He was trying to get votes for the General. Defendant was talking to several people, some from Hong-kong, and several others. Mr. Prichard was present. Defendant was standing near the table under the bulletin board. He did not remember what started the conversation, but believed it arose from the defendant trying to stop people from voting for General van Buren. He did not recollect how

General van Buren, Dr. Fisher, R.N., and Mr. Litchfield had been mentioned as candidates for the Presidency of the Yokohama United Club. The ballot box was on one side of the hall and the conversation took place on the other side. He told Dr. Tripler that he thought he was making a mistake in talking about the General in this manner. He was doing himself no good. People knew there had been a disagreement between them, but were surprised at his conduct, as at a previous election he had worked for the General.

To Mr. Weiller—The conversation took place between 5 and 7 o'clock in the evening and lasted for about half an hour. Mr. J. Douglas was present and defendant asked him had he voted. Numerous other members passed through including Mr. Beato, Mr. Walker, and Mr. C. de B. Stewart. He thought Mr. Beato heard a portion of the conversation, also Mr. C. de B. Stewart. Mr. Douglas was there all the time. The conversation arose through my remonstrating with the defendant for working against General van Buren. Witness commenced the conversation, and during it the words complained of were spoken. Mr. Douglas and witness were talking together and some one was voting. Dr. Tripler was in the bar, and rushed up and asked him not to vote for General van Buren. He then took up the list and seeing we had voted said he hoped we had not voted for the General. Mr. Douglas said he had voted for Mr. Litchfield as he was an old friend, otherwise he should have voted for the General. Witness said he had voted for the General. Defendant then spoke about the purchase of the Consulate. It was difficult to remember the exact words used in a conversation, but to the best of his recollection he said he (the plaintiff) had swindled the Government. He could repeat much more of the conversation which he had not communicated to the General. There was no more excitement about this election than usual. Plaintiff was not the only man that was abused, there was more or less talk. The ballot-box stood on the table on the right hand side of the hall facing the Bund, the conversation took place under the bulletin board on the left hand side. Mr. Beato was present during part of the conversation. Mr. Walker also heard part. On the Sunday following he (witness) was at the plaintiff's house and communicated the conversation. He did not go there with the special intention of doing so. Plaintiff said he had heard about the conversation, and about his remonstrating with the defendant so he (witness) then repeated the conversation.

Plaintiff here asked witness to repeat the conversation he referred to as not having been communicated to him.

Mr. Weiller objected as it should have been brought out in the direct examination.

After some discussion plaintiff asked the witness whether any other words were used during the conversation.

Mr. Weiller objected again as the plaintiff had no right to try back on the direct examination.

The Court asked plaintiff what point in the conversation he referred to.

Plaintiff said he did not know what the conversation had been about, but the door being once opened by the defendant he desired the whole conversation to be given.

The Court sustained Mr. Weiller's objection.

In reply to the question what led the witness to understand the United States Government was referred to, Witness replied that the defendant's reference to plaintiff's being an American citizen and to Mr. Frelinghuysen as Secretary of State, and his reference to what plaintiff's position would be if he were at home. He said plaintiff would have been imprisoned for it.

Felix Beato stated he had been in Yokohama for 21 years, and had known the defendant for 8 or 9 years. In the latter part of December he met him in the hall of the old Club, to the best of his recollection about 5 or 6 o'clock in the evening. He heard the defendant say that he had discovered how to smash the General to pieces. That he had bought the U.S. Consulate from the Kencho for nothing, and was swindling his Government. He had got it in an underhand way and was getting too much rent, and that he (defendant) was going to write to America about it. Witness had heard the same conversation about a month before. Defendant mentioned the price paid for the buildings but he had forgotten the amount.

To Mr. Weiller—It was in the afternoon that the conversation took place between 5 and 7 o'clock in the hall of the Club near the voting place. He was trying to get votes for the General. Defendant was talking to several people, some from Hong-kong, and several others. Mr. Prichard was present. Defendant was standing near the table under the bulletin board. He did not remember what started the conversation, but believed it arose from the defendant trying to stop people from voting for General van Buren. He did not recollect how

General van Buren, Dr. Fisher, R.N., and Mr. Litchfield had been mentioned as candidates for the Presidency of the Yokohama United Club. The ballot box was on one side of the hall and the conversation took place on the other side. He told Dr. Tripler that he thought he was making a mistake in talking about the General in this manner. He was doing himself no good. People knew there had been a disagreement between them, but were surprised at his conduct, as at a previous election he had worked for the General.

To Mr. Weiller—The conversation took place between 5 and 7 o'clock in the evening and lasted for about half an hour. Mr. J. Douglas was present and defendant asked him had he voted. Numerous other members passed through including Mr. Beato, Mr. Walker, and Mr. C. de B. Stewart. He thought Mr. Beato heard a portion of the conversation, also Mr. C. de B. Stewart. Mr. Douglas was there all the time. The conversation arose through my remonstrating with the defendant for working against General van Buren. Witness commenced the conversation, and during it the words complained of were spoken. Mr. Douglas and witness were talking together and some one was voting. Dr. Tripler was in the bar, and rushed up and asked him not to vote for General van Buren. He then took up the list and seeing we had voted said he hoped we had not voted for the General. Mr. Douglas said he had voted for Mr. Litchfield as he was an old friend, otherwise he should have voted for the General. Witness said he had voted for the General. Defendant then spoke about the purchase of the Consulate. It was difficult to remember the exact words used in a conversation, but to the best of his recollection he said he (the plaintiff) had swindled the Government. He could repeat much more of the conversation which he had not communicated to the General. There was no more excitement about this election than usual. Plaintiff was not the only man that was abused, there was more or less talk. The ballot-box stood on the table on the right hand side of the hall facing the Bund, the conversation took place under the bulletin board on the left hand side. Mr. Beato was present during part of the conversation. Mr. Walker also heard part. On the Sunday following he (witness) was at the plaintiff's house and communicated the conversation. He did not go there with the special intention of doing so. Plaintiff said he had heard about the conversation, and about his remonstrating with the defendant so he (witness) then repeated the conversation.

Plaintiff here asked witness to repeat the conversation he referred to as not having been communicated to him.

Mr. Weiller objected as it should have been brought out in the direct examination.

After some discussion plaintiff asked the witness whether any other words were used during the conversation.

Mr. Weiller objected again as the plaintiff had no right to try back on the direct examination.

The Court asked plaintiff what point in the conversation he referred to.

Plaintiff said he did not know what the conversation had been about, but the door being once opened by the defendant he desired the whole conversation to be given.

The Court sustained Mr. Weiller's objection.

In reply to the question what led the witness to understand the United States Government was referred to, Witness replied that the defendant's reference to plaintiff's being an American citizen and to Mr. Frelinghuysen as Secretary of State, and his reference to what plaintiff's position would be if he were at home. He said plaintiff would have been imprisoned for it.

Felix Beato stated he had been in Yokohama for 21 years, and had known the defendant for 8 or 9 years. In the latter part of December he met him in the hall of the old Club, to the best of his recollection about 5 or 6 o'clock in the evening. He heard the defendant say that he had discovered how to smash the General to pieces. That he had bought the U.S. Consulate from the Kencho for nothing, and was swindling his Government. He had got it in an underhand way and was getting too much rent, and that he (defendant) was going to write to America about it. Witness had heard the same conversation about a month before. Defendant mentioned the price paid for the buildings but he had forgotten the amount.

To Mr. Weiller—It was in the afternoon that the conversation took place between 5 and 7 o'clock in the hall of the Club near the voting place. He was trying to get votes for the General. Defendant was talking to several people, some from Hong-kong, and several others. Mr. Prichard was present. Defendant was standing near the table under the bulletin board. He did not remember what started the conversation, but believed it arose from the defendant trying to stop people from voting for General van Buren. He did not recollect how

much Dr. Tripler said was paid for the buildings, he thought it was 2,000 yen or 2,200 yen, it might have been 1,700 yen. Witness explained that when he said for nothing he meant a nominal sum, he understood it as an English expression for anything that was bought for much under its value. He understood English much better than he could speak it. Defendant used the expression, "I will smash the General." There was some excitement during the election as there always is. He wished to get the General elected, others opposed him. He did not remember any of the other candidates being spoken ill of. Defendant did not abuse anyone else.

Frank Walker stated that he was a book-keeper and shipping clerk in the employ of Messrs. Butterfield and Swire. He had known defendant for 9 or 10 years. He was a member of the Yokohama United Club. He met the defendant at the end of last year in the Yokohama United Club; the election of President was pending. He did not hear defendant speak of plaintiff in the hall, but heard him make some remarks in the Bar-room which opened into the hall. Defendant began and said he had had trouble with the plaintiff about something and that he was going to make it warm for him. He mentioned that he had written to the Secretary of State. That the General had bought the Consulate, and that he thought it was not generally known and that he was charging too much rent for it. Mr. Beato was there at the time and defendant continued the conversation with him. He did not hear any more at that time. At other times he had heard a general running down of the plaintiff's character.

To Mr. Weiller—He could not swear to the date, it was in the evening after dinner about 9 or half-past. He did not remember being in the Club between 5 and 7 o'clock. He could not say whether he had seen Dr. Tripler before on that day, but might have seen him frequently. He voted for the President; the defendant was present and asked him not to vote for the plaintiff, saying he had bought the Consulate buildings and was charging too much rent and that he defendant had written to the Secretary of State about it. The conversation took place in the Bar after dinner. Mr. Beato and Mr. J. Douglas were present. He had received a summons from H.B.M. Court to attend this case. He had heard before this that a case was coming on between General van Buren and Dr. Tripler. The first time he heard about it was 10 or 14 days ago, and he had not communicated the conversation to the plaintiff.

The plaintiff said that closed his case. Unfortunately one of his principal witnesses, Mr. J. Douglas had left the country and he was unaware of his intention to do so until the evening before his departure. Mr. C. de B. Stewart, another of his witnesses had expressed such a desire not to be called that he had been excused.

Mr. Weiller, for defendant, moved for a non-suit on the ground that no action had been made out, pending which, the Court remarked that Mr. P. Osborne who had been called as a witness was obliged to leave and that he might be examined without prejudice to future objections.

Percival Osborne stated that he was employed in the Kanagawa Kencho. He had to do with the ground rents and transfer of land. Knew the position of the U.S. Consulate.

Upon being asked by Mr. Weiller who was the present owner of the U.S. Consulate buildings, the plaintiff objected to the question.

Plaintiff said that this defence could not affect the issue; he did not wish to deny any of his actions but the question of the ownership could not be gone into. If defendant desired to introduce evidence of this kind, he should have pleaded justification.

Mr. Weiller held that they had pleaded justification, and referred to a letter to the Secretary of State mentioned in the petition. They denied that the words were slanderous. The charge brought was that defendant had said the property had been bought by plaintiff and they had a right to prove it had been and also that he was charging too much rent for it.

Plaintiff said that in the answer the defendant had denied using the language complained of and therefore had no right to plead justification. If he had asserted that he had done so, and that it was true, he might then have pleaded justification.

His Honour said he was clearly of opinion that under the statute the Court was authorized to follow the Common Law and under the Common Law in an action of slander it was permissible to deny the accusation and afterwards plead justification. Justification must be pleaded. It appeared to him that the words of the answer excluded the conclusion that they justified the accusation.

The Counsel for the defendant then made application for permission to strike out certain words and otherwise amend the answer to the petition.

The Court said that authorities would have to be consulted in regard to Mr. Weiller's application, and he would adjourn the case till Monday next.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, MARCH 7TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Europe, via Hongkong, per M. M. Co. Tuesday, March 18th.*
From Shanghai, Nagasaki, & Kobe, per M. B. Co. Thursday, March 20th.

LATEST COMMERCIAL.

IMPORTS.

A fair general demand has existed for many descriptions of goods and Yarns, and the clearances continue much more satisfactory.

COTTON YARN.—The Market has been pretty well cleared of all "spot" cargo at present on offer and buyers have reluctantly been compelled to buy for arrival at rather higher rates than previously quoted. Bombays are also in more demand at advanced prices.

COTTON PIECE GOODS.—Shirtings continue dull and neglected, T.-Cloths likewise, but there is a moderate demand for Turkey Reds and Victoria Lawns.

WOOLLENS.—Mousseline de Laine continues to be sold to an average extent, but other goods have had very little attention from buyers, and most prices are quite nominal.

EXPORTS.

RAW SILK.

Our last was dated the 6th instant, since when there has been a large business doing in this Market, and the Settlements for seven days are fully 400 piculs. All classes, excepting coarse *Oshu* and *Taysam* kinds, have shared in the demand, and a rise of about \$10 per picul has been established for suitable lots.

The demand has been almost entirely for the United States Markets, *Filatures*, *Re-reels*, *Kakedas*, and even *Hanks* being freely taken for that destination. Cablegrams, reporting a better feeling in New York, coupled with the fact that the season's Export to date from Shanghai to the United States is now about 50 per cent. short (2,200 bales, against 4,200 bales same date last year) have caused buyers to be somewhat eager; and the native producer or dealer has benefited accordingly. From Europe news is not particularly bright, and purchases for that destination are few and far between.

Full-sized *Oshu* and *Taysam* sorts have again been taken in quantity for the native looms at Kiyoto, values being forced up to a level far above the prices which exporters can afford to pay. We withdraw all quotations accordingly, and the available Stocks are gradually being absorbed for internal use.

The O. & O. steamer *Khiva*, which left this port on the morning of the 8th instant, carried 77 bales for the Continent of Europe. The P.M. steamer *City of Tokio* (detained by bad weather till 4 p.m. yesterday) took 465 bales for New York, of which 37 bales are noted as being shipped by Japanese. These shipments bring the total Export up to 28,020 bales (the figures for the whole of last season were but 28,734 bales), against 22,479 bales to same date last year, and 14,886 bales in 1882.

Hanks.—These have shared in the general demand, about 100 piculs being settled, and shipped for the States by yesterday's mail steamer. In the daily list we note business done in *Shinshu*, at from \$520 to \$510, according to quality. Beyond this a few *Chichibu* reported at \$500.

Filatures.—This class has been in request, and about 150 piculs have found purchasers at full rates. Fine Silks have again been neglected, enquiry running on 14/16 den. thread. Among the purchases for the *City of Tokio* we notice *Tokosha*, \$630; *Yamanashi Ken*, \$620; *Shinshu*, \$620; *Koshu*, \$605 and \$600, with lower qualities at \$590 and \$585. Buying for next steamer has already begun at an advance in price, *Nihonmatsu* having been done at \$657½, with *Tokosha* at \$640.

Re-reels.—There has been a fair enquiry for these, but the scarcity of good parcels has tended to restrict business. We observe one or two small purchases at \$612½ for *Oshu Koriyama*, and \$600 for *Maibashi*.

Kakeda.—Again we have to report a good business, about 140 piculs of all grades having found buyers at enhanced values. The better classes have also participated, and business has been done in *Chochu*, \$605; *Phoenix*, \$600; but sellers will not go on at these rates. Medium sorts have been in strong demand as a substitute for "Re-reeled *Tsatlees*" and leave off with an upward tendency.

Oshu and Coarse Kinds.—Foreigners are quite out of the hunt just now: the home manufacture is gradually absorbing all supplies at very high prices.

England	2,639	3,297	2,847
Total	28,020	22,479	14,886

WASTE SILK.

Transactions have fallen off in this branch, and Settlements for the week do not exceed 150 piculs. Some few supplies have come in, and the Stock is increased somewhat. Buyers complain that the assortment on offer is far from attractive, but with the break-up of winter weather, fresh arrivals will doubtless come to hand. Judging from the production last year, there should yet be some decent lots to come in before the season closes.

The P. & O. steamer of 8th instant carried 134 bales, and the Export now stands at 20,793 piculs, against 19,228 piculs last year, and 17,666 piculs to same date in 1882.

Noshi-ito.—Fully half the transactions have been in this class. *Filatures* are reported sold at \$155, \$140, and \$135, according to quality. In *Joshu* *Noshi*, some sales have been made of Winter reels at \$86. Arrivals generally have been on a par with Settlements, and Stocks are practically unaltered both in volume and quality.

Kibiso.—The balance of purchases recorded are

entered in this class. Best qualities have again been conspicuous by their absence, and transactions are noted as follows:—*Sandanshu*, \$80; *Joshu*, \$33½, \$33, \$32½; *Hachoji*, \$20, \$15; *Low Neri*, \$8 and \$6. These prices are all for the rough "Stock" uncleaned and unpicked.

Mawata.—Nothing passing, and the position is unchanged as per former advices.

Total piculs	2,000	Total piculs	530

TEA.

During the early part of the week a pretty good business was done, but during the last two days, there has been less doing. The total Settlements foot up to 765 piculs, which shows a better business than we have been reporting for the past fortnight. On the 10th and 11th instant, two buyers purchased about 295 piculs of very common Tea at \$2½ to \$3½ per picul, respectively to be broken into dust by firing, and then shipped to New York by first opportunity, these purchases are not included in the above settlements. From the purchases made during the past week now under review, we find that buyers have been paying fully one dollar and a half over our last Market prices, and under existing circumstances we consider it advisable to alter the quotations. The Market closes firm as below. The next mail for San Francisco is the O. & O. steamer *Arabic*, and is advertised to leave here on the 28th instant, taking Tea at 3 cents per lbs. gross to the Eastern States and Canada, and at \$12.00 per ton of 40 cubic feet for San Francisco. Some small amount of Tea cargo has been shipped via Suez Canal to London, thence to be transhipped to New York at rates ranging, from 60 to 62 shillings per ton of 40 cubic feet. The following are the Tea shipments since our last Market Report:—87,727 lbs. for New York, per P. & O. steamer *Khiva*; 12,880 lbs. to New York, per O. & O. steamer *Arabic*, both via Hongkong. 12,704 lbs. for Chicago, 1,200 lbs. for Portland (Oregon), 93,445 lbs. for California, and 10,254 lbs. for Canada, per P.M. steamer *City of Tokio*, making a total of 212,210 lbs. of Fired Tea to the United States and Canada by these steamers.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylangylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR, a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE, and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

YOKOHAMA: SATURDAY, MARCH 22ND, 1884.

SUMMARY OF NEWS.

POSTHUMOUS honours have been conferred on the great-grandfather of the reigning Emperor.

HIS EXCELLENCY the Honorable F. R. Plunkett was received in audience by His Majesty the Emperor on the 21st instant.

A SUBMARINE cable has been laid between the village of Rotomo in the province of Hizen and the island of Tsushima.

CONSIDERABLE distress is said to prevail among the agricultural classes in the prefecture of Ibaraki.

OF eighteen brokers arrested on the 14th instant on suspicion of gambling in margins, seventeen were released on the 17th instant.

A FIRE broke out in Higashi Kuromoncho, Tokiyo, on the night of the 15th instant, and destroyed 170 houses.

A BUREAU for the preparation of the Constitution (*Seido-torishirabe-Kiyoku*) has been established under the presidency of His Excellency Hirobumi Ito.

HER MAJESTY the QUEEN has granted permission to Mr. W. W. Cargill to accept and wear the Insignia of the Third Class of the Order of the Rising Sun.

IT is announced that the ceremony of opening the railway from Tokiyo to Takasaki will be

performed on the 18th of April by His Majesty the Emperor.

A FARMER, by name Shibata Asagoro, residing in the village of Naka-yoshida, in the province of Ugo, has been sentenced to 10 years' imprisonment for a treasonable attempt to subvert the Government.

A STEAMER of 900 tons displacement was launched on the 14th instant from the Government shipbuilding yard at Shin-den, Hiogo. The vessel was built to the order of Mr. Nakamura Tinichin, of Kiyoto.

A CODE of Land-Tax Regulations has been published over the signatures of the First Minister of State and the Minister of Finance. The Regulations embody, and supplement, the various changes that have taken place in the system of land-taxation since the Restoration.

A LINE of steamers has been established to ply between the mouths of the rivers Fuji and Aizawa (in Koshiu). In connection with this enterprise, it is proposed to dredge the bed of the former river at an estimated outlay of 700,000 yen.

AN accident occurred in the harbour on the evening of the 17th instant. A boat containing over a hundred men upset while passing from the M.B.S.S. Co.'s steamer *Wakanoura Maru* to the shore. Eleven of the men were drowned.

A REPORT published by the Finance Department shows that up to the 20th of February the applications for Nakasendo Railway Bonds amounted to 8,166,000 yen. The Bonds were issued at 90, and the amount offered was five million yen. The Report says that the applicants were 677 in all, 153 being Banks and Companies. The premiums offered varied from .01, to 1.50 yen.

NOTES.

It will be remembered that the Municipal Council of Shanghai, some time ago, addressed a letter to the Senior Consul complaining of the disorderly conduct of Chinese soldiers in the foreign settlement, and requesting that steps should be taken to prevent, if possible, the passage through the streets of Mandarins attended by large escorts. To persons whose feelings are not excited by actual experience of the annoyances to which the residents of Shanghai were subjected, there is something almost sublimely high-handed in the notion that a few strangers living on Chinese territory for purposes of trade should undertake to prescribe the manner of going and coming of Chinese high officials. But if those officials cannot preserve order and discipline among their following, it becomes a nice question whether the perils caused by their progresses are not a violation of the treaties, which guarantee peace and protection to all foreigners residing within the settlements set apart for their use. The Consuls, however, would not accept that view of the matter. They declined to take the proposed steps, on the

grounds that "the discussion of certain rights of high Chinese officials would probably have no result." To this the Municipal Council replied, requesting that the whole correspondence should be forwarded to the Foreign Ministers at Peking. "The Ratepayers," they explained, "consider the right claimed by high Chinese officials to come into the Settlement attended by large numbers of armed men, who use force in order to compel every one they meet to stand aside as a mark of respect, is a matter of great importance in connection with the preservation of peace and good order in the Settlement." It will be observed that this is a repetition of the circumstances which foreigners found in Japan before the Restoration. So late as 1868, Captain Stanhope, of H.M.S. *Ocean*, was obliged to get out of his carriage and stand upon the Tokaido while a Daimyo's procession passed. Sir Harry Parkes, we believe, protested very strongly against this proceeding, and an ample apology was made by the Japanese Government. Yet it is worthy of note that when the men of Bizen wounded a Marine and fired a volley in Kobe in 1867, because their ranks were broken, Sir Harry was the one foreign Minister who endeavoured to have their offence condoned, recognizing that from a Japanese point of view, they had just cause for anger. It will now devolve upon him to deal with a similar, though even more reprehensible, state of affairs in China, and we have little doubt that he will devise some means of correcting the abuse, though not in the way suggested by the Municipal Council. In the meanwhile, it is fortunate that Chinese soldiers do not read the English local papers. Doubtless if they had not exhibited a truculent and violent demeanour, they would not be called "a stupid, brutish, and insolent pack of ragamuffins," a "rabble-guard" and "a crowd of unclean savages;" but, on the other hand, even if they were peaceable and gentle braves, such epithets as these might have a perturbing effect upon their spirits. There is a certain consolation in calling a man bad names when he makes himself offensive, but one feels doubtful about the dignity or wisdom of such a resource in the case under consideration.

TO THE numerous list of recent shipping disasters in these seas we (*Hongkong Daily Press*) regret to have to add yet another well known coasting steamer. On Saturday morning a rumour being current in town that the Scottish Oriental Steamship Company's steamer *Rajanattianuhar* had been lost, the local manager of the Company, Mr. G. T. Hopkins, wired to Bangkok an inquiry concerning her, and received the following reply by telegraph:—"Rajanattianuhar total wreck on Pulo Ranjang; crew and passengers saved by *Danube*; returned to Bar." The *Rajanattianuhar* left Swatow on the afternoon of the 25th February with 85 passengers bound for Bangkok. The steamer *Mongkut* passed the *Rajanattianuhar* and *Taichow* on the 29th February about twenty miles to the westward of Pulo Condore. The *Rajanattianuhar*, which was a fine steamer of 793 tons,

left Greenock for the Far East on the 1st April, 1875, under the command of Captain Hopkins, and was employed on the Bangkok line from the time of her arrival here under the same commander until the end of January, 1882, when Captain Hopkins left her to take up the post of shore manager of the Company's steamers. Captain W. Young Hunter succeeded him on the *Rajanattianuhar*, and was in command at the time of the disaster, concerning which no further particulars are yet to hand.

THE Council of Ministers in Paris has decided to interdict the circulation in France of a journal called the *Révolté*, which is published at Geneva. It has also ordered judicial proceedings to be instituted against the *République Démocratique et Sociale*, a daily newspaper edited by M. Talandier, deputy for Vincennes. The alleged offence is an article just published by that paper, over the signature of Michael Morphy, a disciple of Proudhon, containing these expressions:—"Property is theft. Death to the thieves! With the aid of chemistry there is no longer such a thing as a minority. The apostles of the people's vengeance, thanks to dynamite, will be able to conquer the wealthy class, despite its power, its police, and its troops." According to the French law of 1881, any attempt, whether successful or not, on the part of the press, to incite men to murder, pillage, or incendiarism, is punishable by imprisonment of from three months to two years, and a fine of from 200 to 3,000 francs.

FRENCH gentlemen who love their *petite verre* have just had a narrow escape. In the early days of January, the scientists of Paris set themselves to discuss the question whether in future it would not be advisable to adulterate alcohol with strychnine. The idea was not to poison wine-bibbers but to save them from the ill-effects of their excesses. The treatment of alcoholism by strychnine had, in fact, begun to be regarded with favour by the faculty, and from cure to prevention was an easy transition. A distinguished member of the Academy of Medicine, M. Dujardin-Beaumetz, has, however, proved, by experiment and observation, that if strychnine can modify the symptoms of drunkenness and of delirium tremens, it offers no sensible opposition to the various alterations produced in the organs by the presence of alcohol in the tissues. So the notion of adding it to alcoholic beverages by way of a corrective has been abandoned. None the less lively was the emotion caused by the prospect among certain classes of Parisians.

SHORTLY before the Restoration, says the *Jiyu Shimbun*, when the *kinno joi* (serving the Sovereign and excluding foreigners) spirit was at its height, a certain high-spirited Ronin, angry at the *Baku-fu* for not obeying imperial decrees, cut off the head of a wooden image of the third Shogun of the Ashikaga dynasty. This he did in the Todo-in temple at Kiyoto, and afterwards exposed the headless image to public view at Sanjo-gawara. A similar occurrence took place at Hiroshima, Aki Prefecture, on the night of the 21st of last month. During a course of Shintoist lectures at that place, one of the speakers vehemently attacked Buddhism, and, pointing to an idol close by, cried "Gentlemen! this idol, though covered with gilt and ornaments, cannot confer favours upon any one, nor can it bring punishment upon an unbeliever. If you doubt my words, I can and will prove you their truth," and in another moment he had decapitated the

object of his wrath. Many people in the audience hereupon grew greatly excited, and got as red in the face as a boiled cuttle fish.

A TOKYO journal tells a wonderful story of the success which has attended the preaching of a priest called Hôun Bugai, of the Zen sect of Buddhism. This enthusiast spent the greater part of last year travelling and preaching in the three prefectures of Tottori, Shimane, and Yamaguchi, with the result that 285,423 persons avowed themselves converts to his doctrines. Such bewildering figures make a considerable demand upon one's credulity. It is plain that if the results attributed to Mr. Hôun Bugai's eloquence be trustworthy, a campaign of fifteen or twenty years will suffice to make the whole population of Japan followers of the *Zenshu*.

THE question of the relative merits of the Krupp and Armstrong guns is one which will doubtless be definitively cleared up soon. In the meanwhile, the correspondence which we print elsewhere does not throw much light on the question. "Artillerist," writing to *Engineering*, challenges a comparative table published by Mr. Krupp, and justly points out that, to form a correct judgment, it is not right to compare a gun of 35 calibres in length with a gun of only 28.9 calibres. He then gives another table in which the performances of guns of the same length are placed side by side, considerably to the advantage of the Armstrong. Krupp, in his turn, challenges this table, and shows that in more than one respect it is incorrect, not, however, without himself falling into an error of calculation which another correspondent subsequently points out. We regret that Messrs. Takata & Co., have not sent us "Artillerist's" answer to Mr. Krupp. So far as the documents supplied are concerned, the advantage is certainly with the latter, but we cannot agree that the superiority of Krupp's gun is yet "clearly shown." Further trials will be necessary before the relative merits of the two weapons can be exhaustively determined.

A FEW days ago, says a recent, *Alla*, it was reported by the telegraph that Rev. Father Damazo Soto, of Concordia, Mexico, has discovered a key to the Aztec writings. This announcement excited considerable diverse comment, as it was known that the ancient Aztec picture writing had long ago been deciphered without much difficulty. The *New York Tribune* hazards the opinion that it is the the Toltec writings, and not the Aztec, to which Father Soto thinks he has discovered the key. Of the Toltec writings the *Tribune* says:—"We are not aware that any of this priestly text has been deciphered fully, though enough is known of it to warrant the belief that much of the language employed an esoteric meaning, and was intended to conceal supposed truths from the eyes of the vulgar, much as alchemists used to conceal the real significance of their speculations and formulas in the Middle Ages. Could this Toltec hieratic writing be deciphered, it is probable that new light would be thrown upon the religion and science of that ancient and interesting people, and such information would be particularly welcome in this era of analytic inquiry."

WHEN Mr. A. J. Wilkin states that the tariff revision of 1866 was a kindly measure adopted by upright Foreign Representatives to put an end

to the corruption which prevailed in the Japanese Customs Service, he treads on somewhat delicate ground. Lord's Elgin's tariff was a very simple affair. The precious metals, wearing apparel in actual use, and household furniture or printed books not intended for sale, were duty free. Fourteen enumerated articles paid a duty of 5 per cent.; intoxicating liquors paid a duty of 35 per cent., and everything else paid twenty per cent. Under the system inaugurated in 1866, eighty-nine different classes of imports paid eighty-nine different specific duties; eighteen were duty free, and twenty-four paid an *ad valorem* duty of 5 per cent. To ordinary minds it would seem the apparent intention of this elaboration was to guard against dishonesty, not on the part of Customs officials, but on the part of importers themselves. To men of Mr. Wilkin's high integrity no contingency, perhaps, seems that less probable than fraudulent conduct on the part of European or American merchants. Yet, as a matter of history, fraud was largely practiced in the early days. Not only were goods invoiced at merely nominal figures, but they were sometimes carried off from the hatoba without troubling the Customs at all. These things were well known at the time, and as heartily condemned by the better class of foreigners as they were ever deprecated by the Japanese. How much corruption existed among the Customs officials themselves there is no evidence to show. It was probably very great. But the undeniable fact is that the elaboration of the tariff was designed to guard against smuggling operations on the foreign side rather than against false returns on the Japanese. The less said about the circumstances of those days, the better. If there is anything to be proud of in the business, it is that the Representatives of the Treaty Powers, assisted by the advice of upright gentlemen like Mr. Wilkin, arranged the tariff in such a way that it became much easier for the Japanese to ensure its honest operation. But the terms of the tariff had already been fixed. Its revision on a five per cent. basis had been consented to by the Japanese. Those who deny that this consent was obtained under the pressure of superior force must find some more reasonable argument, than the hypothesis that an allied fleet went to Osaka to procure the Taikun's Government's co-operation in a measure designed solely to correct the morality of Japanese officials and to increase the Japanese revenue.

THE Queen's new book, which was sent out for review February 11th, previous to its publication, is said to be even more in the nature of a record of personal ideas, feelings, and experiences, than was her former volume. The prediction that it would deal largely with political topics is not verified. A few allusions to her sympathy with and regard for Lord Beaconsfield, with implied preferences for his policy as compared with that of Mr. Gladstone, are the only deviations from the line of private reminiscence which Her Majesty has apparently laid down for herself. When she speaks of foreign public events, such as the Franco-German war and the recent Egyptian campaign, it is to indicate the interest they possess for her as an individual, not as a Sovereign. Nothing connected with France is touched upon, excepting her relations with the Imperial family; and her maternal interest in the fight at Tel-el-Kebir, where the Duke of Connaught took some part, is the single reason for

mentioning it. The intention is to supply a sequel to the earlier narrative, describing with simple exactness the general course of the Queen's life "in the Highlands," since the period of the Prince Consort's death. The diary begins in August, 1862; and is interrupted at October, 1879; but is resumed in 1883, for a few pages. The figures which appear most prominently are the habitual companions and attendants of the Queen,—members of her family and others. John Brown's constant and active service is attested by more frequent references to him and his doings than to any other single subject. But the secluded and uneventful life which Her Majesty has led since she became a widow, naturally deprives the publication of anything resembling vivid interest. There was really little to relate, and the incidents of one month, or year, go on repeating themselves with slight variation from beginning to end. Not more than half a dozen exceptional occurrences are chronicled;—the announcement, by Princess Louise to her mother, of the engagement to Lord Lorne; the foundation of a "cairn" to the Prince Consort's memory; a house-warming, where the Queen, at Brown's request, drank whiskey toddy; the reception of the news that the French Prince had been killed in Africa; accidents to Brown and his recovery therefrom; a Royal picnic, at which the ubiquitous gillie had nearly a fight with a reporter who watched the proceedings through a telescope;—and possibly one or two besides. Probably the most striking feature of the book is the fresh evidence it gives of the Queen's unceasing reliance upon the rugged strength and fidelity of her favorite servant; for the explanation of which we need go no farther than to look at her state of social isolation, which has, in later years, denied her the advantage of domestic counsel and guidance from persons of her own, or approximately her own, rank. The closing passage of the volume contains this tribute to the trusted attendant:—"He served me truly, devotedly, untiringly. To say that he is daily, nay, hourly missed by me, whose lifelong gratitude he won by constant care and devotion, is but a feeble expression of the truth."

THE Okinawa (Riukiu) correspondent of the *Fiji Shimpō* writes under date of March 1st:—"In connection with the return of Mr. Shoten (son of Mr. Shotai, the former chief of the Okinawa clan) to this Prefecture, his father, who is at present at Tokiyo, has issued the following notice to the *Shizoku* and people of this Island:—"The Court has shown great leniency and kindness in the treatment of the people of Okinawa, and all should heartily respond to its wishes and obey the local administration. Anything contrary to this is very wrong. The return of Shoten is for the purpose of visiting the tombs of his ancestors and of adjusting family matters: this is the sole reason of his return. Therefore if any one should start a rumour to a different effect or otherwise agitate the public, it would not only harm the people of Okinawa, but cause me serious trouble, and strict punishment would follow. The people should clearly understand the state of affairs; they should quietly follow their avocations, and refrain from violating the laws of the Government. I have given all necessary instructions to Shoten and his steward, which the people will hear of, without fail." This notice was published in the capital, Naha, in the form of circulars, and was read aloud in other places to crowds of the

natives, who, for the first time, thoroughly understand the motives of Mr. Shotai. Many listened to the reading of the circular with tears in their eyes, as they well appreciated the kind feelings of their one-time master towards his people. The followers of the Black Party, however, took no notice of the arrival of Shoten. They intend to appoint a former influential official chief of the clan, and it is reported that they have sent a petition to the Chinese Government. But the influence of the faction is on the wane since the publication of the above circular, and many have even sent apologetic letters to Mr. Shoten.

EDITORIAL changes, with their consequences, have been much remarked, of late, by readers of certain leading London journals. The *Pall Mall Gazette* does not appear to have suffered, as many predicted it must suffer, from the withdrawal of Mr. John Morley; but it can hardly be doubted that it has lost a good measure of the authority and influence which that gentleman's coöperation and management brought to it. He probably did not succeed in adding materially to the circulation, if, indeed, he ever made good the loss which followed the exposure of the internal dissensions of the concern, three years ago. But the circulation of the *Pall Mall* never was large, nor was the importance of its position at all dependent upon the number of its readers. Its real power, when Mr. Morley supplied the leading articles, was due to the fact that he was implicitly followed by numbers of writers in and out of London, some of whom exercised a political force in papers of much greater magnitude and popularity than the little afternoon daily. In this way, he indirectly edited a good many journals besides his own. He certainly brought to his work an energy and an intellectual sincerity more than sufficient to satisfy the average needs of half a dozen ordinary periodicals. Of course his absence from the familiar field is greatly lamented,—not only by the *Pall Mall* clientele, but, with at least equal earnestness, by the group of devotees who found it convenient to take their ideas from him, and present them in their own columns with only slight modifications of treatment. The reasons of his retirement are not well understood; but it is asserted that his relations with his former associates are unimpaired, and that the resignation was entirely voluntary on his part.

Instead of seeking for a new editor, and thereby provoking comparisons which might be injurious, even if unjust, the proprietor of the *Pall Mall* has decided to carry on the paper with its old working force, minus Mr. Morley, and to leave the general management in the hands of Mr. Stead, who was next in command to the late chief. Mr. Stead has a fine reputation in that branch of his profession which concerns itself with editorial superintendence and direction, rather than with literary production. He is not, however, like many executive managers, without good gifts as a writer, and can take his turn with the best, on occasion, in discussing the vital topics of the day. Mr. Thompson, the owner, is not a trained journalist, but is best known as a maker of works on national economy, and a leader in the social field of politics. He was at one time private secretary to Lord Spencer. He has taken some steps toward abandoning the strictly impersonal method in his paper,—the second article being frequently signed with the writer's name. Apart from this detail, and a

greater apparent reliance upon actual current news than formerly characterized it, the *Pall Mall* offers no tangible indication of present or impending alteration.

* * *

Mr. Harwood has said good bye to the *Saturday Review*, and is succeeded, in editorial control, by Mr. W. H. Pollock, a younger member of a family well known in legal and literary circles. The *Saturday* is still a publication of such prominence as to give considerable interest to the details of its organization, although the days when it was the shining—and somewhat lurid—light of English criticism, are well nigh forgotten. The present generation can hardly call to mind the régime of Mr. Douglas Cook, and his band of literary free-lances. In his time, each reappearance of the truculent weekly was a social event. Whatever his principles may have been, Douglas Cook was certainly one of the most ingenious manipulators of newspaper material and resources that ever lifted a periodical to daring, and occasionally dizzy, heights of prosperity. He knew how to turn every element of interest to its best account. Finding it advantageous to his purposes, he made a personal mystery of himself, as well as of his associates and their doings. Probably there was nothing more marvellous in his origin or career than that of most people; but when his conspicuous position made him an object of inquiry, he affected reticence and obscurity, and thus wrapped himself in a mystic atmosphere, through the medium of which his proportions were certainly magnified, and probably unduly distorted. He was known to live in the Albany, and he was surprisingly prevalent in society, for a man who accomplished so much hard work; but as nobody could tell where he came from, everybody was excessively anxious to trace his origin and fix his antecedents. People who did not like him,—and there were legions of these before he had carried the *Saturday* through the first six stormy months,—vowed that he was an escaped convict. This was probably not generally credited. If it had been, half the newspaper owners in London would have been sending to Botany Bay for editors,—on a theory formulated by Abraham Lincoln, with reference to General Grant and whiskey drinking. He had been an attaché of the *Morning Chronicle*, during the discreditable period—if we remember rightly—when Napoléon III. bought that unlucky sheet and entrusted it to the most incompetent American he could possibly have picked out of the United States colony in Paris. The *Chronicle* went to pieces, as it deserved, but its best people were gathered together and marshalled under Cook's bâton in the new *Saturday Review* corps. But they were all under pledge not to reveal their identity, it being part of the editor's policy to invest the authorship of all articles with as much romance as his imagination could devise. It suited his fancy to have it get about that most of the "society sketches,"—the cleverness of which had a great effect in establishing the fortunes of the concern,—were the work of young Oxford and Cambridge graduates, newly created "fellows," unfledged barristers, and the like. In fact, there was a sufficient number of smart University men contributing, under Cook's leadership, to give colour to the report; but the body of the periodical was provided, each week, by men who were neither young nor fresh; by men—or sometimes women—who had for years pursued their vocation without obtaining, or expecting to

obtain, a tenth part of the applause which was regularly lavished upon the unknown contributors to the *Review*. An instance of Cook's peculiar craft occurs to us, in connection with the recent republication of a collection of *Saturday* essays, the parenthetical narrative of which may have an attraction for those who are interested in these topics.

* * *

The proprietor of the *Saturday Review* was Beresford Hope, a connection by marriage with a young nobleman who, though now the recognized leader of the Conservative peerage, at that time found it agreeable to preface book reviews for his brother-in-law's brilliant periodical. Lord Robert Cecil's pen was as bitter as his tongue proved to be in the House of Commons, and his productions were naturally appreciated by Cook in a kindred spirit. Whether Lady Robert Cecil ever contributed to the paper, or not, we are unable to say; but she was all at once credited with the authorship of as remarkable a series of "social studies" as ever adorned the pages of any English journal. The first of these, entitled "The Girl of the Period," caused people to open their eyes to an extent unusual even when the lively columns of the *Saturday* were under perusal. It was, in fact, written by Mrs. Lynn Linton,—an authoress now known to fame as the creator of some of the most powerful of modern fictions; but then in no wise distinguished above the usual order of nimble-handed newspaper attachés. The success of the initial essay caused it to be followed by several of the same stamp, and public curiosity was eager in search of the writer. Internal evidence betrayed the feminine origin, and, lest from that starting point the whole truth should be discovered, it was thought expedient to set inquiry on a false scent. Lady Robert Cecil was celebrated for a cleverness which, if not previously manifested in the same direction, was believed sufficient to qualify her for any achievement she might undertake. She was in constant companionship with her sister, Lady Mildred Hope, and Mr. Hope was owner of the *Saturday Review*. The scheme was thus ready made to Douglas Cook's hand, and was floated into popular acceptance without much need of his masterly strategy. From that day until a few weeks ago, the present Marchioness of Salisbury has worn the honours—such as they are—attached to the composition of "The Girl of the Period" effusions. The editor would never, so long as he could control the matter, permit Mrs. Linton to enjoy the celebrity to which she was fairly entitled. Perhaps she felt, herself, some hesitation in avowing the responsibility; for there are some tolerably audacious passages in the articles, and Mrs. Linton has once or twice shrunk from proclaiming her own handiwork,—notably, in the case of that remarkable allegory, "Joshua Davidson." However, this may be, she has at last disclosed herself, in the preface to a volume containing the essays. Not only has she disclosed herself, but she has made awkward suggestions concerning the pretenders who have shone by the light which she alone kindled. She affirms that she has twice been introduced to alleged authors of her productions,—one, a clergyman, and the other, "a lady of rank, well known in London society, and to this hour believed by her own circle to have written" the sketches in question. Mrs. Linton does not say that Lady Salisbury put forward any claim on her own behalf; but she strongly hints that it

was her duty to disavow "the soft impeachment." So we have, in this disagreeable sequel to a journalistic deception, a new proof that "the evil that men (like Douglas Cook) do lives after them."

* * *

In these days of the *Saturday's* decadence, it is difficult to refrain from thus glancing back to its period of greatness, although we admit that the dexterous machinations of a bygone editor have little to do with the recent accession of a new one. Under Mr. Harwood, who has just retired, the paper continued to exhibit all the rancour and malignity with which his predecessor invested it, but comparatively little of the determined purpose and systematic energy of its youth. It was so carelessly, not to say recklessly, conducted, that its political utterances almost ceased to attract attention. Its discussion of continental questions was at times ludicrously feeble. The literary and general departments were, however, kept at the old standard, or very near it; and upon these the character of the paper has mainly rested. It is somewhat curious that, if we may judge from Mr. Pollock's antecedents, the incoming editor is less likely to infuse vigour and earnestness where these were most needed, than to further develop the merits of the minor features. He is known among journalists as a well informed art critic, and a careful reviewer of French and English theatrical productions. Whether his dainty refinement of taste is the quality needed to restore the *Saturday* to any similitude of its ancient potency, is a question which answers itself. But Mr. Pollock has a reputation for conscientious accuracy which he may succeed in imparting to those of his staff who have, in late years, suffered from the need of authentic guidance. He has undoubtedly a fine opportunity. Little appears to be expected of him, and if he contrive to reverse the downward course of the still conspicuous periodical confided to his care, his success will be all the more striking; and his reward the more substantial.

ACCORDING to the *Kwampo*, the Consular report from Ginsen, dated February 11th, indicates that the Koreans seem at last to have recognized the benefits to be derived from foreign trade, and the momentous necessity of developing their own industries. Most of the inhabitants are engaged in establishing commercial firms in the larger towns, but some are latterly turning their attention to the manufacture of goods for export. Min-O-Shok, President of the Commercial Bureau, who was in China and Japan during the early part of last year, has, in connection with a certain Councillor in charge of military affairs, established a large export firm, with a view to further foreign trade. He intends, with the assistance of experienced Japanese, working the gold mines in Kyōng-sang-do and other provinces. The above-mentioned Councillor has, moreover, started a brewery and a wine factory, in connection with fourteen of his colleagues. White, red, yellow and blue ("blue ruin") wines are manufactured, and reported to be of excellent quality. Another firm, known as the Taido Trading Company, has been started in Hei-an-do. All of these establishments are semi-official. A secretary in the Foreign Office has opened a tobacco factory, and is engaged in the manufacture of cigars in the European style. The tobacco is of various grades, the leaves more nearly approaching those

of the Western tobacco than does that of Japan. Should the manufacture of cigars be improved, there is every probability that Korean tobacco will sell well; but as yet the quantity produced is so small that it does not reach the markets. The establishment of other trading firms is continually going on, and, though there are no data as to the actual result, the fact that the natives have begun to appreciate the importance of foreign trade is a good omen for the future. On the 21st of last September, the *Kokaku Maru*, a little vessel of 87 tons, bought in Japan, sailed for the first time from Korea to Nagasaki, with a full cargo of hides, cotton goods, seaweed, etc. The vessel was commanded by a Korean captain, and was the first to engage in direct export from Korea.

* * *

The same report further states that Go-keicho, the commander of the Chinese troops stationed in Sōul, is said to be about to leave for Canton in company with about 1,000 soldiers. It is, however, rumoured that he intends going unescorted to Tientsin in the first instance, after which he will return and conduct his men to Canton. The minting of a new coinage was carried on extensively during 1883. Coins were struck off both officially and by private individuals up to last November, in which month the work was temporarily suspended. In January of this year private coinage was permitted for a period of ten days, at the expiration of which period all further coinage was strictly prohibited and the mints destroyed. The *Tenkan-Kioku* is the only still existing mint.

* * *

On the subject of the new coins the *Nichi Nichi Shimbun* appends the following remarks:—The new one *mon* coins have not yet come largely into circulation, but as they were intended to remedy the over-issue of 5 *mon* coins they have been carefully minted and are of a uniform weight, which was not the case with the old 5 *mon* coins. Still, it is to be apprehended that this uniformity of weight will not much longer be their commendable characteristic if the mintage is carried on in any other place than the *Koku-fu*. Each of the new *mon* coins weighs exactly one *momme*; but, as they are composed of 6 parts of copper and four parts of lead and zinc, they weigh 2 *fun* less than the old one *mon* pieces. Their small size is an argument decidedly against them.

A SAILOR belonging to the American ship *Frank Pendleton* dropped down dead near the Union Church on Thursday shortly after noon, and a *post mortem* examination made yesterday by Dr. Eldridge showed that death resulted from apoplexy caused by alcoholic poisoning. As indicating the quality and effects of the so-called liquors sold to the unfortunate sailors frequenting this port, it may be worth recording that although the deceased had been in Yokohama but a short time, and the debauch during which he died was of comparatively brief duration, the terrible decoctions of which he had partaken had produced effects upon the vital organs far more severe than in ordinary cases of alcoholism, even if chronic, and closely resembled those found after death from substances universally acknowledged to be poisons, *e.g.* arsenic. The man was, in fact, poisoned, and none the less so that no evidence can be found to prove that he had partaken of anything other than the usual beverages sold at the lower class of public-houses.

THE news received by the American mail shows that the estimate we recently formed of the English Government's policy in Egypt was correct. The programme of General Gordon and Mr. Gladstone is to abolish Turkish and Egyptian rule in the Soudan and to restore the country to its original rulers, the Arabs. A telegram published in the *New York Herald* of February the 7th says that the following extract from a letter of Gordon's has been made public:—"It is no secret that England has abandoned all intention of guaranteeing the continuance of Egyptian supremacy over the Soudan. It has declared that the task is altogether too onerous, and would be attended with no corresponding advantages. It will, therefore, allow the people now in rebellion to revert to their old Sultans." This decision is fully endorsed by Gordon. His characteristic verdict is that "unless England shall secure the Soudan in the possession of a good Government, she ought not to conquer the country herself nor allow others to do so." That Mr. Gladstone fully shares these views is proved by his speech in the Commons on February the 12th, in answer to Sir Stafford Northcote's motion of censure. General Gordon, he explained, had a plan of his own for extricating the garrisons and pacifying the country. He proposed to "restore the former rulers to their ancestral power, usurped by Egypt." The only difficulty to be anticipated in obtaining the Mahdi's consent to this arrangement is that it will confine him to the Soudan. But if, as Gordon supposes, the insurrection is wholly the result of local misrule and not motivated by any larger purpose, there is no reason why that limit should prove a serious obstacle. General Gordon's methods of dealing with the insurgents are illustrated in the message he sent from Korosko to a troublesome Sheikh:—"Meet me at Khartoum. If you want peace, I am for peace; if you want war, I am ready." It is discouraging to find that his chances of success are doubted by no less an authority than Sir Samuel Baker, who has gone to Cairo. Meanwhile, the excitement in England appears to be very great. Professor Tyndall, writing to the *Pall Mall Gazette*, says that "the latest shame and scandal which the Government's cowardice has inflicted bring the country by no means to the end of its humiliations: while *The Times* declares that "if the Government fails to recognize its obligations at a crisis vital to our honour as a nation and to our existence as an empire, it will be a sad and sorry ending of a life of illustrious public service." The *United Ireland*, on the other hand, congratulates the Mahdi on his successes, and the Government, replying to a question asked in the House of Commons, have disavowed any intention of prosecuting the Nationalist organ. The Irish agitators have their own special reasons for rejoicing at the Mahdi's victories, but after all they can hardly be prosecuted for wishing success to a leader who has the British Cabinet's approval.

THE Japanese *littérateur* discloses sometimes a pleasant vein of humorous philosophy. One of them, writing in the *Yomiuri Shimbun*, imparts the information that Mr. Tennyson receives as much as one thousand dollars for a short set of verses, and calls upon his readers to mark the different condition of affairs in Japan. "Here," he says, in substance, "the poet or essayist may wrestle with his theme, and polish, and elaborate with all his might; and then he is

plunged into anxiety as to whether his production will ever reach the glory of publication. Look at us! We pay the postage on our heavy manuscripts, and do not expect to get even that small outlay back. It is enough if we see ourselves in print. But,—one thousand dollars for a few stanzas! I wish I lived in Europe,—oh! how I wish it!" . . . "While writing these words," he adds, "I was interrupted by hearing some one in the next room exclaim,—'A dullard is a dullard, in whatever part of the world he may be.'"

On the 19th inst. a lecture on "Nerves" was delivered at the rooms of the Alpha Lodge, No. 42, under the auspices of the I.O.G.T., to an appreciative audience, by the Rev. G. T. Smith. The lecture was followed by songs by Miss Abbey, and by Messrs. Butland and Thorn of H.M.S. *Sapphire*. Short addresses from Rev. F. Bennett and Mr. Bunting, the Chairman, with closing prayer by the Rev. Mr. Garst, brought an enjoyable evening to a close. We understand that similar meetings are to be held fortnightly at the above rooms.

THE funeral took place on the 19th inst. of the men drowned through the recent boat accident in the harbour. The procession, which was formed at Noge, presented a sad spectacle as the ten bodies were borne up Ishikawa Hill on the way to the cremation ground near the racecourse, as the thought naturally arises that the lives spent were recklessly thrown away. The accident has been a great deal talked about, and almost every foreigner who refers to the subject has some experience to relate of the wanton risks daily run by Japanese in the matter of overcrowded boats. Nor is the danger confined to workmen going to and from ships in the harbour following their daily avocations. Since the accident to which we now refer, a case of overcrowding was seen in a sampan which landed a firing party from one of the Japanese men-of-war now in harbour. A foreigner on the bridge at the end of Water Street, noticing a boat with her gunwale within an inch or so of the water, stopped to count the number of men who got out of her when she came to the steps. The boat was an ordinary sampan in charge of two sendoes, and 35 men and two officers came to the Creek steps in her from the man-of-war anchorage. The men were on the way to the Rifle Range and had their rifles, and, it may be assumed, a fair quantity of ball cartridge, which, with their accoutrements and foreign seamen's rig would have probably drowned half the number had the boat been caught in the swell of a Yokosuka steamer or by other means shipped a little water, as the men were so thickly stowed that there was no room to bale the boat out in such a case.

Vanity Fair thus writes of Mr. Satow, H.B.M.'s Agent and Consul-General in Siam:—"Mr. Ernest Satow was Japanese Secretary at Tokiyo, and co-editor of 'Murray's Handbook of Japan.' Mr. Satow, a B.A. of London University, entered the Eastern Consular Service by open competition, in 1861, since which time he has been the backbone of whatever establishment he has belonged to. No man ever more thoroughly deserved the promotion which has now been accorded to him, fortunately whilst he is still at an age when he and the country are likely to profit by it. By this appointment Lord Granville enunciates the grand principle that any boy

going up for an appointment in the Chinese and Japanese Consular Service by open competition may, if he proves himself worthy, rise to the very highest posts in those countries; for there cannot be any doubt that Mr. Satow's appointment as Her Majesty's Agent in Siam is merely a stepping-stone to his future promotion to Tokiyo or to Peking when the proper moment arrives. Of course in a series of appointments such as this someone must be disappointed. Everybody must be sorry that Mr. Newman, who has served so long and so ably at Bangkok, should be superseded; but it is only for the moment."

THE *Hongkong Daily Press* of the 8th inst. publishes the following relating to the Triad Society:—"Rumours of various kinds were rife among the Chinese in this Colony yesterday with regard to the doings of the Triad Society on the mainland. The most generally diffused rumour was that they had set fire to Canton, and it was in flames on both sides of the river. On inquiring at the office of the Chinese Telegraph Administration, we found that the line was out of order and not working. We also made inquiries of the officers of the *Kiukiang* on her arrival from Canton in the afternoon, but everything was quiet when she left, and they had heard of no trouble whatever other than the destruction of two houses by some accidental fire. The other rumours we heard were that the Society men had risen in Mirs Bay, and had attacked Kowloon City, which they had sacked. Chinese rumours, however, are in at least nine cases out of ten almost without foundation; the Canton one seems of this class, and it is most probable the others are equally unreliable.—We hear that upwards of a thousand Chinese belonging to the Triad Society have quietly left Hongkong, unarmed, with the intention, it is believed, of joining the rebels in the Kwei-shin district.—Latest reports from Canton state that all is quiet there, and there have been no risings by the Triad Society men or other rebels, nor has the city been set fire to. Thursday's wild Chinese rumours have all turned out to be unfounded."

MR. HENRY BUCK, perhaps better known as "Hotspur" of the *Daily Telegraph*, died last week, says a recent home paper, after a long illness, which had withdrawn him from his professional duties since the autumn of 1881. He was one of the best-known and most popular members of the industrious band whose business it is to supply our dailies with a weekly article and daily comments on sporting intelligence, and in his time was found a worthy successor to poor Harry Feist, the original "Hotspur" of the Peterborough Court organ, a paper that has always been very strongly represented in its sporting contributors. The present "Hotspur," whose happy knack of writing causes his article to be always sought for, is Mr. Greenwood, a partner of Mr. Buck in a commission agency.

The original "Hotspur," Feist, made the reputation of the *Telegraph's* sporting column, and in his time gave some remarkable predictions, but we remember one instance when he was altogether "out of the hunt." The occasion was the Liverpool Grand National of 1872. As the day approached for the great gathering at Aintree, Casse Tête came into the betting, and this fact alone was sufficient to induce some of the numerous tipsters to mention the animal

in their sporting notes as a possible winner. "Hotspur" in the *Telegraph*, pooh-poohed the idea of Casse Tête's ability to stay the course, much less that "the undersized, washed-out looking brute" should be in dangerous proximity to the winner at the finish, and in his final notes previous to the race said, if "Casse Tête wins the Grand National I will undertake to eat the beast." It is a matter of turf history that Casse Tête won the race from 24 others, and poor Feist never heard the last of it to the day of his death. It was quite true, however, that the washy-looking chesnut belied its appearance, for many a bigger and better-looking Japanese pony has been saddled on the Negishi Hill.

A TELEGRAM in a New York paper, dated London, Feb. 11, announces the death of Mr. Thomas Chenery, editor of *The Times*. Mr. Chenery, who succeeded the late Mr. Delane in 1877, was born in Barbadoes in 1826 and educated at Eton and Cambridge. Afterwards he was admitted to the English bar at Lincoln's Inn. In 1868 Dr. Wilberforce, Bishop of Oxford and Lord High Almoner, appointed Mr. Chenery Lord Almoner's Professor of Arabic at Oxford. He belonged by appointment of the Sultan to the Order of the Medjidie and was Secretary of the Royal Asiatic Society. He was one of the English revisers of the authorized version of the Old Testament. As an Oriental scholar he is best known by his translation of "The Assemblies of Al Hariri," and by his edition of "Macheroth Ithiel." He is the author of various literary and political writings.

THE Lynch Family of Bellringers, said by the Hongkong papers to have left that port for Yokohama, have decided to remain in Hongkong for a short season, before coming to Japan. The manager writes to say that the party may be expected here about the end of the present month. The *Bombay Gazette* thus refers to the troupe:—The Lynch Family, judging from the uniform warmth of the reception accorded to them by the audiences that have witnessed their performances at the Gaiety Theatre, are likely to reap the same bountiful harvest of success that they have enjoyed elsewhere. . . . To the Lynch Family belongs the credit of being the Pioneer Campanologists in India and so long as bellringing is performed by such clever performers as they are there is every reason to believe it will be as popular here as at home."

A LONDON telegram, which appears to have escaped notice hitherto, mentions a statement, said to have been made by Li Hung-chang, to the effect that the Chinese forces at Bac-ninh had been ordered to withdraw twenty-five leagues to the northward. This intelligence is dated January 17th, and judging by the result of the last fighting in Tonquin, it seems more than probable that such an order was actually issued. The forecast suggested is that China does not mean to fight openly so long as her own territories are not actually threatened. She has two courses before her, either to accept the mediation that will now be offered, probably by America, or to continue the policy of covert assistance, which, up to the present, has given its backbone to the resistance of the Black Flags. The latter are not much less formidable than they were a year ago. They have lost a good many positions, and been severely beaten several times, but they are still a troublesome

factor, to be completely eradicated before the French task can be counted accomplished. It is possible that during the summer they may carry on a harrassing species of guerilla warfare in the mountainous districts between Sontai and Laokai, or even in the delta itself of the Red River, and that China looks to obtain something of her desired terms in exchange for undertaking to rid France of this embarrassment. But, for the rest, it cannot be expected that France will pay much attention henceforth to Chinese menaces. After all the tall talk and brave declarations we have heard, it now appears that the Marquis Tsêng was the sole defender of Bac-ninh. A gallant defence he made, too, in his own way; but one cannot help reflecting, that had he better estimated the true temper of his Government, China's prestige would not have suffered so cruelly.

AMONGST the telegrams taken from the Shanghai papers and published on the 20th inst., there is one which was not sent here announcing an action in Egypt about a fortnight previous to the great fight in which so many of the enemy fell. This message, which is dated London, March 2, does not give the *locale* of the fight, but the British loss is stated to be fifty killed and wounded, while that of the enemy was a thousand.

ACCORDING to an Imperial Notification of the Council of State, H.I.H. Torihito, the father of Kokaku Tenno (one hundred and nineteenth Emperor and great-grand father of the reigning Mikado), has been granted the posthumous title of *Tai-jo Tenno* (Supreme Emperor), and canonized as *Kei-ko Tenno*.

THE trial of the fifty-two members of the Park Club, London, charged with gambling by playing baccarat at the rooms of the club, has been recently concluded. The proprietor of the Club and the members of the Committee were fined £500 each, and the players £100 each. An appeal from this decision was lodged.

A FOREIGNER while passing through the Shimbashi railway station on Thursday was relieved of his watch. Considering the number of warnings the public have had about watch-lifting at the Tokiyo station, it is rather surprising that people do not remember when arriving at the Capital terminus to "pocket their watch and watch their pocket too." The way in which many persons wear a watch and exhibit a foot of heavy gold chain is a premium on theft, although we are not aware this was the case with the latest victim.

IN H.B.M.'s Court on Thursday, before N. J. Hannen, Esq., Judge, Patrick Burnside was summoned by Messrs. Boyer & Co., of the Grand Hotel, for \$32.10 for board and lodging. The defendant did not appear, and one of the partners of the firm having produced a promissory note signed by the defendant, which he had refused to pay, His Honour gave judgment for Boyer & Co. for the amount claimed, with costs.

ADMIRAL COURBET has written to Admiral Peyron, French Minister of Marine, bitterly complaining of being superseded by General Millot in the command of the French forces in Tonquin, just as he was about to attack Bac-ninh.

THE Chinese Government telegraph lines are steadily being extended. The wires have been in working order between T'ung-chow, a town

twelve miles from Peking, and Shanghai, with Tientsin, Nanking, and several other important places *en route*, for some months; and now we learn that a line between Shanghai and Foochow has been completed and opened for traffic.

It would not be generally supposed that passengers by rail are in the habit of leaving money behind them in the carriages. Nevertheless the records of the police station at Shimbashi show that the amount of the money thus forgotten in first class carriages on the Tokiyo-Yokohama line during 1880 was 628 *yen*.

It does not appear that the folks who cater to the appetites of native Lotharios of Yokohama drove a very prosperous trade during 1883. The total earnings of the casinos in Maganechô, Yairakuchô, and Takashimachô only amounted to 173,471 *yen*, of which 59,760 *yen* were the receipts of the female furniture of the establishments.

WE read in a vernacular journal that the total amount of the taxes on vehicles collected during 1883 was 363,300 *yen*, which sum is from thirty to forty thousand less than the average of the preceding two years.

THE number of civil cases appealed to the Supreme Court in Tokiyo, during the month of February, was sixty; and the number of appeals decided, seventy-one. The number of criminal cases appealed was 334, and the number decided, 310.

WE have not been visited during the past two months by so many shocks of earthquake as usual, but on Saturday night about half-past seven the inhabitants of this Port received a sudden and violent reminder in a strong, sharp shock.

HIS EXCELLENCY the Hon. F. R. PLUNKETT, H.B.M.'s Minister to Japan, arrived here on Saturday in the P. & O. steamship *Kashgar*, and shortly after proceeded to Tokiyo.

THE Manila *Comercio* of the 1st inst. says:—"To-day news has been circulated of the receipt of a telegram announcing suspension of payment by the London house of Messrs. Martin, Dyce and Co. We regret this disaster which has fallen on one of the oldest mercantile firms in Manila."

THURSDAY being the anniversary of the Spring Festival (*Shun-ki Ko-rei Sai*) most of the vernacular journals observed a holiday. The Princes, Ministers of State, Privy Councillors and all officials of *sonin* rank proceeded to the Palace, and were present at the ceremonies performed there.

WE are informed that the P. & O. steamship *Khiva* left Hongkong at 4 p.m. on Thursday for this port, *via* Nagasaki and Hiogo, and that the English mails of the 8th February are on board the O. & O. steamer *Arabic*.

THE Russian cruiser *Razboingh* (8), Captain Pojarsky, arrived here on Thursday from Honolulu, after a fine weather passage of 33 days. The *Razboingh* exchanged salutes next morning with the port and *Sapphire*.

THE Occidental and Oriental steamship *Arabic*, for this port, left Hongkong on Wednesday, at 3 p.m. The *Arabic* is bringing up the English mail of Feb. 8, and may be expected here next Tuesday.

JAPAN AND KOREA.

THE *London and China Express* discusses the new tariff and trade regulations between Japan and Korea in a spirit not usually betrayed by writers on such subjects. To a casual reader the impression conveyed is that our contemporary's article was inspired by a sentiment of engrossing anxiety to cast some reproaches in Japan's teeth, and of ungenerous delight at the prospect of an occasion to be severe. In one respect, perhaps, we ought not to complain of this exhibition: it imparts to a naturally colourless thesis lights and shadows which greatly improve its sombre aspect. But when a newspaper which usually displays a desire to divide its vision equally between both sides of a question, suddenly abandons the judicial rôle, and assumes the part of an unreasoning opponent, it is apt to lose in credit what it gains in animation.

The article to which we allude contains so many remarkable statements, set forth in such vigorous language, that we reproduce in full the portions of it which refer to the subjects under discussion:—

In her treatment of Korea we have now the standard created by Japan herself. We need not revert to our own ideas of right and wrong, our methods of dealing with a weaker nation, our standards of justice and good policy, and apply them to Japan. For eight or nine years past Japan has supplied us with means for estimating her sincerity when she professes indignation and discontent at the treaties now binding her to the West. Korea is a weak, ignorant, secluded country; Japan is now the powerful neighbour, with ironclads, machine guns, and repeating rifles, with intimate knowledge, too, of international matters. The case of thirty years ago, so far as Japan is concerned, has been reversed, and has she practised the precepts which she has busily inculcated lately—tenderness and moderation to the weaker and more ignorant neighbour at her feet, and scrupulous respect for her rights and independence (?) Japan complains, and justly, of the violence and outrage of individual foreigners in the first years of the foreign settlements; has she done better in Korea? We think not. It is not very long since a number of Japanese residing in Fusan sallied out from the settlement to force the officials of the neighbouring populous town to give them the satisfaction they demanded; the Consul—we speak now of three or four years ago—at Fusan in his numerous disputes with the Korean authorities was not unfrequently accompanied by a train of his fellow-countrymen to overawe the Korean populace and officials. All private accounts from the settlements speak to the arrogance of the lower Japanese officials and residents to the natives who come in contact with them. It was for some years a bitter complaint of Japanese politicians that a small English and French force was maintained at Yokohama, but Japan maintains in Korea a large force of armed police, and the powers which she claims over her settlements in Korea are far greater than those ever claimed by Europeans in Japan. In short, Japan in dealing with Korea has read in the book of the Western Powers in dealing with Japan, and has bettered, vastly bettered, the instruction. Whatever she has most complained of in the past conduct of the West, she has herself done in Korea. We are, therefore, not surprised to find on examination of the new regulations for trade between Japan and Korea that almost everything which Japan most objects to in the tariff between herself and Western Powers is carefully inserted in the instrument she has just concluded with her neighbour. She demands from the West rights and privileges which she resolutely refuses to Korea; everything which she has declared most unjust and wicked when required from herself she now demands and obtains from Korea. The measure which she demands shall be meted out to her is precisely the measure which she will not mete out herself. Our readers shall judge for themselves as to the justice of these strictures.

Japan at present refuses to all but one or two favoured individuals the right to charter foreign vessels to visit unopened ports. Rice may rot in the north and west rather than that it should be conveyed in a foreign-owned ship. But she appears in Korea as the apostle of a free coasting trade. Article XXXIV. of the regulations provides that Korean subjects may freely charter Japanese merchant vessels; and by Article XXII. Japanese vessels may convey goods of any country whatsoever between the trading ports of

Korea. Even the Japanese Government appear to have been struck by the fact that they are demanding from Korea privileges which they desire to refuse in their own country, for they insert the very lame sub-clause:—"When, however, Korean shipping has become sufficient for the coasting trade of Korea no foreign vessels shall be used to convey Korean produce from one Korean port to another." Who is to be judge of the "sufficiency" of Korean shipping? and is Japanese shipping sufficient for her own coasting trade? We find, again, provisions of the most complete kind for drawbacks, while Japan herself is anxious to reduce the system in her own country to a nullity. While she quarrels with extra-territoriality she establishes it in a full and extended form for her own subjects in Korea. She was very restive for a few years under the foreign post-offices in Japan; yet she establishes her own post-offices in Korea. She insists that drugs entering Japan shall pass her examining bureau, but in Korea the guarantee of the Japanese Consul that opium is for medicinal use among Japanese shall be quite sufficient to pass that drug in freely.

Let us look now at the tariff. Japan objects strongly to *ad valorem*, and wants specific duties; accordingly we find that every item in the Korean tariff is *ad valorem*. Nominally this tariff is 5 to 30 per cent., really it is a 5 per cent. tariff on Japanese goods—precisely the tariff which Japan complains is bringing financial and commercial ruin to herself. True there are certain articles paying 8, 10, 20, and 30 per cent., but they are almost without exception articles, not of Japanese, but of foreign manufacture. Under 5 per cent. we find camphor, copper, kerosine oil (which will arrive in Korea through Japan), "paper used by Japanese," "Japanese provisions," and "articles in common use by Japanese" (a wide phrase). Yet Japan demands 30 per cent. for "foreign provisions" and "articles in common use by foreigners." Japanese cloth stuffs are almost all subject to a duty of 8 per cent. What, then, it may be asked, pay high duties in this tariff prepared and carried through by oppressed and ill-treated Japan? Gold and silver ware and electro-plate, velvets, carpets, foreign spirits, and wines, and the like pay 20 to 30 per cent. Japanese *saké*, by the way, pays only 8 per cent. in Korea. The tariff, in short, amounts to this:—Japanese productions, and articles generally required by Japanese in Korea, pay 5 to 8 per cent. *ad valorem*; Japan demands that foreign productions, and articles generally required by foreigners in Japan, shall pay 25 to 30 per cent.

We should be pleased to receive some explanation of what at present looks like inconsistency. Either Japan has treated Korea heartlessly and cruelly, or she has not. If she has not, then she has no ground of complaint against foreigners for doing the same; but if she has it would be more consistent that she purged herself from her offences, and came into Court with clean hands. No one can blame Japan for endeavouring to obtain all she can, but on this occasion she lays herself open to the retort *et tu quoque*.

The charges preferred in the beginning of this article against Japanese officials and residents in Korea are the only fragment of the writer's views which appear to have any solid basis. Rough and arrogant conduct has been attributed to Japanese settlers in Korea by more than one authority, and, on the other hand, has been resolutely denied by some, or excused by others on the ground of the relations of conqueror and conquered which formerly existed between the two countries. But there is probably as little warrant for the complete denial as there is need of the recon-dite excuse. Japanese can be truculent and overbearing when they please, and in Korea they have much to encourage and little to restrain the exercise of these propensities. We cannot see, however, that anything is to be gained by proving that one's neighbours are not better than oneself. Unless it is proposed to plead Japanese imitation in justification of foreign "violence and outrage," the discussion appears fruitless. Some better evidence, too, is required of our contemporary's allegations than the mere statement of a journalist who can assert that while "a small English and French force was maintained at Yokohama, Japan maintains in Korea a large force of armed 'police.'" The facts are that England and

France maintained a force of fully a thousand men at Yokohama, and that Japan has forty-five policemen and 200 soldiers in Korea.* If a thousand Englishmen and Frenchmen is a small force, and two hundred and forty-five Japanese a large force, the individual Japanese must be a mighty men indeed.

The "powers which Japan claims over her settlements in Korea" are vague matters. In reality they are nothing more than ordinary municipal powers, similar to those exercised by the foreign residents in Kobe, and less than those exercised by the foreign residents in Shanghai. But whether they are great or small, we have to remember that what Japan complains of in this matter is, not the claims to municipal power advanced on behalf of foreigners, but the obstructions opposed to the efficient exercise of any power at all. The Japanese authorities are required to govern municipally in the foreign settlements, and at the same time denied the power of enacting or enforcing municipal regulations. They find that anomaly a little irksome, and so do the foreign residents themselves.

It is scarcely necessary to direct attention to the singular confusion of ideas apparent in the charge that Japan "demands from the West rights and privileges which she resolutely refuses to Korea." Granting, for a moment, the propriety of the accusation, does our contemporary gravely propose to place Japan and Korea on the same level to-day? This, it seems to us, is precisely, the singular injustice which underlies many of the arguments applied by foreign writers to Japan's claims. This it is which induces some critics to meet her efforts to recover the rights of an independent nation—rights on behalf of which we are proud to remember how much our own ancestors suffered—by an objection that what is granted to her must equally be granted to China and Korea. This it is which lies at the root of the resolute resolve not to understand her contention, or to acknowledge that she can possibly be inspired by feelings to lack which would render any Western people despicable in our eyes. She is not inconsistent when she "quarrels with exterritoriality and yet establishes it for her own subjects in Korea." All her statesmen and writers have admitted that exterritoriality was necessary here in the early days of foreign intercourse. But that exterritoriality should be rigidly maintained when the conditions which justified it have in great part disappeared, and when it constitutes an effective bar to ex-

*In 1864, the English and French forces stationed at Yokohama numbered 1201, rank and file, with 10 guns, 4 mortars, and 1 rocket tube. When Mr. Hanabusa returned to Seoul after the rebellion in 1881, he was escorted by 1 battalion (800 men). At the conclusion of the negotiations, half of this battalion was withdrawn, and in August last, half of the remainder. There remains in Seoul, at present, one company of 200 men, all told. In addition to these, the following police force is maintained:—at Seoul, 3 constables and 1 inspector; at Inchon, 10 constables and 1 inspector; at Pusan, 15 constables and 2 inspectors; and at Gensan, 12 constables and 1 inspector.

tended intercourse—this it is of which Japan complains, and justly complains. When she claims extraterritorial privileges for her subjects residing in Korea, she is pursuing a policy the justice of which she never denied when applied to herself under similar circumstances.

Turning to our London contemporary's more specific accusations, we find it stated that "Japan at present refuses to all but one or two favoured individuals the right to charter foreign vessels to visit unopened ports," but that "she appears in Korea as the apostle of a free coasting trade." We are not left in any doubt as to the evidence in support of this assertion. Article 34 of the regulations is quoted as providing that "Korean subjects may freely charter Japanese merchant vessels," and Article 22, as providing that "Japanese vessels may convey goods of any country whatsoever between the trading ports of Korea." Now here is what the regulations themselves say:

Art. 34.—Any Japanese merchant vessel may be chartered by the Korean Government, or by any Korean subjects to convey goods, persons, &c., to any of the non-opened harbours in Korea; but in the latter case the charterer shall first obtain a license from the Government.

Art. 22.—Until such time as the mercantile marine of Korea is in a condition to carry on satisfactorily the coastwise trade of Korea, all Japanese vessels may transport goods of any country whatever from one open port to another in Korea. * * * * * When the Korean Mercantile Marine shall have become sufficient for the coasting trade of Korea, no foreign vessels shall be employed in transporting the Korean produce from one port to another.

The reader will look with astonishment at this evidence that in Korea Japan is "the apostle of a free coasting trade." Under the provisions of these two Articles there is not conferred on Japanese in Korea a single privilege which foreigners do not enjoy in Japan. Foreign vessels have always been free to carry, and do now carry, passengers and merchandise between the open ports of Japan; and Japanese subjects have always been free, and are now free, to charter foreign vessels to convey goods and persons to unopened ports of Japan, provided that they first obtain a license from the Government. So far, then, from "demanding in Korea privileges which they desire to refuse in their own country," the fact is that, while asking for the same privileges, the Japanese set to the period of their enjoyment a limit which foreigners in Japan are not asked to accept.

It is conceivable that the *London and China Express* may have been grossly misinformed with regard to the actual terms of these regulations. But surely no special information was needed to show that if Japan establishes post offices in Korea, it is because the Koreans have nothing worthy of the name; and that if she passes in medicinal opium under the guarantee of her own Consul, it is because Korea does not even pretend to have competent chemical experts. When Korea possesses postal systems and scientific inspectorates such as this country has so successfully established, her claims to perform those

functions of Government independently will, we venture to predict, obtain ready recognition at Japan's hands.

That "Japan objects strongly to *ad valorem*, and wants specific duties," is one of the statements which, when recently advanced by the *Daily News*, was pointed to by a leading merchant of Yokohama as an example of signal ignorance. But whatever Japan wants, it is certain that the duties in the Korean tariff were made *ad valorem* at the request of Korea herself. So far from this being a condition imposed by Japan, it was actually opposed by her. It is a concession, not an exaction.

Perhaps the most singular exhibition of injustice in this singularly unjust article is the attempt to show that Japan has obtained from Korea a scale of duties more favorable to herself than she is willing to concede to Western Powers. Nothing in Japan's foreign policy is less vulnerable than this very phase of her relations with Korea. Under the treaty of 1876, the trade between the two countries was free. Goods entering to Korea from Japan paid no duty. Korea had no custom houses, and did not think it worth her while to establish any. But when she opened her ports to other nations, she became desirous of raising a revenue by customs duties. Japan was not under any written engagement to further the accomplishment of that desire. She might have insisted on maintaining the old state of affairs. But, whether from motives of policy or justice, she readily acknowledged an obligation not to hold Korea to concessions granted under circumstances now wholly altered. In fact, so far from treating Korea harshly or selfishly, she did by her precisely as she asks to be done by herself. The returns of Korea's foreign trade prepared in H.B.M.'s Legation, show that the bulk of the goods imported by Japanese merchants into Pusan and Gensan are articles of foreign manufacture, and these, as the *London and China Express* explains, pay duties of from 8 to 20 per cent. under the new tariff. So far as we can judge, the trade regulations upon which our London contemporary comments so recklessly, must have the effect of entirely depriving Japanese import merchants in Korea of the favorable opportunities they enjoyed under the former régime. They will be at once undersold if they attempt to obtain foreign goods *via* Japan, and when foreign goods are excluded their commerce in imports will be virtually *nil*. To state the case justly, it is necessary to say, not that Japan has imposed on Korea a tariff less favorable than she claims for herself, but that she has exchanged her treaty rights of free commerce for a scale of duties which will divert the trade in imports from her own hands, and that she has made this concession, whether politic or generous, in deference to Korea's fiscal needs, and to the principle that treaties, like everything else, are not independent of circumstances.

MONOMETALLISM AND JAPANESE TRADE.

THIS community ought to be exceptionally capable of appreciating the commercial results of monometallism. The crisis through which Japan is now passing is but an accentuated example of the same influences. Here, during the past two years, we have had thrust upon our notice, in the most unpleasantly persistent manner, the economical truth that prices are governed by the volume of the medium in which they are expressed. The rapid contraction of the bulk of this country's paper currency has been attended by a general fall of prices, and though the effect has not borne a mathematical ratio to the cause, the nature of the phenomenon is not capable of misinterpretation. The table of comparative values which we recently published showed, plainly enough, that the energy of Japanese producers and manufacturers has been, for some time, paralyzed by the knowledge that they have a falling market to anticipate, and that while their returns are diminishing, the burden of their pecuniary obligations is continually increasing. These evils will not cease to be sensible till the resumption of specie payments provides an automatic adjuster of the volume of media of exchange in circulation, and thus eliminates a disturbing factor which ought never to exist under any sound system of finance.

The effects of monometallism, though more remote and therefore less perceptible, are precisely similar. Foreign merchants engaged in the Eastern trade are dealing in a constantly appreciating currency. The markets are always against them. In the interval between the shipment of European exports and their arrival in Japan, prices are almost invariably found to have declined in Europe. Then the telegraph comes into play. Consumers at this side of the water are perfectly familiar with the London quotations of the day, and know that the importer must regulate his sales by present values, not with reference to his original outlay. Exporters of Japanese products, on the other hand, have to base their purchases on the prices ruling in Europe at the moment, and not on the lower prices which they generally find there two or three months later. Thus the demonetization of silver and consequent reduction in the volume of the purchasing medium produce, throughout the whole Eastern trade, effects exactly analogous to those resulting from the appreciation of *Kinsatsu* in Japan. The only difference is that in the former case gold is appreciating; in the latter, paper.

It is not singular that the advocates of monometallism should either be reluctant to admit these inferences, or, admitting them, refuse to acknowledge their importance. The great aim of their system being to secure a perfectly stable medium of exchange, they are naturally averse to

accept the responsibility of having introduced a powerful factor of disturbance. Yet, to be consistent, they ought not to shirk that responsibility. For when they set about reducing, by fifty per cent., the bulk of the precious metals in circulation, they have either to deny that the prices of commodities are regulated by the volume of those metals in use as money, or to confess that a large contraction of the latter must be followed by a corresponding appreciation of the former. Doubtless the time will come when the contraction now in process will have reached its final point, and prices will then cease to be influenced by this particular factor of disturbance. But in the interim, the world will have made terrible sacrifices; sacrifices which our correspondent "T.W." contemplates with just apprehension; which are already becoming intolerable, and which will not be compensated by their result. For it has recently been shown by convincing statistics that the average annual production of gold and silver together is a much more constant quantity than the average annual production of either alone; so that even when silver is completely demonetized and gold becomes the sole unit of value, the volume of the circulating medium, and therefore its purchasing power, will be more variable than ever. The publication of these statistics has largely modified our own views on the subject, and, together with other conditions, is beginning to disturb monometallists in England also. Sooner or later, the commercial world will perceive the true cause of the disastrous conditions under which trade is now carried on between the East and the West, and we shall then see men busy themselves with compensatory vigour about problems which they now treat as scientific fantasies.

THE "DAILY NEWS" AND ITS CRITICS.

AN article recently published by the London *Daily News* has been made the subject of a great deal of comment by the local press and its correspondents. The portions of the article which seem to have given most umbrage are the following:—

The circumstances under which the tariff, as framed by Lord Elgin, was altered in 1866 to its present shape to suit the narrow views of a few resident foreign traders, are still remembered by them (the Japanese) with bitterness. Weak as Japan's Government had been in 1858, they were in 1865 yet weaker—harassed by internal military and political feuds and intrigues, which were daily growing worse and worse, and beset on the one hand by their own malcontents, on the other by foreign aggressions and claims. Sweeping changes were wrought in the tariff under this new and extremely one-sided convention. The import duties, which Lord Elgin had fixed at about 20 per cent., were reduced to rates of which the maximum was 5 per cent., while the average is understood to be now little more than 3 per cent. No corresponding advantages were granted to the Japanese, who, moreover, were required, in addition to some minor concessions, to provide lighthouses, buoys, beacons, &c., for the safer navigation of the treaty harbours and approaches thereto, a condition which they have more than honestly fulfilled. It is unques-

tionable, and has, indeed, been openly admitted, that these terms were extorted from the Government by the pressure of superior force, against their will, and at a time when they were utterly helpless. It is equally certain that no proceeding in the whole history of the treaties rankles so deeply in the minds of Japanese. If the reduction of the duties had wrought what was expected from it in the way of augmenting foreign trade with Japan, that would have been a source of some satisfaction on our side. But it has not done so, and the revised tariff cannot be called a success. Trade has advanced under it but moderately, and the good it has done can hardly be made a ground for its retention. By the Japanese, on the other hand, the low scale of the present tariff, under which their whole customs dues yield them little more than 4 per cent. of the national revenue, is looked upon as a just grievance. They urge that the common national right of regulating their own duties—a right which, as they take care to point out, Great Britain cedes freely to her colonies—is at the present time of high importance to their financial policy, the freedom of which has been in this respect so long infringed.

It is undeniable that this statement contains inaccuracies, or, to speak more correctly, an inaccuracy. Instead of saying of the customs dues that "the average is understood to be now little more than 3 per cent.," the writer should have said that, since the revised tariff came into force, the duties collected have averaged from 2.3 per cent. to 4.1 per cent. We apply this correction, not from any estimate of our own, but from the figures given by those who have undertaken to criticise the *Daily News*. The statistics for six years are adduced by these critics, and from them we learn that the average of the duties collected was 3.5 per cent. Thus, if the statement of our London contemporary were altered so as to read "the average actually collected is understood to have been little more than 3 per cent.," it would be strictly consistent with facts.

The *Daily News* is also charged with "asserting that foreign trade has not been augmented by reduction of tariff." We cannot find any such assertion in the article under review. What the writer says is that the reduction of duties did not augment trade as much as was expected; that "trade has advanced but moderately under the revised tariff," and that "the good the tariff has done can hardly be made a ground for its retention." He plainly admits that the reduction of duties did exercise some effect, but not an effect proportionate to the increase of revenue that might have been obtained under different rates. It is, of course, impossible to analyze, with any degree of accuracy, the different causes which have conspired to promote the growth of Japan's foreign trade from sixteen, to sixty-five, millions. To deny that low duties have exercised a healthy influence would be just as unwarranted as to argue that because trade has developed, its development is chiefly an evidence of the effect of low duties. Japan's foreign commerce is but a fraction of what it ought to be, and we do not believe, not can they pretend who constantly complain of its tardy growth, that it has yet come within measurable distance of the point where a difference of four or five per cent in tariff rates would sensibly promote or retard its advance.

In the early part of the present century the scientific world was astonished at the high degree of mental caloric developed by two renowned astronomers who differed about the parallax of a fixed star. Arithmetic is not generally regarded as a heating subject, but the experiences of Yokohama go to correct this notion. The figures given by the *Daily News* have raised quite a tempest of wrath, and been twisted, by a device more ingenious than ingenuous, into a weapon of attack on the Japanese Government. Mr. A. J. WILKIN, a leading merchant of Yokohama, and a gentleman whose desire to be just is beyond question, addresses a local contemporary on the subject in terms of diverting vehemence. He sets out by expressing his surprise that the "*Daily News* should be the vehicle of such outrageously false statements respecting tariff treaties with Japan," and asks "is this the class of information obtained by 'Our own Correspondent' at that gracious interview which so dazzled his vision that he hastened to announce by wire to Europe the secrets which had been revealed to him?" The journal to which Mr. WILKIN addresses himself echoes his question by repeating it in another form:—"Are these the weapons to which the Government are reduced to carry on their war against foreign oppression and the narrow views of foreign residents?" By what right or on what authority Mr. WILKIN assumes either that the special correspondent of the *Daily News* is the author of the article in question, or that the Japanese Government is responsible for its contents, we are at a loss to conceive. That he distinctly suggests both these inferences is evident from the extract quoted, as well as from the last sentence of his letter, in which he says:—"It is to be regretted that Japan should either employ or accept tactics which consist in the dissemination of mendacious representations: for some of her agents or agencies, no method seems to be too false or too cowardly." The value of words varies according to the frame of mind of their employer. To us, writing at some distance beyond the range of Mr. WILKIN's warmth, it seems that if the terms "false and cowardly" are applicable at all in this context, they must be applied to those who, on the strength of a mere assumption, publicly formulate unjust charges against officials who are not in a position to publicly refute them. As it happens, Mr. WILKIN'S hypothesis with regard to the article in the *Daily News* is wholly incorrect. From what we know privately of its authorship, the Japanese Government is not more responsible for its contents than Mr. WILKIN himself. But even if it were not so, what has Mr. WILKIN to do with the author or his inspiration? These endeavours to probe motives, and this disposition to prefer recrimination to logic, are traits which we should never have looked for in the writings of Mr. A. J. WILKIN, and which betray the weakness of his

cause far more than any arguments that can be advanced on the other side.

It will not be uninteresting to examine briefly the "outrageously false statements respecting tariff treaties with Japan" and the "mendacious misrepresentations" which Mr. WILKIN so severely condemns. We recently had occasion to comment on the grave and cruelly unjust inaccuracies contained in a speech made by the same gentleman, at the annual meeting of the Chamber of Commerce, on the subject of treaty revision. We now observe that he cannot be accurate even when quoting the words of an opponent. He makes the *Daily News* say that Lord ELGIN's tariff treaty was one of a "20 per cent. average duty." The *Daily News* does not say so. What it says is that Lord ELGIN "fixed the import duties at about 20 per cent." The fact is that Lord ELGIN's tariff was fixed on a twenty per cent. basis. Certain articles paid duties of only five per cent., and as cotton and woollen manufactures were included among these, the average duty actually leviable did not, probably, exceed 9 per cent. The writer in the *Daily News* would have done better to state the lower figure. It would have served the purposes of his argument equally well. But no reasonable person can pretend that he is guilty of "an outrageously false statement" or a "mendacious misrepresentation," because he applies the general description "about twenty per cent." to duties ranging from 5 to 35 per cent.

The most remarkable portion of Mr. WILKIN's letter is his statement of the circumstances under which a revision of the tariff was effected in 1866:—

If I mistake not "the circumstances under which the tariff was altered from its primitive form to the elaborate one of 1866, were not only that the then tariff was inadequate to the expanded condition of the trade, but that so much corruption prevailed at the Custom House that at one time probably not more than a third of the duties was collected. I remember making at that time an official representation on this last subject for the use of our Minister. To say that "these terms were extorted from the Government by the pressure of superior force" is a flagrant misrepresentation. I venture to assert that when the tariff of 1866 came into work, the amounts collected for duties must have greatly increased, possibly doubled. It was one of many friendly acts done by foreign representatives to help to free the country from that scandalous corruption about which old residents can tell such tales. But I suppose that this is a kind of service not altogether acceptable in some quarters.

It is difficult to suppose that this is gravely put forward as an explanation of the circumstances under which the tariff was revised in 1866. We are asked to believe that the customs duties were reduced from an average of about 9 per cent. to an average of less than five, merely to free Japan from "scandalous corruption" which largely reduced her revenue. We are asked to believe that it is a flagrant misrepresentation to say that the pressure of superior force was exercised in securing the reduced terms. We are asked to believe that as articles enumerated under the five per cent. clause of Lord ELGIN's tariff "constituted the bulk of the trade," the reduction of duties under the new

tariff was insignificant. And finally, we are asked to believe that this revision of the tariff was "one of many friendly acts done by foreign representatives" to correct abuses from which Japan alone suffered.

Mr. WILKIN's idea as to the amount and purpose of the reduction effected does not tally, we observe, with the opinion of the journal to which he addresses himself. The latter says that the new tariff "wrought sweeping changes," and that "it was intended for that purpose, because trade was so hampered by duties that extension was impossible without a reduction in the tariff." One or other of the two views must be incorrect. We cannot be expected to believe, at one and the same moment, that "sweeping" reductions were made with the object of expanding trade, and that the tariff was only elaborated, to suit an expanded trade and to improve the morality of Japanese officials. The Blue Books help us to choose between these contradictions. Mr. WINCHESTER, H.B.M.'s Chargé d'Affaires, was the first to suggest, officially, "the reduction of import duties, now levied at 5, 6, and 20 per cent. on different classes of goods to an uniform rate of 5 per cent." In his despatch recommending this reduction, he says that "the change would be of great convenience to foreign commerce, and, by stimulating consumption, would probably be attended with no material diminution to the Japanese revenue."¹ According to the QUEEN'S Representative, then, there was only a hope that the change might so expand commerce as to cause no material reduction of the customs' revenue. According to Mr. WILKIN, one of the principal objects of the change was to increase that revenue.

Mr. WINCHESTER, we say, was the first to suggest this change officially. The circumstances under which he made the suggestion, and under which the change was effected, were briefly these:—The TAIKUN'S Government owed the Treaty Powers three million dollars, being "a pecuniary ransom for the town of Shimono-seki and an indemnity to cover the expenses of an expedition against the Prince of NAGATO."² The British Chargé d'Affaires pointed out to his Government that "the known state of the finances of the Taikunate induced him to believe that the obligation to pay so large an indemnity would be felt as a very grievous burden;" that he feared the indemnity would be "nothing but an additional duty levied on foreign commerce;" that its "protracted payment seemed very much like hanging a millstone for five or six years, round the neck of our trade;" and that, under the circumstances, he recommended a proposal "to take as an equivalent for the moiety or two-thirds of the indemnity, some such concessions as the opening of Hiyogo on the 1st of January, 1866; the

written adhesion of the MIKADO to the Treaties; and the reduction of import duties now levied at 5, 6, and 20 per cent. on different classes of goods to an uniform rate of 5 per cent." The British Government recognized the wisdom of this advice and consulted with the other Treaty Powers. France replied that she "considered it would not be opportune at present to ask for the opening of Hiyogo and Osaka;" that "from the moment when the Cabinet of Yeddo decided, as they had a right to decide, for the payment of a pecuniary indemnity, no grounds remained for imposing on them another manner of acquitting their obligations;" and that "judging from the repugnance which the Japanese Government had evinced on this subject, such a request would now again occasion serious difficulties, and might in the end lead to war."⁴ It was subsequently decided, however, that the alternative should be offered, and Sir HARRY PARKES was instructed accordingly. The result was that the Foreign Representatives proceeded to Osaka with a fleet of nine vessels of war, and obtained, not an exchange of one obligation for another, but "the ratification of the Treaties by the MIKADO; an agreement to revise the tariff, and an engagement that the indemnity should be punctually discharged."⁶ They did not obtain the opening of a port, being "clearly persuaded that while the neighbourhood of Hiyogo and Osaka continued to be the scene of military movements and political agitation, those places could not be occupied by foreign merchants without considerable risk,"⁸ but they obtained what they considered "a far more valuable concession."⁷ In short, they went to Osaka with an imposing naval force, to offer to remit a war indemnity of two millions in exchange for three concessions, one of which, they saw, could not possibly be granted. They "held the decided opinion that the confirmation of the Treaties by the MIKADO formed by far the most valuable of the three conditions they were instructed to accept in exchange for two-thirds of the indemnity."⁸ They obtained that confirmation, as well as the third condition, that the duties should be reduced to the uniform rate of 5 per cent., and "in reporting the important advantages secured," their Doyen "reminded" his Government that "no portion of the indemnity had been relinquished, although two of the three conditions they were willing to receive in exchange had been secured."⁹ With regard to the part played by the fleet in this remarkable negotiation, which, while ostensibly undertaken to effect an exchange of obligations, was in reality a method of imposing two new obligations, the state-

ments of Sir HARRY PARKES himself leave us in no doubt:—"My colleagues and myself," he wrote to the British Admiral, "are fully sensible that we are indebted for whatever success has attended our efforts to the efficient and generous aid of our naval commanders, and it would be superfluous for me to point to the extent to which that success is attributable to your exertions:" while, in a despatch to Earl RUSSELL (Nov. 25th, 1865), he said:—"Speaking after the event, I can assert with confidence that had it not been for the presence of the allied-fleet on this occasion, the TAIKUN would not have been persuaded to make to the MIKADO those energetic remonstrances and representations without which union between these rulers on the subject of the Treaties and the foreign policy they render necessary, would not have been effected."

Where, in all this, can there be detected any shadow of a friendly design "to free Japan from the scandalous corruption" of her customs officials? When Mr. WILKIN speaks of "altering the tariff from its primitive form to the elaborate one of 1866," he may himself forget, but he cannot make others forget, that a fleet of foreign war-vessels had, in 1865, virtually dictated the terms upon which that alteration was to be effected. The facts of history cannot be perverted by petulant animadversions. It is very probable that great corruption existed among the Japanese Custom House officials in former years, but it is well known by the "old residents" of whom Mr. WILKIN speaks, that the false invoices presented by foreign traders were a not less powerful factor in reducing the revenue returns. To ignore the one species of fraud and blazen the other abroad may be patriotic, but certainly is not just. Essays have been composed ere now for the purpose of glossing over the methods employed in 1865 to obtain a fifty per cent. reduction of Lord ELGIN'S tariff, but it was reserved for Mr. WILKIN to advance the splendid paradox that one of the three conditions which the Treaty Powers offered to exchange for a war indemnity due by Japan was her consent to a friendly process of freeing her own administration from costly corruption. It is to be desired that Mr. WILKIN, before making speeches and publishing letters eminently calculated to inflame the public mind, would take some pains to study facts. His intellect may be so constituted that he cannot credit his adversaries with either honesty or courage, but it will not, we trust, be a confession of weakness, to leave to him a monopoly of that species of scepticism. It is not "the agents or agencies of Japan" that he charges with "outrageously false statements," with "mendacious representations," and with "false and cowardly methods," but the officials who have represented his Sovereign at the Japanese Court and the despatches which have been presented by his Government to both Houses of Parliament.

THE PROPOSED CHRISTIAN UNIVERSITY.

TWO Gentlemen of Tokiyo, writing over the signatures "Ferrex and Porrex," recently addressed to this journal a letter criticizing and condemning a scheme formulated by the Rev. C. S. EBY for the establishment of a Christian University in Japan. In reply, Mr. EBY propounds certain questions, which we willingly proceed to answer, the importance of the subject being sufficient to warrant its public discussion even at this early stage.

Mr. EBY asks us, first, whether the character given to his scheme by "Ferrex and Porrex" corresponds with its outlines as published in the appendix to a pamphlet entitled "The Immediate Christianization of Japan." Were we to answer this question frankly, we should be obliged to confess that "Ferrex and Porrex" do not appear to have read the pamphlet at all. It is, however, impossible to suppose that they undertook to discuss a subject which they had made no attempt to examine. They probably read the pamphlet; though it must be confessed that their letter contains no evidence of the fact.

To make the matter clear, we cannot do better than restate the scheme. The prospectus of its projectors lies before us, and the very clear language in which it is couched leaves no room from misapprehension.

The general outline of the project is the establishment of a Central University to be fed by Preparatory Schools and Academies. The necessity for such a work is based upon the national craving which Japan exhibits for western education, and upon the incapacity of existing machinery to satisfy that craving. It has long been evident to those who know the country that its resources are not equal to its aspirations in this matter. When the masses of the people began to recognize that their place among the nations of the world must depend upon the success of their efforts to recover the ground lost during centuries of seclusion, a wonderful impulse towards Western philosophies and sciences led to the establishment of schools everywhere, and to the general employment of foreign teachers. As might have been expected, this impulse was neither always economically wise, nor always fortunate in its indiscriminately employed foreign aid. Little by little foreign teachers were of necessity dispensed with, and the educational ideal originally conceived had to be modified. The Missionaries, according to their public statements, believe that any help they can give, or procure, to advance the country's progress towards its first intention will be of large benefit at this juncture. There is also another important consideration connected with the general conception of their scheme. It is that in the wave of progressive effort which swept over Japan after the contact with the outer world, many of the landmarks by which society had been

guided in the past, went down, never probably to rise again. In the old Confucian philosophy there were very tolerable materials for building up, round a domestic centre, a solid social and national structure. But Confucianism did not escape the discredit that befel everything of purely Oriental origin. It was ousted from the schools and nothing took its place. Education became purely secular. There are, indeed, many who believe that scholastic training ought never to travel beyond secular lines, and that its moral supplement should be supplied within the family circle. But the instincts of humanity have always rejected such a notion. Japan is to-day feeling, and feeling keenly, the extinction of her old lights before the new were kindled. Many a man who knows nothing of Christianity beyond the doubtful reputation its early professors left behind them here, is yet constrained to confess that in the Missionary Schools alone can a parent now look to obtain for his child the moral culture which Confucianism once afforded after a fashion. The Missionaries would not be true to themselves or to the cause they serve if they let slip such an opportunity. By a wisely exercised and earnest effort, they may, and probably will, succeed in grafting on the educational systems of this country, and on the minds of the rising generation, those elements of Christian morality which are an integral part of the civilization Japan is adopting.

So much for the general conception of the scheme. We proceed, now, to consider briefly the details which have excited criticism. "Ferrex and Porrex" begin by deducing from experience an inference that the co-existence of two universities in one city is impossible. In support of this theory they point to the Roman Catholic University of Ireland and the Roman Catholic University of Kensington. But it seems to us that these are scarcely cases in point. Both these Universities were established with the avowed intention of perpetuating a system which had just been abandoned at the institutions they sought to rival, and which was in direct opposition to the growing liberality of the time. Under such circumstances their failure was natural. But the proposed University for this country aims at nothing further than to engraft upon its educational scheme those moral influences which, though active in every similar institution in Western Europe, are wanting in Japan. It seems to us that our correspondents make the mistake of forgetting the different conditions they have to deal with in Europe and Japan.

Other special causes of probable failure are adduced. "An university," we are told, "grows but is not made. To found an university without knowing exactly what class of students will come, what has been their previous education, and what is to be their subsequent career, is a very rash proceeding." We cannot pretend to follow

the line of argument, or even to trace the sequence of ideas, in these sentences. That an university grows, like everything else, may readily be admitted. But unless "Ferrex and Porrex" advocate the development of a Japanese university from one of its embryonic forms, a school, a seminary, or a college, we do not see why they should object to its being founded and endowed as has been the case with every other similar institution, all the world over. They think it rash to set about making an university unless an exact knowledge exists of the class of students that will come there, their previous education and their subsequent career. As it happens, this objection is in part irrelevant, seeing that the proposed Christian university would be fed by its own schools and academies. But we are curious to learn whether in any part of Europe or America there is an university which gives itself the slightest concern about its students before their matriculation or after their graduation. We know of none; nor do we believe that any university of such a meddlesome disposition could possibly prosper. "Ferrex and Porrex" are evidently under the impression that, in Japan, professional success is inseparable from officialdom. "The Government Colleges," they say, "are mere gateways to Government posts. No man in Japan can set up as an engineer, architect, lawyer, or doctor, unless he is a functionary of the Government." A more erroneous statement could scarcely be made. It is true that the Government, by providing free education for a certain class of students at the Engineering College, establishes a claim upon their subsequent services. But no one can pretend to think that there is not, or will not hereafter be, any want of engineers, architects, chemists, or mineralogists outside official circles. As for the assertion that no man can set up as a lawyer or doctor unless he is a functionary of the Government, it is curiously incorrect. Nine out of ten lawyers and physicians now practicing have no connection whatsoever with the Government.

These hasty objections prepare us for the graver misrepresentations which follow. "Ferrex and Porrex" describe the proposed university as a place where religious tests would exist for the professors, and where literature, science, and philosophy would be taught explicitly from a theological point of view. The only religious test for the teachers, as Mr. EBY explains, would be the broad one of Christianity versus Paganism, while for the students, there would be no tests at all. Needless to say that the teaching of literature, science, and philosophy explicitly from a theological point of view is not contemplated at all.

More important than these objections, in fact "the most important objection of all," we are told, is that the university would be "under the dictation of foreigners

and the exponent of a religion which has been hated for centuries." It cannot be denied that under existing circumstances—so long as foreigners in Japan constitute a distinct class, outside Japanese jurisdiction and not amenable to any laws of Japanese origin—an university entirely controlled by aliens might labour under some disabilities. This is not the only, nor even the most serious, obstacle presented to missionary enterprise by the present international arrangements. But things will not always be as they are now. It is not extravagant to look forward to the day when a system only calculated to perpetuate race prejudices will have yielded to more rational and civilized influences. Certainly, so far as the Japanese Government is concerned, we may safely predict that its inclination would be to extend to a Christian University, established on the broad lines contemplated by Mr. EBY's scheme, all the rights and privileges enjoyed by any other educational institution in this country: and upon the attitude of the Government a great deal would of course depend. As for the contention that the university would be "the exponent of a religion which has been hated for centuries," were its validity admitted by the missionaries they might pack their carpet bags and get away as quickly as possible. Their whole work in this empire is open to the same objection. Yet they have accomplished a great deal, and every year that passes brings a larger promise of success. From what we know of Japan, we are persuaded that if Christian morality is ever to obtain a permanent footing, it must find its way to the hearts of the people, in great part, through their schools and colleges. There it is that the incongruities and imperfections of Confucianism will first be fully recognized, and there it is that the want of something better will be most keenly felt. If that want is ever to be supplied, it will not be by such timid casuists as "Ferrex and Porrex."

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MR. WILKIN AND THE "DAILY NEWS."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have been surprised and amused by Mr. Wilkin's letter in the *Gazette* about the article in the London *Daily News* regarding Treaty Revision. Mr. Wilkin could hardly have read the article, otherwise he would not have been so in-temperate, not to say uncharitable. The article in the *Daily News* dealt entirely with facts, and was exceedingly dispassionate. It was written by a servant of the Queen, who spent many years in the East, and not by the special Correspondent of the *Daily News*, as Mr. Wilkin has hastily conjectured without any sufficient reason. Mr. Wilkin's statements, that "It is to be regretted that Japan should either employ or accept tactics which consist in the dissemination of mendacious representations," and that "for some of her agents or agencies, no method seems to be too false or too cowardly" remind me of the famous note to Mr. Gladstone, read by him in the House of Commons during the debate in 1878, regarding

military preparations (*i.e.* the additional vote of credit for £6,000,000):—

Your's not to reason why,
Your's not to make reply,
Our's but to say you lie—
Vote the six millions.

I think, before Mr. Wilkin next rushes into print, he should try to read the article he denounces as "mendacious;" and I think that, as a Christian gentleman, he should endeavour to ascertain who the writer of the article is, before he denounces him as an agent of the Japanese Government.

During the silk difficulty, it was Mr. Wilkin's speech which inflamed the Japanese, and now he again comes forward as a denouncer.

Another matter deserves note. No doubt prior to 1868, few customs duties were collected owing to venality on the part of the Tokugawa Customs officers and general low declarations of value on the part of foreign merchants; but I remember well when the present Government came into power, in the summer of 1868, that on the appointment of Mr. Wooyeno Kagenori as Commissioner of Customs, a reform was at once commenced, followed by the appointment of competent American appraisers and English advisers; since which time the administration has been well served and an honest collection has resulted. This is due to the steps taken by the present Government; and has nothing whatever to do with any tariffs, whether of 1866 or previously.

The question as to whether the tariff of 1866 was "extorted from the (Japanese) Government by the pressure of superior force" is a matter of history. That history can be read in the Blue Books of Her Majesty's Foreign Office. And that statement seems to be the truth of history. I have a great respect for Mr. Wilkin as a merchant, and I would advise him to either read such history or else to avoid political controversy. Above all, he owes it as a duty to himself, as well as to the community, not to be so hasty in his conclusions and denunciations.

I am, Sir, your obedient Servant,

GILEAD P. BECK.

Tokyo, March 15th, 1884.

THE TRUTH ABOUT SILVER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your article of 10th instant on Bimetallism is a clear and opportune exposition of a question which has serious bearings on the financial policy of Japan, and on all commercial interests in this country, though it will very likely elicit the usual sneers from those who regard the discussion of this subject merely as a proof of crotchety proclivities.

As one who considers the "Silver Question" as second to no other in real importance, and who strongly desires to have it generally and thoroughly understood, I beg leave to indicate two points in your observations which seem to need elucidation, namely: first, that History shows that gold alone is insufficient for the exchanges of the world; and second, that silver has lately depreciated in value.

What I would prefer to say on the first point is that the exclusion of silver from monetary use (in Europe and America), by human law, is a defiance of Nature's purpose in furnishing that metal, which must entail evil and punishment on those who venture it.

History shows that almost any substance may serve as money, on the condition that prices, expressed in that substance, are governed strictly by its volume in actual, or potential, circulation.

It shows also, however, that the automatic adjustment and steadiness of prices necessary to healthy trade is only possible when the production of the monetary substance is limited by natural laws.

By this rule, gold alone would answer tolerably well for a money material. For, although its production has been irregular (far more so than that of silver), yet it is, practically, both limited and ascertainable.

Those who agree with Mr. Cernuschi contend that, as the production of silver and gold together is much more regular than that of either alone, they should be used in combination, at a fixed ratio, so as to give the utmost steadiness to prices; and herein they have History and the universal instincts of mankind on their side. But they do not pretend that gold alone cannot be used for money if men choose to have it so. What they assert on this point, and what is every day being demonstrated by the decline of prices in all gold-using countries, is that such a rejection of one of nature's benefactions is unwise, and that to enact it suddenly, as has been done in Europe and America, and to compel men to work with gold money alone, is a wanton cruelty which inflicts immense suffering on every one engaged in production and trade, or owing debts in money; and furthermore that this suffering is profitable only to a small class of rich persons, but degrading and impoverishing to the

whole body of workers, and wholly unjust, useless, and indefensible. They do not deny that in time the contraction it requires will reach its level; that a so-called adjustment of prices may be attained, and a single gold basis of values established. But they see that to arrive at this result, involves a frightful amount of wholly unnecessary distress, that entirely eclipses the slender and doubtful advantages which the scientific merit of gold money alone can offer to the world. And they believe that as the common sense of mankind awakens, this truth will be perceived, and men will revolt against the oppressive greed, or doctrinairism, which imposes such suffering upon them. Already, in the spread of Socialism and discontent of all sorts, this revolt is showing itself, and as prices continue to fall and distress to extend, it will acquire force which will finally compel those who have done the wrong to repair it, by readmitting Silver into full monetary use.

This, then, is the main and practical importance of this question for men of business. They may well leave the scientific side of it to statisticians and philosophers, but they cannot afford to be indifferent to the steady depreciation of their stocks of commodities, their factories, implements, and machinery of all sorts, or to the converse difficulty they find in meeting their money obligations; and I wish that, as a class, they could be more quickly aroused to a sense of the wrong they are enduring in these respects. For were they generally to recognize it, and demand the only remedy, the insensate war against Silver money and all its fell consequences could soon be made to cease.

As to your second point, that Silver has depreciated in value, I would refer you to the price table hereto appended, which shows that Silver exchanges now for as much, or more, in most commodities (except gold), as it did in 1876, when its demonetization began to take effect. It is easy to see from these figures (taken from the London *Economist*) that Silver has not depreciated in value, but has only fallen in its Gold price, as almost every other commodity has likewise fallen.

The actual fact is that Gold has risen in value exactly as those who urged the expulsion of Silver intended it should. It has so risen owing to the increased demand for it for monetary use, and latterly also to its reduced production. Mr. Goschen and others have clearly proved this appreciation of Gold, and any one may perceive it, and he must feel it, in the continuous fall of the Gold prices of the articles he deals in.

It was the subtle device or the good luck of the advocates of Gold alone as money, to have this movement called "Depreciation of Silver," whereby many who otherwise might have opposed it from the first have been misled into bewildered acquiescence in their own undoing.

Had it been at once known as a design to make Gold dearer, and called by its true name, "Appreciation of Gold," it would probably have long ago encountered the spirited resistance of many who even now do not recognize it as their enemy.

And Gold has become dearer not only on account of the new demands upon it, but also on account of a steady and unexpected diminution in its supply, which fully justifies those who declare its production to be too irregular and precarious to make it alone a sufficiently steady standard of value.

In a recent New York *Financial Chronicle* are some carefully compiled tables which prove this point. They show that while the total production of the world in 1866 was £29,000,000 of Gold, that production steadily declined, until in 1883 it was only £20,600,000, or a sum less than the present annual rate of the consumption of Gold in the arts and in wear of coin, etc.

It follows, therefore, that not only is there no prospect of that increase of the amount of Gold now existing in circulation which the growing numbers and wants of men require, but that the present stock is being continually reduced. Prices in gold must then experience a further fall, and present distress must increase. If this is a prospect with which the majority of men can be content, I prefer remaining with the minority.

But when we have taken the present stock and future supplies of Gold into account, we have not gauged all the influences which threaten prices, and the stability of things generally, in Western countries. For the partisans of Gold money alone have not yet ventured to deploy all their forces; have not dared to carry out to its full extent the whole of their iniquitous theory, and have in reserve a means of wreaking misery which might well excite dismay, if they were likely to survive to use it. Let us turn to the *Financial Chronicle* to find the measure of this force.

The total sum of Gold held in Europe and America in 1883 is reckoned at £435,300,000. But these countries held also £339,000,000 of Silver which they used in place of, and practically counted as, so much Gold; so that the total of their circula-

tion on a Gold basis was over £774,000,000. (That I do not misstate the fact may be readily perceived if it be remembered that Silver Dollars in America, Shillings and Crowns in England, Thalers in Germany, and Francs in France, are all current, not at their value in Silver, but at a legal, fictitious, value in Gold, and hence are equal to a Gold coinage of the same amount.)

Now if, even with this Silver mitigation, the artificially created money famine has already depressed prices so greatly, and produced such a flood of misery, what would be the effect of the complete demonetization of Silver by the expulsion from currency of this £339,000,000? It is nearly 44 per cent. of the whole monetary stock of Europe and America.

Its demonetization would therefore mean a further reduction of all prices by 44 per cent.; that is to say that silk now worth 45 francs per kilo., would bring only 25 francs, and iron now worth 45 shillings per ton would fall to 25 shillings. Can any one consider such a fall in prices without shuddering as to its effects on industry and on society?

Yet, if the Gold maniacs are consistent, and resolute, that, and nothing less, is what must occur. And, in order to force their hand, to precipitate a solution, to arouse men to action in the matter, the bolder partisans of Silver are now urging the Western Governments to take precisely this action. A Bill has been already introduced into the American Congress to abolish the Silver dollar coinage. The next step would be to sell the 200 million Silver dollars already coined; for who sells first will sell best. France would have to take the same line for the same reasons, and hasten to get rid of her £124,000,000. Germany, as original leader in the Gold mania, could hardly stultify herself by demurring, and her £44,000,000 would also come into the market as an unwanted commodity. The crash and slaughter when this reserved force came into action would be terrific.

The friends of the Gold standard ought to be delighted with such a glorious prospect of success. I am glad to doubt, however, that they will survive to enjoy it. For the bold play of the Silver men (urged years ago by Mr. Cernuschi) will probably compel their opponents to recognize the folly and impracticability of their nefarious game and to give it up before much further harm is done.

Meantime, however, these Eastern Nations who accept Silver, and are out of the mad struggle over Gold, should avail of their chance to get good money cheaply, and I hope that what has been now said on the subject will indicate, to Japan at least, an opportunity.

I am, Sir, your obedient Servant,

T. W.

Yokohama, March 12th, 1884.

Table of proportionate prices of sundry chief commodities, of fairly regular supply, based on the number 100, as representing average prices in the years 1845 to 1850. (Extracted from the London *Economist's Review* of 1882.)

	January 1, 1876.	January 1, 1883.
Silver	92	83.3 or—9.5 per cent.
Coffee	183	82
Sugar	67	60
Tea	100	76
Wheat	84	77
Cotton	107	89
Hemp	105	68
Wool	133	106
Oils	116	100
Timber	128	108
Copper	100	80
Iron	125	79
Lead	131	83

Average of 1,379 1,008
12 articles... 115 84. or—27 per cent.

And the prices of January, 1884, were still below those of 1883. These figures show that silver has fallen in price only 9.5 per cent. during the last eight years, while the other commodities named have fallen 27 per cent. Therefore Silver has appreciated in value as compared with these principal commodities.

T. W.

KRUPP AND ARMSTRONG GUNS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The accompanying are copies of a correspondence which has appeared in *Engineering* issues of November 30th, December 14th, 1883, and January 11th of this year, respectively:—

(1). Letter signed "Artillerist" denying the superiority of Krupp's guns over those manufactured by Armstrong.

(2). Letter from F. Krupp in reply to the above, proving the figures with which "Artillerist"

attempted to support his assertions to be entirely supposititious and incorrect.

(3). Letter from Mr. J. A. Longridge referring to the gas pressures in the two guns.

This controversy brings before the public all the proofs called for by you in your issue of March 1st, as it shows clearly the superiority of Krupp's guns, and we therefore request you to give this the publicity of your columns in order that any false impressions received by your readers may be removed.

We are, Sir, your obedient Servants,

TAKATA & Co.,

Agents for FRED. KRUPP.

Tokio, 16th March, 1884.

TO THE EDITOR OF "ENGINEERING."

SIR,—In a recent report on certain firing trials at Mep-pen, Mr. Krupp gives the following Table (No. 1), showing the comparative power of the Elswick 12-in. breechloading rifle gun supplied to Spain with that of his own gun of the same diameter of bore:—

TABLE I.

	Krupp Gun, 12-in.	Armstrong Gun, 12-in.
Calibre, mm.	305	305
Length, calibres.	35	28.9
Weight, kg.	49,200	44,350
Weight of battering shell, kg.	455	318
Weight powder charge, kg.	132	149.7
Muzzle velocity, m.	565	635
Energy of projectile:—		
Total, mt.	7403	6529
Per cm. of section, mt.	10.14	8.94
Per cm. of circumference, mt.	77.28	68.1
Per kg. of gun, mkg.	151	147
Per kg. of charge, mt.	45.71	43.6
Thickness of wrought-iron plate perforated at the muzzle, cm.	75.1	68.3
Proportion	1	0.91
Mean pressure of gas, atm.	2630	2745

The Elswick gun, chosen by the Spanish Government for special reasons, has a length of 28 calibres, whereas the gun with which Mr. Krupp compares it is a much longer gun of 35 calibres. Under these circumstances it is not difficult for Mr. Krupp to show that his gun is the more powerful weapon of these two, but how far his further claim that "the Krupp gun remains still always absolutely and relatively superior to the Armstrong gun" is in accordance with actual fact will at once appear from Table No. 2, in which are placed side by side the Krupp gun of 35 calibres long and the Armstrong gun of the same length.

TABLE II.

	Armstrong Gun, 12-in.	Krupp Gun, 12-in.
Calibre, mm.	305	305
Length, calibres.	35	35
Weight, kg.	48,768	49,200
Weight of battering shell, kg.	363	453
Weight of powder charge, kg.	181.5	162
Muzzle velocity, m.	670	565
Energy of projectile:—		
Total, mt.	8300	7403
Per cm. of section, mt.	11.5	10.14
Per cm. of circum., mt.	86.62	77.28
Per kg. of gun, mkg.	170.2	151
Per kg. of charge, mt.	45.75	45.71
Thickness of wrought-iron plate perforated at muzzle, cm.	84.2	75.1
Proportion	—	—
Mean pressure of gas, atm.	2555	2630

It will be seen from these figures that when fairly compared the Krupp gun, instead of remaining absolutely and relatively superior, is in point of fact inferior to the Armstrong gun in every respect.

Are such statements based upon evidently unfair comparisons worthy of Mr. Krupp's renowned gun factory? I am, Sir, yours truly,

ARTILLERIST.

TO THE EDITOR OF "ENGINEERING."

SIR,—In No. 935 of *Engineering*, edition of the 30th of November, you print a letter on the "Krupp and Armstrong Guns," bearing the signature "Artillerist," which letter contains a charge against me.

This letter is the translation of a circular in the French language, which has been widely distributed in St. Petersburg, bearing the signature "Edward Sydney Schweder, Agent de Sir W. G. Armstrong, Mitchell, and Co.," and must therefore be considered as a circular emanating from Sir W. G. Armstrong, Mitchell, and Co.

I now beg to submit that my statement respecting the results of my guns is completely justified and clearly borne out by the following facts.

1. In the Table I., which is taken from my report No. XLVII., I have used for comparison the results of an Armstrong 12-in. gun which were known to me, though not yet published, and which have not been published till the publication in *Engineering* of the 30th November. 2. In Table II. "Artillerist" gives figures for a 30.5 cm., which does not exist at present, of which I could not have any knowledge and which I therefore could not draw into comparison. "Artillerist's" concluding paragraph, "Are such statements based upon evidently unfair comparisons worthy of Mr. Krupp's renowned gun factory?" implies therefore an unjustifiable reproach.

I should not like, however, to content myself with its refutation, but also prove by the following that the figures given by "Artillerist" in Table II. of the performance of the Armstrong 12-in. gun of 35 calibres length cannot be correct. The Armstrong 12-in. gun given in Table I. obtained the favourable results only by employing the German brown prismatic powder, which is the same powder used by me and which I have brought by my artillery trials to its present development and perfection.

For the comparison it must therefore be taken for granted that in both guns this superior class of powder is employed.

Furthermore, it must be assumed that both guns have the same maximum pressure, as otherwise (as is shown by my report No. XLVII.) for my gun a higher velocity must also be accepted.

Under these obvious suppositions "Artillerist's" figures of the Armstrong gun as given in Table II., are impossible.

He states that in the Armstrong 30.5 cm. gun of 35 calibres length each kilog. of powder gives 45.75 mt. of *vis viva*, whilst the Krupp gun of the same length attains 45.7 mt.

That is impossible, (1) because Armstrong employs a lighter projectile, and (2) because the greater charge which he wants to employ requires a larger space of combustion, and therefore the expansion of the gases must be less in his gun than in Krupp's.

According to the experiments executed by Krupp (Report 47), the utilisation of the powder decreases considerably when the weight of projectile is reduced. With a weight of projectile of 330 kilogs. for instance, the utilisation of the powder was 94 per cent. less than with the weight of 455 kilogs. It must therefore be presumed that with Armstrong's projectile weighing 363 kilogs. against Krupp's projectile of 455 kilogs. the utilisation of the powder (always presuming it to be of the same good quality) will be about 6 per cent. lower.

Further, the charge of 162 kilogs. of powder in the Krupp gun had at its disposal per kilog. a volume of space of combustion of 1.09 dcm³. Into the same space of combustion it is therefore impossible to bring 181.4 kilogs. of powder. The space of combustion must be larger. According to the design of the 12 in. Armstrong gun in the *Spanish Artillery Journal* of April, 1883, the space of combustion of the latter gun is 215.9 dcm³. This space is sufficient and quite proportionate for a charge of 181.4 kilogs. This charge will produce in it (always the same superior powder presumed) the same gas pressure as the 162 kilogs. in the experimental Krupp gun.

While according to this the coefficient of expansion in the Krupp gun is 4.33, the same in the Armstrong gun is reduced to 3.52 in consequence of the enlargement of the space of combustion. This reduction has for result a diminution of 12 per cent. in the utilisation of the powder. There is therefore (equally good powder presumed) in the Armstrong gun a lesser powder utilisation of 12 + 6 = 18 per cent. to be expected than in the Krupp gun. As in the latter an energy of 45.7 mt. per kilog. of powder was obtained, in the Armstrong gun only 37.5 mt. can be expected. For a charge of 181.4 kilog. this corresponds to a total energy of 6800 mt. against 7400 mt. total energy as obtained in the Krupp gun.

Under the above-mentioned conditions the Armstrong gun is therefore still 9 per cent. inferior in its effect against armour, &c., to the Krupp gun. It is still to be considered that the new Krupp guns of 35 calibres length weigh only 48,550 kilog., not 49,200 kilog., the weight of the experimental gun.

Already, years ago, Armstrong has produced the same 30.5 cm. gun of 35 calibres length in Spain on paper, but has never, that I am aware of, made such guns till now. It would appear, therefore, to be difficult for Armstrong to make guns of this length. For that reason he is obliged, in order to attain approximately the velocities of the Krupp guns, to considerably increase the charges.

Totally setting aside the greater cost caused thereby, these short guns have the disadvantage that they strain the ship's decks and bulwarks considerably more than the longer Krupp guns. This has been shown in a very striking manner by the experiments of various artilleries, who were agreeably surprised that notwithstanding the heavy charges, these Krupp guns strained the decks and bulwarks still less than the short guns of former construction with smaller charges.

It results from the preceding, that for his comparison "Artillerist" has used figures that cannot be correct if Krupp's figures are valid, and these are so, being taken from the results of trials, while the figures given of the Armstrong gun are imaginary and wrong.

The figures quoted by me have been found by a method of calculation derived from experience, and proved to be correct by the results of repeated experiments. They lead, besides, to another conclusion, i.e., that it is inconvenient to go beyond certain dimensions of the space of combustion, consequently beyond a certain expansion of the powder gases.

When we suppose, namely, equal weights of projectile, the energy of the projectile in the Krupp gun would be 162x45.7=7403mt., and in the Armstrong gun 181.4x0.88x45.7=7297 mt.

Consequently, and notwithstanding the difference in the charges, the energy of the projectiles in Armstrong guns would be approximately the same as in the Krupp guns, whereby it follows that the Krupp construction is the more rational, as it attains the same effect with a smaller charge. The two 30.5 cm. guns furnished by Armstrong to Spain give an instructive example for the correctness of the preceding conclusion.

It has been calculated above that the Krupp 30.5 cm. gun of 35 calibres length has 9 per cent. greater effect than the Armstrong gun. It was tacitly presumed that the effect against armour is in direct proportion to the total energy. This is not exactly the case, inasmuch as, according to the executed experiments, the lighter projectiles as employed by Armstrong show about 10 per cent. less effect than the heavier Krupp projectiles, the same high class material being understood for both.

Besides, for the comparison of the effect of both guns it must be taken into consideration that the lighter projectile loses its energy quicker than the heavier projectile. In this direction the proportion is the following:—

Distance.	<i>Vis Viva</i> of the Projectile of a 30.5cm. Gun of 35 Cal. Length	Proportion of the Two <i>Vis Viva</i> 's
	Armstrong's metre-ton.	Krupp's metre-ton.
0	6800	7403
500	6287	6959
1000	5821	6539
1500	5394	6148
2000	4982	5777
2500	4606	5433

While therefore the *vis viva* of the projectiles of the Armstrong gun at the muzzle is 9 per cent. less than that of the Krupp gun, this difference at 1000 m. rises already to 11 per cent. and at 2500 m. to 15 per cent.

If now one takes into consideration the 10 per cent. of less effectiveness of the light projectiles, one may expect for the Armstrong 30.5 cm. projectile at the distance of 1000 m. 20 per cent., and at 2500 metres 23½ per cent. less effect than for the Krupp projectile.

I am, Sir, yours obediently,

FRIED. KRUPP.

Essen, December 8, 1883.

TO THE EDITOR OF "ENGINEERING."

SIR,—I am not going to take either side in this controversy, but there is one statement in Mr. Krupp's letter of 8th December which cannot be allowed to pass unchallenged, and as it is at the bottom of whatever may be the difference between the two guns, I will at once point it out.

Mr. Krupp says the combustion space in his gun is 1.09 dcm³ per kilog., and in the Armstrong gun 215.9 dcm³ for 181.4 kilog. = 1.19 dcm³ per kilog., therefore the gravimetric densities are .9180 and .8412 respectively. He continues thus:—"This charge (the 181.4 kilogs.) will produce in it (the Armstrong gun) the same gas pressure as the 162 kilog. in the Krupp gun." This is quite erroneous. The gas pressure will be in round numbers 35 tons per square inch in Krupp's gun, and 29 tons per square inch in Armstrong's.

This is the real cause of the superior ballistic effect per kilog. of powder in Krupp's gun. Krupp is not afraid of high pressures, and therefore does not chamber, or rather air space, to the extent Armstrong does; and he is quite right if, as I believe they are, his guns are stronger than Armstrong's.

Yours, &c.,

J. A. LONGRIDGE.

MR. EBY'S NEW SCHEME.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I cannot agree with "Ferrex and Porrex" as to the impracticability of a university with a Christian test for its professors, provided the test were broad enough, no more minute than, say, the Apostles' Creed. There can hardly be a doubt, however, that they have pointed out very grave difficulties in the way of founding a second university in Tokio, or even elsewhere in Japan. And besides, the chances of raising money enough by a popular subscription scheme such as has been proposed by Mr. Eby seem to me to be almost infinitely small. But why cannot the object aimed at in the proposed Christian university be accomplished in a simpler way? Why should not any church or mission establish, close to the government University, a Christian school or college, in which students should be prepared for the higher University classes, and any students attending those higher classes who wished it admitted as boarders? Such an institution would of course have its own religious instruction and worship. It might have any courses of study additional to those of the University that were thought desirable. It would be free, by lectures on apologetics, Bible classes, classes in Church history, or other similar means, to influence to as large an extent as it could the students of the whole University, and, if it were conducted by men of the right kind, such influence could hardly fail to be great.

Such a plan would have numerous advantages. It would avoid any such tendency to drive the present University into active opposition to Christianity, as a rival university would be likely to develop. It would need no special privileges from the Government. The cost would be moderate, and the difficulties of administration comparatively small; while, if it should seem at any time desirable and possible to found a Christian university at Osaka, Kiyoto, or elsewhere, the way would still be open to that.

I may add, that an institution of this kind has lately been opened in the United States, in connection with the University of Michigan, so that the plan is not altogether a novel or untried one.

I am, Sir, very truly yours,

THEODOSIUS S. TYNG.

Tokyo, March 16th, 1884.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In Mr. Eby's letter of the 14th inst., as well as in your leader of to-day, I notice that Mr. Eby's scheme for a Christian University is spoken of as if it had received the sanction of the whole Missionary body of Tokio and Yokohama. "Its projectors" are mentioned, and it is referred to as "the outline proposed by the Conferences." Now, as a member of the said Conferences, I think it only just to state that Mr. Eby is the sole projector of the scheme which has been little more than received for discussion: and that until it has passed through the hands, and received the approval, of a responsible body (which the Conference is not), it remains nothing more than a proposal of Mr. Eby's.

In common with other missionaries, I believe that this scheme, far from recommending itself generally, is certain to be quashed when it comes up for further discussion.

I am, yours, &c.,

THOMAS LINDSAY.

18, Tsukiji, Tokio, 15th March, 1884.

[It was hardly necessary for our correspondent to tell the public that a memorial is not final. Yet it is a memorial of a conference, not of one man. The prophecy contained in the last clause of this letter seems to us very like an illustration of the fault our correspondent condemns.—Ed. J.M.]

LAND-TAX REGULATIONS.

NOTIFICATION NO. 7 OF THE COUNCIL OF STATE.

The following Land-Tax Regulations have been established. The Regulations for the revision of the Land-Tax published by Notification No. 272 of 1873, the rules relating to the revision of the Land-tax, and all other measures which conflict with these Regulations are hereby abolished.

In the case, however, of the Seven Islands of Idzu and of the Island of Ogasawara, which are in the jurisdiction of the Tokio Fu, and of the Hakodate, Okinawa, Sapporo, and Nemuro Prefectures, the existing regulations will remain in force.

The above is notified by Imperial Decree,

(Signed) SANJO SANEYOSHI,
Prime Minister.

(Signed) MATSUGATA MASAYOSHI,
Minister of Finance.

15th March, 1884.

LAND-TAX REGULATIONS.

I.

The Land-tax is fixed at 2½ per cent. of the value of land per year.

By "the value of land" mentioned in these regulations is understood the value of land as stated in the Title Deed.

II.

The Land-tax will not be increased in years of plenty nor will it be reduced in years of scarcity.

III.

Taxable land is divided into two classes.

1.—Rice land; land on which crops other than rice are grown; house land in country districts; house land in towns; salt flats; and land on which mines are worked.

2.—Marsh land; hill and forest land; moor land; and other land not specially classified.

Land of the 1st class or land of the 2nd class, the separate classification¹ of which is altered shall be known as "altered land."

Land of the 2nd class which by the employment of labor and capital has been converted into land of the 1st class shall be known as "reclaimed land."

Land of the 2nd class the conformation of which has been altered by natural calamity, such as "land slips, changes in a river's course, encroachments of the sea or of rivers, deposits of sand by sea or river, and land which by such natural disasters has been converted into rivers, into sea or into lakes, etc., shall be known as waste land.

IV.

Land occupied by Public Schools, land occupied by Shinto Shrines in the country,² and by cemeteries, land covered by drains, land underlying artificial ponds or reservoirs, land forming dykes and embankments, land underlying trenches used for purposes of irrigation, and land included in public thoroughfares, is exempt from taxation.

V.

In the measurement of land the long measure (*kanéjaku*) will be used, and 6 feet of this measure will constitute one *ken*. Four square *ken* will constitute one *ho*, 30 *ho* one *se*, 10 *se* one *tan*, and 10 *tan* one *chō*.

In the case of house land, one square *ken* will constitute a *tsubo*; one-tenth of this square area will constitute one *go*; and one-tenth of a *go* will constitute one *shaku*.

VI.

When the value of land is to be determined upon the expiration of the period known as the "Hoing Term"³ in the case of reclaimed land, and of the period of exemption from taxes in the case of waste land, and when the classification of land is changed, the land in question shall be measured.

VII.

The value of land, except in the case of land the classification of which is changed and reclaimed land, shall not be altered.

VIII.

Should it be necessary to make an universal re-valuation of land, notice of the fact will be given beforehand by decree.

IX.

In determining the value of land, the quality of the land and its class will be specially determined,

¹ The meaning is not quite clear. But evidently the alteration referred to is intended to apply only to alterations within the particular class; such as rice land being converted into ordinary arable land, or forest land becoming moor land; or again arable land being turned into house land.

² No mention is made of the land included in the precincts of Buddhist Temples.

³ The "Hoing Term" is a period fixed, in the case of moor or forest land, etc., being brought under cultivation, during which the cultivator in consideration of his having improved the quality of the land is only called upon to pay the Land-tax leviable upon the land in its original condition. The reclamation of "waste land" is treated separately.

the profit attending cultivation will be ascertained, and the value will be fixed in accordance with the conditions of the land.

X.

When the classification of land is altered, application must be made to the office of the local prefecture, and the land will be re-valued in accordance with the actual conditions of the holding in question.

XI.

When it is desired to convert land exempt from taxation into taxable land, the permission of the office of the local prefecture must be obtained, and the value of the land will be fixed in accordance with the actual conditions of the holding.

XII.

The Land-tax will be levied on the person in whose name the title-deed of the land is made out. But in the case of land given in pledge the Land-tax will be paid by the mortgagee.

XIII.

When taxable land is converted into land occupied by Public Schools, into land occupied by Shinto Shrines in the country, or into cemeteries, exemption from taxation will date from the month^a in which permission for the proposed conversion is obtained. When taxable land is converted into land covered by drains, into land underlying artificial ponds or reservoirs, into land forming dykes and embankments, into land underlying trenches used for purposes of irrigation, or into land included in public thoroughfares, exemption from taxation will date from the month^a in which the work of carrying out the changes commences.

When land exempt from taxation is converted into taxable land, the Land-tax will be levied from the month immediately following that in which permission for the proposed conversion is obtained.

XIV.

In the case of land the classification of which is altered, Land-tax will be levied in accordance with the change in the value of the land from the year in which the alteration in value took place.

XV.

In the case of reclaimed land and waste land, Land-tax will be levied from the year following that in which the "Hoeing Term," and period of exemption from taxation, respectively expire, in accordance with the value of the land as determined.

XVI.

When it is desired to reclaim land^a the permission of the office of the local prefecture must be obtained. A "Hoeing Term" not exceeding 15 years will then be granted; during this period, however, Land-tax will be levied on such land in accordance with its original value.

XVII.

Should the cultivator, during the "Hoeing Term," change his intentions and convert the land in question into a class of land different from that originally intended, he must report the fact to the office of the local prefecture. Under these circumstances the value of the land may be at once determined, or a new "Hoeing Term" be granted (according to the nature of the case).

XVIII.

In the case of land which, at the expiration of the "Hoeing Term" has not been brought into profitable cultivation, a further "Hoeing Term" not exceeding 15 years will be granted.

XIX.

At the expiration of the "Hoeing Term" a re-valuation of the land in question will take place. In the event of the "cultivator's original intentions with regard to the land not being realized, and the land being converted into a class of land different from that originally intended, the value will be fixed in accordance with the actual conditions of such land.

XX.

In the case of land rendered waste by natural calamity, a period of exemption from taxation not exceeding 10 years, and dating from the year in which the calamity occurred, will be fixed. At the expiration of this period the land will revert to its original value.

XXI.

In the case of waste land the actual condition of which at the expiration of the period of exemption from taxation is such as will not admit of its reverting to the original value, a further period not exceeding 10 years will be fixed, during which the value of the land will be estimated at a low rate, not, however, less than 30 per cent. of the original value. At the expiration of this further period the land will revert to its original value.

XXII.

In the case of land which at the expiration of the further period during which it has been estimated

^a i.e. periods of days not being taken into account, the exemption will take effect from the 1st day of that month.

^b See previous note.

^c This does not apply to the reclamation of "Waste Land;" see previous note.

at a reduced value is still not in a state to revert to its original value, and in the case of land which at the expiration of the period of exemption from taxation is not in a condition to be restored to its original classification, the value will be fixed in accordance with the actual conditions of such land.

XXIII.

In the case of land which at the expiration of the period of exemption from taxation preserves all the characteristics of waste land, an extended period of exemption from taxation not exceeding 10 years will be granted; and land which at the expiration of such extended period is still not in a condition to revert to its original value will be dealt with in accordance with the provisions of Articles XXI. and XXII.

XXIV.

In the case of land rendered waste by being converted into rivers, into sea, or into lakes, not being restored to its original condition at the expiration of the period of exemption from taxation, an extended period of exemption not exceeding 20 years will be granted; and if at the expiration of this extended period the land in question has not reverted to its original classification, and is incapable of any other classification, such land shall be regarded as land underlying rivers, sea, or lakes, and the title deed shall be taken back.

XXV.

Persons who fraudulently conceal the extent of their holdings and thereby evade payment of land-tax will be punished by a fine of not less than *yen* 4 and not more than *yen* 40. Moreover, the value of the land in question will be determined in accordance with its original classification, and land-tax will be exacted for the number of years during which the fraudulent concealment has continued.

This provision, however, will not have retrospective effect in respect to offences of this nature which occurred previous to the 1st year of the Land-tax Revision (1873).

XXVI.

Persons violating Articles XI. and XVI. will be punished by a fine of not less than *yen* 3 and not more than *yen* 30. In the case of land exempted from taxation which has thus been converted (without notice to the authorities) into taxable land, and in the case of land being reclaimed (without the permission of the authorities having been obtained) and in respect to which it appears fitting that such permission should be given,—the price of all such land shall be determined respectively in accordance with its actual⁷ classification, and the Land-tax shall be levied on the increased scale.

This provision, however, will not have retrospective effect in respect to offences of this nature which occurred previous to the 1st year of the Land-tax Revision.

XXVII.

Persons violating Articles X. and XVII. will be punished by a penalty of not less than *yen* 1.00 and not more than *yen* 1.95.

XXVIII.

With regard to the offences enumerated in Article XXV. and in succeeding Articles, should these be committed by the lessee or cultivator without the knowledge of the proprietor, the lessee or cultivator shall be fined and the taxes shall be levied from the proprietor.

XXIX.

In the event of persons who have committed the offences enumerated in Articles XXV., XXVI., XXVII., and XXVIII. confessing their misdemeanours, the fines and penalties in question will be remitted, but the Land-tax will be exacted.

NEW SUBMARINE CABLE.

NOTIFICATION No. 7 OF THE COUNCIL OF STATE.

It is hereby notified that, whereas a submarine cable has been laid between Kotomo-mura, Higashi-matsuura-gori, Hizen, Saga Prefecture, and Gono-ura, Ishida-gori, Iki, Nagasaki Prefecture, *via* Komota-mura, Idzugahara, Shimogata-gori, Tsushima, Nagasaki Prefecture, all anchoring, fishing, and dredging for sea-weed is strictly prohibited within prescribed distances from the cable. In a plan (accompanying the Notification) it will be seen that the said distances, on either side of the cable, are marked by buoys, 100 *ken* apart at the widest, and 30 *ken* apart at the narrowest, places (at the shore ends).

SANJO SANEYOSHI,
Prime Minister.

SASAKI TAKAYUKI,
Minister of Public Works.

March 19th, 1884.

⁷ And not, as it would otherwise be, for a term of years in accordance with the original classification.

THE FOURTH LECTURE AT THE MEIJI KWAIDO.

The Missionaries are not fortunate in their weather. At this time of year, indeed, it would be extravagant to expect constant sunshine. Still, seeing that two days out of the four fixed for the Meiji Kwaido lectures have been particularly inclement, we may fairly say that the elements are not active in the cause of religious teaching this spring. The 7th instant was a day of wind and rain, sufficient to deter all but the most earnest hearers. Nevertheless, about twelve hundred people assembled at the lecture hall to hear the Rev. Hugh Waddell compare the merits of Confucianism and Christianity. It is much to be regretted that there is not available in the capital some place better suited than the Meiji Kwaido for lecturing purposes. The very remarkable mastery of the language which the Missionaries have acquired by years of unremitting study, and the high gifts they bring to their work, render them capable of achieving great results if only the opportunity existed. Nothing could have been happier than the idea of delivering annually a course of lectures in Japanese. The churches and the sermons preached there almost daily naturally attract only those who have already become disciples of Western faiths. In time, no doubt, the circle of these believers will widen, but it were over-sanguine to expect that a leaven working in such circumscribed grooves can speedily affect the mass of a virtually indifferent public. The general attitude of the educated classes towards religion is one of apathy. Both Confucianism and Buddhism, as they are taught here, are essentially calculated to foster this mood. For the former regards death as an universal purifier. To have become familiar with its awesome mystery is to have earned the worship of posterity and a place among immortal beings. The disciple of Confucianism, when he burns incense and offers meat and wine before the cenotaphs of his ancestors, sees nothing of the vital aspects of his creed, but remembers only, that however he may have lived, there will surely open to him one day the portals of that deifying knowledge of which the poet's instinct has so well said:—

We shall know what the darkness discovers,
If the grave pit be shallow or deep:
And our fathers of old and their lovers,
We shall know if they sleep not or sleep.

The doctrines of Buddhism, on the other hand, are incompatible with the energy and practicality which the world we live in demands of all intelligent men. It is difficult to be a Buddhist and to have, at the same time, earnest aims and objects in the present. The result is that great numbers of Japanese are either practically creedless, or else content themselves with the thought that as they do by those who have gone before, so will those that follow do by them also. To make any perceptible impression upon this apathetic crust, the Missionary wants to reach the leaders of thought, and not to work only among the weaker vessels who are ready to have their thoughts manufactured for them. Among the various ways of accomplishing this, none seems better than the delivery of public lectures in the great cities, but especially in Tokiyo, where the student and official classes chiefly reside. We believe that excellent results would follow were Tokiyo provided with a large hall, where monthly, or bi-monthly, lectures could be delivered, throughout the year, by foreigners and Japanese, and where large audiences could be comfortably accommodated.

The subject of Mr. Waddell's lecture on the 7th was of a nature that might have been expected to cause some excitement. Confucianism, appealing as it does so powerfully to the domestic affections, is at the root of those household creeds upon which Chinese society, and China's existence as a national entity, have rested for centuries upon centuries. It is hallowed at once by antiquity and by use, and a stranger, standing up before an Oriental audience to expose the faults and fallacies of so revered a code of ethics, might look for anything but a patient hearing. Nor did Mr. Waddell spare the weak points of his theme. A speaker apparently without any fear of the passions he might excite, he held up Confucianism as it looked by the light of intelligence and logic without any of the obscuring glamour of sentiment or mystery, and though his hearers sometimes seemed on the point of losing their self-control, the interest of this new revelation always sufficed to restrain them. Among the audience on this occasion were several officials, who listened from first to last with marked attention. Mr. Waddell's Japanese, though somewhat disfigured by forms of expression which have evidently resulted from a premature use of this difficult language, nevertheless sufficed to convey his meaning clearly, and was always fluent. The lecture lasted nearly two hours. The following is a *resumé*, necessarily much abridged:—

The Bible says "Buy the Truth and sell it not."

We meet here to-day to seek for truth. Truth, like gold and silver, is often concealed from our view under a covering of earth and sand. It requires the practised eye to distinguish the precious metal from the rubbish in which it is buried. The unskilled, on the other hand, cast all away. In seeking for truth let us beware of prejudice. He who looks at things through coloured glasses sees all in a false light. Let us beware of putting on national spectacles in seeking for the truth. Let us try also to look at the systems we discuss to-day through each other's glasses, and thus, by helping one another, we may come to form a fair estimate of the whole. In speaking of Confucianism, there is much about it to command our respectful attention. It is no system of to-day. It comes to us hoary with age, and every one must feel within him veneration for antiquity. Again, it is not an untried system. It has been tested for centuries; it has built up and held together a nation from the remotest antiquity down to the present day; and now, to-day, it addresses us with four hundred millions of our fellow men at its back. It alone seems to survive the wreck and ruin of time and to stand firm amidst all changes. The lecturer then invited his hearers to examine with him what was in this system that gave it this moulding and conserving power. What was the element in it that thus bound together one third of the human race? In the lecturer's opinion it was religion. A religion which united the present with the past, the son to the father and to the ancestors, by the strongest ties of filial affection and religious veneration and fear. It is said by some that Confucianism is not a religion. This, the lecturer considered a mistake. A system which teaches the existence of a god, or gods, which teaches that the affairs of the world are under the care of the deity, and that man, for favour received from the divine being, ought to worship the author of these blessings, is properly called a religion, though it may be a false one. Now does Confucianism teach the existence of the gods? Does it teach that the world is under their care? Does it inculcate on man the duty of worshipping the gods? To all these questions the answer is affirmative; and if so, then it is properly a religion. The lecturer then went on to consider what are the gods of this system; how they are divided and designated, what they do and how and by whom they are to be worshipped; and from this he contrasted what is said of them by Confucian writers with the teaching of Christ, leaving the audience to consider for themselves which of the two systems commends itself to reason and conscience. The writings of the Chinese show: 1st. That gods were divided into *nai shin* and *gai shin*, gods of the family and of the State, thus forming a family and State religion. The *gai shin* were *jotei*, the gods of the famous mountains, great rivers, and of the four quarters, and the *nai shin* were spoken of as the gods of the ancestral temples and of the grain and the land. Attention was directed to the fact that the *gai shin*, or national gods, were properly called *shin*, while the *nai shin*, or gods of the family, were properly called *rei*. The commentators explain that a god in heaven or above was called *shin*, and when he came down to earth he was called *rei*, and that a god far off was called *shin*, while a god near at hand is called *rei*, and hence when we speak of the gods with reverence they are called *shin*; when we speak of them with affection they are called *rei*. Mr. Waddell showed that similar usage held in the case of *θεος* and *δαίμων*. The god in heaven was called *θεος*, the god among men was called *δαίμων*. He then showed that the gods were again divided into three classes, according as they belonged to earth, heaven, or man, and that these three classes of gods had distinct names applied to them; thus the gods of heaven are called *shin*, the gods of earth are called *gi*, and the gods human are called *ki* 鬼. *Shin* and heaven, *gi* and earth, *ki* and man were, in the mind of the Chinese, but one and the same thing only viewed from different aspects. Hence, speaking of earth as to its form, we call it earth, and speaking of it as a god we call it *gi*; and so, too, speaking of heaven as to its form, we call it *ten* or heaven, speaking of its ruling power we call it *tei* or *jotei*, supreme ruler; speaking of its infinite mystery we call it god. He then considered the names of the god heaven, and his relation to the other gods, and showed that he was called the chief or most honourable of all the gods, the object of veneration for all, and the lord of men and gods. The Chinese ranked among their gods, sun, moon, and stars, heat and cold, winds, rain, and clouds, etc., all, on the principle that these things were useful to man and were therefore *shin* or gods and worthy to be worshipped. The ancient stoics held precisely the same theory, allowing the name god to be applied to everything useful to man. In China, the national gods were only to be worshipped by the Emperor and his princes and magistrates. The people had

no right to serve these gods, but were taught to worship the gods of their own families, or the *nai-shin*. With regard to the family gods, Confucius taught that a man derived his spirit from heaven, and his soul and body from earth, and that when he died, the spirit or soul-spirit, *konki*, returned to heaven, while his body-soul *tai-haku*, returned to earth. On this duality of soul and spirit a double form of worship was founded. And spiritual things were offered to the spirit, while corporeal things were properly offered to the body-soul. The *ki*, or spirit of man, was said to be in the *kon* or rational soul, but, according to others, the *ki* was external and the *kon* internal. This latter was the view of Lord Bacon, who says that the spirit is the organism of the soul. We have written proof that the sages of China, in order to excite fear and reverence in the minds of the people, changed the names *kon-paku*, *animus* and *anima*, into the name *kishin*, on the ground that the former did not denote honour or respect, while the latter was regarded as the most honourable title that existed. The spirit had the heart and lungs and liver and blood presented to it, on the ground that these were the seats of this spirit in the man when he was alive. Further, this spirit, or *ki*, was summoned from heaven by music, while the *haku*, or animal soul, was called from earth by the pouring out of libations. The spirit was supposed to come to the feast, partake of the offerings, and confer the blessings of long life and prosperity on those who duly performed the service to the dead; while those who neglected them, were supposed to come under its displeasure and be punished accordingly. In this way the family gods became the guardians of the living, and man was thus constantly surrounded by the departed. In the spirit world, husband and wife were not separated and obliged to feast at different tables as in life, but, on the contrary, the body being laid aside, the spirits, *seiki*, met at a common altar and were worshipped together, a circumstance which might tend to console the dying wife in her last moments, and render her future prospects brighter than her past. Among the departed, some ranked above others, some being called *shin* in contrast to others who were only called *ki* 鬼. Thus the spirit *ki* 氣 of the *seiki* was called *shin* or god, because his spirit was mighty and could order and produce things, and thus cooperate with the gods of earth and heaven. On the other hand, the spirit of the *ken-jin* was said to be weaker than that of the sage *sei-jin*, and became simply a *ki* 鬼 (*ιδωλιον*) or shade. The lecturer then proceeded to contrast all this with the religion of Christ. There we have no deification of heaven, earth, or man. The God of the Christ is not heaven earth or man, but the Creator of them all. A man cannot serve two masters neither can he serve many gods. The loyal heart can have but one sovereign; Christianity is here true to man's nature, Confucianism false. Again, Confucianism forbids the common man to worship the great gods. It sends each man to his own ancestral god and thus crushes the poor man down in the dust; while, on the other hand, Christianity lifts up all men to one common level, and invites all to come to the same great God who made heaven and earth. Further, Confucianism requires the worshipper to bring scrip and purse, drink offerings and meat offerings, precious stones and clothing to offer to the gods, and he who comes empty-handed to feast this ancestral god, gets not a blessing but a curse; while Christianity, on the contrary, requires none of these things. God is a spirit, and they that worship him must worship him in spirit and in truth. He asks not our food or clothing, our libations and incense. He seeks only the deep devotion of the heart. Hence the poorest, meanest man on earth, who comes to Him with a loving, loyal heart, finds as ready a welcome as the greatest of earth's kings. What has held China together from the distant past until the present day, is the deifying and worshipping of parents and ancestors. Here the love of the child for the parent unites with the veneration and religious fear of the god; and man becomes bound by a chain which cannot be easily broken. For the parent merges in the god, and the god clothes himself in the form of the parent. Thus love, adoration and fear bind the past and present in China. But Christianity realizes all this on a grander scale. For God makes us his children, and becomes our Father in heaven. Nay more, we form but one family and are all bound together by the same family ties to the same common God and Father of us all. Whereas the Confucian system unites each family round its own centre and family god, and by this very means fails to produce true union, for a separate god in each family divides one from the other, and tends to foster all kinds of discord among the various clans and districts. Again, as the living must worship the dead from the remote past until the present, and as among these dead there must be many who have lived notoriously

wicked lives, it follows that the living worshipper must pay his devotions to these wicked men because they are his ancestors. Here then we have good and bad, all ranged in common line of family gods, and the filial son must worship his father's shade even though he were a robber or a murderer. Surely many a man must blush to be found worshipping as gods men who disgraced their kind by their evil deeds when alive. But Christianity leads us to the worship of a God who has in him every perfection, who is the centre of all truth and purity, and in whose worship we may glory: for he is infinitely worthy of it. Again Confucianism tends to lead men to think little of the evil of sin because the offence bulks very much in proportion to the rank of the person against whom we offend, and as the people have little to do with any god but their own frail, sinful ancestors, it will be manifest that the worshipper cannot feel much detestation of sins committed against such a mean divinity. On the other hand, Christianity gives men a deeper sense of sin just because of the infinity of the great and holy Being against whom we have sinned. Again Confucianism does not tell us how a man who has sinned against Heaven can be saved. It says, indeed, that he who sins against Heaven has no where to whom to pray, but it does not tell us how such a man can get forgiveness. But the religion of Christ makes known to the sinner how he may return to God against whom he has sinned. It points out how sin may be forgiven. It shows how God can be just and yet pardon sin through the blood of the cross. It points to the love of God in giving his son, and to the justice of God in punishing the sinner's substitute, and thus justice and mercy meet in the cross of Christ, and sinners are everywhere invited to seek and be saved. Again, both Confucianism and Christianity teach the existence of the world of spirits. The Confucianist regards the present world of light as the desirable one. Here the sun god shines upon him by day, the moon and other gods by night. To leave this world and go into a dreary world of spirits where the spirit is up in the clouds and the soul down in the earth must be a gloomy prospect. The part in the earth is the seat of memory, the part on high is the fountain of all activity. But if the memory be gone from the active part, and all activity from the earth-bound soul, surely it must be a dreary prospect to look forward to such a separation, with only the hope of being united again, say, at least at times, once or twice a year. And what must be the case of those who have no such prospect? Those who die without any one to worship them or care for them when they are gone? But to the Christian the world of spirit is not dismal. On the contrary, it is his own home to which he is going. There is his father's house. There his soul and spirit united shall dwell in the presence of God. And there he will find all his wants supplied. He will not need the food and drink of his posterity. He will hunger no more, neither will he thirst any more. Confucianism keeps China from being opened up; it obstructs the progress of railways and mining. It fills men with the dread of the gods of hills, rivers, roads, and so forth. The people fear to investigate too closely the affairs of the heavens with a telescope, believing that sun, moon, and stars are gods. Christianity rids men from all such fear. Japan is gradually getting rid of all these gods. Science is showing her that the gods of sun, moon, and stars are no gods. It is driving the gods from mountain and river, sea, and land. The real danger now is that if the knowledge of the true god, the Creator of heaven and earth, be not received, the people of the present will cease to have any religion at all. Agnosticism or atheism has no power to unite and hold men in a common brotherhood. Religion alone can accomplish this, and above all, that religion which makes the father god, and which unites men at once by the strongest ties in their nature, divine love, reverence, and filial affection. This has been and is the secret of the power of Confucianism, and Christianity gives us all this in a deeper and wider sense, for it makes all men who believe in Jesus the sons of one God and the Father. Another theory of Confucianism is that the dead may become evil demons and curse the living. This has led the Chinese to provide a worship for all such hungry ghosts, and hence, from the Emperor down to his meanest subject, all offer sacrifices to the unpropitiated divinities. A Chinaman, for this reason, will often show more attention to the body of a dead beggar than to the same unfortunate in life, because, being dead, he has become powerful for evil, and may proceed to take vengeance on those who neglected him while alive. Christianity is not disfigured by any such demon-worship. The souls of the dead have no power to torment or harass the living, nor does their rest or happiness depend on the burning of incense or the offering of gifts at their tombs by those that are soon to follow them into the presence of their Creator.

NEUTRALITY.

(Translated from the *Nichi Nichi Shimbun*.)

What position shall Japan hold in the event of a war between France and China? This is a question which, just at present, demands our serious consideration. Now that these two nations are involved in grave complications with reference to Tongking and Annam, it is very probable that if France besieges Bac-ninh (*Hokune*), conquers that important fortress, and carries her arms to the northward, China will no longer remain quiescent for the sake of international interests, although she may not desire that the tide of battle be carried into Yunnan. Should China remain passive, it is very possible that France will force her to pay all the expenses incurred in the war in Tongking and Annam, by seizing the islands of Hainan and Formosa. If this were done, China could no longer hesitate to declare war with France. It is truly most desirable that the tranquillity of the East should rest undisturbed; but if we do not immediately make ourselves ready for any emergency, even though the threatened war do not break out, we shall certainly be guilty of dire imprudence. It is absolutely necessary that we should be prepared to face the many dangers which may arise. What form shall our preparation take? Shall we stand neutral in case of a great war between France and China? Or shall we declare ourselves the passive partisans of one of the belligerents? Or shall we, finally, join our forces with one of the belligerents and take part in the war? Say, for the moment, that we stand neutral: shall our neutrality be a strict or a benevolent one?

China is our nearest neighbour, with a literature the same as our own, and easternmost boundaries which directly face our western shores; while France is one of the best friends we have in Europe. A defeat suffered, or a victory gained by either of these two great Powers, would not only cause us sorrow or joy, but would have a most important influence upon the policy of our own Government, as well as upon our national interests. It is, therefore, most necessary that we should consider the present situation in every point, and that we should determine whether it is possible for us to maintain our present status without endangering our friendly relations with either of the two countries; without disturbing the tranquillity of Eastern Asia; without losing ought of our national prestige.

Our modern politicians are often disposed to comment upon the liberty of man, as well as his so-called natural rights; but they are sadly indifferent to the solution of such practical problems as are those which we have just specified. And even though they may occasionally turn their attention to such burning questions as these, they think they do all that is required of them in stating that Japan should stand neutral. It is, perhaps, not to be wondered at that they have never given their opinion as to how this neutrality is to be maintained.

Our own views are always against the maintenance of an aggressive policy; a policy which is entirely out of place in this country in so far as its geographical position is concerned. The possession of territory in the Asiatic continent would surely lead to unfortunate results. This is all the more forcibly true, when we remember that we have no actual quarrel with China, and that we are far from entertaining any hostile feeling towards France. We have no just reason either in the circumstance of the case or in our position to participate in a Franco-Chinese conflict. It follows that neutrality is our safest and best course. But we must know that, if a war actually breaks out between France and China, the maintenance of a strict neutrality would be a most difficult matter, and that strict neutrality not infrequently assumes a partial appearance. In order to make both disputants fully aware of our neutral standing, we must be armed at all points. If war is declared, we in the east, and Great Britain in the west, will find it very difficult to preserve a neutral states. The position of Great Britain would be briefly as follows:—Neutrality includes, *primâ facie*, strict impartiality; for if any partiality is shown by a neutral power to either of two belligerents, that power is actually no longer neutral. Benevolent neutrality, says a Western Jurist, is only slightly different from actual participation in warfare. This is a wise saying, indeed. The people of England appear to suppose that their Government will officially announce a strict neutrality so soon as war shall have been declared between France and China. Such an announcement would prove most beneficial to China, but it would entail serious inconveniences upon France. French vessels, whether men-of-war or transports, *en route* for Annam or China, must call at Port Said, Aden, Point de Galle, and Singapore for coal and provisions. Admitting that Port Said is

an Egyptian port and that no objections could be raised against French vessels stopping there, we are inclined to suppose that, as all the other above-mentioned ports are under the British flag, no French ships could call at any of them, and that they would be unable to reach Saigon, where the head-quarters of the French forces are established. Although, in case of a war with China, France would depend principally upon her navy, still forty or fifty thousand troops would have to be sent out. It would be hardly possible to bring out these troops in French vessels alone, and yet the laws of neutrality would forbid Great Britain's rendering any assistance whatever. There would be the greatest difficulty, therefore, for France in transporting men and provisions. Hongkong is a military post of the greatest importance in the eyes of the French, as it commands the whole of the southern Chinese littoral; but England could not permit France to make any use of the island, nor would she allow France to engage in naval conflict in adjacent waters. France might blockade the ports along the whole coast of China, but England would refuse to recognize the validity of the blockade, and might forcibly interfere in the interests of her eastern commerce. Nor is it at all unlikely that English vessels would try to run the blockade. In this case, complications would inevitably arise between Great Britain and France. Again, English merchants might, for the sake of large profits, secretly sell arms and ammunition to the Chinese, in utter disregard of the laws of neutrality; and the arrest of these merchants would lead to angry disputes between England and France. There are at present several British subjects employed in China in the capacity of naval and military officers and instructors; these officers would have to throw up their engagements, nor could they take any part in a Chinese war with France. Yet, owing to pressure of circumstances or at the earnest desire of the Chinese, they might resolve to continue in the service, at the loss of the national honour, not caring if they thus forfeited their birthrights as British subjects. Many such occurrences took place in the late Turkish war. They would then speedily assume command of the Chinese army and navy, beside superintending the building of war-vessels and the Government arsenals, and they could prove exceedingly dangerous to French interests. Such a state of affairs would not fail to produce much irritation between Great Britain and China. Finally, the people of England manifest much greater sympathy with China, on account of their commercial interests, than they do with their neighbour, France. And in case war is declared between France and China we may reasonably expect that this feeling will grow stronger rather than decreases. The protection of British commerce in China will, in case of war, be a very expensive matter, and the profits derived from that commerce would be greatly curtailed. At all events, if Great Britain maintains a strict neutrality, she will give great umbrage to France; and if she exhibits any partiality towards France her relations with China will be seriously imperilled. Under these circumstances it will be a most difficult matter for Great Britain to stand neutral.

What is true of England in the west, is true of Japan in the east. Since the outset of our intercourse with foreign nations, the earliest declaration of neutrality made by Japan was in the year Ansei, when the allied armies of England, France, and Sardinia fought with Turkey against Russia, in 1854-55. This event took place after we had already concluded a treaty with Russia, and opened the ports of Nagasaki, Shimoda, and Hakodate, where only Russian vessels might take in supplies of coal and provisions. But when a Russian vessel, in which the Envoy Buchachin had embarked, was wrecked and sank off Shimoda, the Shogun's Government not only permitted him to build a new ship in Japan in order to return to his own country, but also provided him with the necessary timber and a staff of efficient carpenters. In a short space of time a schooner was built, mounting several guns. With the help of this schooner the Russian Envoy succeeded in reaching Kamschatka without falling in with English vessels. It must be remembered that, at that time, our relations with England were restricted to supplying fuel and water to English vessels, in accordance with certain articles agreed upon by the then Governor of Nagasaki and the Commander of a British vessel. No treaties had been drawn up by any special commissioners or envoys. No especial announcement of our neutral status had been made to Great Britain. Nor is it unreasonable to affirm that the courteous reception of the Russians by our authorities betrayed their utter ignorance of the true nature of neutrality. In the sixth year of Ansei (1860), when England and France formed an alliance and attacked China,—with which country, however, we had not yet entered into friendly relations—we not only neglected to make

any declaration of neutrality, but we even did not prohibit the English landing their men and buying horses in Yokohama. Somewhat later on, a civil war broke out in the Northern and Southern States of America, while, in Europe, Prussia became involved first in a war with Denmark and then with Austria. As all these occurrences had no immediate connection with the welfare of this country, it was, of course, not necessary for us to make any special declaration of neutrality. But when, in the third year of Meiji (1870), a war broke out between France and Germany, and the fleets of these two countries constantly sailed in eastern waters, our Government maintained a strictly neutral position, and escaped a breach of friendly relations with either of the two belligerents. Diplomacy had by this time considerably developed, and our responsible diplomatists had become familiar with the most important points of neutrality. But we are inclined to believe that their real knowledge of the vital importance of neutrality first began when they themselves saw that, during our revolutionary war, the representatives of the treaty powers in this country openly declared their strict neutral standing. Later on, when war broke out between Russia and Turkey, there was no necessity for a declaration of neutrality on our part, as the dispute had little or no connection with the welfare of Japan. Nevertheless, had England changed her policy and determined to assist Turkey, it would have been absolutely indispensable for us to maintain neutrality in its strictest form. Again, when a dispute arose last year between China and Russia in regard to the concession of Ili, the Admiral assumed command of a well-equipped fleet, and held himself in readiness to attack China simultaneously with the advance of the land forces, so soon as he should have received despatches from his Government announcing the outbreak of hostilities. The moment was one of great significance to our foreign policy. Questions at once arose as to what policy we should adopt; what sort of neutrality we should declare, and whether it would be possible for us to put it in practice, etc. Ever since that time, the public has been familiar with the true significance of neutrality.

The difficulty in maintaining a neutral standing in case of the declaration of a war between France and China will be just as great as if hostilities broke out between Russia and China. The announcement of strict neutrality on the part of our Government would be highly beneficial to China, as in the coming contest her rôle will be rather a defensive than an offensive one. But France, who has to play the part of an offensive belligerent, would thereby be seriously inconvenienced. Indeed, strict neutrality on our part would very probably assume the aspect of benevolent neutrality, so far as China is concerned. If the conflict be confined to Tongking, France will want nothing of us; but if the war be carried on along the eastern coast of China, between Tientsin and Shanghai, it is not so very improbable that France would want to establish naval stations on the western coast of this country, for instance at Nagasaki, Goshima, Tsushima, or Naha. But this we must prevent by every means in our power, even if we have to resort to arms. Still, we could not, nor would we, forbid French vessels calling at these ports simply as havens of safety, where they might be free from all danger of an attack of the Chinese. Again, if France were defeated, and if she lost Saigon, she would be absolutely forced to establish some temporary head-quarters in adjacent seas. It needs no lengthy demonstration to prove that such territory could only be found in Japan or in one of the Eastern Asiatic Colonies of Great Britain. Admitting even that France would not have to change her head-quarters from Saigon, yet it might very possibly happen that, in consequence of injuries sustained by her vessels, she might apply to our Government for permission to repair her ships in Nagasaki; or she might bring wounded soldiers to this country for medical treatment. In such a case, the simple announcement of neutrality would not keep us from acceding to her request, and we should have to let ships be repaired and her soldiers cared for in our ports. But, at the same time, our Government would be forced to adopt measures preventing these soldiers, when convalescent from re-appearing in the field of battle. For if this were not done, the Government would be liable to be severely criticized and charged with having infringed the law of neutrality. It is not difficult for us to prevent the two contending parties from buying anything in this country contrary to the law of neutrality, yet it must not be forgotten that there are many articles which, though not directly applicable to warlike purposes, may indirectly be made use of in warfare. The sale of such articles often gives rise to disputes. Coal, for example, may give occasion to great discussion. If it is not customary to place any restrictions upon the sale of this important article in time of war, we have nothing further to say; but

in any other case the export of coal from Japan will be seriously affected, and the national revenue will suffer in consequence. If similar restrictions are to be imposed upon the supply of provisions, wood, and water to either of the two belligerents, we must be prepared to fly to our arms the moment either of the two nations refuse to observe these restrictions. So far as our international relations are concerned, there are many points in connection with neutrality that require our earnest and careful consideration, and we shall refrain from commenting upon them in a careless or superficial manner. We sincerely trust, however, that our readers will remember that the just preservation of neutrality is not by any means an easy matter; and that, if hostilities break out between France and China, the position of Japan will be one of the gravest responsibility.

IN THE MINISTERIAL COURT OF THE UNITED STATES OF AMERICA IN JAPAN.

Before the Honorable JOHN A. BINGHAM, Envoy
Extraordinary and Minister Plenipotentiary.

MONDAY, March 17th, 1884.

THOMAS B. VAN BUREN V. THOMAS H. TRIPLER.
SLANDER.—\$5,000 DAMAGES.

General Van Buren conducted his own case.

Mr. Weiller appeared for the defendant.

At the previous sitting of the Court, on the 13th inst., Mr. Weiller applied for permission to strike out the words "in the letter to the Hon. Secretary of State" in the second portion of the answer, pleading that they were put in in error.

The Court said it thought it would not help the defendant, as no plea of justification was admissible under the general issue. Defendant could not allege the truth even as a mitigation of damages without acknowledging having used the words.

Plaintiff said that the proposed change entirely altered the defence. The allegation was explicit and the denial distinct. If he wanted to plead justification it was very simple to try and prove the truth of the words spoken. But that was not the question. The question was had, he made those statements? Defendant had stated that he had written to the Secretary of State criticizing his acts. What the defendant thought about the purchase of the buildings had nothing to do with this case. He did not wish to be misunderstood, he had always been agreeable to the defendant making any pleading he liked, but it must be explicit. By allowing him to alter the answer he did not propose to surrender any of his rights.

Mr. Weiller moved to amend the answer by adding "that if the defendant did utter the words" and so forth "the same were true."

Plaintiff said that the defendant then admitted that after all the first plea was a mistake. The probable motive in inserting the second plea in the answer was no doubt to show to the Court his patriotism and his interest in the people of the United States and to warn them against this terrible Consul-General.

Mr. Weiller admitted that his ignorance of common law pleadings was the cause of the mistake.

Mr. P. Osborn was recalled.

Plaintiff objected to having the testimony of Mr. Osborne as to record evidence. He was perfectly willing to publish in every newspaper in Yokohama and the United States everything connected with any business transaction he had ever been engaged in, but he did not intend to gratify the malignant curiosity of the defendant in a matter with which he had no concern. If, however, the defendant would place himself right upon the record, he would show everything connected with the transfer of the Consular buildings. As the pleadings now stood, however, no evidence upon the subject was possible.

Mr. Weiller then submitted an amended answer.

Plaintiff remarked that in the answer as now proposed, the defendant says he made an error, he intended to plead justification but did not do so. It went on to say that if he used the words, they were to the best of his information and belief true. The words information and belief are no part of a plea of justification. The defendant seemed to be trying to do a great deal on a very small basis. If the plea came in it must come with an admission that he used the words. If it came in that way he would not object.

Mr. Weiller would not admit having used the words "swindled" or "swindled the Government." He would admit the criticism relative to the buildings in the letter to the Secretary of State.

After some further discussion,

Plaintiff cited 2 Rent, page 25, note A., on justification and general issue, which reads that "a plea

of justification accompanying the general issue was proof of the speaking of the words, and that if the defendant failed to establish it by proof, the plea was evidence of malice."

Counsel for defendant then submitted another amended answer, which the plaintiff contended did not contain a proper plea. The difficulty was that they were not entitled to any amendment, if they wanted to change the issue they must admit the using of the words. It was as plain as the nose on a man's face that the whole of this was an attempt to take it out of the category of actions for slander. He objected to their changing the plea unless they admitted saying the words and if they did so they were barred from bringing evidence to prove the contrary. They wanted to say admitting and did not admit.

The Court said it was under the impression that in Common Law a plea of not guilty would admit proof of justification.

Plaintiff said that the defendant was asking for a privilege and yet would not put his plea in a proper form and the one the Court had suggested.

Mr. Weiller said they were demanding it in the furtherance of justice, they had admitted having made a mistake. He insisted that under the law of pleading the defendant could deny and plead justification after the plaintiff had made out a case.

The Court said that one of the allegations was that the purchase of the Consular buildings was unlawful. He might as well say at once that it was bringing up a question over which he might not have jurisdiction. The actions of Consuls were under the State Department. If the State Department had been advised and had sanctioned the purchase he had no power in the premises.

Plaintiff said he stood ready to prove that the Department knew of the purchase and sanctioned it.

His Honour said the action of the Government would be a bar to all further action.

Mr. Weiller said that if that was the view taken by the Court, he should renew his motion for a non-suit.

Mr. Weiller in support of his motion for non-suit, claimed that even if all the allegations contained in plaintiff's petition were considered proved, they were not sufficient to maintain a cause of action.

Plaintiff said that the cases to which the defendant's Counsel referred were State cases, that they were Common Law cases did not appear, and quoted from Starkie by Fulkard's on the Law of Slander and Libel, 6th ed., pages 70, 83, 110, 111, 119, 278, 283, 287. Also Kent, 12 ed., vol. 2, pages 16, 20 and 22. Smith's Manual of the Common Law, page 33. Walker's American Law, 6th ed., page 584. Sedgwick on Measure of Damages, 7th ed., vol. 2, page 344. Some of these cases ruled "that words are actionable, without proof of damage, which directly tend to the prejudice of one in his office, profession, trade, or business"; also "that where his office is lucrative, words which reflect upon the integrity or capacity of the plaintiff, render tenure precarious, and are therefore *pro tanto* a detriment in a pecuniary point of view;" again "where a person holds an office or situation in which great trust and confidence are of necessity reposed in him, words which impeach his integrity generally, though they contain no express reference to his office, are actionable, since they must necessarily attach to him in particular, and virtually represent him as unfit to hold that office or situation." Plaintiff, continuing, said that the allegation as laid in the complaint and as proved was that he had committed an act contrary to law, defendant's saying so did not make it so, but he had charged the plaintiff with committing an unlawful act which was either a crime or a misdemeanour and had likewise said that he had swindled the U.S. Government, which was an indictable act.

Mr. Litchfield, on behalf of the defendant, said that the words as proved by Mr. Prichard, who was the only real witness, stated they were spoken in connection with plaintiff's candidacy for President of the Y.U.C., there was therefore variance between allegation and a proof. Further, assuming that they were spoken of the plaintiff in his Consular capacity, they were spoken as of a matter that was past, and which had been adjudicated by his superior officer. And therefore no further damage could be done. This was like where a man had been charged with having been a convicted felon, which was not slanderous, Starkie, Law of Libel, page 101. Words spoken of a Church Warden might be slanderous, but to say that he stole the bell-ropes of church was not slander as he was in charge of them, Starkie, page 150. No more would it be slander to say that the Consul-General acquired the property improperly, because he was in charge of the U.S. Consulate, and it must be assumed that he held them for the benefit of the State. If the Court was against him and ruled that the words were actionable *per se*, he should have to refer to the plea of justification.

His Honour said that, the Counsel having quoted several authorities, he should reserve his opinion on the motion to non-suit.

His Honour said that before entertaining the motion that was standing, he wished to remark that he was previously under the impression that under the Court Regulations it was necessary to have the evidence written down and signed, but found that the Court Regulations did not require it, but the statute made it mandatory that they should be taken down in writing in open court, be made part of the case, and be made a permanent record in case of an appeal. The signing was not compulsory, but it was only just to the witnesses to have it read, and just to the parties in the suit, so that it could not be called into question afterwards.

The Court notes of the testimony of the witnesses at the previous hearing were then read and accepted by both parties.

Referring to the motion for a non-suit, dismissing the petition, the Court said it rested on two grounds. First that the words were not actionable. Secondly, that it had not been proved that they had been spoken. He had looked carefully into the cases mentioned and thought that to look at the definition of slander in books would not help; it was the circumstances under which it was made. He thought that the motive in the case cited by the defendant's Counsel from the Law Journal was all well enough. That to say that a man was a swindler might be unpleasant, but does not enable the public to know anything about it, and therefore he was not in danger of arrest. He had looked into the authorities and thought that the rulings in Starkie and the Law Journal were made for the reason that there was no averment of an act done. In this case there is an averment of an act done, namely, that he had swindled the Government. What is said of a public officer affecting his character in his official capacity is actionable. Referring to the case of Pollard v. Cooley, Cooley on Torts, page 196, quoted by the defendant, the Court said that the first four definitions of slander therein mentioned covered the present case. Where the words spoken prejudiced an official as touching his office, they were actionable. His opinion was that the words as laid in the petition, "that he had swindled the Government" were actionable. This disposed of the motion. The Court further observed that regarding the evidence brought forward, without assuming what evidence the defendant might bring forth, the three witnesses had proved substantially the following charges: (1) that the defendant had said that the plaintiff had bought the buildings in an underhand way for *yen* 2,200, from the Kencho; (2) that the plaintiff had swindled the Government of the United States. Unless something else occurred in the evidence, he thought that sufficient had been proved to dismiss the motion.

Motion overruled.

His Honour then remarked that the next question was the amendment of the answer. It was a good home rule that, in the furtherance of justice, the defendant may in an action for slander plead the truth in justification of one or more of the charges, citing Kent's Commentaries, vol. 2, pp. 25, 26. Hilliard, p. 380 par. 35. One charge is that plaintiff purchased the property for *yen* 2,200, the second that he swindled the Government. That there were two distinct charges here was not to be doubted at all. He supposed that beyond all question he might justify as to either of them. As to general and special pleas of justification, the Court read from Falkard's Starkie, pages 391, 515, and 740. There was a general plea of justification and a special plea. The general plea would cover the whole ground. Under a special plea it is not necessary for the defendant in his plea to deny the innuendo, the truth of the defamatory matter intended to be pleaded in the defence must be verified. According to Starkie, he could plead in whole or in part. Defendant could plead truth in the whole or in any part of the allegations. The law clearly settled that the defendant might plead the truth of the matters charged without in anywise subjecting himself to any estoppel of right under the general law. As to the form of the plea and justification, the Court referred to Folkard's Starkie, and said that the defendant must admit the words spoken and aver their truth. There was an allegation that the words were spoken in the interest of the public. The law was that where a party in mitigation says that it was done in the public interest, it remained with him to show how the public were affected in the matter. Leave to amend the answer was then granted, provided that it conformed with the law as cited so as to enable the Court to file it and put it on the records.

Mr. Weiller here handed in the following amended answer:—The amended answer of Thomas H. Tripler, the above named defendant to the petition of the above named plaintiff, shows as follows:—That the said defendant admits so much of the said petition as alleges that the plaintiff is

Consul-General of the United States at Kanagawa, Japan, and that he is resident in Yokohama. That the said defendant denies that he spoke and published of and concerning the said plaintiff the alleged defamatory words in the petition set forth, or any of them, and says that he is innocent of the grievances alleged in the petition; and for a further answer defendant says that at the time of the alleged grievances set forth in the petition he did speak of and concerning the plaintiff that he the said plaintiff had improperly purchased as Consul-General the buildings and premises now occupied by him, the said plaintiff, as Consular Offices and his residence. That he the said plaintiff had no right to buy then at all, and that said purchase and occupancy were contrary to law, all of which said statements are true, and all of which said words the said defendant had a right to say of and concerning the said plaintiff. Therefore, the defendant prays that the petition of the plaintiff be dismissed; that the said plaintiff be adjudged to pay all the costs of this action, and that the defendant receive such other relief as from the nature of the case and in the discretion of the Court may seem right and proper.

Answer admitted.

Plaintiff expressed himself willing to go to issue under the rule.

Percival Osborn, recalled, stated that he knew the location of the U.S. Consulate in Yokohama.

Mr. Weiller—Who is the owner of those premises?

Plaintiff objected, and said that the defendant's Counsel must recognise the fact that the best evidence was the records themselves. This was not legal evidence, but to facilitate the case he would not press his objection, but let it pass.

Witness—The land is owned by the Japanese Government. It was leased before he went to the Kencho. He believed it was leased to the U.S. Government, but was not sure. The ground-rent receipts were sent to the U.S. Consul-General. There was only a notice sent to the U.S. Government or the Consul-General to pay the ground-rent. He did not know who owned the buildings, they formerly belonged to the Japanese Government before they were sold. They were sold to General Van Buren by the Japanese Government. He was Consul-General at the time, and he had no doubt his title was put into the document as it was the usual thing to put in titles in such documents.

Counsel—Do you know the limits of the foreign concession in Yokohama within which foreigners can purchase land?

Plaintiff objected to going into the history of Yokohama, alleging that it had nothing to do with the issue.

Mr. Weiller, insisted that the question was pertinent, as under the treaties that part of Yokohama could not be purchased by any other person than an official. He wished to show that no ordinary person could acquire property there.

Plaintiff said he was willing to admit that the lot was a portion of the ground set apart for public buildings.

P. Osborn said he could not say exactly how the title deeds were worded; it was a long time since he saw them. Others occupied land on the block, such as the German Club and the American Church. The land was a strip that had been reserved for public buildings.

Plaintiff said there were two lots, one for public buildings and one for Consular buildings. The lot upon which the English Consulate was built was owned by an American citizen, who gave it up for the lot set apart for public buildings.

Witness said the transfer of the buildings took place some years ago, he believed in the 13th year of Meiji.

Mr. Weiller—What was the price paid?

Plaintiff objected to the question on the ground that it was entirely immaterial, and referred to the answer to the petition which stated that the purchase was contrary to law. He thought the price had nothing to do with the allegation of his action being improper or contrary to law. He would show in good time how the price came to be fixed, it was a matter between himself and the Kencho, which perhaps the latter would not care to have divulged. He did not wish to gratify the curiosity of the defendant or his counsel in any particular.

The Court said it had been stated in evidence that the buildings had been purchased for nothing, or a nominal sum, which, if so, might imply that it was done in an underhanded way. He supposed the counsel for the defendant wished to show how much money was paid so as to make good the plea of justification.

Plaintiff said there was nothing in the issue as to the amount of the purchase-money. He contended that the question was not what the price of the buildings was but what defendant had said. If the price had been \$5.00 or \$5,000 it made no difference.

The Court ruled that the defendant had a right

to prove the purchase in support of his justification. Plaintiff noted an objection (overruled).

P. Osborn (to the Court)—He did not recollect the price; if he did he would not be at liberty to state it without the permission of the Government. He did not remember the rent paid to the Kencho when they owned the buildings. He forgot the exact amount of the ground-rent paid, but it was about 27.897248 yen per 100 tsubo.

To plaintiff—He had not the right to say who made the proposition for the purchase or sale of the buildings. He had no right to speak about the matter without permission from the Government. There was some correspondence on the matter. He did not think that the plaintiff had sought to purchase the buildings. As far as he was concerned in the matter, the General did not make any proposition or solicitation for the purchase as far as he could recollect. He did not remember seeing the plaintiff in the Kencho in connection with this matter. As a rule he (witness) went accompanied by a Kencho official to the plaintiff's office. He believed that the Kencho made the proposition and fixed the price, which was accepted. The plaintiff did not make any attempt to change the price fixed by the Kencho. He had no distinct recollection of the correspondence he had spoken of before, but believed that the title-deeds and a letter were sent to the plaintiff and he returned a cheque by letter. Thought he remembered a letter being written.

Plaintiff then asked if the witness knew of any conditions as to occupancy of the buildings mentioned by the Japanese Authorities previous to the sale.

Mr. Weiller objected to this question on the ground that if the witness could not answer his question as to the amount of the purchase-money without permission, he could not answer this.

Plaintiff said he wanted to show that the U.S. Government held the buildings on the same terms as previous to the transfer.

Witness did not remember the oral conditions that were agreed to, or that the U.S. Government should have it on the same terms. The parties who would remember the particulars had since then left the Kencho. Mr. Nomura Yasushi, the then Governor of Kanagawa Ken, and the land officer might know. The papers in the Kencho might show the conditions of sale. The ground-rent was the same as before and had been paid in the same way.

Mr. Weiller said that two very important witnesses, for whom he had applied, were not present, namely, Mr. Nomura Yasushi and Mr. Uchiyama Rosetsu, and it was very desirable to hear their evidence.

The Court said it had applied through the Chiji of Tokiyo Fu for the attendance of Mr. Nomura and had received a communication stating that he could not attend till Thursday afternoon.

Plaintiff asked what was to be proved by these witnesses.

Mr. Weiller said that he hoped to prove by the ex-Governor the price that had been paid for the buildings. Mr. Rosetsu was a lawyer practising in the Japanese Courts, and it was through information he had gathered from the Kencho and from other sources whilst in the employ of the defendant that he (the defendant) had been led to make the statements complained of.

His Honour said that he supposed that the evidence the defendant wished to get at could not be obtained from Mr. Osborn, but could only be obtained by an inspection of the title-deeds.

Mr. Weiller said as the witnesses were not present he would ask for the Court's ruling for the production by the plaintiff of the documents he had applied for in his notice.

Plaintiff then read the notice and said it was the most extraordinary document he had ever seen. It seemed to him that what the defendant's Counsel did not know would enlighten the whole of Yokohama—and if complied with would require a whole train of cars to bring it up to Tokiyo. He did not propose to bring Consular documents into court unless specially ordered to do so. He might bring copies if he deemed them essential to his case.

The Court said it was very clear that the whole of the plaintiff's correspondence with the Secretary of State could not be called for.

Plaintiff said that when the documents were applied for there was no plea of justification, as had since been ruled by the Court.

Mr. Weiller referred to rule 178 of the Court Regulations to show that the Court could order the production of the papers. Some of the documents were necessary to maintain that the property was improperly purchased. The plaintiff had said he would bring such documents only as would suit his case. The defendant was unable to go into the U.S. Consulate and demand them. He wanted the title-deeds and vouchers for rent. He would be satisfied if he were allowed to go to the Consulate and copy or read the documents and

then it would not require an extra train of cars to bring them up.

Plaintiff said they had applied for all his correspondence with the Department of State since 1874. He had with him a copy of the letter from the defendant to the Department and the answer thereto, which he was ready to produce.

Mr. Weiller said he was going to produce them in good time.

Plaintiff said he was not so sure of that, and he would like to produce it now.

The Court said that the action of the Department of State could not be reviewed by this Court or any other court in Japan. He did not propose to review the action of the Department of State, as it would not be proper.

Mr. Weiller proposed to show that the defendant had not made full and complete representations to the Department. What the defendant wanted were the letters and vouchers. The plaintiff seemed to think they were afraid to produce the letter from defendant to the Secretary of State and the reply.

Plaintiff said the Counsel's bravery had never been called into question by him. He was amazed at the learned Counsel's temerity. He would repeat, what he had already said to the Court a number of times, that he had nothing to conceal in the transaction under review. In the objections he had been actuated simply by a determination in so far as possible to thwart the malicious curiosity of the defendant, which was not based on any desire to benefit anyone, but simply to wreak his vengeance on the plaintiff. The facts, as they must be shown by the evidence, are that the purchase of the buildings was urged upon the plaintiff by the Kencho authorities, that the price was fixed by them: that although the plaintiff knew of no legal objections existing to his completion of the purchase, he decided not to entertain the proposition until he had communicated with the Department of State, as he wished to do nothing contrary to the wishes or views of that Department. Accordingly he wrote to the Department that the Authorities had offered him the buildings and were determined to get rid of them, and that if he heard no objections from the Department within a reasonable time he would complete the purchase. He heard nothing from the Department to the contrary and completed the purchase. The price fixed by the Kencho was accepted by him and he at once communicated the fact to the Department. The Department's reply would be found in its answer to the letter of the defendant to the Department.

Mr. Weiller said that all this was not in evidence, the plaintiff said he had nothing to conceal but he made objection upon objection. Why did he not produce the documents that had been called for if the plaintiff was so sure of his position?

The Court supposed that the documents in connection with the purchase of the buildings and the vouchers ought to be produced. He would then inspect them and decide whether they could be admitted in evidence or not. It was certainly reasonable that the plaintiff should have proper time to produce them.

Plaintiff said he had made copies of some of the papers, but had not brought them with him. He would wish that the evidence be taken first and the documents produced afterwards.

Mr. Osborn's testimony was then read to the parties and accepted by them as properly recorded.

The Court then adjourned to Thursday next, at 1.30 p.m.

THURSDAY, 20th March, 1884.

The Court's record of Mr. Osborn's evidence given at the previous hearing of the case was read and accepted.

His Honour said that before proceeding further he might bring to the notice of the defendant that he had received a letter from Mr. Nomura, Post Master General and ex-Kenrei of Kanagawa, stating that he regretted after promising to attend that he was unable to do so, it being a National holiday and therefore he had to appear at the Imperial Palace. As to the sale of the buildings in question, he thought the documents relating thereto were to be found in the archives of the Kanagawa Kencho, but he, personally, had no distinct recollection of the circumstances of the sale. If the Court applied through the Minister of Foreign Affairs he thought the documents would be produced. He wished in future to be excused from attending the Court, as he was so much engaged in his official duties.

The Court said that, documents being primary evidence, it would apply for them if so desired.

Mr. Weiller desired that they might be applied for.

Plaintiff said he did not think it would be necessary to make any such application after he had produced his documents. Nevertheless, he was sorry that Mr. Nomura could not attend.

Mr. Weiller said that before the documents were

produced he wished to call Mr. Uchiyama Rossetsu.

Mr. Rossetsu, examined by Mr. Litchfield, said he was a legal practitioner in the Japanese Courts. In about September of last year he received instructions from Mr. Litchfield to make enquiries as to the ownership of the U.S. Consulate in Yokohama, as to the title to the buildings, and the lot on which they stand. He made such enquiries, and afterwards gave Mr. Litchfield certain information as to the purchase of the buildings of the Consulate General at Kanagawa.

Question—Was the information you then gave me correct?

Plaintiff objected to the question, and wished to know how the witness could testify whether his information was correct or not.

The Court said it presumed that the question was put with the intention of rebutting the accusation of malice.

Witness said he gave a correct report of the information as he obtained it.

Question—According to the information you obtained, can you state in whose name the Consular buildings are registered?

Plaintiff objected, saying that it could not bear on the case. It was not the best evidence, it was secondary evidence of the worst kind; the deeds only were the best evidence.

Mr. Weiller remarked that the plaintiff seemed to forget that he could cross-examine the witness afterwards. His object was to rebut the accusation of malice.

Plaintiff said that secondary evidence could not be received until it was shown that primary evidence was unobtainable. He was willing to produce the documents, which were primary evidence.

The Court said that if this case were being tried before a jury this evidence could not be received if primary evidence could be produced. He followed the present manner of proceeding to save time. If primary evidence were not forthcoming or could not be produced, he must receive this as the best evidence, otherwise it would be secondary evidence.

Plaintiff said it could not be secondary or even tertiary evidence, it was only hearsay. Witness had made enquiries and had communicated the result, and even if there were no other evidence it could not be received.

The Court remarked that if the witness had communicated it to the defendant it would amount to something to rebut the charge of malice.

Plaintiff said that the plea that the information had been communicated had no effect in a slander case.

The Court said that it could not be received as evidence of title, but might be used as evidence to rebut the charge of malice.

Mr. Litchfield said that the position of the witness was that he was employed in his professional capacity to find out certain facts, and those facts he had communicated to his employer.

To Witness—Did you ascertain in whose name the Consular General buildings are registered in Yokohama?

Plaintiff objected to the question, and wished to know how witness could possibly ascertain in whose name the buildings were registered. The mere hearing of a statement and ascertaining a fact were two different things.

The Court overruled the objection.

Plaintiff wished his objection to be noted.

Witness said he had obtained information on that head. He also got information as to the date of the transfer of those buildings. He also got information as to the purchase price of those buildings. He also got information as to the character—official or otherwise—of the person who purchased the buildings.

Examined by plaintiff, witness said at the time he was applied to by Mr. Litchfield to obtain the information he had not the slightest idea to what purpose it was to be used.

Question—When did you first ascertain to what uses it was to be put?

Objected to by Mr. Weiller, but overruled.

Witness could not tell exactly, but thought it was some time in December last. It was pending an election for the presidency of the Y.U. Club. He was informed by the defendant himself as to what use the information was to be put. Defendant thanked him for his information. Witness replied, what information do you refer to? Defendant said the information referring to the purchase of the Consular buildings. Witness asked whether the information was for him, as he did not know it.

What else did he say?

Mr. Weiller objected to these questions, as it seemed that the plaintiff wished by them to reopen his case.

Objection overruled.

Witness—The defendant referred to the action of General Van Buren in this matter as a swindle on the Government.

To Mr. Litchfield—The name of General Van Buren was the name I gave you as the purchaser

of the buildings of the U.S. Consulate. In my information the purchaser was described as General Van Buren, Consul-General.

Mr. Weiller now called for the documents that the plaintiff had been ordered to produce.

Plaintiff produced the following documents:—

(1) Letter No. 483 from plaintiff to Department of State, dated 1st December, 1880.

(2) Letter No. 224 dated 13th January, 1881, from the Department of State to the plaintiff.

(3) Letter No. 500 dated 18th January, 1881, from plaintiff to the Department of State.

(4) Letter No. 229 dated 5th March, 1881, from the Department of State to the plaintiff.

The substance of this correspondence was that the Japanese Authorities wished the American Government to buy the buildings. The plaintiff communicated this to the Department of State which replied that it was contrary to the policy of the Government to acquire property outside of their own territory. Plaintiff subsequently informed the Department that the Japanese Authorities were determined to be relieved of the inconveniences attending the present tenure of the premises and desired him to purchase them. They had made him an offer which he would accept unless he received instructions to the contrary from the Department within a reasonable time. The letters received from the Department acknowledged the receipt of his letters but gave him no instructions, he therefore purchased the buildings and announced the purchase to the Department of State.

(5) Letter of 16th December, 1880, from the Kanagawa Kencho to plaintiff offering him the buildings for the sum of yen 2,547.

(6) Letter of 17th December. No. 4967, from plaintiff to the Kanagawa Kencho accepting their proposition.

(7) Certificate dated 19th March, 1884, from the Vice and Deputy Consul General, George C. Rice, that the vouchers were so numerous that it would be inconvenient to produce them and further that the rent paid at present was the same that had always been paid.

Plaintiff then went on to say that he protested in the strongest terms against making any statement as to the amount of rent paid by the U.S. Government, except saying that it was the same as before. He argued that the amount paid had nothing to do with the present case and could not affect it. He believed the U.S. Government would not desire to have it made public, and if he was not peremptorily ordered by the Court he would not state the amount.

Mr. Weiller applied for such peremptory order, saying that it materially affected the case. That if any profit were made the U.S. Government should have the benefit of it. The Court would presently find that a full and complete revelation of the facts had not been made known to the Government.

Plaintiff said that in the answer there was nothing about the amount paid for rent, it had nothing to do with the case. The charge was that the defendant had stated that he had improperly bought the buildings, and had thereby swindled the Government. He had no right to make public what the Government paid for anything without its permission.

Mr. Weiller said that the amount paid for public buildings was a matter of public interest, and he did not understand why the plaintiff made such a great secret of it. The amounts paid for some of the buildings were published yearly, and therefore he did not think that the Government could be so particular. The information was necessary to complete their case.

Plaintiff remarked that it was for the defendant to produce the evidence. He would not divulge it.

Mr. Weiller said the rent vouchers were the best evidence. The Court said that these matters might go as a mitigation of damages, but did not affect the main question. They might have given the defendant a colorable reason for believing that the plaintiff had swindled the Government, and might go to show that the defendant was led to make the statement in error.

Plaintiff said he did not see how the Government could be damaged, as it was on record that the rent was the same as before the transfer.

The Court could not see how it could injure the Government to answer the question. It understood that the Government was absolved from paying the ground-rent.

Plaintiff said that the Government paid the rent to him and he paid the ground-rent, they both appeared in the same voucher for the sake of convenience. He then put in exhibit No. 8, original title-deed from the Kencho, dated 28th December, 1880, stating that it had been brought to him by the Kencho officials and the purchase-money was paid in his own office. It was made out to T. B. Van Buren, Esq., United States Consul-General.

The Court said that the question was reduced to the amount paid for rent. It was not necessary

here to examine the accounts with the Department. The only thing they required to know was the amount of the rent paid for the buildings and the ground, and whether they were separate items.

Plaintiff handed in a receipt No. 234 for the ground, rent dated 5th February, 1884, for \$175.40 being the rent for one year.

The Court said that in connection with the subject of rent, referring to the last annual report of the fifth auditor of the U.S. Treasury, the rent of the jail was \$600 per annum, the only question remaining was the rent of the other buildings. The Court was under the impression that the purchase-money was paid in paper yen, not in dollars.

Plaintiff said he did not recollect at the moment, but did not think it material to the case.

The Court thought that the object of the defendant in bringing forward this evidence was to show a colorable reason for the statement that the plaintiff had swindled the Government and wished to rebut the assumption of malice. There were other words in the petition such as "he improperly purchased," etc., and the question was, could he not introduce these matters, not to justify, but as tending to mitigate damages.

Plaintiff asked how the question of impropriety attached to the rent.

The Court said the Government had no knowledge of the real value of the property. He thought the Government has been notified before that it was worth \$5,000.

Plaintiff said that was so, and he strongly urged the Government to buy it.

The Court, continuing, said there was nothing in the General's action in the matter that reflected on him in any way. However we got at this, that the whole thing was bought for yen 2,547 *satsu*, and it could not be doubted that, as the Government paid the same rent for property worth only yen 2,547 as when it was valued at \$5,000, it could not be aware of its true value. This did not justify him in using the word swindler, but the question arose whether this did not give the defendant colorable ground for saying that the transaction was improper.

The plaintiff said that supposing the Japanese Government had given the property to him for nothing, as in the case of the French Consul. He had bought it to make money out of it, and would not lease it for at smaller rental.

The Court thought that, in the rights of justice, it could not injure anyone to mention the amount paid for rent. It did not want to know the whole amount paid, but what was paid for the buildings other than the jail, which was \$600 per annum. The rent of the jail was assessed on a valuation of \$6,000, and knowing the amount of the purchase-money of the buildings, it was not difficult to see that a man might make remarks about the matter, although there was no swindling in the transaction. The evidence was admissible for the purpose of rebutting malice and in mitigation of damages.

Plaintiff remarked that he did not buy the property for fun, he bought it to make money out of it.

The Court said it did not question the propriety of purchase, but would allow the evidence to be given as to the amount of rent.

Plaintiff said that if the defendant had spoken to the proper persons concerned he would not have objected, but he had belched it out in public.

The Court remarked that would have been a privileged communication. It would allow evidence to be given as to the amount of rent.

Plaintiff wished his objection to the ruling of the Court to be noted, as he objected to the amount of rent being put in evidence (objection noted), and said he would furnish a certificate at the next session showing what rent was paid for the buildings, outhouses, etc., excepting the jail. He had one drawn up, but had forgotten to bring it with him.

Dr. Tripler said that he was a physician and surgeon, came to Japan first in 1873, and had resided permanently in Yokohama since 1876. He was an American citizen, and was a member of the Yokohama United Club. There was an election for president of the Club which closed on the 31st December last. He took an interest in the election. Mr. Litchfield, Dr. Fisher, and General Van Buren were candidates. He was opposed to the election of General Van Buren and favourable to Dr. Fisher. He remembered having a conversation with a gentleman of the name of Prichard, the same gentleman who had given evidence in the Court. He met Mr. Prichard accidentally, before dinner, in the hall way of the building that was then occupied by Yokohama United Club. They had some conversation as to the candidates who were being balloted for as President. He (Mr. Prichard) was a strong partisan of General Van Buren, and witness was a partisan of Dr. Fisher. They had several minutes' private conversation. His grounds for opposing General Van Buren were that he could not see how a member of the Club could support him after the hostile manner in

which he had behaved to the members whilst they were trying to found a member's Club. Mr. Prichard said something about Consular matters.

Mr. Weiller (to witness)—In your conversation with Mr. Prichard did you, or did you not, say in reference to the plaintiff that he had swindled the Government?

Plaintiff objected, as the proper course would have been to ask the defendant what he did say, and not put the words in his mouth.

Witness stated that in his conversation with Mr. Prichard he had said that he thought it very inconsistent of the members to support General Van Buren inasmuch as he had opposed a member's club. There was some conversation about the Consular buildings. He said that the General had got the thing very cheap, and that he thought that the rent, taking into account the purchase-money, was very high. He did not say that the plaintiff had gone to the Kencho and got them to sell him the Consular buildings and in an underhanded manner obtained them. He never mentioned the price as being yen 2,200. He did say that the property was out of the concession and could not be held by a private individual, it must be held officially, and also that he got the ground for nothing. He did not recollect using the term law, it was not used in the conversation. He never said that the plaintiff had swindled the Government on that or any other occasion. He had no recollection of having mentioned to Mr. Prichard on that day that he had written to the Department of State, but would not say that he had not done so. He employed someone to find out for him as to how the transfer of the buildings to General Van Buren was made.

Mr. Weiller—What information did you receive in consequence of those enquiries?

Plaintiff objected to the question.

Witness said he received some information.

Mr. Weiller—State what that information was.

Plaintiff again objected.

Witness continued that according to the information he received they were transferred to General Van Buren in his official capacity. He put the question as to privately or officially, and was answered officially as Consul-General. He got information as to the price paid for the buildings, outhouses, jail, etc., in fact all the buildings on the compound were transferred to General Van Buren for 2,547 yen. There was nothing paid for the land except the ground rent. There were 623 tsubos. He knew the building.

Mr. Weiller—What portion of the building is occupied as public offices and what part as private residence.

Plaintiff objected to the question, and the Court sustained the objection.

Examined by plaintiff, witness said he came to Japan in 1873 from New York. Was a resident of New York and was brought up there. He left there in January, 1873, and thought it was on the 6th, it was in the first few days of the month. He landed here on the 29th March, 1873.

Plaintiff—Was the intent of your leaving New York sudden, or had it been contemplated for some time?

Question objected to and ruled out by the Court. Plaintiff said that he thought in cross examination he had a right to enquire as to a man's antecedents.

Mr. Litchfield remarked that if the General would carry the investigation back to the marriage of his parents there would be no objection offered.

Plaintiff said that to day it was the generosity of the Counsel that astonished him, before it was their boldness.

Witness, to plaintiff, continuing said they had been acquainted since 1874. He did not remember having used any such language as testified to by Mr. Prichard. The words swindler, thief, and so forth were not in his vocabulary. He did not recollect when he first made mention of the purchase and sale of the Consular buildings. He had spoken to Mr. Litchfield about it in September last. He might possibly spoken about it before. He had not denounced the purchase of the buildings to a great many persons on a number of occasions. He wished to know in what sense the plaintiff used the word denounced. He had criticized the action. He first authentically heard of the purchase in September last, there had been talk about it for a long time. He believed that he first heard about it from Mr. John Middleton about July last year. He did not hear of it in 1881. The plaintiff never told him about it himself. He was intimate at the plaintiff's house, in 1880 and 1881. That intimacy ceased last August or September. There was a misunderstanding between them. He did not remember speaking very severely of the plaintiff. He believed that he had said that the plaintiff had improperly purchased the buildings, but could not swear as to the exact words. He could not deny, but did not remember saying that the purchase and occupancy of the buildings was contrary to law.

What he had sworn to in his amended answer was in sum and substance what he said. (Amended answer shown witness). He said he used those words. What he said to his Counsel about the words "contrary to law" was that he did say them, but to whom he did not remember. The purchase of the buildings had nothing to do with his misunderstanding with the plaintiff, his feelings in regard to him were about the same as before.

Plaintiff—Before you applied to Mr. Litchfield did you apply to anybody else to make enquiries about the sale and purchase?

Mr. Weiller objected, as it was not material how many persons he applied to.

The Court overruled the objection, as it thought the question was put simply to prove animus.

Witness said did not apply to any one else. He had no recollection of applying to Mr. Weiller. He had some conversation with Mr. Weiller about the same time, whether it was before or after he had seen Mr. Litchfield he could not say. He was almost certain that he did not apply to Mr. Weiller for the information that he afterwards got from Mr. Litchfield. He did not apply to Mr. Weiller as a lawyer, and did not offer him a fee. Did not remember Mr. Weiller's refusing to get the information.

Mr. Weiller said this would close the case for the defence, except that he wished to put in a letter from the Department of State to Dr. Tripler.

Plaintiff remarked that he would like to have the letter from Dr. Tripler to the Department of State put in, and would introduce it himself.

The letter from the Department of State to Dr. Tripler was then read by defendant's Counsel and was to the effect that the Department was aware of the transaction and did not oppose it; and that General Van Buren held the property at his own risk as a private citizen.

Plaintiff said he would have two more witnesses to call.

The Court then adjourned to Monday 24th instant, at 1.30 p.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, MARCH 14TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dotted line—percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 29.3 miles per hour on Monday at 11 p.m.
The highest reading of the barometer for the week was 30.243 inches on Thursday at 10 a.m., and the lowest was 29.482 inches on Monday at 6 a.m.
The highest temperature for the week was 55.2 on Thursday, and the lowest was 30.8 on Sunday. The maximum and the minimum for the corresponding week of last year were 60.8 and 28.8 respectively.
The total amount of rain for the week was 0.138 inches, against 0.29 inches for the corresponding week of last year.

Per French steamer *Volga*, from Hongkong:—1,099 bales.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—Treasure, \$54,950.00.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—\$75,708.28.

Per British steamer *Kashgar*, for Hongkong via Kobe and Nagasaki:—Silk, for France, 13 bales.

REPORTS.

The British steamer *Kashgar*, Captain W. J. Webber, reports leaving Hongkong on the 6th March, at 0.50 p.m. with experienced north-easterly winds, and thick foggy weather, and a very heavy thunderstorm, vivid lightning, and heavy rain on the 7th; towards latter end weather became finer; arrived at Nagasaki on the 11th March, at 9.40 a.m., and were detained 17 hours 5 minutes on account of thick rainy weather with fresh southerly and south-westerly winds. Left Nagasaki on the 12th March, at 2.50 a.m. and experienced overcast weather, fresh westerly winds and heavy squalls; at 4.40 a.m. passed Company's steamship *Khiva*, at 4.20 p.m. entered Shimonoseki Straits weather clearing up; passed all the principal scenery by daylight; arrived at Kobe on the 13th March, at 5.10 p.m. with light southerly winds and fine weather. Left Kobe on the 14th March, at 4.55 a.m. and experienced light variable winds, and fine weather to Rock Island, thence to Yokohama N.W. winds, and fine clear weather. Arrived in Yokohama, on the 15th March, at 2 p.m., on the whole, having had a most agreeable and pleasant voyage throughout, quite a yachting excursion.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Kobe on the 18th March, at 6.30 p.m. with light northerly winds during the first part of the voyage, and on the latter fresh E.N.E. winds and unsettled weather. Arrived at Yokohama on the 20th March, at 7.30 a.m.

LATEST COMMERCIAL.

IMPORTS.

The tone of the Market has been quieter, and business has been somewhat checked by the appreciation in the value of *Kinsatsu*.

COTTON YARN.—Reduced Stocks of desirable spinings and the firm tone of the Manchester Market have caused holders to raise their prices, which has been paid to a limited extent, but buyers have been operating very cautiously. Bom-bays have been dull.

COTTON PIECE GOODS.—Grey Shirtings continue neglected, and quotations more or less nominal. Small sales of T-Cloths are reported, and a moderate business in Turkey Reds.

WOOLLENS.—Fair sales of Mousseline de Laine have again been recorded, but other goods have been mostly dull, and without enquiry, especially Cloths and Blankets, prices of which are quite nominal.

EXPORTS.

RAW SILK.

Our last report was issued on the 13th instant,

since which date there has been less doing, the Settlements for the week being reported 170 piculs only. There have been enquiries for various kinds of Silk at fair prices, but dealers have not been very anxious to sell, unless at full rates, the hardening of the "Satsu" Market making them yet more conservative in their ideas.

Again the bulk of purchases made are presumably destined for the next American mail. Advices from Europe give little encouragement to buyers at the moment, and sellers also seem inclined to bide their time. Meanwhile, native manufacturers are in the Market to some extent, and the Stock is yet further reduced.

The Export to be recorded for the week is very small, consisting of 30 bales, destined for France and shipped per M.M. steamer *Mensaleh* on the 15th instant. The present week's English mail left on Thursday, being advanced somewhat on account of the change in the monsoon. The total Export to date now stands at 28,050 bales, against 23,318 bales to same date last year, and 15,549 bales in 1882.

Hanks.—Nearly one-half the recorded business appears to have been in this class. Prices unchanged since last report. Among the purchases we observe *Shinshu*, \$520, \$512½, \$510; *Foshu*, \$515; *Hachoji*, \$465. The Stock of *Hanks* is comparatively large, but prime qualities are very scarce and firmly held at long prices.

Filatures.—There has been something doing in this class, although the full tide of purchasing for the next American mail does not seem to have set in at present. Among the recorded Settlements we note *Shinshu*, \$620; *Koriyama*, \$610; *Hikone*, \$590; and a few bales *Tokosha* rejections at the last-named price. Some *Koshu* "Black Horse" chop also done at \$590.

Re-reels.—Not much done in these, favorite chops being scarce. Some business rumoured in No. 1 at \$610 to \$615, but the report needs confirmation. *Koriyama* quoted \$610, and some Medium *Oshu* \$595. *Shinshu* kinds are apparently quite absent from the Market.

Kakedas.—Some business passing; holders are asking very high prices, which buyers hesitate about paying. The list of transactions comprises kinds at \$625, \$575, and \$565. Stock is reduced to 150 piculs, and some parcels are doubtless held off sale for the present.

Oshu and Coarse Kinds.—No transactions whatever for export: some parcels again taken up for manufacturers' use.

QUOTATIONS.

America	8,553	7,814	4,813
England	2,639	3,597	2,935
Total	28,050	23,318	15,549

WASTE SILK.

There has been more doing in this department, and Settlements are returned as 300 piculs. Supplies have been about equal to demand, and the Stock-list is practically unchanged from last week, Good Wastes are reported very scarce up country,

and Stock here is very small; so these grades hold their own well. On the other hand, Medium and low *Kibiso* do not hold their ground, although *Neri* exhibit an advance, the purchases of a month ago not being practicable to-day.

The M.M. steamer of 15th instant had on board 99 bales, and Export to date now stands at 21,010 piculs, against 19,674 piculs to 20th March, 1883, and 19,154 piculs at same date in 1882.

Noshi-ito.—Two-thirds of the week's business has been in this class. Good Medium *Filatures* have found buyers at \$135, with some lower quality at \$122½. Best *Foshu* have been dealt in at \$112½ and \$105, with Ordinary at \$87 to \$85, according to assortment. Some few lots *Shinshu* noted at \$115. Arrivals have not been large, and there is but little Stock at the moment to choose from.

Kibiso.—The remainder of the week's business has been done in *Kibiso*. There seems to be no Stock whatever of the higher grades, and the Settlement-list comprises *Shinshu*, \$55; *Yechigo*, \$42½; *Foshu*, \$45, \$39, \$35, \$32½, with some very Common *Hachoji*, at \$15. In *Neri* transactions reduced to a minimum by the paucity of the Stock and the advanced pretensions of holders.

Mawata.—No transactions, everything in statu quo.

Taysam Kinds	30			
Total piculs	1,850		Total piculs	510

TEA.

Settlements since the 14th instant amount to 580 piculs. Good Common to Good Medium have been in most demand, and prices paid for these have been fully up to the last quotations. Receipts have been steady, and the unsold Stock is estimated in the neighbourhood of some 965 piculs, an increase of 230 piculs, as compared from this day a week ago. No shipments of Tea have been made since our last Market Report, and none is likely to be made until the *Arabic* arrives.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878.
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MARCH 29TH, 1884.

BIRTH.

At 139, Bluff, on March 24th, the wife of F. O. EUSTACE of a Son.

At 72, Bluff, Yokohama, on March 27th, the wife of W. G. CAMERON a Daughter.

DEATH.

At New York, March 24th, WILLIAM H. FOGG, President of the China and Japan Trading Co., Limited.

On March 28th, at the General Hospital, Yokohama, of malarial pneumonia, F. DUNBAR, aged 40, late Second Officer of the Mitsu Bishi steamship *Hiroshima Maru*.

SUMMARY OF NEWS.

A TRAMWAY has been completed between Kanda and Ueno in Tokiyo.

COPPER 5 *rin* coins coated with silver, so as to counterfeit 20 *sen* pieces, have been discovered in circulation in the capital.

A SEVERE earthquake has been felt in Nagano Prefecture. The shock caused a landslip of large dimensions—48 yards in width by 100 in height—but fortunately no lives were lost.

A NAVAL REGATTA is announced to take place on the Sumida River on the 2nd proximo. His Majesty the Emperor has signified his intention to be present.

A BOY, twelve years of age, arrested in Tokiyo on suspicion of incendiarism, confessed to having set no less than six houses on fire. It transpired that certain ruffians in the capital are in the habit of paying children one *yen* for each house they succeed in burning.

THE lady of His Excellency the First Minister of State gave birth to a son on the 21st instant, but the child only survived until the following morning.

HIS EXCELLENCY ADMIRAL YENOMOTO, Japanese Representative at the Chinese Court, who is at present on leave in Japan, went to Kobe on the 26th instant to meet Mrs. Yenomoto, who is on her way home from Peking.

IRON ore of a very fine quality having been obtained from the Shimonida Mine, will, it is announced, be employed hereafter for forging the armour of war-vessels built under the direction of the Imperial Naval Department.

It is stated that large iron-works will shortly be opened by a Japanese capitalist at Kobe, and that several hundred experts, trained at the Akabane Iron-works and elsewhere in Tokiyo, have been engaged by the projector.

A NUMBER of coolies who frequent the neighbourhood of the Yokohama Hatoba and employ rough and annoying methods of soliciting custom, have been arrested by the police and lodged in jail on a charge of disorderly conduct.

A PROJECT is on foot among the Japanese to erect a monument on Noge Hill, in the Western suburb of Yokohama, to the memory of Ii Kamon no Kami, the Minister whose liberal views with respect to foreign intercourse cost him his life a quarter of a century ago. It is proposed to raise a sum 30,000 *yen* for the purpose.

It has been finally decided that a racecourse shall be formed round the margin of Shinobadzu Lake in Ueno. The course, when completed, will probably be one of the most beautiful in the world. On the 24th instant an entertainment was given by the members of the Union Race Club in honour of the new scheme.

WRESTLING has again become fashionable in Japan. An excellent display is now taking place in Kobikicho, Tokiyo. A private performance has been given before His Majesty the Emperor, and the champion wrestlers are constantly invited to exhibit their powers at entertainments given by the upper classes in the capital. There appears to be a desire on the part of many leading Japanese to encourage everything tending to promote physical development.

A CHANGE in the *personnel* of the Ministry has taken place by the appointment of His Excellency Ito Hirobumi to the post of Minister of the Household Department, the former Minister, His Excellency Tokudaiji, assuming the functions of Lord High Chamberlain (*Fijiuchō*). His Excellency Ito's appointment is remarkable as the first instance of the Household Department being presided over by an official not of

Imperial blood. It is understood that the intention of the new nomination has reference to the constitutional and administrative reforms now shortly to be inaugurated.

A BUREAU for Constitutional and Administrative Reforms (*Seido Tori-shirabe-Kiyoku*) has been established under the presidency of His Excellency Ito Hirobumi, Privy Councillor. Nothing has yet transpired with regard to the precise functions which the Bureau will be called on to perform. The officers are Mr. Inouye Ki, Mr. Ito Miyoji, and four secretaries, with a foreign *attaché*, Mr. Peyton Jaudon, whose duties were previously in the Privy Council.

AMONG the passengers by the outward bound American mail on Friday was Mr. W. H. Denison, legal adviser to H.I.J.M.'s Foreign Office, who returns to the United States on leave. Mr. Denison was accompanied to the Shimbashi terminus by their Excellencies the Minister and Vice-Minister of the Foreign Office, and was received at Yokohama by the Prefect of Kanagawa, in whose carriage he rode to the Hatoba. About thirty Japanese officials and several foreigners escorted him to the steamer.

A STONE monument has been erected by Japanese, at Namamugi, on the Tokaido, in *memoriam* of Mr. C. L. Richardson, who was killed at that place by soldiers forming the escort of a Japanese nobleman, on September 14th, 1862. The inscription on the monument is singularly characteristic of the change that has come over Japanese national sentiment since the days when these deeds were counted patriotic. It is to the effect that from Richardson's blood sprang the germs of Japan's new civilization, the abolition of feudalism, the diffusion of knowledge, and the recognition of the people's rights.

A MEMORIAL, said to have been signed by the whole foreign commercial community of Yokohama and presented to the Representatives of the Treaty Powers in March, 1882, has been published in the local press. The memorialists ask for permission to carry on trade and reside in the interior under a passport system, and also that the unrestricted employment of foreign ships by Japanese subjects may be sanctioned. They declare that these measures would, in their opinion, be productive of large benefit, not only to the foreign commerce of Japan, but also to the mutual relations of foreigners and Japanese. The publication of this memorial has excited much surprise, its utterances being strangely at variance with those of leading members of the mercantile community, presumably among the signatories, who recently declared in public that for some years to come Japan's foreign trade had better be carried on in its present grooves.

THE Zen sect of Buddhists, which shares with the Monto the reputation of being the most powerful in Japan, is forming an organization for the purpose of undertaking a crusade against Christianity. What precise shape this opposi-

tion will assume is still uncertain, but judging from reports that came from the provinces, the controversy will not be limited to appeals to reason. At a lecture against Christianity delivered in Hakodate by members of the *Dan-vaku-Kwai*, a society for the suppression of superstition, Christian converts interfered, and a somewhat serious fracas ensued. In well informed circles an idea prevails that better success would attend the efforts of Christian propagandists in Japan did they refrain from direct attacks upon the doctrines of Buddhism and Confucianism, and confine themselves to preaching their own faith pure and simple. They would thus avoid arousing susceptibilities which in opposition become unreasoning.

NOTES.

THE excitement in Shanghai about the violent conduct of the Viceroy T'so T'sung-tang's soldiers, during a recent visit of that dignitary to the Foreign Settlement, has not yet subsided. The truculent braves, after spitting in ladies' faces, firing at foreign ships, stirring peaceable citizens up with their bayonets, and otherwise misconducting themselves, have been quietly suffered to take their departure without so much as a reprimand. The *North China Herald* justly points out the possible evils of such a precedent. When Li Hung-chang's men were guilty of similar, but less serious, outrages, that statesman showed a marked desire to make amends and received the suggestions made to him by the Foreign Consuls with great courtesy. For this weakness his prestige, says our Shanghai contemporary, suffered severely. His countrymen could not comprehend why time-honoured methods of paying respect to a high Mandarin—as, for example, the firing of squibs, blowing of wind instruments and beating of drums, whenever he went out or came in—should be modified, simply because a handful of red-headed barbarians objected to noise and smoke. Accordingly, the advent of the redoubtable T'so was looked for with anxiety. Would he too show the white feather, or would he, on the contrary, teach the intruders that a big Chinaman on his own soil is not to be dictated to by impertinent outsiders? T'so came, and his braves speedily set to work stabbing, spitting, and otherwise “spreading” themselves. Complaints were made, letters written, and representations forwarded. But the result was *nil*. The great General went away with his rude following, and his braves are probably boasting now how they bearded the barbarians in their own den and came off scathless. Of course this will not tend to make them politer in the future. The *North China Herald* observes that, while a drunken Irishman was punished with imprisonment and fine for bonneting a servant of Kwoh Sung-tao in London, Chinese soldiers may probe foreign gentlemen's persons and spit in foreign ladies' faces in the streets of Shanghai with perfect impunity. Sir Harry Parkes is evidently wanted in Peking just now. Englishmen will find themselves safer after he has been there a while.

THE two classes which in England appear to receive the greatest amount of gratuitous advertising are the aristocracy and the actors. It might easily be explained why, but the fact is sufficient. As a natural result, any scandal connected with either, attains a notoriety which seldom waits upon peccadilloes in less con-

spicuous circles. When the scandal happens to attach itself to both of them at once, the buzz and clamor are, for a time, deafening. Pall Mall and St. James's Street resound with it, Belgravia booms sonorously, and all Mayfair echoes the mischievous clatter. Just now the air of London is noisily agitated with that peculiar cacophony in which the sound of cracked marriage bells predominates,—the disturbing causes belonging, as is usual in cases which command the attention of the entire town, to the above named apparently opposite poles of society. That the opposition of the said poles is, however, nothing more than apparent, few persons familiar with the unwritten and unpublished annals of London life, in the last dozen years, need to be told. Alliances of more than one description, between peers and players, have so grown upon public notice as to partake of the character of nouns substantive in grammar,—common, as a rule, and not so often proper. The average Dundreary nobleman's start in life has been considered an imperfect *entrée* unless accompanied by an excursion into the mysterious regions of stage immorality. There is hardly a theatre to be named, from one end of the great metropolis to the other, which has not in its day done service as a tunnel through which the revenues of immature legislators of the Upper House have been poured into the laps of privately captivating,—though often publicly unattractive,—aspirants for histrionic distinction. In most instances, these seductive creatures have been less successful in establishing a dramatic, than in demonstrating their disregard for other kinds of, fame. In the endeavour to secure the utmost magnitude of type on playbills, they have been indifferent as to how their names were otherwise imprinted upon the public memory. Their business has been to revel in the glory of characters created for them, not to keep their own in order. If the inward history of the London stage could be truly chronicled, it would read very much like a suppressed appendix to “Burke's Peerage”;—or a collection of expurgated notes to a free and easy edition of “Our First Families.” We might be tempted to faintly outline some of the vicissitudes of high-class theatrical speculation, but for the extreme length,—not to speak of breadth—of description to which we should be carried. Like Banquo's issue, the line might stretch out to something resembling the crack of doom. It is enough to say that one of the worst degradations to which dramatic art has been subject, has resulted from the leasing of play-houses by young “swells” with more brass (of both figurative kinds) than brains, in order to afford their temporary favorites the opportunity of publicly manifesting their ignorance and incapacity, and of compelling the general community to stamp their unveiled effrontery with opprobrium and derision. Of all the ill-endowed candidates that have thus been thrust before the gaze of the multitude, hardly one has stood the test for half a season. The exceptions are so rare as merely to emphasize the rule of ignominious failure.

* * *

These informal and unrecognized unions of antipodal extremes seldom succeed, however, in producing a first class sensation, unless complicated by more or less flagrant invasion of the usages by which society consents to be regulated. They belong to the category of things which everybody knows, and talks about, until point blank questions are asked, when the subject is suddenly enveloped in a fog which the electric

radiance of all the latest inventions combined could not penetrate. But if the conventional limit of toleration is overstepped, and the extremely liberal range of operations accorded to transgressors of lofty degree becomes too circumscribed for their exploits, a remarkable transformation scene ensues. Then society, which commonly maintains a tepid indifference, fans its moral fires, and incontinently boils over. If the irregular proceedings happen to emerge from the obscurity of the *coulisses* into the glare of the law courts, the wicked are plainly made to understand that there is no more rest for them. The uproar is accurately proportioned to the personal elevation or the professional prominence of the parties concerned. A *marquis, ceteris paribus*, is naturally good for more than a viscount, as a theme of reprobation, and a comedian of established popularity is entitled to a higher pressure of condemnatory steam than a ballet-dancer. To evoke the fullest fortissimo of agitation and excitement, nothing less than a ducal delinquent will serve; and among the personages of the true and living dramas by which all England is now edified, a duke-expectant is the leading figure. After him, follow less exalted recipients of the general obloquy, but to him, as being foremost in publicity, the first consideration is due.

* * *

In one of the latest theatrical ventures of the well remembered E. T. Smith, that versatile and not overscrupulous speculator found it convenient to raise little side winds by permitting ambitious young neophytes of the light fantastic order to appear in certain scenes of his pantomime, to the extent of a song, or a dance, or the eloquent delivery of a message, or, it might be, as a silent but picturesque participant in a procession. The importance of the fair *débutante's* share in the performance was said to be measured less by her aptitude or acquirements than by the fee she was willing to pay for the privilege of displaying herself, as liberally as might be, before an audience. Unkind critics declared that the ultimate—perhaps, even, the immediate—purpose of these novices was not to gauge their histrionic capabilities, but simply to advertise their personal charms. Fastidious censors pretended that the right to thus reveal themselves was paid for in accordance with the terms of an undeviating tariff,—so much for liberty to sing a song, so much for a dance, so much for a single twirl on a pointed toe. “There's a fortune in a twirl, if you calculate your angles of observation,” the sagacious Smith was wont to say. There was a regular charge for riding on an elephant, occasionally brought in from Cremorne for the purpose, and another for coming up through a trap. Nice gradations were devised with respect to costume, the experienced manager having a very keen eye to profits derivable from this source. “The less you wears, the more you pays,” he would remark, with easy indifference to grammatical precision. “The more you takes off, the more I puts on; there's *my* risks to be considered; the Lord Chamberlain, you know.” In this way it came about that a certain young woman of pleasing exterior, generally known and addressed as Mistress Kate Cook, came within the cognizance of that studious band of telescopists whose stations are in the front rows of stalls, or the proscenium boxes, and who are constantly on the watch for new discoveries, whenever the stars of the ballet shine and twinkle through their clouds of gauze and

fleece, upon their admirers below. To what heights of Thespian grandeur this adventuress might have attained, had she held to her footing on "the boards," no one can ever know; since, before her name was well established in that connection, it became much better known in another,—of which the party of the second part was no less a person than Mr. Fitzroy, a scion of that princely house which owes its origin to an old-time combination between the merriest of monarchs and Barbara Villiers. Whether Mr. Fitzroy was softer than most gentlemen who get entangled in these meshes, or Mistress Cook was harder than most ladies in her position, is an open question; but she gained a point not often secured by members of her sisterhood, and in course of time became Mrs. Fitzroy. This was a severe blow to upper class Podsnappery, which distinguished body was only partially consoled by the subsequent separation of the wedded pair. And now events have happened which make the matter infinitely worse. The old Duke of Grafton has died, and is succeeded by his brother, Lord Augustus Fitzroy, whose eldest son is the individual upon whom the charms of the aforesaid ballet girl wrought such incurable havoc. The old adage is therefore improved upon by the circumstance that *one* Cook is sufficient to spoil the Grafton broth. The present duke is not a young man, having been born in 1822, and the family are doing their best to rid Lord Euston—(Mr. Fitzroy that was)—of his conjugal encumbrance, before the coronet has to be fitted to his curiously proportioned head. Divorce was thought of, but the courts are not so complacent as they were in other centuries, and will not now-a-days grant divorces as a matter of convenience to wealthy and noble suitors. So, by dint of anxious search, a previous husband has been found for "Lady Euston Square," as she is facetiously termed by the irreverent, and the future duke is to be freed, if possible, by the process of convicting his wife of bigamy. As a matter of course, the lady utterly denies the charge, and professes to be able to prove her innocence in two rather contradictory ways. First, she insists that she never was married to her alleged preliminary spouse; and next, that even if she were, the man had another wife living at the time, so that she was free to contract the Fitzroy alliance, with all its impending possibilities of grandeur. The scandal is as ugly a one as can well be imagined, and, among its peculiar features is the opportunity it gives the theorists of "arrested development" to trace back the sources of all this impurity to the high-placed but by no means high-principled triflers with marriage-vows and domestic ties, two hundred years ago.

* * *

Next in unsavory prominence is the case of Lord Garmoye, Earl Cairns's eldest son, and the lady ordinarily known and spoken of as Miss Fortescue, of the Savoy Theatre,—her real name being Finney. A very amusing list, by the bye, might be made up, in double column, of the true and the assumed patronymics of English players. The Montagues, Seymours, Fortescues, Montmorencys, and St. Quentins of the programmes would be converted into all sorts of plebeian designations, and it would generally be found, we apprehend, that the more humble or inharmonious the actual title, the more gorgeously patrician would be the borrowed one. This assumption of resonant nomenclature seems to be almost exclusively a British practice. It

is not common in France, nor yet in America. One of the obstacles to the bestowal of knighthood upon the popular and esteemed manager of the Lyceum Theatre,—not to speak of others, which would probably stand in the way,—is that his name is not Irving, as most persons suppose. But the little star of the Savoy has until recently been free from all concern as to her spinster appellation, a much more satisfactory one being ready for her, on her promotion to matrimony. All this, it now appears, is at an end. After repeated rumors this way and that, assertions and denials of rupture, and definite announcement of the wedding day, the news comes that "*tout est rompu*." Lord Garmoye has broken the engagement and run away to the continent, and Miss Fortescue (as she will continue to be called) has instituted a suit for breach of promise, claiming £50,000 damages. From what has thus far been revealed of the circumstances, the popular indignation against the Cairns family seems to be well founded. The young lady, by all testimony, is as good as she is pretty, notwithstanding that a malicious attempt to blacken her character has been made, since the quarrel, presumably by misguided friends of the young nobleman. From the first, his betrothal to an actress was objectionable to his parents, both of whom are vehemently antagonistic to the vanities of earth in general, and theatrical vanities in particular. Neither, it is declared, has ever been inside a play-house. Nevertheless, they gave a reluctant consent to the match, stipulating that Miss Fortescue should abandon her profession without delay. This was not unreasonable, and was agreed to. She was received with apparent good will at Lord Cairns's residence in Scotland, and her prospects remained unclouded until a few weeks ago, when she received a letter informing her that her lover was unable to resist the opposition and entreaties of his mother and father, and that the marriage could not take place. Lady Cairns, it is said, is suffering from heart disease, and insisted that the fulfilment of the contract would kill her. Lord Cairns, it is asserted, received a letter from the Duke of Richmond, notifying him that no actress could be presented at Court;—though what the Duke of Richmond should have to do in the matter, or why he should be any better informed on the subject than the ex-Lord Chancellor, or how such a statement could ever be made, seeing that actresses have been and still are welcomed at Court, nobody has attempted to explain. It is evident, however, that Lord Garmoye, whose head possesses no seniority over the excessively youthful shoulders which carry it, has been diverted from his intentions by strenuous representations of some kind, and that his parents are conscious of having sown a particularly lively wind, though perhaps not so fully prepared for the whirlwind they will have to reap. They offered the girl £2,000 to accept her insult quietly, and were persuaded by their solicitor to increase the bribe to £5,000. Her response was a claim for £50,000, which she regards as by no means an excessive indemnity for the affront, the loss of title, social position, fortune, etc. She does not regard the copy of the Bible, which Lady Cairns sent her, as affording all the compensation she has a right to expect. The trial will occur next autumn, unless some successful means of pacification is meanwhile devised,—which is not likely. Then Lord Garmoye will probably lose a round sum in

cash,—of which he has plenty of his own,—without regaining much of his reputation,—which has been so shattered that his name is erased from the books of all his clubs. Lord Cairns, the newspapers say, will suffer even more severely, perhaps to the loss of the political prestige for which he toiled for years under Lord Beaconsfield, and which he values more highly than any other possession. Possibly it was the fear of risking this, which led him to interdict the nuptials; but if so he may learn anew the old and always painful lesson that however keen the anguish of the frying pan *in esse*, the fire *in posse* is capable of inflicting agonies still more acute.

* * *

Rather in the way of gossip than of scandal is the spreading whisper of an attachment between the Duke of Portland and Miss Mary Anderson, the young American lady who is filling the Lyceum Theatre and her own purse, during Mr. Irving's absence in the United States. Miss Anderson as all the world knows, enjoys a character as unassailable as her beauty is impeccable,—the latter being of the kind described by Tennyson as belonging to Maud; namely, faultily faultless. Professionally, she is open to a similar criticism, the classic coldness of her deportment impairing the effect of her performances when she essays impassioned rôles. Her sincerest admirers confess to a regret that she has not a little more life in her,—a defect which, possibly, marriage might tend to obviate. The prospect of her admission to the haughty house of Bentinck is, however, somewhat uncertain, grave doubts being expressed—at least by the newspapers—as to whether the duke "will be permitted to marry an actress." As he is at just about the age when the desire for emancipation from outside authority sets in, and when, moreover, the adult energy is most determined,—that is to say, twenty-seven years,—he will perhaps decide for himself what he may be permitted to do. At the same time, his wishes, if they lie in that direction, will undoubtedly meet with a hundred times the opposition that would beset him if he sought only to disgrace himself, and the girl, by an illicit association. In fact, he would be troubled by no interference worth speaking of, on his side of the house, if the latter arrangement were contemplated. Nevertheless, nobles of highest rank have married theatrical stars before now, and the spectacle of a duke and his actress-wife would be far preferable to such exhibitions as those with which his late Grace of Newcastle, accompanied by his burlesque mediocrity, used to favor the public, before he went to financial smash. It could probably be shown that, of the longish list of ladies who have flitted from the stage to aristocratic drawing-rooms,—setting apart the few whose reputations were notoriously bad beforehand,—hardly one can be named who has not worn her honors worthily and added brightness to her new sphere. The doors are opened to them reluctantly enough, but, once inside the coveted precincts, they and all concerned with them are apt to find it is only the first step that costs.

A BERLIN correspondent of *Bradstreet's* writes that a new invention by Mr. Maurice Honigmann, engineer, of Aix la Chapelle, is exciting considerable interest in technical and industrial circles in Berlin. It is expected to cause great changes in several branches of technical industry. Mr. Honigmann has constructed a boiler to generate

steam without fire, and therefore free from all the inconveniences, such as smoke, etc. The construction is based upon the principle that solutions of strong alkaline substances, boiling only at 210° to 245° Celsius, when subject to the influence of steam, absorb it and store up the heat, thus attaining a temperature much higher than that of the steam itself. On this principle Honigmann produces steam by placing a boiler filled with water into a larger one containing boiling alkaline, which is kept boiling by the spent steam from the engine. Thus the production of steam is continued until, by dilution, the boiling point of the alkaline solution becomes too low for heating purposes, in consequence of its getting too weak. The boiler must then be refilled with a strong solution, whereas the weak one can again be condensed by fire. Experiments have proved hydrate of soda to be a substance especially fitted for this purpose, and these boilers can work for hours without requiring to be refilled. The procedure, besides being less annoying than the common steam engines, producing no smoke or waste steam, is economical, all the spent steam being made use of for heating purposes. A successful experiment was made a short time ago on one of the steamers plying between Berlin and the village of Treptow on the Spree. Other experiments, too, on the tram elevated railways, in Berlin are about to be tried.

A STRANGE action for libel has been commenced at Paris. The defendant is Mustapha-ben-Ismaïl, formerly First Minister at the Court of the Bey of Tunis, and the plaintiff, his ancient *maitre d'hôtel*. The latter's petition sets forth that his reputation has suffered severely in consequence of a false and frivolous accusation preferred against him by Mustapha, to the effect that he has been guilty of stealing, or otherwise making away with, sundry bottles of wine. Ten thousand francs is the price the injured *maitre d'hôtel* puts upon the suffering caused by this aspersion. The case came up for hearing before the Tenth Chamber of the Seine Tribunal, but was remanded because the defendant, being decorated with the Grand Cross of the Legion of Honour, could not be cited before an ordinary Court. In Tunis in the old times the *maitre d'hôtel's* wounded pride would probably have been salved by a sound flogging.

AN American journal says that Japanese scarfs are rapidly gaining favour, and describes them as "a perfect reproduction of those worn by Japanese women to fasten their tunics." A great many wonderful things have been said and written about Japanese fashions, but the notion of Japanese women in tunics fastened with scarfs, even supposing that the operation of fastening a tunic with a scarf in any part of the world were possible, is the most admirable flight of imagination this subject has hitherto prompted. We shall not be surprised to hear next that the ladies of the West has been persuaded to patronize garters after the pattern worn by Japanese Princesses.

THE quarterly record of the National Bible Society of Scotland has the following:—It is highly desirable that our Bible work in China should be adapted to meet more adequately the new circumstances. Other agencies are fully alive to the importance of the opportunity. The Baptist Missionary Society has resolved to send

out fourteen new men, at a cost of £10,000. The China Inland Mission proposes to commission seventy-five additional agents. The American Presbyterian Board has already sent out ten or fourteen more missionaries; and the British and Foreign Bible Society has resolved to appoint two additional and special agents, so that it may be represented at once in Northern, Central, and Southern China. A special effort on our part seems to be called for, and the directors have resolved to invite donations to enable them to extend present agencies and to institute new work in China.

THE following is the address made by His Excellency the Honorable F. R. Plunkett on the occasion of his Audience at the Imperial Palace on Friday last:—

Having had the honour to be selected by the Queen and Empress, my gracious Sovereign, to succeed Sir Harry Parkes as Her Majesty's Envoy Extraordinary and Minister Plenipotentiary and Consul General in Japan, I approach Your Imperial Majesty to present the Letter by which Her Majesty the Queen and Empress has been pleased to notify to Your Imperial Majesty the transfer of Sir Harry Parkes to another Post, and to accredit me to Your Imperial Majesty as Her Envoy Extraordinary and Minister Plenipotentiary at Your Imperial Majesty's Court. It is with feelings of sincere satisfaction that I take up the mission which my Sovereign has been graciously pleased to confide to me. It affords me the opportunity of returning to Your Imperial Majesty's dominions, where I have already, on a previous occasion, had the advantage of residing for some time and of making many friends;—it will also, I trust, enable me to be an instrument for maintaining and drawing still closer those bonds of union and friendship, which happily exist between Great Britain and Japan, and which it must be the desire of both nations to see as intimate as possible. Your Imperial Majesty may rely on my using my best endeavours to perpetuate that harmony and friendly intercourse which my Government desires should ever prevail between the two countries, and I feel convinced that in these endeavours I may safely count on the hearty coöperation of Your Imperial Majesty's Ministers.

His Majesty the Emperor replied as follows:—

I received with great pleasure the Letter of Credence from Her Majesty the Queen of Great Britain and Empress of India, nominating you as Envoy Extraordinary and Minister Plenipotentiary to this Court, as well as Consul General, and also I acknowledge the recall of your predecessor, Sir Harry Parkes. I fully trust that, during the period of your Mission, the friendly relations which have hitherto existed between Great Britain and Japan may be strengthened, and especially so on account of your long experience and previous residence in this country.

SOME interesting experiments have been made of late with regard to the sounding-post in violins. A novel and apparently highly successful idea is the substitution of a glass tube instead of the usual wooden sounding-post. The glass post does not differ in shape or thickness from the usual sounding-post; but it is hollow. A clear and beautifully rich tone was obtained, and it is hoped that, by this device, very ordinary violins may acquire a fullness and depth of tone only to be met with in instruments of the first order.

* * *

Very many experiments have led to the conclusion that the famous "porcelain violins" of a few centuries ago could not have been of such wondrous *timbre* as has been generally believed. Nor can the weird story of that porcelain baritone which bore the strange inscription, "He that plays me will go music-mad," be explained otherwise than by assuming that the unfortunate musician would break the violin in disgust. These porcelain violins have a reedy and altogether unpleasant sound, and the wonderful tales about the magic properties and ethereal delicacy of their tone must be relegated—with a lot of other equally interesting anecdotes—to the nursery, and excluded from the school-room. The violin of "silicified wood," another ingenious creation of the past, must similarly be stripped

of the fables that have shrouded it in mystery. Silicified wood is not uncommon in the carboniferous formation, but no amount of ingenuity could make a good violin out of this article; and it is to be seriously doubted whether the pre-historic man would have cared for violins at all. According to Darwin and other writers, the favourite instrument of the pre-historic individual partook of the nature of the *tum-tum*, and it did not require any great musical ability to become a proficient performer.

SAYS Professor Huxley, in the *Agnostic Annual* for 1884:—"Some twenty years ago I invented the word 'Agnostic' to denote people who, like myself, confess themselves to be hopelessly ignorant concerning a variety of matters about which metaphysicians and theologians dogmatise with the utmost confidence. Thus it will be seen that I have a sort of patent right in 'Agnostic' (it is my trade mark); and I am entitled to say that I can state authentically what was originally meant by Agnosticism. What other people may understand by it by this time I do not know. If a General Council of the Church Agnostic were held, very likely I should be condemned as a heretic. But I speak only for myself in endeavouring to answer these questions. Agnosticism is of the essence of science, whether ancient or modern. It simply means that a man shall not say he knows or believes that which he has no scientific grounds for professing to know or believe. I have no doubt that scientific criticism will prove destructive to the forms of supernaturalism which enter into the constitution of existing religions. On trial of any so-called miracle, the verdict of science is 'Not proven.' The theological 'gnosis' would have us believe that the world is a conjuror's house; the anti-theological 'gnosis,' talks as if it were a 'dirt-pie,' made by the two blind children, Law and Force. Agnosticism simply says that we know nothing of what may be beyond phenomena."

SINCE the world has been made aware, says a London journal, that Thomas à Kempis's "Imitation" is the favourite book of General Gordon, there has been a "rush" on that work at the booksellers'. It is quite possible that the desire to resemble "Chinese" Gordon in any way will make many people members of the "Brotherhood of Common Life" along with à Kempis, who would otherwise be Buddhist with Mr. Edwin Arnold, or Quietists with Mr. Shorthouse. It is to be trusted that none of these spasmodic enthusiasts will be damped by any recollection of De Quincy's declaration that he never could endure "Imitation," on account of what he irreverently described as "Tommy's queer latinity."

THE committee appointed by the Minister of Public Works in Italy to consider the best mode of rebuilding the houses destroyed by the recent earthquake has sent in its report, to which is appended a complete return of the number of deaths and of houses destroyed. Out of the 4,300 inhabitants of Casamicciola itself, 1,784 were killed and 443 injured; while of the 672 houses, 537 were completely and 134 partially destroyed. Of the 1,800 inhabitants of Lacco Ameno, 146 were killed and 93 injured; and of the 389 houses, 269 were completely and 102 partially destroyed. Of the 6,800 inhabitants of Forio, 146 were killed and 98 injured; and of the 2,713 rooms (no separate return is made of houses), 1,344 were completely and 977

partially destroyed. Of the 2,000 inhabitants of of Serrara, 28 were killed and 21 injured; and of the 1,159 rooms, 65 were completely and 973 partially destroyed. Of the 4,600 inhabitants of Barano, 10 were killed and as many more injured; and of the 2,693 rooms, 63 were completely and 1,430 partially destroyed. No loss of life occurred at Ischia itself; and altogether the earthquake occasioned 2,313 deaths, while 762 persons were injured. Of the 2,313 killed, 650 did not belong to the island, but of these only 54 were of foreign nationality.

THE *Oesterreichische Monatsschrift für den Orient*, in its first number for the present year, contains the opening article of a series on Consular Jurisdiction in the Orient, from the pen of Dr. Lorenz-Von Stein, one of the most eminent juridical writers in Germany. The contents of the article are thus summarized by the *London and China Express*:—

After referring to the fact that the subject of Consular jurisdiction does not find a place in publications on international law—nor does that greater public which is more interested in the economical than the juridical and diplomatic circumstances of the East, attach any meaning to the term—the writer proceeds to define its precise meaning, and at the same time attempts to describe “the character of the present struggles, or, to speak more accurately, the almost undeniable necessity for establishing a new basis for this particular branch of international law.” The general idea in Europe is, to put it in a single sentence, that the jurisdiction, and at the same time the extra-territoriality—that is, independence of the country in which it is situated—of the Consulate is the first condition of commercial relations with the East. What this implies when carried out in detail, how it is to be formulated into a legal proposition, what individual rights attach to it, is left in its political features to diplomacy, and in its legal aspects to International law. This notion of Consular authority has grown up with course of time, and it is easily comprehended by everybody. It became embodied in treaties; no one asked on what principle this new system of jurisdiction was based, and soon no one thought it necessary to assign any grounds whatever. But new development of intercourse among peoples, and new science is beginning to alter this, and it is now no longer questionable that the whole of Eastern Asia, above all Japan, is determined to find and establish a new foundation for everything connected with Consular jurisdiction. It is almost unnecessary to say that with the term State, the writer connects independent Sovereignty. Sovereignty implies that all persons, all property, and every act of life are under the laws of the State concerned; and no State is a sovereign State which has not this complete control. The limits of sovereignty are identical with the territorial limits of the country; and if there is anything within these limits over which the sovereign has not power, he is to such an extent no more sovereign. Whatever meaning we may attach to the term consular jurisdiction, this at least is clear, that it withdraws and destroys to a certain extent the rights of the sovereign. Extra-territoriality and consular jurisdiction are a direct impeachment of the nature and whole legal conception of an independent State. These positions are not so unimportant as they may at first sight appear, for the consequence from them is that one State can exercise these powers in the territories of another only by virtue of an express treaty; that they cannot exist where no treaties exist; that such treaties form a perpetual exception from all public law, and are, therefore, a *privilege*; that every privilege, according to the recognised canon of interpretation, is strictly construed, and no extension of it without the express agreement, of the two contracting parties can be permitted. From these follow several other important positions. First, it is clear that when the grounds on which such treaties are based disappear, neither of the contracting parties has a right to demand the renewal of an instrument which has no longer a *causa efficiens* when one of them objects to it. Again, it is evident that when the circumstances under which such a treaty is concluded are materially altered, the intelligence of a civilised country would not think of re-imposing a treaty meant to meet a set of circumstances which had completely changed during its existence. Turning now from these “simple and hardly contestible positions” to the subjects of Consular jurisdiction and extra-territoriality, Dr. Von Stein says that these privileges were called into existence only where there were good and permanent grounds which made them necessary, and on which the contracting parties were quite agreed. When, therefore, a question of renewing such treaties is raised, the first question is not what increase or modification of this privilege shall be received but the far more important one:—Are there now the same reasons as those which may have formerly existed for restricting the sovereignty of an independent State

in favour of another State; or, instead of a Consular treaty, shall we not now rather admit the ordinary principles and rules that govern international intercourse?

“Our Consular system,” he says, “was established for an Orient which has changed and is changing, and is no longer the old Orient. We must above all things separate the Consular system in Europe and in the East; their origin, history, and legal growth are wholly distinct.” And Dr. Von Stein promises in the next article an account of the third Consular group—viz., the Consular system of the future in the Far East. In his subsequent papers he asks for broad judgments in his readers, and trusts that he will not meet with narrow and interested views. “Under any circumstances it would be most difficult of all for us to argue with those who think that what is now being done (in the East) is only for the moment. What happens to-day will for a long—perhaps a very long—time continue to happen.” The discussion of questions of the vital importance to our readers of those indicated by Dr. Von Stein cannot fail to receive great attention, especially when the eminence of the writer is borne in mind. The somewhat academic nature of the propositions, which we have here summarised at more than our usual length, will doubtless lead us next month to more concrete and practical arguments.

Do we now make, asks a writer in the *Whitehall Review*, Oriental wonders better in this country than in the East? A throne for an Indian rajah is a strange thing to be manufactured in England, yet the well-known firm of Osler and Co. are exhibiting a huge crystal throne which is to be sent to India. It will give some idea of the workmanship connected with this when we mention that the finials of the legs are each cut into 234 mathematically accurate facets. To some extent, wood and iron are used, so as to give extra strength to the structure; but these are inclosed in glass, and their presence made imperceptible. The hangings and cushions are of brilliant crimson velvet. Contemplating this, one is forcibly reminded of Milton's Description of Satan's

Throne of royal state, which far
Outshone the wealth of Ormus and of Ind;
Or where the gorgeous East with richest hand
Showers on her kings barbaric pearl and gold.

HENRY WARD BEECHER thus expresses himself:—Nothing to my mind is more indecent than the way great criminals are converted and carried out of life. A murderer is in prison awaiting the expiation of his crime on the gallows, and the most salacious and abominable sympathy is shown to him. Women send flowers to his cell. Some of them would even kiss an ulcer for him. Priests and philanthropists run to see him. Tracts, books, and delicacies are crowded upon him, and all, forsooth, because he is going to die. Are not poor men dying all around, and no sympathy poured out for them! But here is a monster, and for him the flood-gates are opened. The newspapers say he died trusting in Jesus. Faugh! what a world of mischief that thief on the cross did? Can the current of a man's life be changed in a moment? Can one become learned in the love of heaven in a minute? Can reeking passions learn from vestal purity? Can a boor from the country learn in a night how to conduct himself at a party in a mansion? And yet a man who has crept to the gallows through the common sewer blossoms out at the last minute, when hope of pardon is gone, into a saint. I don't believe it.

It is stated by a vernacular journal that the number of hands hitherto employed at the copper mine of Ashio, in Yashiu, was five thousand, but that in consequence of a great increase in the richness of the vein an addition of several hundred men is found, necessary. Items of this sort attract little attention among the residents of our settlement. Japan's mineral resources have ceased to be regarded as the future El Dorado of enterprise. Yet, no longer

than three years ago, an expert who had devoted much time to performing a mineralogical survey of the country, placed on record his opinion that its wealth in iron and coal is not second to that of Great Britain. It is impossible to doubt that some opportunities exist, and that if foreign intercourse were freed from its present restrictions, a new vista of chances would open up. How long it will be worth foreigners' while to remain in Japan under existing conditions is a question one does not care to consider.

If we are to accept the statements of “Asiaticus,” who has just been writing in the *Daily News* on the relations between Japan and the West, and who has evidently had access to exceptional sources of information, the long-pending revision of the Japanese treaties is at last on the point of completion, so far, at any rate, as concerns the tariff of duties upon foreign imports into that country. These duties, the writer gives us to understand, will probably be fixed at rates representing an average of not less, but not much more, than 10 per cent., in place of the present nominal average of 3 per cent. It is further argued that such increase will not appreciably affect the volume of the trade of this country with Japan. An important feature of the article is the intimation that the European States offer to leave the Japanese Government free to regulate their own tariff at the end of eight years, if by that time they shall have freely thrown open their country to foreign trade and residence. But it appears doubtful whether the bait thus thrown out will be taken, unless in the meanwhile the treaty Powers concede some substantial limitation of the prevailing system of consular jurisdiction, which has long been a sore grievance with the Japanese, and the inconveniences of which are described with much force. This latter branch of the general question will, it is said, be made the subject of further negotiations.—*Pall Mall Gazette*.

AMONG the curiosities which science has recently devised is an electric cane. In general appearance it is an ordinary stick with a crystal knob. Inside the knob, however, is a tiny electric lamp, fed by the current from a miniature battery, weighing about a pound averdupois and carried in the pocket or at the girdle. The wires from the battery are sewed inside the coat-sleeve, and cause no inconvenience. The whole thing is neat and pretty, but very expensive. Moreover the light only lasts three quarters of an hour without a renewal of material. We shall not be surprised to hear next that buttons with an electric apparatus inside have taken the place of diamonds.

THE *Penang Times* of the 5th March publishes the following latest news regarding the *Nisero* case:—“We are in a position, through the much valued courtesy of Mr. Kynnersley, Resident Councillor, *ad interim*, to give our readers the following items regarding Mr. Maxwell and his mission to Tenom. Mr. Maxwell writes on board H.M.S. *Pegasus*, off Telok Bubun, on the 1st March, that negotiations are proceeding slowly. He saw Teokoe Tjit, the leading man in those parts, on the 24th February, and hopes to go himself to see the Rajah at Tenom in a few days. The crew of the *Nisero* are all alive, but have been on very short commons since the burning of Tenom, as neither goats nor fowls have been obtainable, and they have had to live, like the Achinese, on rice and green stuff. Mr.

Maxwell has been able to send them a small supply of tinned provisions, biscuits, tobacco, &c. The second mate is ill. Mr. Maxwell is hopeful of success. The crew are only one day's journey up the Tenom river. The Achinese are most friendly to the English."

A new and dangerous development of mesmerism, says a home paper, was displayed the other day at Paris to an admiring and sympathizing public by a well-known mesmerist, who at the same time is a lion-keeper in a certain menagerie. A beautiful young girl, on whom the spiritualist generally practises, was brought into a cage of lions, and after being thrown into a cataleptic sleep was submitted to the most frightful ordeals. In one of these the head and arm of the girl were put into the mouth of a lion, which had previously been infuriated by lashes from its master's whip. But the apparently dead body did not excite the animal's appetite. At the end of the scene the girl was released, and went smiling away, while the mesmerist earned rich laurels. But suppose the lion had eaten the maiden—what then?

MR. C. MARVIN promises to publish shortly the narrative of the Russian mission to Cabul in 1882. The public has still to learn even the bare facts of this mission; but it appears that Mr. Marvin, whilst on his way to the Caspian, to report on the oil wells at Baku, met a man toward the end of 1882, who had been sent on a secret mission to Cabul. Mr. Marvin's book will be expected with some interest.

Messrs. Sonnenschein & Co. will publish Mr. Charles Marvin's new work, entitled *Reconnoitring Central Asia: Adventures and Travels in the Region between Russia and India*. It gives, in a popular form, the exploits of the principal explorers, secret agents, and newspaper correspondents who have sought to examine the rival positions of the Russians and English in Central Asia from the time Vambéry set out in disguise twenty years ago down to Nazimbekoff's recent secret survey of Merv on behalf of Russia.

THE submarine telegraph from Nagasaki to Fuzanho, in Korea, has been open for the transmission of messages since the middle of last month, but as the line is not yet carried to either Ninsen or Söul, persons desirous of communicating by wire with either of these places are required to deposit a sum of six *yen*, to defray the cost of forwarding their despatches from the point where the cable terminates. The line is, consequently, but little employed.

At a meeting of the National Food Reform Association the secretary stated that he had been for upwards of six years an abstainer from fish, flesh, fowl, alcohol, and tobacco. He also "demonstrated" that it is possible to live on six-pence per day. Of course it is. A hungry man, for instance, might swallow two penny worth of dry peas, and then go to a public free fountain and drink two quarts of water to swell them up. For a change, for his next meal he might have a half-quartern new loaf and a pound of bran. All these things are filling at the price, but they are not attractive luxuries. What would be the value of living if a man were debarred his fish, flesh, fowl, alcohol, and tobacco? He might as well sit on a rock in the middle of a river and eat small coal. A great

deal of nonsense is often spoken in connection with the vegetarian movement. Some men, doubtless, are naturally so strong that they would grow fat and look sleek on sponge trimmings and granite chips, but the majority of mortals would rapidly be improved off the face of the earth if they were compelled to live on bread-steaks, sirloin of carrot, parsnip pudding, jugged haricot beans, devilled turnip, minced beetroot, shoulder of onion, or any of the many dainties set before vegetarians.—*Sportsman*.

THE Chief Police Bureau of Tokiyo has just published some interesting statistics showing the annual numbers of fires and values of property destroyed in the capital since 1874. From these statistics it appears that, during the ten years ending December 31st, 1883, the area of the buildings reduced to ashes every year was, on the average, 67,467 *tsubo*, that is to say about 56 acres. From calculations made at the Finance Department, with reference to a scheme of national insurance, it is shown that, including chattels and goods, the average value of one *tsubo* of building in Tokiyo is 28.913 *yen*. It follows, therefore, that the loss sustained by the citizens from conflagrations alone, every year between 1874 and 1883, was 1,957,150 *yen*, approximately; while the total loss throughout the whole period was nearly twenty million *yen*. The number of houses in Tokiyo is 287,930, so that if the annual loss were divided throughout the whole city, it would amount to 6.774 *yen* per house. The salient points brought out by these statistics are shown in the following table:—

YEAR.	NUMBER OF FIRES.	HOUSES DESTROYED.	TSUBO.
1874	258	1,544	15,529
1875	391	1,803	20,198
1876	424	11,412	103,563
1877	462	3,536	35,144
1878	305	5,943	55,433
1879	301	13,025	100,815
1880	280	6,068	64,447
1881	312	21,949	239,528
1882	311	1,264	14,716
1883	180	641	5,301
Totals ...	3,254	67,185	674,677

YEAR.	LOSS (YEN).	DEATHS.	EXPENSES OF FIRE BRIGADES.
1874	464,607	1	87,693.623
1875	1,128,340	4	66,587.30
1876	2,845,571	17	60,282.785
1877	1,616,545	6	61,159.15
1878	1,054,470	11	51,390
1879	2,579,397	50	52,347.316
1880	1,713,498	6	65,432.117
1881	7,416,146	13	50,108.218
1882	540,785	2	57,552.472
1883	147,786	5	54,717
Totals..	19,507,150	115	555,906.991

These statistics do not cover a sufficiently long period to justify any very positive deduction. Assuming them as a basis, however, we see that Tokiyo is wholly destroyed by fire once in 43 years. In other words, twenty-three houses in every thousand are burned annually. In Great Britain, on the other hand, insurance rates are based on the assumptions—proved by a long series of observations to be as nearly as possible correct—that, of thatched buildings, or "doubly hazardous risks," less than three in every thousand are destroyed each year; of "hazardous risks"—i.e., buildings partially or wholly constructed of timber, but covered with slates, tiles, or metal—only one in every 800 is destroyed; and of common—i.e., buildings of brick or stone and covered with tiles, slates, or metal—the annual casualties are one in every 1,300. Briefly, the losses from fire in Tokiyo are ten times greater than the losses on doubly hazardous risks in Great Britain, and eighteen times greater

than the losses on hazardous risks. In short, it is absolutely impossible that Tokiyo can ever become a great, prosperous, or wealthy city until a totally different style of building is adopted there. The houses in Ginza, and its neighbourhood come under the category of "hazardous risks," being built of brick with wooden additions for kitchens, &c. We have not at present any data to show the losses from fire among these houses since they were erected more than 10 years ago; but we can assert from observation that the number of casualties has not exceeded the English rate for second-class risks. How many districts might have been rendered equally secure against fire with the twenty million *yen* lost since 1874?

The remarkable diminution in the number of fires during 1883, as compared with any of the previous years, shown in the above table cannot fail to strike our readers. It affords, perhaps, the best possible tribute to the growing efficiency of the police. For, unfortunately, one cannot escape the conviction that the great majority of the fires in Tokiyo are the work of incendiaries. The remarkable immunity Ginza enjoys is in itself a conclusive proof of this regrettable fact. Attempts are not made to burn houses there, for two reasons: first, that the only easily accessible portions of the buildings being of brick defy such weapons as bundles of shavings steeped in kerosene; and secondly, that a fire in Ginza is always confined to the house where it breaks out: it does not spread to neighbouring buildings, and, consequently, creates no opportunities for theft. If conflagrations were due, in any considerable degree, to the carelessness of householders, there is no apparent reason why Ginza should be so fortunate, seeing that all the operations from which fires may be supposed to emanate, as cooking, heating baths, and so forth, take place in the wooden portions of the premises. Heroic measures of reform are not to be advocated, but we do think that the authorities and citizens of Tokiyo might show themselves less apathetic about the safety of their city.

WE cannot believe that France has demanded an indemnity of six millions sterling from China. The demand would not be inconsistent with the recent vaporings of certain Parisian journals, but to credit M. Grévy with so reckless a policy requires some credulity. So far as we know, China's liability to be mulcted in a heavy sum has not been established. No regulars of her forces were found among the defenders of Son-tai or Bac-ninh, and the Middle Kingdom's share in the opposition France's army of occupation encountered in Tonquin is little more than a matter of conjecture. With more subtlety than courage, China has managed to hide her hand. However certain the world may be that her influence was at work all the time on the side of the Tonquinese, something more substantial than secret decrees or the discovery of arms bearing the mark of the Imperial Arsenal is needed to justify such a claim as that now ascribed to the Paris Cabinet. Neither can it be forgotten that China had a solid right to be consulted about French designs in her neighbourhood. That she based her right, in the first place, on an indefensible title of suzerainty, gave her pretensions a certain air of absurdity, but could not obscure the real point at issue. That point was whether a foreign Power should be allowed to obtain unconditional possession of territory

through which runs the principal route communicating with one of China's richest provinces. At the present moment, when questions are asked in the British Parliament about Russia's action with respect to Merv, and when the Secretary of State is negotiating with the Cabinet of St. Petersburg the delimitation of the frontiers of a country which occupies towards our Indian empire precisely the same position that Tonquin occupies towards China, it would be absurd, on the part of Englishmen at any rate, to deny that China had a right to interfere with French proceedings on the banks of the Red River. Finding her remonstrances unheeded, and unwilling to engage in open war, she gave covert assistance, it is said, to the Black Flags, and even went so far as to confer official rank on their leader. But if this is to cost her 150 millions of francs; if, in addition to the serious loss of prestige she has already suffered, she is to be still further humiliated by having to pay a heavy war indemnity, the result may be highly inconvenient, not to France alone but to all the European Powers. China will not fight. That is very plain. She is evidently afraid that the shock of a foreign war might break her to pieces. But though she may succeed in escaping dislocation by avoiding any actual conflict, and by a show of bluster sufficiently sustained to deceive her own people, from the moment she consents to pay, or is even asked to pay, a large indemnity, her disgrace can no longer be concealed. What that may involve, we can only conjecture. But if those who ought to understand the internal condition of the Middle Kingdom may be believed, the official ship is hardly strong enough to weather such an exposure. At any rate it is quite clear that the hands of the anti-foreign party in China would be immensely strengthened were France to pursue a policy so arbitrary and unjust. She ought to build a golden bridge for China's retreat, instead of compelling her to bow her head lower in the dust. All this must be fully recognised in Paris, and we hesitate to credit the course now ascribed to the Ferry Cabinet.

THE speech delivered by Sir Charles Dilke at the annual meeting of the Chelsea Liberal Association contains the clearest exposition we have yet seen of the Government's policy in Egypt. It is some satisfaction to find our own forecast of that policy so exactly verified, but a much larger satisfaction to see that the impulsive and apparently bewildered character ascribed to the proceedings of Mr. Gladstone's Cabinet has no foundation in fact. The idea of sending out General Gordon did not present itself at the eleventh hour, like one of *Punch's* "happy thoughts," as the public has been led to suppose. It presented itself, Sir Charles says, "many months ago," but found no favour with the Egyptian Government for reasons easily comprehended. The statement of the member for Chelsea is as follows:—

With the patient and considerate support of the Liberals of the country—and I will even say with the patient and considerate support of the people of the country—our Government will help the Egyptian Government to overcome their difficulty.—(Cheers.) We have great confidence in the advice we have received from General Gordon—(cheers)—the nature of a part of which may be gathered from certain of the articles and letters in which his views have been set forth. If it be the case that the Soudan has been vilely governed by the former governments of Egypt since it has been under Egyptian foreign rule, that its partial revolt is clearly to be traced to such misrule, that the old Sultans, the old rulers and chiefs of Darfour and of various parts of the Soudan are, and have been, under successive Egyptian governments in confinement at

Cairo, then were these men to be sent back, the countries to be evacuated by Egypt would fall not to the Mahdi, but to these old chiefs, with whom good treaties as to the slave trade and as to commerce might be made; if these statements which have been put forth in General Gordon's name are an accurate representation of the facts. Then it will be to the advantage of civilisation generally, and to the special advantage of Egypt and this country, that Egyptian rule in Darfour and in some other portions of the Soudan should cease.—(Hear, hear.) The greater part of what is called the Soudan is not, and never has been, in any real sense, a part of Egypt. The Egyptian has always been a foreigner in the Soudan, which has always been a drain on Egypt to try and hold. These countries have always been, in our opinion, a weakness to Egypt; and if so, it would be madness for this country to interfere.—(Hear, hear.) We have no interest in seeing the Egyptians rather than the Sultans of Darfour, for instance, rule Darfour. We have an interest in peace in Cairo; we have an interest that Egyptian rule should be maintained on the coast of the Red Sea; but we have no interest in the Egyptian rule in the interior of the continent of Africa. In an able leader yesterday, I found it hinted that we had our doubts about keeping the Mahdi from Suakim. That is not so. We stated from the first that the *status quo*, or something like the *status quo*, and entirely excluding the Mahdi and his friends, should, except indeed as regards Abyssinia, be maintained on the whole of the Egyptian coast.—(Cheers.) The Conservatives seem to think that we are an exceedingly vacillating people, and that the idea of sending out General Gordon struck us suddenly a few days ago. We first suggested the sending out of General Gordon to the late Egyptian Government very many months ago, but at that time our own advisers in Egypt thought that, under the then circumstances, he had better not go there. The reluctance lasted until quite lately, and it was mutual. It was only about ten days ago that we were informed that although General Gordon had no wish to go to Egypt, he would willingly obey the orders of her Majesty's Government to go, should they choose to send him—(cheers)—and would act under the instructions of Sir Evelyn Baring and General Stephenson. As soon as we had obtained by telegraph the concurrence of Sir Evelyn Baring in our view, the matter was at once arranged. The reply was received, I think, on Wednesday last. The General's instructions were given to him on Friday, and the General, with that remarkable public spirit which characterises him, started with Colonel Stewart that very night.—(Cheers.) I thought it well to state to you, quite simply, the history of this affair, in order to prevent the many misconceptions which we have seen prevailing in Conservative circles. I am certain that General Gordon carries with him to Africa the good wishes of every one in this room—that he carries with him the good wishes of the whole people of this country.—(Cheers.) They know the high public spirit and great humanity that he has shown, not only on some occasions, but throughout his whole career, and he is a man in whom the public of this country undoubtedly have great personal trust.—(Renewed cheers.)

M. DÉGRON has returned to France, having spent a year in Japan studying the vines of that country at the request of the French Ministry of Commerce. He brought back with him fifteen thousand feet of vines, which are now in the Botanical Garden at Montpellier. The traveller gave to his friend M. Sarcey the following note, describing his journey and its results:—"I travelled twice through Yesso (Hokkaido). I visited the north, the west, and a part of the centre of Japan proper, and I also went to Sado. Everywhere I found wild vines, some specimens of which I brought back on account of their scientific interest. It was in the island of Yesso, however, above the 44th degree of latitude, that I discovered, as I believe, what I wanted; namely, a *vitis*, apparently capable of defying the phylloxera, and of becoming acclimatized in the most northerly vineyards of France—which is not possible in the case of the American vines. It is at least as vigorous as the American vines, which are safe from the phylloxera in the middle of France; it grows to a height of 100 to 150 feet, covering, in some places, the highest limbs of large trees; at a few feet from the ground its stem is often more than 55 or 60 centimetres in circumference, and its small, dark fruit is largely used in all the villages of the island. It is therefore almost certain that the Japanese, if they please, can have grapes of fine quality, rich in sugar and alcohol, but that is their affair.

The chief point for us is to know whether this vine will resist the phylloxera. For my part I am persuaded that it will, and I base my opinion upon certain peculiar characteristics which it has in common with the American *Iabrusca*. Of course one cannot predict anything with certainty, but if my hopes are not disappointed, the result will be great for France. Some people may be surprised to hear me say that our most northerly vineyards will grow vines which I found in latitudes corresponding with those of Marseilles, Nimes, Montpellier, and Avignon. But the fact is that, though the island of Yesso only extends as far as 46° north latitude, its climate is at least as cold as that of Holland. The Japanese, it is true, do not make wine. They are content with a poor sort of liquor made by fermenting rice. I gave them lessons, however, and we succeeded. They made wine, not of fine quality, to be sure, but remember the vine in Japan is still wild. In ten years time we must count on Japanese competition in the wine market. For there is not in the world a people more intelligent, more assimilative and more industrious than the Japanese."

THE "leather" guns of old, barrels of leather bound with iron hoops, are to find an imitation in cannons of silk and steel. A German inventor proposes to wrap a steel tube with silk until a diameter is attained corresponding with the ballistic power which is required for the cannon. For any given diameter, silk possesses a tenacity as great as that of the best tempered steel, and has the advantage of a superior elasticity. After the tube has been made, it is centred upon a lathe which turns with a great angular velocity. Above and parallel with the tube are arranged a number of spools of silk, which cover the surface in the form of a helix, by means of guides, without leaving any space between the threads. When the desired thickness has been obtained, the silk is coated with gutta percha or hardened caoutchouc, in order to preserve it from air and dampness. The silk being a bad conductor of heat, the gun can be fired very often without getting hot, and it is stated that it can be more easily managed, since its weight is only one-third as great as if it were all of steel.

IN a recent number of the Statistical Journal (*Tokei Shiushi*), says the *Fiji Shimpō*, there are some interesting tables comparing the price of rice and the prevalence of thefts. The tables prove conclusively that the number of thefts increases with the higher prices of the staple, and *vice versa*. In January, 1876, when the value of rice was 5.36 *yen* per *koku*, the number of thefts was 10,011; but when, in June, 1880, rice rose to 11.53 *yen*; the thefts two months later amounted to 24,234. It is a remarkable fact, that the increase of thefts is particularly noticeable one or two months after the rise in the price of the staple. This goes to prove that, for a short time after any particular appreciation of the cereal, the pauper manages to save himself from starvation in some way or other, but when all his means are exhausted and the prices of other articles begin to go up, he is forced to commit petty larceny in order to live. In 1882, although the price of rice fluctuated between 7.15 *yen* and 9.15 *yen*, considerably lower rates than those of 1880, the cases of theft amounted to more than 20,000, and the number of highway-men and pickpockets materially increased.

This was owing to the continuous appreciation of the staple since 1880. Although there is no doubt that the increased value of rice is beneficial to the agricultural and commercial classes, yet it cannot be denied that it has a most injurious effect upon the poorer people.

On the night of the 27th inst., says the *Mainichi Shimbun*, two convicts made good their escape from the Ishikawa-jima jail. The one was Akai Kageteru, a Liberal of Kubiki, in the province of Yechigo, who was sentenced to nine years' penal servitude on the 17th of December last. The other, Matsuda, a native of Ishikawa Prefecture, is said to have been one of the accomplices of Shimada Ichiro, who, six years ago, murdered H.E. Okubo, at Kioizaka, Tokiyo. The metropolitan and several other police stations have sent detectives to Niigata in order to trace the fugitives.

A WRITER in the *Pottery Gazette* has been making some investigations with regard to the "crackle" found on early Chinese pottery. This ornament, for it is not at all the result of age, was produced by a very simple method, the body or *pate* being made more sensitive to heat and expansion than the coating or glaze. Only a little manipulation is required to cause the cracks all over the surface to be more or less frequent, and so form crackle of a larger or smaller pattern. Black, and sometimes red, were then rubbed into the tiny cracks in order to make the decoration more distinct. This crackle is often taken by amateur collectors to be a distinctive mark of the era or date of manufacture, and it is true that the porcelain of the early days of the Ming dynasty has a crackle peculiar to it; but, as a rule, it forms no standard of age. When crackle first came into vogue, it was generally of a brownish-grey, and relieved by raised ornaments of a dark ferruginous colour, much resembling bronze. The earliest Chinese pottery is entirely free from any trace of crackle.

THE enquiry into the explosion on board the *Yotsai*, by which it will be remembered several persons lost their lives, was commenced at Hongkong on the 19th inst. Nothing in the evidence given at the first sitting was elucidated beyond the facts already published, and it will probably only be after experts have reported upon the condition of the boilers as seen after the accident that anything like a theory can be advanced as to the cause of the disaster.

THE Shans and the Burmese are engaged in hostilities, and the former, according to the Mandalay correspondent of an Indian contemporary, have gained an overwhelming victory over the latter. The General commanding the Burmese—the same Officer who accompanied the Burmese Mission to Simla in 1882—is reported to have been killed, and the three Italian officers who accompanied him, are not on a bed of roses, large numbers of King Theebaw's soldiers having gone over to the Tsaubwa's side, they being under the impression that Prince Myingoon had arrived at Monay, and that nothing could stop his successful advance on Mandalay.

THE one great stain on the career of Li Hung-chang—his supposed treachery in causing the murder of the Wangs after the fall of Soochow—is nearly obliterated by the following version of

the affair which the *North China Herald* derives from an officer who was serving under Li at the time:—

Li, then a young man, and a member of the Hanlin College, is said to have passed a *jeunesse orageuse*. He was regarded with feelings of anxiety by those who had his welfare at heart, and fears were entertained that his strong individuality of character might lead him into tortuous paths if not properly guided by propitious circumstances. In this, we may remark parenthetically, the Chung-t'ang is by no means singular, some of the most eminent and venerable of the Chinese statesmen of to-day having, it is said, been rather unsettled in both their views and their conduct during early life. At the time of which we are writing, Li returned from the North to his native province of Anhui, and soon found himself at the head of a band of men who may without offence be described as near of kin to those who rallied to the standard of David during a similar period in his career—discontented and lawless desperadoes. Just then the T'ai-p'ing Rebellion assumed formidable proportions, and gave the opportunity to Li Hung-chang, as, in fact, it did to T'so, then a struggling adventurer, of which he was not slow to take advantage. He took the field against the insurgents, aided by the wise counsels and interdict example of Colonel Gordon. Li was then of somewhat low rank; and an Imperial promise that the man who should succeed in wresting Soochow from the rebel army should be rewarded by being appointed Fu-t'ai of the city, naturally fired his ambition. What followed is well known. Four of the Wangs fell into the hands of the Imperialists, Colonel Gordon pledging his word that they should not be killed. This pledge was accepted by Li, and with every intention of preserving it inviolate. Gordon left—four official hats were made, ornamented with red buttons and feathers, to be conferred on the Wangs, and placed in readiness on the table:—and then Li gave orders for them to be brought before him. But with Li was associated a General to whom this arrangement was highly distasteful. "The rebels must be decapitated," he said, angrily. "It is easier to kill a tiger when caught than to catch him in the first instance." The expectant Fu-t'ai replied that he had passed his word to Gordon and would not break it. The lives of the Wangs should be spared, and the loyalty of the prisoners ensured by their being advanced to high posts of State. But the General grew furious, and at last, seizing his colleague roughly by the waist, pushed him forcibly into the inner tent. "There is your place," he cried roughly. "Leave me to deal with the rebels." Li, overborne by the violence of the man, and naturally somewhat infirm of purpose—dreading, too, perhaps, misrepresentations of his conduct to the Emperor in case he persisted at that moment—yielded, determining however to save the Wangs and his own honour as soon as the General's fit of fury should have passed. But he reckoned without his host. Not saying a word to Li, the General rushed off, and had the prisoners beheaded *there and then*; long before the time appointed for dealing with them in any way, and in direct disobedience to the orders of his superior officer. The horror and amazement of Li Hung-chang, when presented with the row of bleeding heads, is said to have been extreme, and his indignation passed all bounds. But it might have been as much as his own head was worth to have visited punishment upon the true traitor, whose action, after all, would no doubt be interpreted as one of loyalty to the Throne; and he had no choice, being himself the responsible authority, but to accept the situation and incur the righteous wrath of Colonel Gordon.

THE January report of the Silk Association of America, says the current number of *Bradstreet's*, on the importations of silk manufactures at New York does not indicate any cessation of purchases owing to the supposed tendency to economize during the existing contracted condition of general trade as compared with two years ago. The total value of importations of silk manufactures at New York during January, 1884, was \$3,592,842 as compared with \$3,144,968 in January, 1883, \$3,062,969 in January, 1882, \$2,424,584 in that month, 1881, and \$2,493,287 in January, 1880. The gain in value of the various silk manufactures last month as compared with those in the like month of 1882, in this view of the situation, is of sufficient interest to print in full:—

	1884.	1883.
Silk piece-goods	\$2,024,548	\$1,687,348
Satins	30,072	15,102
Crapes	44,761	42,122
Pongees	5,423	2,053
Plushes	70,146	26,748
Velvets	165,006	85,120
Ribbons	441,451	238,246
Laces	209,031	398,058
Shawls	1,845	941
Gloves	77,359	35,013
Cravats	1,966	5,432
Handkerchiefs	8,679	502
Hose	42,974	41,782
Threads and yarns	2,515	3,809
Braids and bindings	128,789	91,478
Silk and worsted	14,913	1,590
Silk and cotton	262,286	468,634
Silk and linen	148
Totals	\$3,592,842	\$3,144,968

Of the aggregate entered at this port during January there were entered for consumption, \$2,791,044 worth; entered for warehouse, \$801,798; total value landed in New York, \$3,592,842; with-

drawn from warehouse, \$842,054; value placed on market, \$3,633,098.

CONSIDERING the wretched condition of the weather on Monday, there was a very good attendance at the Gaiety Theatre to witness the entertainment given by the Yokohama Amateur Minstrels for charitable purposes. The elephant was apparently effected by the raw, cold state of the atmosphere, and was consequently not quite so lively as on Saturday, but the pantomime went well, and the Amateur Orchestra were in great form and were loudly applauded, their rendering of the "Sextuor" being received by a perfect ovation. The Minstrels acquitted themselves very creditably, some of the solos being encored, and the jokes were generally well received.

SERGEANT BIRDSALL and Officers Travers, Kelly and Coleman raided an opium den at the corner of Washington and Kearny streets the other evening, capturing seven Chinese smokers, and George Harvey, a white devotee of the pipe. The quartett report turning an average of \$100 a day into the Treasury, in fines, since the New Year, notwithstanding the fervent prayers of the gamblers and "joint" conductors for a change of luck with the New Year. The same officers also captured a fan-tan game a few nights ago, with six players and their paraphernalia.—*Alla*.

THE quantity of Indian tea exported from Calcutta to Great Britain from the 1st of May 1883 to the 31st of January 1884 was 53,284,407 lbs., as against 47,425,033 lbs., exported in the corresponding period of last year. The exports to Australia during the same period were 298,405 lbs., as against 2,821,089, lbs., and to America 148,733 lbs., as against 587,186 lbs.

WHILE the "Mahdi" is making progress in the Egyptian Soudan, something resembling another movement of a similar nature is being developed from an opposite point of the compass. Intelligence from Teheran states that a "rabble" of 2,000 ill-armed Turcomans have entered Persia, led by a Mussulman fanatic, named Khan Seyd, and along with other two bands of freebooters are advancing on Meshed, the holy "city" of Persia.—*Indian Mirror*.

THE Home Department has received, says the *Kwampo*, a telegram from Nagano Prefecture, stating that a great earthquake was felt at Yamada-mura, Takai-gori, on the morning of the 13th inst. The hill at Kamikura gave way to the extent of 24 *ken* in width and 55 *ken* (over 345 feet) in height. No lives were lost.

A WRITER in *Bradstreet's*, referring to trade in the Far East, says:—In Japan business is depressed from other causes than those which are operative in China. That country is slowly emerging from the financial slough into which western cupidity plunged it soon after opening its ports for foreign trade.

HIS EXCELLENCY ITO HIROBUMI has been appointed Minister of the Imperial Household Department (*Kunaisho*), vice His Excellency Tokudaiji, who will continue to hold the office of Lord High Chamberlain.

WE are informed that the Messageries Maritimes steamship *Menzaleh*, bringing the next French mail, with dates from Marseilles to the 17th ultimo, left Hongkong on Wednesday at noon.

OPINIONS ON TREATY REVISION.

THE question of Treaty Revision has brought into the field another writer, Mr. J. A. FRASER, recently Chairman of the Yokohama Chamber of Commerce. The public is thus placed in possession of the opinions of three leading members of this community, Mr. T. WALSH, Mr. A. J. WILKIN and Mr. J. A. FRASER. Between the views of the first and the last there is complete divergence. Mr. FRASER does not think that existing systems are really irksome to the Japanese: Mr. WALSH thinks they are intolerable. Mr. FRASER does not think that the conditions under which those systems were inaugurated have changed materially: Mr. WALSH thinks they have. Mr. FRASER does not think that any large industrial development will be the result of opening the country: Mr. WALSH thinks that therein lies the only hope of development. Mr. FRASER does not think a modification of extraterritoriality necessary as a preliminary to opening the country: Mr. WALSH thinks that "no Government careful of its dignity, or considerate of its security, could allow foreigners of all sorts to go and stay where they pleased, amenable neither to local nor imperial authority." Mr. FRASER does not think that the time has come when Foreign Powers can restore to Japan her autonomic rights. Mr. WALSH thinks that "without some radical change in the relative positions of the two parties" no active development of industry and commerce can be effected. There is also another notable difference between the writings of the two gentlemen. It is, however, a difference of method only. Mr. WALSH is studiously moderate and impartial: Mr. FRASER, in common, curiously enough, with all those who advocate the conservative view of this question, seems incapable of crediting his adversaries with honesty of speech or purpose. Thus, while Mr. A. J. WILKIN declares that no device is "too false or too cowardly" for those who recommend a change, Mr. FRASER says that they are "retained for the defence," and that "they conceive it to be their duty, in season and out of season, by fair means and foul, to advocate the claims of Japan, in opposition to those foreign rights which they would fain ignore altogether." If these utterances are to be taken as a measure of English tolerance in Japan, it is not wonderful that a *modus vivendi* is difficult to discover: neither is it wonderful that the cause in which they are made loses respectability.

We desire to treat Mr. FRASER's arguments with the utmost courtesy. But it must be confessed that he places himself, at the outset, on a somewhat surprising pedestal of omniscience. For he undertakes to analyse the sentiments of the whole Japanese people: to tell us exactly who do care about treaty revision, and who do not. Under the former category he places a pretty large following—"the official

element, sections of the educated classes including the journalists," and persons "within the precincts of the capital and the great cities of the empire." That any considerable portion of the population still remains to be accounted for in connection with such a problem, seems doubtful. But whether or no Mr. FRASER means to advocate the preservation of the *status quo* until the country farmers and remote villagers begin to clamour about international equity, it is plain that he possesses some remarkable facilities for gauging the depths and shallows of public opinion. We are sufficiently sceptical to wish that he had made known his methods. They might have proved very serviceable to persons who, while really anxious to obtain some accurate insight into the desires and dispositions of the Japanese people, find themselves baulked on the threshold of investigation by an unknown tongue, an inaccessible literature, a people with whom they can communicate only by gesticulation, and their own confinement to a little settlement where none but the dregs of the population penetrate. It is, however, permissible to doubt whether Mr. FRASER has any expectation of being interpreted literally. He treats the views of his opponents with such pleasant flippancy that one is uncertain whether his purpose is not to laugh and be laughed with. What can be finer humour, for example, than to restate an adversary's proposition and then denounce the statement? "We are expected to believe," writes Mr. FRASER, "that the surrender by Foreign Powers of their rights of jurisdiction is what this country has set her heart on above all else, as the goal of her hopes and ambitions, and that this all absorbing desire is national in its extent. Such extravagance of statement is well calculated to defeat the object aimed at." So it is, certainly; in the same way that to blacken a man's face is well calculated to hide the colour of his complexion. But the extravagance is wholly of Mr. FRASER's manufacture. He never found such a statement any where but in his own imagination. And from the same *répertoire* comes the assertion that "the working of the present criminal code has filled the breasts of all beholders with wonder and admiration." Evidently Mr. FRASER prefers persiflage to accuracy, and indeed we can sympathise with his propensity to colour a picture which in black and white looks inconveniently realistic.

If the Government of Russia or Germany, in neither of which Empires the policy of the rulers is supposed to mirror accurately the will of the ruled, were to put forward a proposition touching the international treaty rights of their countries, it would be deemed a grotesque piece of impertinence on the part of a foreign power to reject that proposal on the grounds that it was not sufficiently endorsed by the mass of the German or Russian people. But an English merchant in Yokohama who undertakes to

correct the Japanese Government's estimate of the Japanese nation's wishes, deserves to be listened to with the utmost respect. His opportunities of judging are so ample, and his impartiality is not troubled by any individual friendships with the people, since he has no means whatsoever of holding converse with them. From Mr. FRASER's pedestal, too, a very wide prospect is evidently discernible. He can penetrate the ideas of the Foreign Powers not less accurately than he gauges the sentiments of the Japanese. Having explained exactly within what circles, official, literary, journalistic, metropolitan, and urban, the autonomy of Japan is an object of aspiration, he proceeds to marvel at the "ready credence" of the Foreign Powers, who have "accepted the idea that untold benefits are to result" from the complete opening of Japan to international trade. The statement, indeed, is a little startling. We are disposed to suspect that what we hear is not the view entertained by Foreign Powers, but another of Mr. FRASER's playful interpretations. Yet to correct this dangerous myopia on the part of Western Governments, it might be well to shut their Representatives up in Yokohama, and thus free them from perturbing contact with Japanese statesmen and perplexing proximity to sources of large information. True, Mr. FRASER himself admits that "the opening of the country might in itself be a desirable step, and might be productive in time of some benefit to the commerce of the country." But he deprecates, with fine magnanimity, "the ignoble spectacle of the Treaty Powers endeavouring to drive a bargain with the rulers of Japan." He would have concessions made "from a sense of what is due to the country from its advance in the path of civilization and enlightenment," and he revolts at the notion of "reducing the question to a doubtful bargain." We should be glad to linger long in these elevated regions in Mr. FRASER's company. But he drops, with cruel precipitancy, to the low level of hard practicality. The bargain-driving business is not the only "ignoble" feature of the spectacle. The rash Powers are also "inclined, it seems, to barter away privileges, which are of value, in exchange for a concession the benefits to be derived from which are at least problematical." Mr. FRASER rebukes their temerity, and bids them observe that in such an exchange "the balance of advantage would undoubtedly be to Japan," and that "in no sense could the opening of the country be regarded in the light of a *quid pro quo*. "He is of opinion that, for many years to come," foreign trade "will best be carried on within the confines of the open ports," and within these confines he, for one, is quite willing to remain. Without questioning the truth of all this, it is only just to observe that some excuse may be made for the misconceptions of the Foreign Powers. Everybody is not of Mr. FRASER's way of thinking. Now that his repugnance

for the ignoble spectacle of bargain-driving is known, nobody will suspect him of a desire to "perambulate the country and be thus brought face to face with the consumers of his yarns and shirtings," or enabled "to buy at cottage doors the skeins of silk fresh from the reeling basins." But it seems that there are others of his fellow merchants who would gladly get beyond the ring of guilds and monopolists that environ Yokohama, and who for years have been uttering reproaches against the illiberality that keeps them confined there, or writing petitions to be granted fuller privileges. Yokohama's moods are so very chequered that people on a lower pedestal than that occupied by the late Chairman of the Chamber of Commerce may well be perplexed to interpret them, or betrayed into the blunder of supposing that Mr. FRASER'S love for his prison is not universally shared.

One would like to hope that there was some chance of Mr. FRASER'S noble code of international morality receiving recognition. But unfortunately Foreign Powers have been driving bargains with Japan too long either to wean themselves readily from the habit, or to obtain easy credence for their reformed principles. HER MAJESTY'S Representative, writing to Earl RUSSELL nineteen years ago, summed up the position pretty accurately when he said:—"On our part it is as difficult as it would be wrong to lose sight of the main and sole object of our establishment in Japan; viz., the fresh field it has afforded for a prosperous trade." To that succinctly stated principle the practice of the British Government has invariably conformed, and, conforming, declines to surrender any of its treaty acquisitions without a reasonable equivalent.

We trust Mr. FRASER will pardon us if we seem to treat his thesis with some irreverence. But it is impossible to think that he is quite serious when he undertakes to be the mouthpiece of the Japanese people, as well as to banish every element of traffic from the discussion of international compacts essentially trade in their purpose and scope. Nevertheless, we do not for a moment desire to make light of his scruples, or to undervalue the weight of his and Mr. WILKIN'S opinions. Mr. FRASER says, indeed, that the advocates of Japan's rights seek to ignore foreign rights altogether. For our own part we desire to repudiate this charge most emphatically. A little more than a year ago we expressed our views in the following terms:—"We cannot conclude this article without once more protesting against the utterly erroneous statement that the total abolition of extraterritoriality has been demanded by the Japanese Government, or advocated in these columns. Extraterritoriality is a parasite fatal to the vitality of progress in this country, but unfortunately for Japan as well as for her foreign visitors, it is a parasite that cannot

be at once shaken off. Even if the Japanese possessed what they do not yet possess—satisfactory codes and an efficient judiciary—something would still be due to the strong feeling of reluctance entertained by so many respectable foreigners to forego the protection of their own Courts. People who have come here and invested large sums on the faith of certain treaties have a right to decline being taken by surprise in such a matter." To this may be added the argument that Japan would be very ill-advised did she hastily seek to assume the government of men who object so strongly to be governed by her. But neither Mr. FRASER nor Mr. WILKIN will be disposed to deny that if their feelings deserve respect, Japan's also may claim some consideration. Were it necessary to choose between the two—to wholly ignore these for the sake of those—Japan's desires could scarcely expect much attention at foreign hands. But it is not necessary. It is not necessary to practically deny that Japan has made any advance along the path of Western civilization. It is not necessary to refuse all restoration of her autonomic rights lest, in some remote contingency, "annoyances, hardships, or even suffering should be entailed" upon ourselves. It is not necessary, to wholly condemn her to continued isolation because we are not yet prepared to associate with her on equal terms. It is not necessary to stultify ourselves by admitting that, having for a quarter of a century pointed to the restrictions she imposes upon foreign intercourse as "a relic of barbarism"—to use Mr. WILKIN'S words,—we should now decline to permit any modification of conditions which perpetuate those restrictions. It is not necessary that, having perpetually described foreign commerce as Japan's only means of growing powerful and respected, we should now prevent her from employing an obvious factor in its development, because her share in the resulting advantage may be greater than ours. It is not necessary that we should refuse to revise treaties which we were solemnly pledged to revise twelve years ago, because our merchants at the open ports think that, for the time being, "trade can best be carried on within the confines" of those places. None of these things are necessary. A *modus vivendi* can be found without doing violence to the feelings of either side. More than that Japan does not seek. The extent of her proposal is a first modification of existing conditions, to be followed gradually and at long intervals by larger measures. She is understood to be willing to surround that modification with the most ample guarantees. Mr. FRASER and Mr. WILKIN both appear to think that the immediate and total abolition of extraterritoriality is in contemplation. Their information as to the views of the Japanese Government may be fuller than ours, but we cannot believe that any such

intention is seriously entertained. As to its precipitancy and inexpediency, there does not seem to be any room for a second opinion. So far as Great Britain is concerned, it is reasonable to hope that her new Representative at the MIKADO'S Court will discover some middle way out of a dilemma which has become very irksome to both sides, which is fatal to the growth of commercial prosperity, and which can only develop fresh mischief by delay.

DIFFERENCES OF OPINION.

THE Memorial said to have been "signed by the entire commercial community of Yokohama without exception and presented to the Representatives of foreign governments in March, 1882," is an incontestable proof of the impatience that has been engendered by existing treaty conditions. It is not wonderful that men should grow weary and disheartened when they find themselves condemned to follow, year after year, the same narrow tracks, and to struggle against an omnipotent environment of guilds and combinations which effectually obstruct the growth of trade, diverting, in the direction of scheming and chicanery, profits which should go to reward enterprise and intelligence. With the feeling of almost intolerable irritability that must grow up amid such circumstances one cannot but sympathise. Yet it must be difficult both for the Japanese Government and the Foreign Representatives to know exactly the nature of this community's sentiments. Here, for example, we have a lengthy Memorial, endorsed by the whole trade interest, asking for an extension of the privileges enjoyed under the present treaties, and predicting as the results of such extension, "a great stimulus to industry;" "increased national wealth;" an improvement in "the present seriously depreciated and fluctuating paper currency;" promotion "of the welfare of the Japanese in the first instance and improvement of the commerce carried on by foreigners, in the next," and various other most desirable advantages. All this is set forth in forcible terms, which appreciably help the general argument. But soon this firm footing is suddenly demolished, and the whole question launched once more upon a sea of doubt and perplexity. The Memorial says:—"Until some means are adopted to permit us (foreigners and Japanese) to know more of each other, it is impossible that the mutual feelings of respect entertained by respectable Japanese and foreigners can be manifested and strengthened; and until that takes place we must perforce distrust each other. As we are now placed we are compelled to remain ignorant of each other's wishes and requirements, and submit our commercial transactions and ourselves to the mercies of men who are the

average of less than five." These estimates of ours are, we observe, severely criticized. They are, in fact, described as "a deliberate attempt to delude the British public," and our critic goes so far as to launch at our heads quite a chapter of quotations from Dr. JOHNSON on the subject of mendacity. The figures upon which we based our statement are as follows:—

IMPORT TRADE FOR 1882, ACCORDING TO THE TRADE SUMMARY OF H.B.M. LEGATION.

Cotton and Woollen Manufactured Goods.....	\$13,702,601.91
Metals, Zinc, Lead and Tin	170,839.04
Miscellaneous Foreign (Silk and Woollen Mixtures, &c.).....	468,700.10
Machinery.....	339,705.48
	\$14,681,846.53
5 per cent. on this sum =	\$ 734,092.33
Metals (other than Zinc, Lead, Tin, Gold, and Silver).....	1,779,064.14
Sugar.....	4,529,639.37
Miscellaneous Foreign Goods.....	3,463,657.35
Miscellaneous Eastern.....	1,764,700.17
	\$11,537,061.03
20 per cent. on this sum =	\$2,307,412.20
Intoxicating Liquors.....	\$304,099.70
35 per cent. on this sum =	\$ 106,434.89
Duty-free Goods.....	\$324,128.30

Total Import Trade (Kerosene excluded)..... \$26,847,135.56
Total Duties = \$3,147,939.32
Being an average of 11.71 per cent.
If, further, the import of specie, which was duty free, be included (namely \$6,160,725), we have the total imports. \$33,007,861
And the total duty leviable..... 3,147,939
Being an average of 9.23 per cent.

Our results, therefore, for this particular year are, that, including specie, imports would have paid an average duty of 9.23 per cent.; while, excluding specie, the duty would have been 11.71 per cent. The propriety of including specie imports in a calculation of this sort is more than doubtful.

It is plain that with a trade varying in its nature from year to year, the returns of one year alone are not sufficient to convey a just idea of the general effects of a tariff. We proceed, therefore, to analyse briefly the import trade of 1880 and 1881, excepting Kerosene, as before. Our results are as follows for the two years combined:—

		DUTY.
Goods liable to a duty of 5 per cent.....	\$38,438,238	\$1,921,911.9
Goods liable to a duty of 20 per cent.	25,593,225	5,118,645
Goods liable to a duty of 35 per cent.	712,744	249,460
Goods duty free.....	299,430	—
Total Goods.....	\$65,043,637	\$7,290,016.9
Being an average of 11.2 per cent.		
If, further, the import of specie (\$5,495,377) be included, we have the total imports.....		\$70,539,004
and the total duty.....		7,290,016.9
Being an average of 10.05 per cent.		

Thus, finally, for the three years 1880-1882 the average duty leviable on imports under Lord ELGIN'S treaty was 11.45, excluding specie, and 9.64 including specie. Our statement that the duty "probably did not exceed 9 per cent.," was therefore well within the mark.

These problems of simple arithmetic, whether rightly or wrongly solved, do not seem to justify expressions so calorific as those they have evoked. We have never heard that errors in addition or subtraction impugn a man's respect for veracity. Were

this principle admitted, it would be necessary to inflict the penalty for lying on a schoolboy who did his sum wrong. The writer in the London *Daily News* will, doubtless, be amused by the compliments his article has received, but whether his opinions will be much altered, appears questionable. He certainly conveyed a false impression when he said that Lord ELGIN "fixed the import duties at 20 per cent." But, after all, the mean of five, twenty, and thirty-five, is twenty; and apart from the conditions of the trade—conditions which might have been very different had Lord ELGIN'S tariff remained in force—it is an indisputable fact that the average of the three rates named in the tariff is twenty. The truth is, that to apply Lord ELGIN'S scale of duties to Japan's foreign commerce as it exists at present, is more interesting than useful. No rigid deduction can be drawn from the result. It is consistent with all experience to suppose that had the rates of 1858 remained in force, the bulk of the imports least burdened with duties would have grown in larger proportion than the bulk of those subjected to heavy rates. Under these circumstances, the issue, so far as the Japanese revenue is concerned, might not have sensibly differed from that attained under the revised tariff. This argument, which supports the theory that, in effect, the Government may have lost little by the revision of 1866, ought not to be left unstated. But it is obviously impossible to deny the direction of a change which converted a tariff with a maximum duty of 35 per cent., into a tariff with a maximum of 5 per cent. That was the measure to which the allied fleet obtained the assent of the TAIKUN'S Minister's at Osaka in the autumn of 1865.

THE LASKER-BISMARCK
IMBROGLIO.

IF a full-fledged general quarrel should grow out of the action taken by Prince BISMARCK with reference to the "Lasker" resolution; and the United States of North Germany on the one side, and of America on the other, should find themselves embroiled through the idiosyncracies of a mighty Chancellor and an obscure Congressman; we shall have a new illustration of the ease and rapidity with which little fountains of dissension may flow into large streams of turbulent animosity. The difficulty had its origin in the simplest, and at first view, apparently the most unexciting, of causes. Dr. LASKER, a German politician of considerable position, a member of the Reichstag, and an effective newspaper writer, died at the beginning of this year, and was duly lamented by the body of his party at home, and by numbers of American citizens of German birth on the other side of the Atlantic. A certain gentleman named OCHILTREE, a representative from Texas, seized upon

the occasion to offer a resolution of condolence in Congress, the terms of which required that it should be officially communicated to the German Government. What his precise motive was, we can hardly determine. Colonel OCHILTREE belongs to the Democratic organization, which seldom neglects opportunities of appealing to the sympathies or prejudices of foreign born citizens, Irish or German; and it may be that he desired to capture a few Teutonic votes, either for himself down in Texas, or for his party all over the country. On the other hand, he may merely have been inspired by a notion that here was a chance to distinguish himself, as a young member, in a natural and harmless way. "TOM" OCHILTREE is one of the queerest characters in American political life, and it would be useless to guess at the true cause of any demonstration he may choose to engage in. For years he has been a butt and a laughing-stock, North and South; but he has nevertheless managed to work himself into Congress, and he is certainly not without many respectable aspirations. It may, we think, be safely assumed that he had no premonition of the storm he was raising when he prepared his now famous resolution. He probably knew nothing of LASKER'S career but that the late member of the Reichstag had been an extremely advanced Liberal, and had at one time been thrown conspicuously to the front, as a social and political reformer. Of the fact that he had been directly opposed by BISMARCK, and had been pretty well knocked about and shaken down by that hard-hitting antagonist, Colonel OCHILTREE was doubtless unaware, or supposed that, as an event of the settled past, this need not interfere with his little complimentary manifestation. Nor should it have done so, if he had contented himself with persuading Congress to express its opinion—or to endorse *his* opinion—without taking measures for transmitting the same abroad. Perhaps if he had even caused the resolution to be sent to the family or the relations of Dr. LASKER, no evil result would have ensued. But by making it a diplomatic transaction, and requiring the State Department to send the document through the regular international channels to the Reichstag, Congress undoubtedly laid itself open to disagreeable consequences. Whether it was necessary to the dignity of a Prime Minister to betray such resentment as Prince BISMARCK has shown, is a question which, no doubt, will be variously answered. It is incredible that he, or anybody, should believe that the American Government intended to cast a deliberate slight upon him. Regarding it,—as at the very worst it should only be regarded,—as a thoughtless indiscretion, it would seem that he might have found some less irritating method of expressing his displeasure than by sending the resolution back to the House of Representatives. In fact, if his action is correctly reported in the tele-

graphic despatches, he has committed a graver error than can be charged upon the American originators of the affair; for they, at least, arranged that the communication should pass through the legitimate channels, whereas Prince BISMARCK is said to have instructed his Minister at Washington to return the papers directly to the legislators,—an infraction of diplomatic etiquette quite without precedent, if we do not mistake. It may be, however, that this detail is wrongly given. We sincerely trust so, for an affronted Congress is likely to deal much less placably with such a business than the diplomatic officers of the Government. This is one of the cases where there is sure to be less wisdom in a multitude of councillors, than in the narrow circle of the Executive and its advisers. The House of Representatives, smarting under BISMARCK'S rebuff, may choose to forget that the Government of Germany is an absolute monarchy, and that the Chancellor is accustomed to look upon himself as responsible to nobody except his Sovereign; and may take further proceedings on the theory that parliaments are everywhere as independent as they are in the United States, and that BISMARCK has far exceeded any right which average Americans can conceive him to possess. There is some possibility, moreover, that a similar view may be adopted by many of the German people, and that the Reichstag may consider that its privileges have been violated by preventing it from participating in any measures to be adopted. We already hear of a vehement newspaper controversy on the subject, led off by the *Kreuz Zeitung* on behalf of BISMARCK, and the *National Zeitung* in opposition. Of course there will be a great deal of loud talk in American journals, but it is beyond belief that the affair can have any serious conclusion. If, in the adjustment of it, the conflicting factors of Prince BISMARCK'S temper and the meddlesome self-sufficiency of Congress could be eliminated, the settlement would be all the speedier and the more satisfactory. One good result to the United States may eventually grow out of it. The House of Representatives may be induced to understand that a little less eagerness to intrude itself upon the notice of European Powers might not only keep it out of mischief, but also save the Republic from such mortifications as have necessarily followed its attempts, for example, to avert the doom of Irish murderers. There is, to be sure, considerable of this nonsense on all sides, as we were reminded when Mr. LOWELL had occasion to reject an impertinent missive to his Government, emanating from a certain officious body in London; but the balance of offence is strongly against the Washington legislators.

It may be worth while to show wherein the OCHILTREE resolution was objectionable to Prince BISMARCK. Its most emphatic declaration was that "LASKER'S

death is not alone to be mourned by the people of his native land, where his firm and constant exposition of a devotion to free and liberal ideas has materially advanced the social, political, and economic conditions of those people, but by the lovers of liberty throughout the world." This is probably an extravagant estimate of the once prominent reformer, but there are plenty of his old associates who will cordially support it, especially after BISMARCK'S contradiction. That the Chancellor should take a very different view of the man he "sat upon," is natural enough; but there will be hundreds and thousands who will now, in their turn, deny the living statesman's denial that the dead politician held "such a position as to justify the resolution." That part of the dispute, however, may well be confined to Germany. It would be a sorry thing if two great nations could be set at odds by so insignificant an incident.

THE PROPOSED CHRISTIAN UNIVERSITY.

THE discussion evoked by the scheme for a Christian University in this country threatens to assume dimensions which may tax our readers' patience. Our correspondents, "Ferrex and Porrex," make out a strong case against the success of such an institution, but by no means as strong, it seems to us, as the case that might have been made out ten years ago, against the probable success of Christian propagandism in Japan. A great deal is said against the expediency of grafting religious tests on an educational scheme, and certainly the balance of intelligent opinion is against such a course. But that it is in any way fatal to the prosperity of an university, we cannot for a moment admit, with the history of Trinity College, Dublin, not to mention other places, before our eyes. Moreover, an undue degree of importance seems to be attached to this phase of the project. A system of tests, as generally interpreted, means that every distinction an university has to confer, if not the very privilege of matriculation, is inaccessible by persons who refuse to subscribe to certain religious dogmas; whereas, the most that can be said of the proposed University is that its professors must not be pagans. That is undoubtedly a test—a test which, as "Ferrex and Porrex" truly point out, would be at least as stringent in a community of Buddhists and Confucianists as the test of Roman Catholicism in a country of Protestants. But so long as no such obstacle were placed in the way of the students, it is difficult to think that the prosperity of the University would be seriously impaired. That its chairs could not be occupied by non-Christian graduates would be a disability of very limited operation.

Granting, however, the abstract truth of everything urged by "Ferrex and Porrex," it seems to us that their argument lacks relevancy. It is not enough to say that a system of tests is bad in the abstract. That contention, even supposing it were fairly applicable to the scheme under consideration, places the whole question a platform foreign to the circumstances. The inexpediency of grafting religious tests upon systems of secular education is based mainly upon the injustice of such a combination. To declare that a man shall not enjoy the benefits of an university career because he cannot persuade his conscience to a facile acquiescence in the dogmas of a certain creed, is simply religious persecution in disguise; an unwarrantable interference with personal liberty. The great majority of our greatest scientists in the past and present were, and are, firm believers in the truths of Christianity. But some of them, like the illustrious founder of Agnosticism, have learned to withhold their intellectual assent from every dogma that is not proven. Blind faith is to them impossible, because they have been trained in a school whence all doctrines unsupported by logical demonstration are excluded. It were an insult to reason that such men, whose lives are, almost without exception, perpetual illustrations of the principles Christianity aims at inculcating, should be subjected to any disabilities, especially in connection with education, which they have done so much to promote. To exclude them from our chairs of learning would be to pervert religion into a means of obstructing the mental culture which its own tenets inculcate. But, on the other hand, the stoutest opponents of this unwise illiberality, while advocating the expediency of not hampering secular education with tests of doctrinal credulity in countries where the moral philosophy of Christianity already permeates everything, will readily admit that, in a country where that philosophy has yet to be established, secular education must be regarded as one of the most powerful instruments for its inculcation. There it is that "Ferrex and Porrex," as well as other correspondents, seem to misinterpret the proposed scheme. The question is, not whether the progress of education in Japan is to be obstructed by the superfluous furniture of religious bigotry, but whether education is to be ennobled by association with the moral philosophy of Christian civilization. We tried to make it clear in our last article on this subject that Japan is now, to some extent, groping in the dark: that a partial influx of Western sciences and systems has submerged many of her old landmarks, and that the opportunity seems exceptional for converting her apparent loss into a large and lasting gain. As a practical method of utilizing that opportunity, we see nothing better than a thorough system of education, not "from a theological standpoint"—if such a

remnants of an evil past." This is precisely what has been urged over and over again in our columns during the past three years. But exactly twenty-four months after the forwarding of this Memorial, the late Chairman of the Chamber of Commerce, addressing the local press in his own name, and as an exponent of the opinion of "many other of his fellow residents," says:—"The conditions of foreign trade in this country are such, that, for many years to come, and until the means of transport and transit are very different from the present, it will best be carried on within the confines of the open ports." Such a remarkable conflict of ideas naturally compels us to suppose that the writer and the "many others" whose sentiments he represents, were not among the signatories of the Memorial. Yet it is publicly stated that that document "was signed by the entire commercial community of Yokohama without exception;" and, as if to make assurance doubly sure, the journal publishing this statement, adds, with reference to the views embodied in the Memorial, that "the letters of Mr. WILKIN and Mr. FRASER to the press afford ample ground for the belief that the opinions of two years ago remain unchanged at this time." Obviously the only alternative is to suppose that if opinions have not changed, the signification of words must have undergone a radical modification. "We are satisfied," wrote the memorialists, "that the system of guilds and other trade combinations, over which the Government have no apparent control, limits the number and class of Japanese who are entitled by the existing treaties and conventions to enjoy free and unrestricted commercial intercourse with us: and we believe that this most objectionable system can only be broken through by a Government concession granting us conditional permission to travel into the interior to meet face to face with the real producers and consumers, there to arrange in person the terms and extent of our business without the invention of third parties." Now, hear Mr. FRASER:—"Is it likely that our already hard-worked merchants would be willing to add to their present burdens by perambulating the country, and be thus brought face to face with the consumers of their yarns and shirtings? Would they be likely to buy at cottage doors the skeins of silk fresh from the reeling basins? or venture even to dispute the vantage ground of local market places with their native competitors? Any such ideas may at once be dismissed as impracticable." By no possible device can these views be reconciled with those set forth in the Memorial. According to the late Chairman of the Chamber of Commerce and the "many others of his fellow-residents" who think with him, the Memorial "signed by the entire commercial community without ex-

ception" is based on impracticable ideas and asks for impracticable privileges.

These flagrant contradictions are unfortunate. The inevitable inference they will suggest to intelligent Japanese is that the views entertained by foreigners on the subject of treaty revision depend entirely on the mood of the moment. Nevertheless, a conviction ought to remain that the Memorial, deliberately compiled and universally signed, represents the opinion of the commercial community more faithfully than a letter addressed to the local press by a single number of that community. The Japanese Government may, we believe, confidently accept the assertions of the memorialists, that "mutual feelings of respect are entertained by respectable Japanese and foreigners;" that to extend the facilities for trade beyond the confines of the open ports would "strike at the very foundation of the grievances of which foreigners justly yet vainly complain," and that there is every disposition on the part of the Yokohama community to ask for nothing which "would benefit unduly the foreigner at the cost of the native."

To few questions has greater prominence been given both in the foreign local press and in the trade reports of HER MAJESTY'S Legation than to the supposed deficiency of the vessels engaged in the coasting trade of Japan, and the consequent necessity of granting to Japanese subjects indiscriminate permission to charter foreign ships to and from the unopened ports. The Memorial now before us deals with this matter at considerable length. It sets out by saying that "the numerous ports on the coast of Japan are closed to the advantages derivable from commerce by the conditions of the treaties and the Government's resolution to enforce them against certain people while relaxing them in the case of others." The position here taken by the memorialists with regard to the Government's action is not happy. For it is quite plain that since foreign-owned vessels are not entitled under the present treaties to visit unopened ports for purposes of trade, any relaxation of that restriction must either be discriminating or subversive of treaty stipulations. Under exceptional circumstances only, and therefore to special individuals alone, can privileges be granted, which, if extended to all alike, would amount to a radical change of treaty provisions. That such a change would be for the mutual benefit of Japanese and foreigners, we do not for a moment doubt, but it is impossible to ignore the direct bearing upon present treaties of a measure conferring on foreign-owned vessels the right to enter closed ports under Japanese names.

The proposal of the memorialists aims at enabling Japanese merchants "either to send their produce to an open port for sale there, to send it abroad directly on their own account, or to sell in the open

ports for delivery at a non-treaty port." In other words, it is proposed that foreign-owned vessels may be employed, nominally by Japanese, both in the coasting and foreign trade of the country, without regard to treaty limits. Two principal reasons are assigned in support of this change. First, the great inadequacy both in number and tonnage of seaworthy and seagoing vessels under the Japanese flag suitable for the coast trade." The total tonnage of ships available for this trade is placed by the memorialists at from 50,000 to 75,000 tons. Turning to the official statistics for 1881, we find the vessels engaged in the coastwise trade of Japan stated as follows:—

298 Steamboats	41,044 tons.
379 Sailing vessels (foreign build)	43,503 tons.
1,375 Junks over 500 <i>koku</i> burden..	1,056,156 <i>koku</i> .
16,917 Junks under 500 <i>koku</i> burden.	2,056,826 <i>koku</i> .

Thus the total shipping available for the coasting trade at the time this Memorial was forwarded, was 677 vessels, of foreign build, with an aggregate tonnage of 84,547 tons; and 18,292 junks with a carrying capacity of 3,112,982 *koku*. We do not, of course, include fishing, and other small, craft, of which there were 414,629 with a carrying capacity of 155,839 *koku*. This large fleet of native construction was doubtless ignored by the memorialists as not coming under the category of "safe, rapid, and insurable transport." But the omission invalidates any calculation based on the deficiencies of the mercantile marine. The fact is that these junks are engaged in the coastwise trade under conditions which render competition, even of steamships, exceedingly difficult. Their owners are not only carriers but merchants, who purchase, or advance money on, the cargoes they ship. So convenient do Japanese producers find this plan, that even the Mitsu Bishi Company has been compelled to adopt a similar method in many cases. For years to come junks must, therefore, be reckoned among convenient and popular vehicles of coastwise transport. It is worthy of note, also, that since this memorial was forwarded, there has been established another large shipping company less directly dependent upon Government aid than the Mitsu Bishi. If the opinion of "the entire commercial community of Yokohama without exception" goes for anything, the wisdom and advantages of the new enterprise, apart from its official elements, are self-evident.

For our own part, however, while fully admitting that the Japanese mercantile marine is inadequate, we find one set of conditions very difficult to reconcile with the extreme views taken by the memorialists. Were Japan suffering so much from the retarded circulation of her saleable commodities, considerable differences ought to be found in the market quotations of various localities. To what extent those differences exist will be seen from the following table, in which rice alone is

shown, as the leading staple of internal commerce :—

AVERAGE PRICES OF RICE PER KOKU THROUGH-OUT THE YEAR 1881 IN 24 DIFFERENT LOCALITIES.

PLACE.	YEN.	PLACE.	YEN.
Tokyo	10.760	Kiuta	8.737
Setsu	9.538	Fukki	8.562
Higo	9.475	Niigata	9.435
Chikuzen	9.738	Sakata	8.999
Kaga	9.505	Yechigo	10.073
Ychigo	9.065	Akita	9.013
Banshiu	9.157	Tsugaru	9.758
Bizen	9.002	Awa	7.411
Hizen	9.750	Sanuki	9.638
Chigoku	9.278	Awaji	9.718
Kuwana	9.817	Hakata	9.081
Oshi	10.582	Kumamoto	9.596

It is not, of course, possible to deduce any conclusive inference from these figures, but they certainly go to show that the prices of rice, at any rate, are too uniform throughout the country to warrant the strong statements of the memorialists. And this brings us directly to the second reason assigned in support of the proposal to give foreign-owned vessels access to the open ports. It is that, at the time of writing (March, 1882), there was stored in the producing districts "a surplus supply of rice, available for export, worth at least 30 millions of dollars in silver." In the term "available for export" the assumption is obviously included that the rice was procurable at a rate which would permit export. Taking that rate at \$4.50 per *koku*, the hypothesis of the memorialists is that about 7 million *koku* of rice were stored in the producing districts and unable to find a market. Now the production of rice in 1881 was as follows :—

TOTAL PRODUCTION AND EMPLOYMENT OF RICE THROUGHOUT JAPAN IN 1881.

	KOKU.
Common Rice	27,482,621
Glutinous Rice.....	2,396,331
Upland Rice.....	92,431
Total	29,971,383
Rice employed in making <i>Sake</i>	4,297,706
Excess of Rice exported above Rice imported	42,624
Total available for ordinary consumption.....	25,631,053

Thus the assumption of the memorialists is that more than one-fourth of the entire crop available for every-day consumption was stored away as surplus grain. The average quantity of rice consumed by an adult Japanese is 1.8 *koku* per annum, and the number of adults, male and female, in 1881, was 21,434,697, while the number of persons below 20 years of age was 8,750,995. Assuming that no rice whatever was used by a fourth of the former number or by any of the latter—an assumption which probably exceeds the truth by a considerable figure—we find that the crop of 1881 gave an average of a little more than 1.5 *koku* per head of the rice eating-adults. Is it conceivable, under these circumstances, that more than one-fourth of the entire annual yield could be stored away as surplus stock? Or is it conceivable that if production was so much in excess of consumption, prices such as those we have quoted could have been sustained throughout the empire?

The second proposal of the memorialists

is that the following words should be omitted from the passports granted to foreigners :—"forbidden to trade, to conclude mercantile contracts with Japanese and to rent house or rooms for a longer period than the journey requires." In other words, it is proposed that passports shall be issued conferring the privileges of trade and residence in any and every part of the country. That such a removal of existing restrictions would carry with it the great commercial and social benefits set forth by the memorialists, we do not for an instant doubt. But here again crops up the unfortunate query—how are the persons enjoying these privileges to be governed? Is it seriously urged that the system of conflicting jurisdictions and grotesque deadlocks so forcibly illustrated within the limits of the open ports ought to be extended throughout the whole country in a worse and more inconvenient form? We observe that the journal which publishes the Memorial says :—"it may be asserted that if the condition, under which these moderate concessions should be made, is to be submission to Japanese jurisdiction, no demur will be raised, provided, that no act of a foreigner shall be construed into an offence here that is not an offence in other civilized countries." If this assertion is advanced seriously and with authority, the whole difficulty disappears. If foreigners are really willing to submit to Japanese jurisdiction with the above proviso, not alone the privileges asked for in this Memorial, but much larger privileges, will, we believe, be readily granted. But what may be regarded as a certainty among all these conflicting statements? We have, on the one side, a Memorial "signed by the entire commercial community of Yokohama," asking for extended privileges of trade and residence, as well as larger facilities for the employment of foreign shipping, and declaring that "these concessions appear to the memorialists to bear closely upon the future commercial progress of the Japanese people while they strike at the very foundations of the grievances of which foreigners justly yet vainly complain." We have, on the same side, a journal which professes to speak in the name of the memorialists, announcing that if the granting of these concessions be contingent upon submission to Japanese jurisdiction under certain guarantees, no demur will be raised. We have, on the other side, the Japanese Government offering to confer these very privileges, together with the right of holding property throughout the whole extent of the cities or prefectures in which the open ports lie, provided foreigners submit to Japanese jurisdiction, limited in extent and exercised by foreign and native judges, the former in the majority. And finally, we have leading merchants announcing in public speeches or published letters that any change involving the least departure from extrajurisdictional privileges would be intolerable,

and that for many years to come no change is desirable. What, then, may be taken as the fact? If the Memorial and the article embodying it express the views of the foreign residents, there are an absolute consensus of opinion and parallelism of proposals between this community and the Japanese Government. But then, what is to become of recent letters and speeches?

LORD ELGIN'S TARIFF.

THERE appears to be much uncertainty with regard to the average duties actually leviable under Lord ELGIN'S treaty with Japan. The perplexity of one of our local contemporaries on the subject is illustrated by the four following extracts from its columns of the 12th, 13th, 15th, and 19th instant respectively :—

"The tariff (of 1866), no doubt wrought 'sweeping changes : ' it was intended for that purpose, because trade was so hampered by duties that extension was impossible without a reduction in the tariff " (of Lord Elgin)."

"The value of three years' trade, 1863-1865, was \$67,877,910; and there can be no mistake in estimating at least three-fourths of that as having consisted of cotton and woollen goods imported and silk and other staples exported, all dutiable at 5 per cent. If the remaining one-fourth, duties ranging between 20 and 35 per cent., paid a mean of 20 per cent., excluding duty free articles which could not have had any great value, there would have been an average duty of 8½ collected."

"The total value of trade for 1882 was \$66,403,851, on which the customs duties, according to the tariff of 1858, would have been \$5,433,951, or 8.2 per cent."

"If that tariff (Lord Elgin's) be applied to the trade of 1882, we shall find, excluding Sugar and kerosene (the import of sugar was trifling while kerosene had no existence as an import in 1860), that the mean *ad valorem* duty does not exceed 6 per cent. * * * The inequalities of an unsuitable tariff were done away with and a uniform tariff substituted, on a basis about one per cent. lower than the original."

"The revised tariff . . . now returns an income of \$2,700,000, or 4.1 per cent. on the gross trade."

We have thus six distinctly conflicting assertions :—First that the revised tariff of 1866 wrought sweeping changes; secondly, that it only made a change of one per cent.; thirdly, that the average duty under Lord ELGIN'S tariff was 8.75 per cent.; fourthly, that Lord ELGIN'S tariff applied to the trade of 1882 gives an average duty of 8.2 per cent.; fifthly, that the same tariff applied to the same trade of the same year gives an average duty not exceeding 6 per cent.; and sixthly, that while the duties now collected average 4.1 per cent., they are only 1 per cent. less than average duties of 6 per cent. It is plain that there must be something very intractable about an arithmetical problem which can betray a calculator into six contradictory results in eight days. We ourselves, on the 18th instant, published an article containing the following statements :—"The fact is that Lord ELGIN'S tariff was fixed on a twenty per cent. basis. Certain articles paid duties of only five per cent., and as cotton and woollen manufactures were included among these, the average duty actually leviable did not, probably, exceed 9 per cent. * * * The customs duties were reduced from an average of about 9 per cent. to an

phrase be intelligible—but from the standpoint of Christian morality. Most men carry into the practice of their maturer years the principles they imbibe at school and college. The scheme under review aims at influencing those principles. Our correspondents persist in judging it by standards which are only applicable to wholly different social conditions. Because the tendency of Western thought is to free the path of science from doctrinal tests, they hold that no effort should be made to associate education and moral philosophy in a country whose present misfortune is that the two have ceased to cooperate.

CORRESPONDENCE.

JAPAN TEAS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I trust that the excellent article on this subject in your issue of last week will attract the attention it deserves, and be well understood by Japanese Tea producers. It should make them ashamed of the present conditions of their business, and induce them, and the officers charged to control their operations, to work hard to improve that condition.

Perhaps most Japanese assume that foreigners concerned in the Tea trade at the open ports are so much interested in their firing houses, and so fond of the profits accruing from these establishments, that they will resist to the utmost any change in the present system of Tea business. And so they might, very fairly. For it was not by their acts that those establishments were made necessary, but by the bad management of the Tea dealers themselves, who proved too ignorant and too untrustworthy to be relied upon in the preparation and packing of the leaf. Foreigners have been therefore obliged to do this work themselves, and, having now bought land, built costly premises thereon, and otherwise put a good deal of capital into these establishments, many of them are naturally unwilling to have the packing business taken out of their hands. And there are some also who reasonably doubt if it will be as well done by Japanese in the country as it is now done at the ports. I am myself a proprietor of such premises, and I do not like to see them rendered worthless.

Nevertheless, I wish to cast my vote in favour of having all this work done by the Teamen themselves, in the country, if it can be there properly done, and I do not believe I should be altogether alone in that respect. As a rule, foreigners who buy Tea in Japan are merchants, and would rather confine themselves to mercantile operations than combine trading and manufacturing, and when the time comes when they can buy Tea and Silk in Japan, as they buy Cotton and other Merchandise in Western countries, and as they buy Tea and Silk in China, they will welcome the reform, even if it costs them something at first in the disuse of their own firing establishments.

Your article contains a slur on mercantile probity which I think unmerited, and the product of some prejudice. For merchants, as simple intermediaries between producers and consumers, have no reason to practice dishonesty, and in general prefer honest dealing, not only as the best policy, but because they respect themselves. If they buy inferior Tea it is because it is cheap, and if they improve its appearance by coloring it, it is because consumers require them to do so. There need be no dishonesty or deceit on their part in the matter, and as a rule there is none. If Japanese merchants would act on the same principles, their reputation to-day would be better than it is, and there would be less reason to distrust their Tea packing.

To revert, however, to the main question, I would say that Tea producers and the officials who are to cooperate with them, need not fear that preparing and packing the Tea in the country, if it be skilfully and honestly done, will affect their trade otherwise than to increase it. American consumers are more or less ignorant about the process of producing Tea, but they are not stupid, and they will certainly finally prefer a good and pure article to one which is falsified by color or otherwise. At present they know

only that the Teas packed by A or B in Kobe are sometimes better than those packed by C or D in Yokohama, and at other times E or F surpass their competitors. They know nothing about the Japanese producer, and probably imagine him as a peasant on the hill side gathering leaves for intelligent foreigners to cure for export.

It is time that the producer, or at least the country packer, should assert himself in the business, and I, for one foreigner, shall be glad to see him do so.

If he will claim his proper position, and prove his right to an honorable reputation by doing his work honestly and well, he will easily enough find ways to sell his Tea. He is now urged to this effort by his Government and his sense of patriotism. His interest is also concerned, if he but knew it. I wish, too, to add my encouragement, although I am,

A FOREIGN TEA MERCHANT.

Kobe, March 10th, 1884.

[It was not our intention to cast any slur on mercantile probity, but history proves, we think beyond doubt, that policy is at the root of all honesty in trade.—Ed. J.M.]

MR. EBY'S NEW SCHEME.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Several letters have appeared in your columns bearing on what is called "The Christian University Scheme," and as Mr. Eby is anxious that his paper should be freely discussed, I venture to make a few remarks on one or two of the subjects that are introduced into it.

First, I think it should be pointed out that the Missionaries as a body have by no means endorsed the action of the Tokio and Yokohama Conference, in reference to this scheme. In fact it is generally considered that the action of the Tokio and Yokohama Missionaries has been rather premature; and that it would have been preferable to have consulted the Missionaries at the outposts, before drawing up rules and passing resolutions, that are more or less binding on all who wish to join the Missionary Union.

As regards Mr. Eby's paper, in the first place I object to its title: "The Immediate Christianization of Japan," because it seems to me to make an assumption which is unwarranted by facts, and which to those who are well acquainted with the way in which Christianity has progressed in other countries, as well as with the immense power of counteracting influences in Japan, seems a most groundless assumption. It is quietly taken for granted that Japan can be made Christian at once if the machinery specified in the paper be set in motion.

The proposals having reference to united Christian effort are excellent, and will doubtless lead to some practical results.

The University scheme seems to me vulnerable at every point. If I understand it aright, it proposes to establish a University that shall be a means of propagating Christianity. The professors are all to subscribe to a creed, that is to be settled along with their salaries, by the missionaries. The test applied is to be theological as well as moral. For instance, a most excellent geologist, whose moral life is of the highest type, will not be employed to teach the subject in which he is so well versed unless he agrees to the catalogue of dogmas drawn up or fixed on by the Missionaries. The students may believe what they please, but the Professors are to be Christians at any rate professedly.

Now imagine, Sir, such a plan put into operation. The Professors who are invited to come to this country would be paid high salaries on the condition that their teaching was in strict accordance with the interpretation put on the theological dogmas by the Missionaries. Cases of heresy would arise—men of spirit would speak out their minds on various subjects. And then the Missionaries would say to some learned Professor, Sir, you are paid to teach science and philosophy from a Christian standpoint—which means that you shall not say anything contrary to the dogmas of the Church. And so, gradually, the learned gentlemen would find out that they had entangled themselves in the meshes of ecclesiastical controversy: and that the institution which in their innocence they took to be a great educational agency, was in reality a great ecclesiastical agency, the supreme rulers and the holders of the purse strings being ecclesiastics.

The sharp distinction between Christians and pagans that the author of the paper draws, in a letter that appeared in your columns a few days ago, if the test applied be moral and not theological, is not based on facts. There are pagan Christians and Christian pagans, as those well know who have lived long in the East: and why a man, be he Japanese, or foreigner "whose life

is in the right" is to be excluded from the Professorial Chairs of such a University because he refuses to subscribe to certain articles of Christian faith, is what I fail to see. What is there to fear in a Japanese being allowed to hear all kinds of opinions on the subject of religion? What is the condition of our foreign Universities in this respect? Every shade of opinion has its supporters and advocates—the great philosophical as well as the great Ecclesiastical Schools are all represented there, and the consequence is, that those who go out into life from these Universities are Christians, as a rule, if men of any mark, well capable of defending themselves against the attacks of their numerous foes.

The proposed University, then, it seems to me, to be thoroughly popular, must be so conducted that those who study at it shall be left entirely free to choose what religion they will. No undue pressure must be put on them, and the Professors must not be propagandists. Will the great Missionary Societies approve of such an institution? Certainly not. Unless it is to be a regular Mission Agency, whose main object is propagandism, and not high class education, they could not support it.

If native Professors are employed to teach Western science and philosophy the vernacular of the Country is to be ignored (vide Appendix B. p. XII. of Mr. Eby's paper) and the highest education to be imparted by means of a language that is but imperfectly understood. It is designed to effect a marvellous change in the country by saying thought instead of "omoi" or "shiso," and philosophy instead of "tetsugaku" (vide appendix B. p. XII). Not Christianity and the Japanese, but Christianity and the English language are going to "elevate the highest intellect of this nation."

It is high time I brought these remarks to a close, but before doing so, I would express my regret that Mr. Eby's great Christianizing Scheme was not cut down to about half its size; it would then doubtless meet a great want, and lead to more practical results than in its present form, unless I am very much mistaken, the most sanguine of its supporters dares to hope for.

I am, Sir, your truly,

X. Y. Z.

Tokyo, March 16th, 1884.

[Our correspondent seems to make some unwarranted assumptions. There is no question of "theological dogmas" in the scheme as we understand it. Neither need there be any difficulty in finding professors willing to teach in Japan exactly as they teach in England. The ecclesiastical controversy which "X.Y.Z." appears to apprehend is a very shadowy sort of danger, in our opinion. It never much troubled those great Universities in the West where there existed a much stricter system of tests than anything contemplated here. The difficulty about teaching in English is also chimerical. All the instruction at the Imperial Engineering College is given in that language, and the results are eminently successful.—Ed. J. M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your leader of Saturday, March 15th, you have deemed it necessary to restate for our benefit the University scheme projected by Mr. Eby. We are accused of misrepresenting it; and yet, with *perhaps* one exception, no argument of ours is, so far as we can see, shown to be based upon anything that disagrees with Mr. Eby's own statements.

Our objections, as given in our former letter, may be arranged under three headings, which correspond to the three outstanding features of the scheme. A University is to be established in a civilised country under the control chiefly of foreigners; it is to be set up in a city which already has a University fully equipped in all save one department; it is to be a test University. It might be possible, in certain circumstances, to found such an institution, say, at Osaka or Kyoto; and there it might be a Christian University (in Mr. Eby's broad sense) without in any great degree having its influence diminished as an intellectual centre. But to establish it in Tokyo, and to give it a distinctly religious bias—these to our mind condemned the scheme at its first statement. It may be argued that the second feature given above is not contained in Mr. Eby's statement. Certainly it is not explicitly mentioned; but we are right in assuming it as a fundamental part of the scheme. In the present state of things the idea of a Central University for Japan elsewhere than in Tokyo can hardly be entertained. Mr. Eby himself would be the first to admit this.

We gave two illustrations of a city with two distinct co-existing Universities; and here we seem to have been curiously misunderstood. Surely, sir, you are poking fun at us when you suggest that by the Roman Catholic University of Ireland we meant the Queen's Colleges of Belfast, Galway, and Cork! We give the following facts, which can be certified by reference to any good

educational directory. In 1854, a Roman Catholic University was established in Dublin by the Romish Bishops, with the aid of Cardinal Newman. It depends for its maintenance upon voluntary contributions, and is intended to be a rival institution to the non-Sectarian Queen's University of Ireland, founded in 1850, with examining body in Dublin. The general ignorance of its existence demonstrates its practical failure. As regards London, we did not think it necessary to mention by name London University with its two Colleges in the Capital—an essentially unsectarian institution. The Roman Catholic Universities of Dublin and Kensington were established for very much the same reason implied in Mr. Eby's scheme,—as rivals to "Godless Colleges." We consider our historical analogy relevant to the present case.

This naturally brings us to the question of the test. The tendency everywhere in the Christian world is to abolish tests; we think this is incontrovertible. All the older colleges in Europe and America were originally founded to educate men for the church; and this is still largely their function. Gradually, however, in response to the demands of the age they developed in other directions of learning; and then the sectarian armour that was deemed invulnerable had to be doffed, that the College might grow with the times. The *raison-d'être* of the originally non-sectarian Universities of the United States in big America is sufficiently obvious. The newest University in Britain, The Victoria University, was for many years a College affiliated to London University; its growth may be taken as an index of the growing demand for higher education. From all sides is the conclusion forced in upon us, that a University grows and is not made; and that in these days a religious test retards progress.

True, Mr. Eby's test is to be "the broad one of Christianity versus Paganism;" and at first sight there might not appear to be much analogy between this kind of test and the sectarian tests of the Western Schools. But a Christian test in a non-Christian country is surely analogous to the Roman Catholic test in a Protestant country; here Mr. Eby and Cardinal Newman join hands. We do not ask what the "broad" test is to be, who is to determine it, who is to apply it; but we think the idea that such a broad test could ever be applied to the satisfaction of the Christian World singularly utopian. In this connection a phrase of ours is quoted, the condemnation of which seems to us to be the only attempt to make good the assertion that we have misunderstood Mr. Eby's statements. Unfortunately our phrase is not given in its own original setting. We wrote that "special colleges where Literature, Science, and Philosophy are taught explicitly from a theological point of view are miserable institutions." This is a statement of fact, and does not of course apply in the first instance to Mr. Eby's proposed University. But it would apply if the University came into being. For, as Mr. Eby himself says, "the object of the institution would be not to teach Christianity but to impart a thoroughly sound education under Christian influences and from a *Christian standpoint*." The italics are ours; our statement differs from his only in the use of "theological" instead of "Christian." The words certainly are not truly synonymous; but the word we use is the only one that could group together the Sectarian Colleges which abound in the other continent, and this proposed Christian anti-Pagan University. To take theological here in a dogmatic sense would be folly, considering the peculiar nature of the question we are discussing. Hence we have still to learn that our *sentence* in its immediate setting gives a new colouring to Mr. Eby's scheme.

After all, our great arguments have not been touched. We fail to see either in Mr. Eby's characteristic pamphlet or in your own re-statement any rational reason given for carrying out this magnificent scheme. A university must be in close sympathy with the national feeling. It can exist only by supplying a certain demand. There is no indication as yet of such a demand as Mr. Eby's scheme would meet. Under foreign control, this University could never become national. Its supply of students would be precarious as long as the native Christians number a few thousand. When the Christians become many, and Japan needs no more to be nursed by foreign missionaries, who would take charge of this strange exotic? Possibly by passing gradually under native control, it would become then a national university. We think, however, the same thing would come about more naturally and to better purpose, as it has done in all lands,—by the growth of native universities to meet the fresh demands of a growing nation.

We are, Sir, yours, &c.,

FERREX AND PORREX.

Tokyo, March 17th, 1884.

FOREIGNERS' KNOWLEDGE OF JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

My attention has been drawn to the statements of Mr. Fraser in a letter which appeared in the *Japan Herald* of the 17th inst. There are some things in his letter which show how very little a man may know of a country in which he has lived for many years. I, on the other hand, write as one who knows very little of Japanese in the open ports. But in a despatch sent to the British Government some time ago, I find it stated that certain Japanese in a certain port felt the advantage of foreign commerce to such an extent that they would take up arms against their own people in case of war. Now if this really expresses the disposition of the Japanese residing at the open ports, I think it may be confidently asserted that they do not represent the sentiments of the nation. It is, therefore, not surprising that Mr. Fraser, and others who think with him, should detect no national excitement or evidence of "terrible friction" "on the smooth surface of our daily life." That is hardly the place to look for it, nor yet among the Japanese cliques who reap advantage from the present state of commerce.

My experience with Japanese is of a different kind. I know something of their daily life, their schools, their press, their thoughts, their feelings, not second hand but by actual converse, in their own tongue, in large cities in the interior, where no other foreigner has been, with *Daimiyo*, *Samurai*, and peasants. For years, at every place I have visited, there has been perceptible a growing feeling of being humiliated by foreign Powers, of being defrauded by foreign treaties, and that Great Britain is chiefly to blame. In ordinary intercourse you meet with the ordinary gentle decorum of Japanese manners; but, whenever this subject is touched, up flashes a slumbering enthusiasm plainly held in control with much difficulty. And this is general among the young men of to-day, who were but boys 10 or 15 years ago. I think any one who does not know this by experience, can hardly have had much conversation on the subject with young Japan. And that the feeling has sprung from interested foreigners, seems an idea too absurd to mention. It has sprung from Western education, which is now becoming national in Japan.

In one thing I fully agree with Mr. Fraser, and that is that this affair of extraterritoriality and of opening the country, &c., should not be made a matter of mercantile profit and loss, or a question of a *quid pro quo*. It is an international question of right or wrong. It seems a pity, too, that we should talk of "conferring rights" on this nation. The question seems rather to be—has the time come when we can, to a certain extent, allow Japan to exercise her inherent rights in a wider field than hitherto with perfect security to every perfect right of foreigners. And with a great many more who are absolutely independent in opinion, I believe that the time has come when common justice demands a change.

Yours, &c.,

VOX.

Tokyo, March 22nd, 1884.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your remarks on the singular knowledge displayed by a leading member of this community in his newspaper essay on Treaty Revision found at least one appreciative reader. What we people in Yokohama do not know about Japan and the Japanese is not worth knowing. You yourself, Mr. Editor, are sufficiently familiar with Japanese character to guess how grateful our native friends must be when they hear their likes and dislikes interpreted for them so glibly by men who enjoy the advantage of not being able to speak five words of Japanese. But even the glorious assurance of "the late Chairman of the Chamber of Commerce" pales before that of your contemporary the *Gazette*, which, in its issue of Friday last, declares that this community is "far more competent to judge of the requirements of Japan than the Japanese Administration is to decide upon what is needful for themselves or beneficial to foreigners in the way of trade." I never knew that I was one of a body which knows so much. But then, to be sure, modesty generally accompanies competence. I am prepared to tell you henceforth all about "thinking Japanese:" how the present "condition of affairs became to them irksome, burdensome, and is now well nigh intolerable;" how "the people are of one mind with regard to the wisdom, propriety, and indeed necessity of granting permission to Japanese subjects to make use of foreign shipping," and how "they are equally unanimous in looking upon the two steamship companies substituted for that privilege as monopolies framed for no better object than to tax the industry of the farmer, thereby preventing the extension of his operations." All

this I am prepared to tell you about, but I deprecate any impertinent questions as how I came by my information. This nation, look you, Sir, is a very remarkable nation. It understands the true principles upon which navigation laws should be based much better than Englishmen did before the Reciprocity Treaty of 1815; much better than Americans or Frenchmen do to-day. What is more, it has a singular capacity for making its views known. You must not fail to observe, too, that it does not take the trouble to unbosom itself to its despotic Government. No! Sir. It is to the whilom despised aliens that the people of Japan communicate their feelings. We alone can speak with certainty of what they think and hope. We, once the reputed enemies of Japan, once distrusted and disliked, are now the recipients of the national confidence. How wonderfully the times have changed! The two steamship companies may take our word for it that "the people are unanimous in looking upon them as monopolies." The Government, too may learn from us who are "far more competent to decide upon what is needful for it than it is itself" that—. But hold! here is a horrible mistake. In this very article which so justly describes the singular perspicuity of our community and its power of feeling the pulse of the Japanese nation, I find it stated that "few foreigners know anything of the country and the mode in which business is done in the interior." What is the key to this conundrum? "Few foreigners know anything of the country," and yet foreigners are "far more competent to judge of the requirements of Japan than the Japanese Administration is to decide upon what is needful for themselves." Really, Sir, your contemporary must be "pulling our legs." Or perhaps, like some of the popular novels now appearing, his journal is composed by two editors of slightly different persuasions, one of whom writes the beginning, the other the end, of the leading articles.

Your obedient Servant,

AN ALL-WISE ALIEN.

Yokohama, March 26th, 1884.

A WARNING VOICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I hope you will not consider me egotistical when I say that I am glad to see that my warning notes have born fruit in some small measure, and that I take hope for the future, because the indications are strong that there has been a spirit evoked which will not bow down until it is crushed out by the logic of events. The arrival of Her Britannic Majesty's Envoy Extraordinary, Minister Plenipotentiary, and Consul-General for Japan, at Kobe, on the 13th instant, was a proper and most fitting time for the expression of the sentiments of that thriving settlement regarding the vital issues that are now the subject of negotiations between the Government of Japan and the Foreign Powers. I was glad to read the address of welcome presented on the occasion, inasmuch as there is disclosed therein as much moderation as could be expected, in view of the weighty matters touched upon. But when I read the extempore reply of Mr. Plunkett, I feel that there is danger ahead, danger to be provided for, danger that may whelm all English interests in ruin. Mr. Plunkett says:—"It is true I return at a time when important changes are likely to take place." Great Scott, just think of it. Important changes are likely to take place! A mountain of apprehension falls upon me as I contemplate the statement, for full well I know that diplomacy would have dictated more consoling assurances if such had been within the compass of His Honor's instructions from his Government. We must do our most heroic deeds to prevent the consummation of any changes we do not dictate; we would not be Britons else, for are not British interests involved. What care we for the sentiment of the world besides. It is enough for us that *our* interests are in the balance. A fig for the opinions or interests of others. And here again I am plunged in the depths of despair, and inclined to think that the Gladstone Administration has outlived its usefulness, and should step down and out, giving place to some of the large brained and conservative denizens of Yokohama, who can be counted on all the time to withstand the shock of any advancing wave of international justice that may be surging on its way hitherward at the supplication of Japan. For His Excellency says, further:—"You know, however, that these changes are not merely the subject of direct negotiation with England, but many foreign countries are taking part in the discussion." Alas! and has it come to this, that we should have to confer with others? That there are other powers who assume the rôle of negotiators? Must we acknowledge that we are not final judges where

we have interests? Has Britannic supremacy so thoroughly crumbled that it is possible other Powers are consulted in affairs of the Far East? Humiliation can drag us to no lower depth than the suspicion that this can be a fact. Yet, while the threatening evil is not an actuality, there are room and scope for action on the part of those who desire the present status to continue. The first thing we should do in the premises is to fabricate a million magnifying microscope, through which Her Majesty's Representative can look at British interests here, and furnish him at the same time with a pair of blinkers for his use when he would look at Japanese interests: we might induce him to use them. It might not be amiss, also, to ask His Excellency to inform us whether the plotting that must have been necessary to make it possible that our rights as Britons bold should be so invaded, could have had the cognizance of our whilom staunch friend, Sir Harry Parkes. We are at sea, and conjecture fails us to furnish a clue as to how the Government of Great Britain could have been so hoodwinked regarding affairs in Japan, and our particular wishes, as to coöperate, even in the remotest degree, in the nefarious project of depriving us of our privileges, so long enjoyed that we have come to consider them our birthright. I am glad to see that I was right in my estimate of the spirit dormant in the breasts of some of my fellows in Yokohama. I felt that all was not ashes, but that some smouldering embers of patriotism could be found to kindle into a blaze, and throw light upon the vital issues we have to consider in the possible "important changes" now imminent. I am jubilant over the effort put forth in our behalf by my fellow citizen, Mr. J. A. Fraser, in the *Japan Daily Herald* of the 17th inst. It stirs the cockles of my heart to read his article and think seriously of the deep impression it must make upon the minds of the old folks at home, and the flutter it will create when it is read by the "Lords and Gentlemen" of the Queen's Parliament. For most surely it will find its way there. The *Herald* will see to that most probably. If it has not been thought of already, I now make the suggestion.

I am glad to read that he feels. He says, "I feel sure that a feeling of uneasiness, amounting it may almost be said to anxiety, pervades the members of this community,—a feeling intensified by the thought that some changes in the status of foreigners in this country are in contemplation, possibly impending, but of the nature of which they have no exact information, and in regard to which their respective governments may afford them no opportunity of expressing an opinion. Enough, however, appears to have leaked out of the intentions of the Foreign Powers to lead to the belief that they are disposed to make concessions to the demands of the Japanese Government, and to agree to the abolition at a more or less early date, of the extra-territorial jurisdiction secured by the existing treaties." Then he pulls the *Mail* and some of your correspondents over the coals, and just roasts you and them. Altogether you must feel cheap indeed, because, don't you see, he shows that you "have interests of your own to serve in this matter," while he has none in giving utterance to his views. He paints you with a brush that cannot tar himself. What a splendid point he makes when he declares that among the Japanese there are none who take any stock in the great question of the return to Japan of the rights wrested from her, "but the official element, and sections of the educated classes, including the journalists," and that "it may well be doubted whether outside the precincts of the capital and the great cities of the empire, the question excites the smallest degree of interest." If that don't stamp you and your correspondents as working in a direction opposite to that from which the aspirations for national independence should come, I confess myself mistaken. That these named classes and communities advocate the jurisdiction of the Government being extended over the foreigners resident in the Empire should cover the proposition with ridicule. We should learn of the coolie and the untaught and uneducated of the land what are their aspirations, and give heed thereto, that is if they "possessed the necessary spirit of independence" to tell us what they wanted. Who can gainsay the dicta of Mr. Fraser when he declares he must decline to endorse the statement that there is ability in Japan to administer her laws, and when he says that "such an expedient as the so-called mixed tribunals, would probably fail to remedy the evil." We ask again, who can gainsay this? Can it be believed that the men who might be selected, after due thought and advice, by the Japanese Government, from among the hosts of foreigners, English, German, French, American, and other favored nations, to fill the important position of Judges in Japanese Courts, would be, or could be, other than unfit and incompetent to discharge their duties, or that the air and atmosphere of Japan

would not undermine their honor and integrity as soon as they set foot upon the soil of Dai Nippon? There have been men who have developed into good first class scoundrels after arriving in Japan, so let us be on the safe side and believe that every one coming here to officiate as a judge in His Majesty's Courts would take on that hue and complexion. Prevention is better than cure, and don't cost so much. Our peace and comfort depends upon our ability to prevent the possibility of mixed tribunals. We should urge with Mr. Fraser, the adoption of the "humane and enlightened systems of the west, before we consent to put ourselves under the operation of Japanese law."

The opening up of the country to foreign trade is handled with a breadth and depth of thought by Mr. Fraser that signals deep research regarding the possible advantage to accrue therefrom, and a true and exact measurement of benefit to be derived by both parties to the transaction, and it is his firm opinion that "it might be a desirable step, and might be productive in time of some benefit to the commerce of the country," but "that the balance of advantage would undoubtedly be to Japan." Now I hold that anything to the advantage of Japan should be frowned down, as not to be thought of for a moment. I am also of Mr. Fraser's opinion regarding foreign trade, that "it will be best carried on within the confines of the open ports," but I am afraid that there are elements at work which may lay in ruin my fondest hopes, centered as they are in the continuance of the present status. America takes all the tea exported from Japan, and it may possibly be considered of importance by American thrift that if the country is opened up to trade and residence profit may be brought to the shop. The purchasers of silk in Germany and France, as well as the United States, may think that it would be about as well for them if they could have resident agents in the silk producing districts, so they may not have to intrust large sums to irresponsible parties, wherein they claim they take large risks and sometimes lose large amounts, as happened in the case of one unfortunate firm within the past three months. Still, we must keep our pecker up, and not despair of what we may accomplish in defence of our rights.

I am, Sir, Yours, &c.,

ANXIOUS WARNER.

Yokohama, March 20th, 1884.

THE GAIETY THEATRE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As one of the audience at the Gaiety Theatre last night, will you kindly allow me to point out through the medium of your paper to the gentlemen who make it a habit to leave their seats between the acts on a chatting expedition to their friends, seated at other parts of the house, that by so doing they are not only spoiling the enjoyment of that portion of the assembly that attend mainly to hear the music, always good, and a good many more who consider the music as part of the entertainment, not to mention the slight (unintentionally I am sure) thus put on the members of the orchestra who labor so hard for our enjoyment, that it can't be very encouraging to them, when straining every nerve to please, to see a number of the audience leave their seats and commence talking and laughing and not paying the slightest attention to the music or letting others do so who want to. If these disturbers only "went outside to see a man," all well and good, the movement would be understood, and the disturbance would soon be over, but as it stands, I must say its very annoying to any one who is drinking in the delightful strains of "Sextuor," etc., to be suddenly brought up by hearing a remark made regarding the rise or fall of Satsu or on the consequent price of Cotton Yarns. Don't you think it is, Mr. Editor?

Yours, &c.,

NEMO.

Yokohama, March 25th, 1884.

TRANSLATIONS FROM NATIVE JOURNALS.

THE GOVERNMENT AND RELIGION.

(Translated from the *Nichi Nichi Shimbun*.)

Some of the vernacular papers have stated that during the delivery of a series of Shintoistic lectures at Hiroshima, in the province of Aki, one of the orators beheaded an image of Buddha, in order to convince the audience that the image had no power either to bless or punish. The *Danwaku-Kwai*, a society for the suppression of superstition, established in Hakodate, is said to have given lectures

on the Buddhistic theories, urging that Christianity is a depraved religion, and that its followers must be looked upon as national enemies. But no sooner had some young men, Christian converts, expressed contrary views and attempted to refute the lecturers' arguments, than a disturbance arose, which ended in the windows of the lecture-hall being broken. As such and other reports have reached us, we cannot help regretting that the conflict between Christianity and Buddhism disturbs the tranquillity of society, while it also threatens to affect the policy of our international intercourse.

The doctrine that politics and religion ought not to interfere with one another is very generally accepted, and does not admit of contradiction. But when religion evidences a tendency to violate the laws of a country, or endangers the well-being of a people, the Government must perforce interfere in the operations of the religious propagandists, and adopt measures to enforce their obedience to the country's laws. It is the legitimate function of the Government to enforce obedience to its laws, to formulate and carry out its own policy, and to maintain the welfare of its people. Can the priests of one sect openly contend with those of another without seriously affecting the tranquillity of the nation? As far as our opinion goes, certainly not. Look, for instance at the Buddhist-fanatics. If, in their presence, we audibly sneer at the image of Buddha, an image which they are accustomed to worship with genuflexions and clasped hands, they will undoubtedly become furiously angry. Fortunately, the sun does not shine now-a-days on over many famous and virtuous priests, and the faith of the general public seems to be very weak; unbelievers are in the majority, and no priest has actually attempted to shake the foundations of the Empire. But should a strict and upright priest appear upon the scene, declaring that those who oppose his doctrines must be regarded as the enemies of Buddha and that he intends to employ all the power at his command to crush these heretical foes, a serious disturbance would be the inevitable consequence, for many people would take up the cudgels in his defence. Such a state of affairs could not fail to throw the country into disorder. As everybody knows, most of our foreign allies are, with the exception of China and Korea, Christian nations; whatever is said derogatory to the Christian religion may, therefore, be held as insulting to the people of the treaty powers, and would infallibly give great offence to foreigners in this country. The result would give birth to a feeling of discord between Japanese and aliens, and this, in turn, would affect the policy of our Government, which aims at the consolidation of our international interests.

Many of the religious propagandists may be ready to declare that they would never attempt anything not in accordance with the policy of the Government, nor do aught calculated to disturb the tranquillity of the people; but they could not but strive to suppress all religious creeds other than their own, for the very nature of their undertaking forces this upon them. They would roundly assert that this is the only way in which falsehood may be vanquished and truth made triumphant, as it is impossible for non-Christian zealots to demonstrate the truth of their doctrines without proving the falsity of Christianity. Though this idea may itself be a justifiable one, there must be some other method of attaining their end than by having resort to offensive criticisms and insulting speeches. What this other method may be, or whether it exists at all or not, we cannot venture to state; but, at all events, so long as their proceedings are calculated to break the peace, to obstruct or hinder the national policy, or to infringe the nation's laws, politicians should not hesitate to call them to strict account. The fundamental principles of society forbid us to enjoy ourselves at the expense of others. The Government aims at the maintenance of social order, and must, therefore, place restrictions upon those who, by extolling their own creed and decrying those of others, endeavour to promote their own wellbeing at the expense of the happiness of others, thereby disturbing social harmony. We are forbidden to sacrifice even the pleasure of a smaller number of people for the convenience of a much greater number; and much more should we attempt to sacrifice the welfare of the majority for that of the minority. Suppose that the followers of Buddhism were to insult the believers in Christianity, urging that the doctrines of the latter were deceitful and false. Then would the Buddhists be open to the charge of having disturbed the harmony of the Christians. The same is true of those Shinto priests who reject the teachings of the Buddhists in an insulting manner. These remarks do not, of course, apply to those who pass their lives in seclusion, living in the forest or on the hill-side where they rarely meet with human beings. But those who move in every-day society cannot be allowed to pursue a course contrary to the principles of its organization, even though

their creed may sanction such a course. It may be justifiable from a doctrinal, but utterly unjustifiable from a political, point of view. If the conflict between the adherents of different religious creeds is to disturb the welfare of the people, the nature of the evil consequences it produces will be similar to those which characterize the violent speeches of political lecturers. The Government may therefore most assuredly prohibit the delivery of religious lectures of such a nature. And this is all the more forcibly the case if we consider the subject with respect to the policy of the Government. Christianity is, as we have stated, the national religion of the treaty powers. Now, take the case of two individuals, one of whom is a Christian, and the other a Buddhist. Should they desire to enter upon intimate acquaintance, they must have mutual respect for each other's creed, and refrain from saying aught against it. This is exactly the same case with regard to the intercourse of two nations. If Christians should cast opprobrium upon Buddhists, what feelings would the latter entertain towards the former? And what would be the sentiments of Christians to Buddhists were the latter to insult them in a like manner? The priests of this country have shown a strong inclination to contend with foreign religious zealots, regardless of the policy of our Government; and some plan must be adopted in order to prevent the outbreak of a great religious conflict. For should they persist in acting contrary to the welfare of the country, it is within the functions of the Government to interfere and check them.

The honour of a creed is not augmented over much if it calls forth the interference of the Government, and, on the other hand, it is not laudable for the Government to offer interference. We trust, therefore, that religion may not lose its independence, and that the Government will be saved from interfering. But this object can not be obtained otherwise than by persuading the priests in this country to remember that they are, individually, members of one great social community; that they ought not to do to others what they would not have done to themselves; that they should refrain from disturbing the peace of others for the sake of their own; and that they should not behave in such a manner as to endanger the tranquillity of this country or obstruct the policy of the Government.

THE LAND-TAX REGULATIONS.

(Translated from the *Fiji Shimpō*.)

On the 15th inst., the Government published the long spoken of Land Tax Regulations, annulling therewith all other existing rules respecting the land tax. The new Regulations contain in all twenty-nine articles; they are short but clear, and, as they are rather a mere abridgment of the old Regulations, there is nothing very novel or original in them. The older Regulations were compiled in the sixth year of Meiji, and have undergone decided amelioration and alteration in the succeeding ten years; and so it is not a matter of surprise that the present Regulations do not contain many of the provisions that were clearly set forth in the former ordinance. Ten years ago, it was announced that the land tax, although fixed at 2½ per cent., should gradually be reduced to one per cent.; whereas the present statutes put the tax at 2½ per cent. on the value of land without giving any idea of a future decrease or increase. Again, the former Regulations stated that, although certain fluctuations in the value of land might occur after their publication, no corresponding change in the rate of taxation would be made for five years; and when, in 1880, the time had come for alteration, the Government announced that the Regulations would remain as they were until 1885. The new Regulations, however, simply intimate that due notice will be given prior to any change in the rate of taxation, without giving any prospect of an intended alteration in 1885. Further, it was formerly stipulated that, should the tax-payers deem the rates as established by a local Governor excessive, and report the matter to the Minister of Finance, the said Minister would despatch inspectors to the place where the grievances were said to exist, and change the rate demanded after practical investigation of the condition of the taxed lands. But the new Regulations definitely announce that the rate of taxation shall not be changed under any circumstances whatever, unless, indeed, the land be changed in kind, or desert land have been reclaimed. These are the principal differences between the old and new ordinances.

After careful perusal of the present Regulations, we find nothing in them particularly suggestive of future inconvenience in their practical enforcement. Yet the alteration of the Land-tax was a great national event ten years ago, closely following, as

it did, the abolition of the feudal system, and the establishment of local administration; and even yet, after the Regulations have been for years in working order, discontented murmurings are heard in various parts of the country. Although it may not be the actual desire of the general public to make a great change in the existing rate of Land-taxation, it is, nevertheless, undeniable, that the inhabitants in many of the rural and urban districts would gladly welcome a decrease in the tax so far as their own particular localities are concerned; many, too, undoubtedly hoped to see the fulfilment of their earnest hopes in 1885. Or at least those authorities who come into daily contact with the people might have made some verbal stipulation towards granting their oft-repeated wishes at a future date, instead of merely condoling with them on their own pressing needs and sorry condition. But so long as the new Regulations prohibit the alteration of the rate of taxation under any circumstances, except in case of a material change in the description of taxed land, there is no hope that the requests of any one particular district will be complied with, regardless of the possible difficulties consequent upon this policy. It is, in very truth, highly questionable whether a series of constant troubles may not be expected in various parts of the country.

(Translated from the *Hochi Shimbun*.)

Over the signatures of the Prime Minister and the Minister of State the new Land Tax Regulations were published on the 15th inst. After reading these ordinances through, we came to the conclusion that they were an improvement upon, and modification of, the various systems of taxation which have been in force since the first year Meiji. Our Government has, ever since the days of the Restoration, been actively engaged in revising the system of land-taxation, and has issued countless rules and regulations, the mere perusal of which is a wearisome matter. There would be a still greater difficulty if we endeavored to commit them to memory, so that it is quite out of the question for us to discuss all the various points at issue without infringing these and many other regulations which have been issued by the Government. We can, therefore, but approve of the course which our Government has taken with regard to the enforcement of a system of taxation which evidently epitomizes all the former rules and regulations. The new ordinance consists of only twenty-nine articles, but their use and intention are very extensive. The intricate paragraphs of the former regulations are abridged and simplified in the present system. So far as this is concerned, many people will doubtless give the present system their hearty approval; yet, when we compare it with the former regulations, there are many points of a dubious nature, at least so far as we can judge on the strength of our insufficient information. The preamble to Notification No. 7 runs as follows:—"The following Land-Tax Regulations have been established:—The Regulations for the revision of the Land-Tax as published by Notification No. 272 of 1873, the rules relating to the revision of the Land-Tax, and all other measures which conflict with these Regulations, are hereby abolished." Now, do the words "which conflict with" refer to the clause "all other measures?" Or do they relate to the "Regulations published by Notification No. 272?" Do they mean that the regulations for the revision of the Land-tax, as well as all other rules drawn up with regard to the manner in which this revision was to be conducted, and all the notices, enactments, and statutes, so frequently issued in the past, which do not correspond with the purport of the new regulations, are repealed: whereas those which are in accordance with the present system are to hold good? Or, do they indicate that even the regulations for the revision of the Land-tax, as well as those which relate to the manner in which the revision is to be carried out, are, so far as they are not incompatible with the new system, to be maintained? We have come to a private decision on all these points, yet we are not sure that this decision is a strictly justifiable one. If the words "which conflict with" refer to the rules for the revision of the Land-tax, and imply that those paragraphs which are not incompatible with the present system are to be maintained, we may roundly assert that the sixth article of the rules which provide for the gradual reduction of the Land-tax to one per cent., and which is therefore held by the people to be more precious than gold, is in no way inconsistent with the new system, and does not, therefore, come under the heading of "things to be abolished." But those who are disposed to urge the necessity for reducing the Land-tax in accordance with this stipulation only, are merely petulant children, who are ignorant of the real causes which necessitate the reduction. Those who are familiar with these

causes would never think of relying upon a single rule or enactment for effecting the reduction of the Land-tax, nor would they ever deem this one clause a lasting stronghold. As this is the case, neither the maintenance nor the annulment of the famous sixth article can be productive of any real sorrow or regret. Yet there are doubtless some amongst us who believe that the happiness or misery of the people depends upon the retention or abolition of this article. Granting even that the article in question is not invalidated by the enforcement of the new system, we may still declare that it is not capable of a literal interpretation. The phrase which limits the amount of tax on commodities to two million yen must be revised, as its tenor does not suit the practical point in view; in short, it would be absolutely without sense were it allowed to stand unaltered. We assume, therefore, that the Government has merely revealed its intention to reduce the rate of taxation in publishing this article. *Conscious that the real source of national wealth lies in the protection of the soil, and that measures to that end must needs immediately be adopted, our Government will not deviate from the policy which prompts the reduction of taxation, even though the sixth article be cancelled.* For these reasons we are not inclined to attach much significance to that article, and what we have said has been in the interest and on behalf of the popular sentiment.

Simultaneously with our enquiry into the state of the public opinion, we trust that Government will not lose sight of its intention to reduce the rate of taxation in behalf and for the sake of the agricultural classes. In May of the seventh year of Meiji (1874), a notification was issued, adding an eighth article to the regulations for the revision of the Land-tax; and this article stipulated that the tax should be levied in proportion to the value of the soil,—a value that had previously been determined upon. And this system was to be in force until the 18th year of Meiji (1885), in accordance with a notification issued in May of the 13th year of Meiji (1880). The public has eagerly been awaiting the arrival of this year of promise, 1885, and longed to see the result of a modified and reduced taxation. A new system of taxation has now stepped on the tapis, but the only mention of an alteration in the rate made is to be found in the eighth article, where it is stated that a notification will always be issued prior to the necessary reduction of the tax. There is no article in the new Regulations which speaks of any date on which the disparity between the value of the soil and the rate of taxation is so to be adjusted, and the public has begun to doubt that a revision is coming in 1885, basing its deductions on purely imaginative data. With this opinion we do not rashly agree, nor can we form a sound opinion until we are made more familiar with the intentions of our Government by future notifications. If our Government really desires to revise the rate of Land-taxation, it will certainly issue a notification to that effect; and if it does not desire this, it will never take any such a step. As for ourselves, we earnestly trust that the Government will, by the 18th year of Meiji, modify the system, as well as reduce the rate, of the Land-tax. It is not at all necessary to prove that the revision of the rate of taxation is a matter of no trouble whatever. Nor is it at all difficult to alter or modify the system of taxation.

In conclusion, the new Regulations are, as we stated at the outset, no more than an abridged and improved epitome of the intricate rules and enactments which preceded them. They have not introduced any novel device, and it is quite unnecessary to comment upon the twenty-nine articles *in extenso*. What is most important we have already sufficiently dwelt upon:—the reduction of the rate of the Land-tax, and the future revision of the system.

WHAT IS THE POLICY OF THE CHINESE GOVERNMENT.

(Translated from the *Nichi Nichi Shimbun*.)

The fall of Bac-ninh formed the subject of an article in this paper the day before yesterday. This place was for the Chinese one of the most important in Tonquin. Its natural position was strong owing to its being surrounded by hills on all sides, and it served as a frontier protection for the three Chinese Provinces of Yunnan, Kwang-si and Kwangtung, and as it was clear that the capture of Bac-ninh by the French would bring into immediate contact the frontiers of the French and Chinese possessions, the Chinese, there is little doubt, made some effort towards the defence of that town. As to the extent of the aid lent by them there is as yet no positive proof. But it has been reported that secret orders were issued by the Chinese Government to the head of the Black Flags, and that supplies of money and grain were given, and

we know for a fact that many thousand Chinese soldiers were despatched from the Provinces of Yunnan, Kwang-si, and Kwangtung with the object of contributing to the defence of Bac-ninh. The report of Chinese assistance of some kind is, therefore, certainly not without foundation. The Chinese Government were clearly anxious for the defence of Bac-ninh, and hoped that the assistance they lent would at least enable the town to hold out against the French attack for some days or weeks, during which time they would carefully consider the question and decide upon peace or war with France.

Bac-ninh, however, fell into the hands of the French on the 12th instant, after an unexpectedly short and ineffectual resistance on the part of the garrison. Speaking for ourselves, we never thought for a moment that Annamese, Chinese, or Black Flags, however numerous, could successfully withstand the French troops for any length of time. But considering the two disadvantages with which the invaders had to cope, namely, the great numerical superiority of the enemy and the difficult character of the country in which their military operations were conducted, we considered it probable that Bac-ninh would not be captured without a severe struggle. But we were mistaken. Judging by the telegraphic reports, the French would seem to have taken Bac-ninh with the utmost ease, their trifling loss itself showing how small was the resistance encountered. This admits of three solutions. It may be that the despatch of Chinese troops to Bac-ninh was merely talk and never had had any existence in fact; or it may be that the Chinese troops in Bac-ninh withdrew before the French assault; or, again, it is possible that they scattered in panic as soon as the action commenced. But however this may be, two points have been clearly established,—that the statements of the Chinese Government in the Peking and Paris negotiations were empty braggadocio, and that China can no longer retain her influence in Tonquin.

The fact that China did not declare war when Son-tai was taken, and the further fact that she has not done so now that Bac-ninh has fallen, are sufficient to prove that the policy of the Chinese Government is not to go to war. This being so, it would have been better for her to have shown a pacific policy in conducting negotiations with the French. As matters stand now, she can neither effectually assert her suzerainty over Annam by assuming a threatening attitude, nor by the adoption of a conciliatory policy can she secure in Tonquin a frontier-protection for her provinces of Yunnan, Kwang-si, and Kwangtung. She has lost her opportunity for both peace and war. If she had intended to fight France she had her opportunity at Bac-ninh, though even that was late in the day for her. That opportunity exists no more. She has no alternative now but to acquiesce in the annexation of Bac-ninh by France, to recognize the fact that Annam and Tonquin are countries with which she has henceforth no concern, and to accept as her future frontier the boundary hitherto existing between China and Tonquin. If she would avoid further loss she cannot do better than submit to the mediation of England or of the United States.

The policy of France throughout this matter has been one of consistent advance. Her pretensions have increased with the extension of her operations, and she now seeks to annex the whole of Annam and Tonquin up to the borders of Yunnan, Kwangsi, and Kwangtung. And although the French Government have made no declaration of an intention on their part to demand from China the reimbursement of the expenses of the Tonquin Expedition on the ground that those expenses were increased by the assistance given by China to the Black Flags, and failing such reimbursement to occupy the Islands of Hainan, Formosa, and Chusan, still, proposals of this nature have appeared in an influential French paper which is supported by the Government, and in view of this fact it is quite possible that advantage may be taken of China's incapacity for action to carry out some such designs.

On the other hand, should it happily occur that France, now that she has taken Bac-ninh, is content to rest satisfied with the accomplishment of her original intentions, and by accepting the mediation of England, America, or some other friendly Power to relieve China from her present dilemma, this would, indeed, be a satisfactory conclusion of the affair. Should she, however, provoke a controversy with China by raising the question of an indemnity, and eventually go to war to enforce her demands, all persons with a knowledge of the subject agree in thinking that she would invite disaster upon herself. Looking at the matter from the point of view of French interests, it appears to us that France has now a good opportunity to make peace with China and at the same time to secure the fruits of her victories.

The success of any mediation between the two nations must depend on the future action of the

two countries concerned. No satisfactory results can be hoped for unless France, on the one hand, exercises a wise moderation, and China, on the other, is content to accept the situation with which she is confronted. Unless both countries approach the question in the spirit we have indicated, negotiation will be fruitless. What, however, the results of negotiation will be it is impossible to predict. For while France can afford to be magnanimous and not push her pretensions to a point of direct conflict with the Chinese Government, the latter are divided into two parties,—one for peace and the other for war,—and no settled policy can be looked for with any confidence. Nevertheless, it is to be hoped that the present state of uncertainty may be remedied, and that China may soon decide upon a firm policy and consistently adhere to it.

FOREIGN FUNDS AND FOREIGN LOANS.

(Translated from the *Fiyu Shimbun*.)

As has been elsewhere stated, the time has not come which admits this country's raising foreign loans. The success of any industrial enterprise does not, in our opinion, depend upon the question of capital, but upon the sagacity, experience, and skill of the originators of the scheme. These three qualities are not as yet sufficiently advanced among our people to admit of their undertaking such magnificent schemes as do the people of Europe and America; and we apprehend that, if foreign loans are ever raised, the money would simply be wasted in unprofitable undertakings. Now that rumours of the quasi-revision of the treaties are flying all over the country, and the question of mixed residence is being debated, the advantages and disadvantages of the introduction of foreign capital claim a large share of public attention. Whenever foreign loans are contracted by a country, its Government is responsible for their future repayment. Let us suppose, for a moment, that a nation has raised a foreign loan of ten million *yen*; that the financiers of the country appropriate one half of the sum in order to engage in extensive mining operations, but that their calculations turn out to be incorrect, and the profits of the mines fail to cover the incurred expenses; and that the other half of the loan is spent in the establishment of numerous manufactories under the direction of the most trustworthy persons, but that these establishments, for the most part, turn out to be failures, owing to the want of experience and skill on the part of the directors. Even under such adverse circumstances, the Government would not only be forced to pay the annual interest on the loan, but have eventually to redeem the original sum borrowed. How difficult and painful an affair! Should the Government fail to meet its obligations, owing to great financial embarrassment, the displeasure of the foreign creditors would be extreme. Matters might even go so far that other nations, either from an intention to protect their own interests, or with a view to take advantage of the financial embarrassment of the indebted country, might interfere under some pretext or other in the financial workings of the latter. A disastrous crisis would ensue, due alone to the fact that the Government had, in the first instance, rashly taken the responsibility of a foreign loan.

Not so, however, with foreign funds. However great may be their amount, the Government has only to sanction their introduction into the country, a vastly different proceeding from becoming responsible for a foreign loan. Foreigners bringing their capital into the country are themselves responsible for any loss that may arise from the manner in which they employ it. Even though they sank millions of *yen* in a mine which failed to yield one *sen*, neither the Government nor the people could be called to account; and though they lost immense sums of money in establishing profitless manufactories, they could bring no complaint against either the Government or the people.

While foreign loans would entail great responsibilities upon our Government, and the consequences of dire misfortune be inevitable in case of mismanagement or ill success, foreign funds might be readily introduced into this country without fear as to the results. Moreover, the people of the country would certainly derive great profit from the introduction of foreign capital, irrespective of the prosperity or failure of the introducers. For whereas our capitalists are wanting in sagacity, experience, and skill—qualities which will rapidly develop in the course of the next few years—they would profit greatly by the introduction and investment of foreign capital, guided by foreign skill, and invested in that sagacious and skilful manner which foreigners alone understand. The lesson derived from watching their proceedings would be most wholesome and salutary, and

speedily make our capitalists and enterprising men independent of further instruction. In fact, the development of this country with and without the introduction of foreign funds may not inaptly be compared with the relative speed of the hare and the tortoise. Although, indeed, our people might readily acquire the essentials of industrial enterprise by means of foreign loans, the probability of failure or loss would more than outweigh the momentary benefit derived. But not so with foreign capital invested in this country; all loss in connection with its investment would fall on shoulders other than ours, and in the meantime our people would be steadily acquiring great skill and experience.

Although our Government should contract a foreign loan with the laudable intention of furthering national industries, the result might prove wholly unsatisfactory and a complete failure. Just at present, most people find it easy to rely entirely on the Government, the wealthier classes in especial. And so, should the Government raise, just now, foreign loans to a large amount, and undertake various industrial schemes, these gentry would only idly look on and trust to the sagacity of those in power to make their enterprises a success. But they themselves would hesitate to take part in any scheme, unless it were a definite success. And thus the intentions of the Government would not secure the best good of the country. And even this is not all; for, should the Government enterprises prove unsuccessful, would the people derive any profit from this experience? On the contrary, they would cry out against supporting the payment of the interest of the contracted loans, and harbour doubts as to the sagacity of the contractors. Foreign capital is, however, free from the possibility of entailing any humiliation or disgrace, and would assuredly encourage the industrial spirit of the country, while giving a decided impetus to trade and commerce.

If the current report be true, that the Government has requested the Treaty Powers to abolish extraterritoriality and that a new treaty permitting mixed residence in the interior is nearing completion, then is it quite clear that the Government is persuaded that the introduction of foreign capital will be most advantageous. If foreign funds are really to be brought into this country, we must hit upon some scheme to induce aliens to bring their capital into competition. Would Europeans or Americans, breathing, as they do, the air of freedom, ever invest their capital in a country where the policy of interference predominates, or where the mischievous custom of protecting a few big merchants at the expense of the general mercantile community obtains? Besides this, as anything which comes under the heading of political oppression or interference, and undue partiality towards any one faction or party, not unfrequently seriously hinders the commerce of a nation, the people of Europe and America would think twice before transferring their capital to a country where such evils prevail. Now, although in our country political freedom exists to a certain extent, there are still many points which are distasteful to Western nations. So long as these unsatisfactory matters remain unaltered, Westerners will hesitate before investing their capital in this country. If our Government is really persuaded that advantages will certainly accrue from the introduction of foreign funds, it will be necessary to abolish and do away with everything resembling political oppression, or the protection of a few to the disadvantage of the many. In other words, make our liberal administration still more liberal. In that case our people would reap a double harvest; for not only would our arts and industries derive fresh vigour from the introduction of foreign capital, besides gaining greater experience and skill, but the people would enjoy greater political freedom and larger national liberty.

Despite the more than probable disadvantages attendant upon the contraction of foreign loans, there are yet people who fear the introduction of foreign funds still more than they do foreign loans. They imagine that foreigners are cunning and rich in resource, but that our people are unenlightened and dull-minded; so that, if these rich and clever gentry come amongst our poor, stupid countrymen, it will be like letting loose so many hungry tigers amid a flock of unprotected sheep. But such fears are utterly groundless. Suppose, for example, that a mine had been opened and a factory established in the interior by foreign capitalists. Such a mine and such a factory would never have been brought into existence, had it not been for alien money. And then, at that, the miners and workmen employed would needs be chosen from amongst our countrymen. And the produce of the mine and the goods turned out at the factory would have to be sent to the coast-ports and pass our Custom Houses, to the direct increase of the customs' revenue. Besides, after our countrymen had acted for a time as the agents of foreigners, or in any other

capacity, they would acquire sufficient skill and experience to start in similar business on their own account, or at least other native capitalists would eagerly embrace the opportunity to employ men of such skill and experience. However clever foreigners may be, they alone could not reap the benefits of their business without directly benefiting the people of this country, and opening up opportunities for us, which, without their presence, would never have arrived.

Viewed from this common-sense standpoint, the introduction of foreign capital will not only tend towards increasing our sagacity, skill, and experience, but will be a direct source of pecuniary profit to this nation. And, slowly, but surely, our countrymen would gain sufficient wealth to be able to compete successfully with their foreign rivals. We need not fear that we shall ever be enslaved by them; witness the settlements at Yokohama and in the other treaty ports. There our countrymen are far from being the lackeys of foreigners, nay, many are even keeping steady pace with them. Even bantos and petty clerks in foreign employ have succeeded in amassing great wealth after years of steady perseverance. A caterpillar has to contract its body and draw up its many legs before it takes a step ahead.

Nevertheless, we do not positively declare that no one will be imposed upon by, or suffer loss through, the craftiness of foreigners; indeed such and other abuses are unavoidable. But they are so insignificant when compared with the certain benefits to be derived from the introduction of foreign capital, that we may fairly proclaim them not worth our consideration.

IN THE MINISTERIAL COURT OF THE UNITED STATES OF AMERICA IN JAPAN.

Before the Honorable JOHN A. BINGHAM, Envoy
Extraordinary and Minister Plenipotentiary.
MONDAY 24th, March, 1884.

THOMAS B. VAN BUREN V. THOMAS H. TRIPLER.
SLANDER.—\$5,000 DAMAGES.

General Van Buren conducted his own case.
Mr. Weiller appeared for the defendant.

The evidence given at the previous session by Mr. Rossettsu and Dr. Tripler was read, and also the documentary evidence that had been put in.

The plaintiff said that, having been ordered by the Court, he now produced the certificate from the vice Consul-General showing that the U.S. Government paid \$1536.40 for the use of the premises, which included the ground-rent, the jail, and all the buildings on the compound.

Mr. Osborn, called for by plaintiff, stated that since he had been in the Court before he had obtained permission from the Kenrei to tell all that he knew about the circumstances connected with the purchase and sale of the Consular buildings.

Plaintiff—Will you please state in your own way your recollection of the negotiation and the completion of that purchase and sale.

Mr. Weiller objected on the ground that this was not the best evidence. He had tried to get Mr. Nomura to attend, who could have given direct evidence, and had failed. The Court had given the plaintiff notice to bring certain documents which would show the whole transaction and it was to be presumed that he had brought them all.

Plaintiff said that he had introduced all the written evidence called for that it was possible to do. He proposed to show how the purchase came about. The ex-Governor's evidence was not the best. The land officers who accompanied Mr. Osborn could give the best evidence. He wished to examine the witness as to all the facts.

Mr. Weiller said that the plaintiff had stated and Mr. Nomura had also stated, in his letter, that the documents in the Kencho would show everything connected with the transaction.

The Court overruled Mr. Weiller's objection, but noted his exception to the ruling.

Witness said he would like to remark that since he had received the permission of the Kenrei to give evidence in this case, he had looked up the matter and posted himself as far as he could do so. The Kencho was at that time anxious to get rid of the ownership of the U.S. Consular buildings.

The Court said that what they (the Kencho) were anxious about did not matter. It wanted him to state what he knew and what he did.

Witness, resuming, said that he was sent on several occasions to General Van Buren; sometimes with the land officers and occasionally alone. He had asked General Van Buren whether the Government would not buy the buildings. He did not recollect whether he had asked the plaintiff to buy them. Plaintiff said that, it

was useless to ask the Government, they were unwilling to buy or own any property. The price was not mentioned at the beginning at all, for the reason that until it was decided that there was to be a sale they did not take steps to fix a price. After several conversations, and as he thought, one or two letters between the plaintiff and the Kencho, the price was finally fixed by having tenders from Japanese contractors as to the amount for which they would buy and remove the buildings. He thought that the price was then communicated to the plaintiff and accepted by him. That was all he could think of just then. The date of the first conversation he forgot, and whether he opened the question or it was opened by the land officers he did not recollect. He did not remember any mention being made of the sale of property similarly situated.

Plaintiff—Do you know whether properties of this kind are held by the Government as being profitable to them as rental property?

Mr. Weiller objected as the witness could not possibly know.

The Court sustained the objection, as the question was entirely foreign to the issue.

Plaintiff's exception to the ruling was noted.

Plaintiff then put the question as to whether he could recollect that it had been put to him in that way.

Witness said that after so many years it was impossible to positively say whether such a statement had been made to plaintiff. To the best of his recollection there had been.

The Court—Have you any recollection at all about it?

Witness—I cannot say more than to the best of my recollection and belief it was.

To Mr. Weiller—To the best of his recollection the U.S. Government or the Consul-General were asked to buy the buildings as they were a source of trouble. He could not recollect every particular but at the time, he understood that the trouble was about repairs, etc. A great deal of money had been paid for repairs and alterations. He could not say whether the Kencho had got rid of all the property so held and did not know of any buildings occupied by foreigners that were owned by the Kencho. He thought it extremely improbable that they should own any that he did not know about, but they might do so.

Plaintiff stated that he and the defendant, as the defendant had already said, had been on good terms for ten years past, and that he had been intimate at his house and a frequent guest at his table. Some time in the latter part of last summer, or the early part of last fall, they had a misunderstanding which at the defendant's request was settled by arbitration. After the settlement defendant wrote him very severely and abusively and soon afterwards he heard rumours that defendant was speaking ill of him on frequent occasions. During the last few months he had heard that the defendant had charged him with buying the Consular buildings contrary to law and with swindling the U.S. Government. He hesitated what to do, from the fact that he was a magistrate, but finally felt that he was obliged to commence an action at law in his own defence and he informed the defendant of his intention by letter. The defendant made no reply, and therefore he commenced the action. Referring to the sale or purchase of the Consular buildings, he had to say that some years ago a proposition was made to him by the Kencho that the Government should purchase the buildings, estimating the value at \$5,000. He communicated the fact to the Department of State and advised the purchase very strongly. The reply of the Department was that the application should have gone through the U.S. Minister. Afterwards the Department advised him (referring to this offer) that it was contrary to the policy of the U.S. Government to purchase any property abroad. In the latter part of 1880 the Kencho officials came to his office and stated to him that the Japanese authorities were anxious to part with all properties leased to foreign Governments; that the expenses were very large, and the buildings were constantly decreasing in value and if possible they were determined to get rid of them. These officials said that the authorities had determined to offer the buildings occupied by him as Consul General for the appraised price of the material, and wanted to know if he would send the proposition to Washington. He replied that he would not, and gave them as his reason that the Government had once informed him that any such offer should come through the U.S. Minister, and secondly the Government had informed him that it was against their policy to own property abroad. He told the officials that they might send the offer through the U.S. Minister on their own Minister in Washington; he preferred to have nothing to do with it. He thought there had been several interviews on the subject. Finally they asked him whether he individually would buy it. He said that he knew of no legal objection of any kind to

his doing so, that he knew of Consular buildings being owned in some instances by Consular officers, but he would prefer before giving an answer to examine the law and the regulations carefully to see if any prohibition to such a purchase existed. He did so and examined the Statute and Regulations and could find nothing opposed to such a transaction. At a subsequent interview, when they again urged the matter upon him, he stated to them that he would make the purchase and would write at once to the Department of State the offer made and his intention to close with it and would ask the Department's approval. He did so write to the Department, as per the letters already produced. They then, at another interview shortly afterwards urged him to complete the purchase as soon as possible, giving their reasons which referred to tax-paying, tithe-collecting, or something which did concern him: he forgot the exact reasons. He told them to submit to him the contract and price in writing, as he had not yet been informed of the price. They did so make the offer in writing, which was in evidence. He accepted, which was also in evidence; and so advised the Department of State, which was also in evidence. His accounts for rent have since that time been receipted by him in his own name (not officially), as the owner of the buildings, and the accounts have been paid by the Treasury Department and approved by the Department of State. He thought it proper to state that the property was offered to him as an individual and purchased by him as a private individual, which was perfectly understood by both parties to the transaction and also by the Department of State. The term Consul-General attached to his name in the title deed was simply a description of his person. He paid the ground-rent by his own cheque instead of an official draft, simply to save making more vouchers to the Department than necessary. The title to the lot and its position remained unchanged on the official Kencho map and is marked U.S. Consulate-General. In addition to this ground-rent which is part of the \$1,500, he had estimated the yearly repairs at about \$400, and from his experience of the place the time might come at any moment when he would have to spend a whole year's rent over the place. In addition to these expenses, he paid about 150 yen a year to keep the grounds in repair, and also \$288 insurance on the furniture and everything. He bought this property to make money out of it if possible. Could he rent the premises for commercial purposes he would double the rent. In comparison with the rentals of other properties in Yokohama the rental was very low.

To Mr. Weiller—His impression was that the proposition to purchase the buildings was first made to him in the latter part of 1875. When that proposition was made the value put upon the property was \$5,000 for the whole lot. The second proposition was made in the latter part of 1880. There was at that time no valuation put upon the property, except that they would sell it at the appraised price of the material. He did not know whether it had at that time been appraised, he could only speak of what they told him. By they he meant the land officers and Mr. Osborn who came to his office. These were the only officials he remembered in the matter, it might have been mentioned when the Kenrei was dining with him. He had looked through the revised statutes and Consular regulations. Any private individual could hold personal property on that lot, for instance his son had furniture there, but no private individual could lease the lot without the consent of the Consuls. He considered the U.S. Government leased the land as it paid the ground-rent. He had no further permission to lease the land than was shown by the letters he had already put in. The term Consul-General in the title-deed was simply descriptive. He signed the receipts for the rent T. B. Van Buren. He took no pains to have it so entered on the title-deed, it was brought to him by the Kencho officials ready drawn out. In his letter to Mr. Nomura he had signed T. B. Van Buren, Consul-General, as was his habit in signing official documents, and he considered that that letter was official.

This closed the case, and the plaintiff being in ill-health said that he was unable to address the Court, but that he had no objection to the defendant's counsel doing so.

Mr. Weiller declined to do so.

The Plaintiff then asked permission to put in a copy of the letter from defendant to the Department of State.

Mr. Weiller objected, as the case was closed.

Plaintiff said he had not said that his case was closed, but even if he had it was a matter purely within the discretion of the court. He added that he could not see how the defendant could introduce an answer to a letter without permitting the letter which provoked the answer to be put in. Defendant had charged him with not informing the Depart-

ment of the price paid, and the defendant in his letter to the Department of State had mentioned the price.

His Honour having expressed an opinion that this letter was testimony-in-chief, the matter was discussed at great length.

The plaintiff said that it was not that the defendant had written the letter that he complained about, it was that he had made certain statements about the truth of which he did not care. Had he made them? He also wished to know why he (the defendant) should object to the introduction of a letter written by himself.

His Honour said that he had not seen the letter in question, but as being written by a citizen of the U.S. States to the Department of State in regard to a public officer he considered that it was a privileged communication.

Plaintiff wished to add that as to the mystery about the price and that the Department of State were not informed of it, the letter he wished to put in would show that they had been informed by Dr. Tripler of the whole of his actions in the purchase, including the price paid for the buildings, long before they wrote to him acknowledging the receipt of his letter, and he repeated that if the answer to the defendant's letter were put in the letter itself should be put in.

His Honour, after perusing the letter, said he considered it a privileged communication and that it was totally irrelevant to the case; moreover, if it were testimony it would be testimony-in-chief and therefore could not be received.

Plaintiff said it was impossible for him to put it in in chief. His proof in chief was simply to establish the fact that the defendant had spoken the words charged, he had nothing more to prove. Any attempt to introduce it at that stage would have been rejected, and properly so. It was only after the defendant had pleaded and attempted to prove justification and especially after he himself had introduced the reply of the department of state that it became his right to introduce this evidence and it seemed to him to be a great wrong that he should be deprived of it.

The Court then adjourned, to meet on a subsequent notice some time after the 28th instant.

CHANGES IN THE IMPERIAL HOUSEHOLD.

NOTIFICATION No. 25 OF THE COUNCIL OF STATE.

It is hereby notified that the offices of the Senior Chamberlain, Chamberlains, and Vice-Chamberlains in the Imperial Household Department have been abolished, and the offices of the Chamberlains have been rearranged as follows:—Senior Chamberlain (a *Chokunin*), ranking with officials of the first class; Chamberlains (*Sonin*), ranking with officials of the fourth to the seventh classes; Attendants (*Sonin*), ranking with officials of the ninth class.

SANJO SANEYOSHI, Prime Minister.

NOTIFICATION EXTRAORDINARY.

To all Government Departments, Senates, Boards, Cities, and Prefectures.

Ito Hirobumi, Privy Councillor, of the Fourth Degree and of the First Order of Merit, has been appointed Minister of the Imperial Household.

Tokudaiji Sanenori, Minister of the Imperial Household, of the Second Degree and of the First Order of Merit, has been appointed Senior Chamberlain.

SANJO SANEYOSHI, Prime Minister.

21st March, 1884.

H.M. the Empress and the Empress Dowager have given the sum of 500 *yen* towards the establishment of the Heian School in Kiyoto.

[NOTE.—*Hei-an* is the ancient name of Kiyoto.]

The Commanders of the Japanese men-of-war will hold a conference at the Eastern Admiralty Office, in order to deliberate upon the new Naval Criminal Law.

Various experiments have been made in the Medical Department in order to test the value of acupuncture and the application of the moxa. The experiments have conclusively demonstrated the usefulness of both in surgical operations.—*Choya Shimbun*.

According to Notification No. 59c. of the Naval Department, the two men-of-war lately ordered from England are to be named the *Naniwa-Kan* and the *Takachiho-Kan*.—*Kwampo*.

[NOTE.—*Naniwa* is the ancient name of Osaka; *Takachiho* is the name of the mountain in the province of Hiuga on which the first human being—the Japanese Adam—is said to have descended from Heaven. The name has latterly been applied to denote the whole country.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, MARCH 21ST, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 17.1 miles per hour on Tuesday at 4 p.m.

The highest reading of the barometer for the week was 30.157 inches on Wednesday at 10 a.m., and the lowest was 29.665 inches on Monday at 6 p.m.

The highest temperature for the week was 59.0 on Thursday, and the lowest was 32.4 on Wednesday. The maximum and the minimum for the corresponding week of last year were 56.3 and 28.1 respectively.

The total amount of rain for the week was 1.453 inches, against 1.270 inches for the corresponding week of last year.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From America ... per O. & O. Co. To-day.*
From Europe, via Hongkong, per M. M. Co. Wednesday, April 2nd.†
From Shanghai, Nagasaki, & Kobe ... per M. B. Co. Thursday, April 3rd.

* Oceanic left San Francisco on March 28th. † Menzaleh (with French mail) left Hongkong on March 26th.

THE NEXT MAIL LEAVES

For Kobe ... per K. U. Co. Sunday, March 30th.
For Shanghai, Kobe, and Nagasaki ... per M. B. Co. Wednesday, April 2nd.
For Europe, via Hongkong, per P. & O. Co. Saturday, April 5th.
For Europe, via Hongkong, per M. M. Co. Saturday, April 12th.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

SUNDAY CHURCH SERVICES.

Christ Church : 11 a.m. and 5.30 p.m.
Union Church : 11 a.m. and 8 p.m.
Roman Catholic Church : 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokiyo : 11 a.m.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, March 22nd.

AFFAIRS IN THE SOUDAN.

Since the great battle, in which Osman Digma played a prominent part, the latter, having failed to rally the remnants of his following, has fled into the interior.

A complete stoppage of the traffic on the Nile beyond Berber has taken place, and the tribes are closing round Khartoum.

Despatches have been received from General Gordon dated March 15th.

THE FRENCH IN TONKIN.

The French claim an indemnity from China, and the sum is stated to be not less than six millions sterling.

The French troops have assaulted and captured Thaing-nyen without loss. The enemy's loss is said to be heavy.

London, March 25th.

AFFAIRS IN THE SOUDAN.

Spies have reported that Osman Digma, after his late retreat, has reached and is encamped at Tamieh. On receiving this information, the entire British force started in pursuit.

London, 28th March, 6.10 P.M.

Cotton, unaltered; Mid. Upland, 6d. Yarn, very firm. Shirtings, unaltered and steady. Silk, quiet and little doing.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Kowyeiki Maru*, from Yokkaichi:—29 Japanese.

Per Japanese steamer *Mikuni Maru*, from Kobe:—38 Japanese.

Per Japanese steamer *Tsuruga Maru*, from Kobe:—40 Japanese.

Per Japanese steamer *Hiogo Maru*, from Hakodate:—Messrs. Kasigawa, Susuki, Sirisawa, Awoki, Nakamura, Ono, Ooyama, Sirisawa, Habu, and Machida in cabin; and 151 Japanese in steerage.

Per British steamer *Arabic*, from Hongkong:—Major and Mrs. Carr Dyer, Mr. Ah Chong and servant, and Mr. Chan San Pin in cabin. For San Francisco: Lieutenant G. B. Wyckoff, U.S.N., Rev. and Mrs. W. K. MacKibbin and children, Mr. and Mrs. B. O'Brien, and Mr. T. Leyburn in cabin. For Honolulu and San Francisco: 1,233 Chinese in steerage.

Per Japanese steamer *Asahi Maru*, from Kobe:—78 Japanese.

Per Japanese steamer *Takasago Maru*, from Kobe:—Mr. Goshing and 2 Japanese in cabin; and 105 Japanese in steerage.

Per British steamer *Will o' the Wisp*, from Hakodate:—Mr. Davis in cabin.

Per Japanese steamer *Okame Maru*, from Handa:—28 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—87 Japanese.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—66 Japanese.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Mrs. Yoshimura, Mrs. Fujioka and child, Messrs. Chas. H. Wilson, Alex. Center, J. W. Hellyer, A. T. Pritchard, J. J. Cowderoy, F. H. Hooper, N. J. Smith, Nishioka, Shin, Kojima, Mizuno, Hadano, Hirazawa, Yamamoto, and Matsuoka in cabin; Messrs. J. Gillespin, U.S.N., J. Shini, and J. White in second class; and one servant, 7 Chinese, and 146 Japanese in steerage. For San Francisco: Mr. and Mrs. Jansen, 7 children and European servant, Mr. P. Karbery; and 7 Europeans in steerage. For Liverpool: Mr. W. E. D. Bigsby in cabin.

Per Japanese steamer *Yechigo Maru*, from Kobe:—48 Japanese.

Per British steamer *Khiva*, from Hongkong via Nagasaki and Kobe:—Rev. and Mrs. E. J. Scott, Dr. T. Scott, Dr. Cottell, Messrs. F. S. James, Ginsburg, Lowell, Fuld, Skinner, Kitaoka, and Queng Kung in cabin; and 7 Chinese and 23 Japanese in steerage.

Per Japanese steamer *Kiyokawa Maru*, from Shimidzu:—22 Japanese.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—78 Japanese.

DEPARTED.

Per Japanese steamer *Seirio Maru*, for Yokkaichi:—80 Japanese in steerage.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—His Excellency Yenomoto, Minister to China, Mr. and Mrs. Ono and 2 children, Mrs. Kishida, Messrs. M. Baizing, J. Hunt, J. Rennie, O. Schubert, Yenomoto, Sakurai, Matsudaira and son, Ashida, Iba, Utsunomiya, Yekoshi, Fukuda, Takagi, Maiki, Nishimura, and Yoshimura in cabin.

Per Japanese steamer *Taganoura Maru*, for Yokkaichi:—75 Japanese in steerage.

Per British steamer *Arabic*, for San Francisco:—Lieutenant A. B. Wyckoff, U.S.N., Rev. and Mrs. K. McKibbin and 3 children, and Mrs. L. P. Perine in cabin; and 23 Europeans in steerage. For Honolulu: 1,214 Chinese in steerage. For New York: Mr. and Mrs. D. C. Jansen, 7 children and servant, Messrs. W. H. Chambers, U.S.N., H. W. Denison, and J. J. Cowderoy and child in cabin. For Liverpool: Dr. and Mrs. Watson, Messrs. W. E. D. Bigsby, W. Robertson, and T. Spencer in cabin. For Paris: Mr. F. Leyburn in cabin. For London: Lieut.-Colonel and Mrs. Sinkins and Mr. C. Karberg in cabin.

Per French steamer *Volga*, for Hongkong:—Messrs. E. Pereira and Mow Loong in cabin.

CARGOES.

Per British steamer *Arabic*, from Hongkong:—4,098 packages.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Treasure, \$2,050.00.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Treasure, \$100,181.40. For San Francisco: \$38,700.00.

Per British steamer *Arabic*, for San Francisco via Honolulu:—

REPORTS.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker reports leaving Hakodate on the 21st March, at 10 a.m. with fine weather to Ogino-hama, when arrived on the 22nd, at 10.20 a.m., and left on the 23rd, at 6 a.m. with moderate wind, and fine weather to Inu-boye; thence to port fresh adverse winds and thick rainy weather. Passed the *Niigata Maru* 49 miles south of Ogino-hama, and *Sekirio Maru* off Toyama Point, bound north.

The British steamer *Arabic*, Captain W. G. Pearne, R.N.R., reports leaving Hongkong on the 19th March, at 4.10 p.m. with moderate winds throughout the passage. Arrived at Yokohama on the 25th March, at 1.30 p.m.

The British steamer *Khiva*, Captain P. Harris, reports leaving Hongkong on the 20th March, at 4.25 p.m. with calms and light winds on the coast of China, and fresh northerly winds and rainy weather in the eastern sea. Arrived at Nagasaki on the 24th, at 4.20 p.m., and left on the next day, at 3 p.m. with light variable winds and overcast weather in the Inland Sea. Arrived at Kobe on the 27th, at 5.40 a.m., and left on same day, at 0.45 p.m. with light N.W. winds and a high S.W. swell in the Kii Channel, and rounded Oo-sima, at 9.5 p.m. with light variable winds to Cape Sima; thence to Rock Island moderate winds from the westward and overcast weather; thence to port fresh northerly winds and cloudy weather. Arrived at Yokohama on the 28th March, at 6 p.m.

LATEST COMMERCIAL.

IMPORTS.

There has been very little business doing, owing, it is said by dealers, to the appreciation of *Kinsatsu*, and country buyers are disinclined to operate except from hand to mouth.

COTTON YARN.—A few small sales at full rates have been reported for early arrival, and holders are generally asking higher prices, but the Market is inactive.

COTTON PIECE GOODS.—Turkey Reds have been sold to a moderate extent, but Velvets as well as all plain Cottons are dull and neglected.

WOOLLENS.—The only article in good demand has been Mousseline de Laine, of which fair sales are reported.

Flat Bars, ¾ inch	2.80 to 2.90
Round and square up to ½ inch	2.80 to 2.90
Nailrod, assorted	2.35 to 2.60
Nailrod, small size	2.85 to 3.15

KEROSENE.

We are still without any further business to report in Oil, and the following quotations are therefore quite nominal. Deliveries have been 16,000 cases during the week, making our present Stock of sold and unsold Oil some 675,000 cases, including the cargo per *B. F. Watson* (35,276 cases) which has just arrived via Nagasaki from New York. The supply of Oil in second hands is very small, and will soon have to be replenished.

	PER CARR.
Devoe	\$1.75
Comet	1.72
Stella	1.68

SUGAR.

Business during the week, which has been on the smallest possible scale, has had no effect on prices, and the quotations below remain unaltered; Stocks are consequently increasing.

	PER PICUL.
White, No. 1	\$8.00 to 8.35
White, No. 2	6.75 to 7.00
White, No. 3	6.30 to 6.50
White, No. 4	5.80 to 6.00
White, No. 5	4.60 to 4.75
Brown Formosa	3.70 to 3.75

EXPORTS.

RAW SILK.

Our last issue was dated 20th instant, since when there has not been a large business passing, and

Settlements for the six days do not exceed 150 piculs. There has been a fair enquiry for the American mail, but desirable parcels are by no means plentiful, and the sudden drop in *Kinsatsu* has made holders very difficult to do business with.

Advices from European centres continue to report dull Markets there, and purchases destined for that quarter are very small. The business done has presumably been all for the outgoing O. & O. steamer, embracing chiefly *Hanks*, *Filatures*, and *Re-reels*, with a few *Kakedas*.

The Export figures for the week are quite insignificant, the only shipment made being 13 bales per P. & O. steamer *Kashgar* which left on the night of the 20th instant. These 13 bales were entered for France and bring the statistics of Export up to 28,063 bales, against 23,907 bales at same date last year, and 15,824 bales in 1882.

Hanks.—The Settlements recorded are not more than 30 piculs, and a good portion of this quantity has been sent back after inspection. Best quality is very scarce, and holders refuse business, except at very high rates. Prime *Hanks* are not to be found now, and anything grading above 2½ is held for a long price. Purchases made comprise *Shinshu* at \$520 and *Maibash* at \$515.

Filatures.—These have enjoyed the most favorable sales being reckoned at nearly 100 piculs. Good *Shinshu* kinds are very scarce, and the business done has ranged from Good *Koshu* at \$625 to Medium *Shinshu* at \$600. But little has transpired in the crack marks—a few bales *Nihonmatsu* have come in, and are expected to go in the *Arabic*. For *Tokosha* \$650 is talked about, but the owner is not inclined to press his goods for sale, having regard to the present quotation for currency.

Re-reels.—There is no Stock of these, and nothing has been done beyond the purchase of a few piculs No. 1 on basis of quotations given below. Some inferior *Oshu* are on offer, but so far without attracting any notice. We cannot expect any great arrivals for the remainder of the season, although with the mild spring weather, re-reeling will again commence, and some small parcels may come down next month.

Kakeda.—Nothing done beyond a couple of small transactions at \$580 and \$530 respectively. The Stock is very much reduced, and there are very few sellers. Some are inclined to hold for fancy rates, and the few enquiries made do not result in much business.

Oshiu and Coarse Kinds.—No purchases by foreign hongs; the small Stock is yet further attenuated by the demand on manufacturers' account.

QUOTATIONS.

	SEASON 1883-84.	1882-83.	1881-82.
	BALES.	BALES.	BALES.
France and Italy	16,871	11,997	7,796
America	8,553	8,191	5,093
England	2,639	3,719	2,935
Total	28,063	23,907	15,824

WASTE SILK.

Business has fallen off somewhat in this department, and Settlements are noted as 150 piculs only. Good Wastes are still in demand, but the Stock is

poor, and badly assorted. A few days ago dealers were a little anxious, and prices of *Kibiso* were looking weak. The course of the "*Satsu*" Market has made the Japanese less eager to sell, but doubtless buyers who can put up with inferior quality might be able to get in at something under our quotations. *Neri*, with any pretensions to quality, are wanted at an advance on late rates.

The P. & O. steamer of 20th instant took but 63 bales, and the Export up to the time of writing is very little over that of last year. The exact figures are 21,315 piculs, against 21,013 piculs to 26th March, last year, and 19,257 piculs at same date in 1882.

Noshi-ito.—Not very much done, the Stock being inferior, and of undesirable assortment, *Filatures* are wanted, but none are forthcoming at the moment. In *Joshu* *Noshi*, some few transactions, but purchasers are apparently inclined to wait for fresh arrivals and better quality. A small lot *Shinshu* quoted \$130, and some dribbles of *Kawamuki* were entered at \$55. Mild spring weather should start the *Filatures* and Reeling factories again; consequently arrivals may be looked for in small quantities next month.

Kibiso.—Some few parcels have found takers, but good quality is very scarce, and the lots offering of low grade stuff are very mixed and uncommon. The demand for Export is not strong, and prices of these inferior qualities must decline. The list of sales comprises *Shinshu* \$65 and \$55; *Sandanshu*, at \$47½. *Joshu* sorts look weaker at quotations. *Neri* has been wanted at an advance of \$2 on prices ruling six weeks ago.

Sendai & Hamatsuki	100		Mawata	20
Taysaam Kinds	10			
Total piculs	1,700		Total piculs	640

TEA.

The business transacted since our last report has been so trifling, that but little can be said about the Tea Market. Only a few scattering lots aggregating 90 piculs, comprise this week's business, and the Settlements at the corresponding period in 1883 was 340 piculs. Tea brokers are dictating their own prices, and buyers are obliged to submit to their terms in some cases. Over 400 piculs of Tea dust have been sold during the interval, and the prices paid for some parcels must show a pretty good profit to the seller. Tea dust cannot be bought now at less than \$5 per picul, as the Stock only amounts to some 200 piculs. The O. & O. steamer *Arabic*, which sailed on the 28th instant, took 2,903 packages Tea and her Tea cargo would have been larger had she more room. Quotations remain nominally unchanged.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylangylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S
GOLD MEDAL EAU DE COLOGNE
is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S
OLD BROWN WINDSOR SOAP,
celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,
a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,
and other Specialties and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 5TH, 1884.

SUMMARY OF NEWS.

A COUNTRY residence for the Empress Dowager is in process of construction at Ikao.

THE Spring Meeting of the Nippon Race Club is advertised for the 8th, 9th, and 10th of May.

A COMPETITIVE exhibition of isinglass was opened at Shimashita, in the province of Settsu, on the 21st ultimo. There were 123 exhibitors.

NEWS from Korea says that the best Chinese troops have been recalled, presumably with a view to their employment in Tonquin.

AN appropriation of 5,000 yen has been made to defray the expenses of Japanese Exhibits at the approaching Dendrological Exhibition in England.

A FIRE occurred in Shirokane-cho, Tokiyo, on the 30th ultimo, destroying 72 houses and injuring 19.

A SERIOUS epidemic of small-pox is reported from Nagasaki and Kumamoto. The disease is said to be spreading to Fukuoka and Kagoshima.

ON the 30th ultimo, H.I.M. the Emperor went on a hunting expedition to Renkoji, in the Prefecture of Kanagawa.

A NAVAL regatta was held on the Sumida-gawa, Tokiyo, on the 2nd instant. His Majesty the Mikado was present. The programme included fifteen races, of which fourteen were for men-of-

war's men and one for cadets. A number of torpedoes were also exploded.

EXPRESSIONS of condolence on account of the death of His Royal Highness the Duke of Albany have been conveyed from the Imperial Household to H.B.M. Legation.

A VOLCANO in Mount Aso, province of Higo, has broken out into active eruption, and discharged considerable quantities of ashes and scoriæ over the neighbouring country.

THE Mitsu Bishi steamship *Kinoye Maru* ran down a junk of 55 *koku* burthen, near the island of Natsu, Sagami, on the 19th ultimo. One life was lost.

AN elaborate code of rules for the control of persons engaged in transactions with second-hand goods has been compiled and published.

It is reported that the Korean Government proposes to send a Representative to Peking, thus, for the first time, asserting Korea's complete independence of China.

THE *Tokiyo Statistical Journal* has published some curious figures showing that the number of thefts committed throughout Japan vary, with almost mathematical regularity, as the price of rice.

A NOTIFICATION has been issued by the Department of Agriculture and Commerce, embodying a set of Regulations regarding the engagement and discharge of sailors in vessels of foreign build owned by Japanese.

THE late master of the *Akitsuishima Maru* has appealed, to the *Kôso Saibansho*, from the judgment of a Marine Court (assembled under the authority of the Minister of Agriculture) which suspended his certificate.

ONE of the men concerned, six years ago, in the assassination of His Excellency Okubo, escaped from the Ishikawajima jail on the night of the 27th instant. He was arrested a few days afterwards by a detective disguised as a jinriki-sha coolie.

THE Accounts of the Charity performances by the French Amateurs have been published, showing a credit balance of \$364.31, which was divided between the Yokohama General Hospital, the Société Française de Secours, and the Amateur Orchestra (for charitable purposes).

AN action for libel brought by the United States Consul-General Van Buren against Dr. T. H. Tripler of Yokohama, was concluded on the 3rd instant. The Honorable J. A. Bingham, U.S. Minister, before whom the case was tried, reserved judgment.

THE Yokohama rowing season was formally opened on the afternoon of the 29th ultimo, by a procession of six boats, one six-oar and five four-oars, which pulled round the shipping. The water was too rough to permit the pair-oars and single sculls to join in the procession.

THE prefecture of Akita is suffering from an epidemic of *kakke*. Up to the middle of Fe-

bruary, 40 adults are said to have succumbed to the disease, and 300 others are suffering from it. A special office has been established in the Imperial Naval Department to carry on investigations in connection with the malady.

THE vernacular press still continues to discuss the question of treaty revision with unabated energy, the opposition journals condemning any measure which stops short of completely recovering for Japan those two powers—*hōken* and *zeiken*—judicial and fiscal, which are gradually passing into a species of national watchword.

STATISTICS have been published, showing that the average annual loss by fires in Tokiyo during the decade 1874-83 was 1,957,150 yen. The Government has submitted to the Tokiyo Local Assembly a project for increasing the numbers of the fire-brigades, and generally re-organizing them, as well as making provision for a larger supply of water.

A MERCANTILE Shipping Company (*Shosen Kwaisha*) has been started at Osaka with a capital of 1,500,000 yen. Fourth-fifths of this sum is represented by the vessels handed over to the new corporation by the former Cōoperative Steamship Co. (*Domei Kisen Kwaisha*), and the remaining fifth is to be raised by 6,000 shares at fifty yen each. Fifty vessels have been chartered by the officers of the Shipping Bureau (*Kwansen Kioku*).

THE Omi tea producers and manufactures have been the first to carry out the provisions of the Notification recently issued by the First Minister of State and the Minister of Agriculture and Commerce. Forty-seven of them assembled at the end of last month, and drew up a number of bye-laws which have been submitted for the approval of the Department of Agriculture and Commerce.

NOTES.

It is interesting to observe that Italy, after setting the world an example in the matter of colossal ships of war, is beginning to wonder whether her huge playthings will really strike, in the day of battle, such effective blows as their projectors anticipated. A distinguished naval officer, Commandant Cottrau, has presented to the Minister of Marine, at Rome, a valuable memoir on the subject of coast-defence. He does not venture to shock public opinion by decrying the big ships openly. On the contrary, he pays them the pretty compliment of saying that Italy has reason to be proud of such magnificent monsters. But—and here comes the fine sarcasm of the thing—he doubts whether the possession of these remarkable *chefs d'œuvres* of naval construction may not lull the nation into a false security. Two years ago Sir William Armstrong said that the invulnerability of ships of war was no longer anything but a dream. He did not specially allude to the "splendid and terrible colossi" of Italy, but simply to the fact that guns had won the day against armour. No coat of mail a ship is

capable of carrying can withstand the blows she must expect to receive. Better, then, avoid the blows than invite them. Monsters like the *Inflexible* and the *Baudin* would be hard to miss in action. To hit the target they offer of 400 square *mètres*, one need only train a gun to the proper quarter of the heavens. True, they have water-tight compartments, so that several windows might be made in their sides before the danger of sinking became imminent. But who supposes that a ship could remain at sea, manoeuvre, and fight her guns, with holes in her ribs through which, to use a gallant officer's description, "an omnibus might drive?" So Commandant Cottrau thinks that these colossi ought not to be too much exposed. He would keep them for the decisive blow—as a sort of reserve, in short—and use smaller, swifter ships in the early stages of the war. This, we suspect, is the first note of the big ships' death-knell, so far as Italy is concerned. If they are too vulnerable to be trusted into the battle, they had better be laid up at once in glass museums. England will inevitably come to the same conclusion ere long. As military tactics have ceased to include the phalanx and the battalion of quarter distance columns among fighting formations, so naval tactics will discard these unweildy monsters, which only embody the principle of force against intelligence. The swift steel double-ender, handy, comparatively inexpensive, and capable of striking as heavy a blow as any colossus, is undoubtedly the battle ship of the future. Sir William Armstrong, the designer of this class of vessel, will hereafter be counted the chief of naval architects, as he is already reckoned the father of breech-loading ordnance in Europe.

A SUBJECT so important as currency redemption naturally provokes discussion. Were all the articles and letters it has inspired during the past five years in Yokohama collected, they would form a ponderous volume. How much of the volume would remain if everything contradictory and illogical were expunged from its contents, we cannot venture to assert. But certainly the process of excision would bring to light many illustrations of the happy irresponsibilities of ephemeral journalism. A recent instance is too remarkable to pass without comment. The Memorial presented to the Foreign Representatives by the merchants of Yokohama in March, 1882, recommended two distinct processes with regard to the currency: the one, a stimulation of the demand for *Kinsatsu*, and and therefore an improvement in their value, the other, an accumulation of specie to redeem them. A local journal, commenting on the Memorial, called this "a sound financial policy." Now it happens that since the Memorial was written, the measures taken by the Government have affected an appreciation of about 30 per cent. in the value of *Kinsatsu*. Those measures are, however, denounced by the same journal as "an unsound policy," and are said to have been "based upon principles diametrically opposite" to the recommendations of the Memorialists. In reality, the only difference is, that the Government, instead of seeking to increase the demand has diminished the supply. The Memorialists would have essayed to produce equilibrium between the volume of the currency and its functions by stimulating trade and increasing exports. The Government has nearly produced equilibrium by reducing the volume of the currency and directly encouraging exports. Both

plans are founded on the same economical principle, that fiat notes will circulate at par with specie so long as they are not issued in excess of national requirements. It would, no doubt, have been very convenient and pleasant to follow the Memorialists' plan, but unfortunately the signatories themselves were unwilling to submit to the only condition which could have rendered their programme practicable. Pursuing the comparison of the two methods, we find, that while the Memorialists "proposed, by fostering trade, to ensure a natural reaction in the currency," the newspaper which calls this "a sound financial policy," asserts, in the same breath, that "the Government's efforts have resulted in checking trade, whereby currency has acquired an artificial and untrustworthy nominal value." It appears, then, that in this wonderful country of Japan, fiat paper may be made to appreciate both by checking trade and by fostering trade. Nor is this all. Another objectionable feature of the Government's scheme, we learn, is that it "absorbs and exports the available produce of the people to cover the heavy foreign expenditure for which no return beneficial to the nation is received." Unless the plan set forth in the Memorial contemplated repudiation of Japan's paltry foreign debts, it is hard to see how their discharge could have been less necessary even though the measures recommended to stimulate trade were actually carried out. Perhaps there is something here not discernible by ordinary eyes. Perhaps if foreign-owned ships were permitted to enter unopened ports, the foreign expenditure of the Government might become beneficial to the nation. But the sequence of ideas is too subtle for our perception. So, too, is the assertion that "the redemption of currency with money is as far off now as it was in 1882." Seeing that the volume of the currency has been reduced from 160 to 125 millions; that its value has appreciated from a discount of 40, to a discount of 9 per cent., and that the specie reserve in the Treasury has been increased from four to twenty-two millions, it seems a little extravagant to say that resumption is as far off now as it was in 1882. The appreciation that has been produced by diminishing the number of *Kinsatsu* in circulation is just as real as the appreciation that might have been produced by increasing the demand for them. The latter plan would doubtless have been wholesomer and less disagreeable, but the Government, having to choose between the two, naturally, as it seems to us, choose the more feasible, and carried it out. If they did not clearly see their way to expand trade up to the volume of the currency, there was nothing for it but to contract the latter to the dimensions of the former.

THE Naval Regatta on the Sumidagawa, which took place on Wednesday, was very largely attended, many thousands of spectators being present. The day was fine, a bright sun in a cloudless sky, but a bleak north wind made it rather cold and raised clouds of dust. H.I.M. the Mikado, Ministers of State, and a large number of naval and military officers of all branches of the service were present, and the Empress and Empress Dowager, attended by fifteen ladies-in-waiting, were in the pavilion in Court costume, and presented a brilliant appearance. The programme consisted of fourteen races, between crews from the various men-of-war and the naval barracks and schools, and these were well contested, an extra race for cadets winding up

the afternoon's sport. After the races some torpedo experiments were exhibited to illustrate the method of counter-mining in an enemy's water where torpedoes are known to be laid down. The experiments were eminently successful, but were on a small scale on account of the narrowness of the river. Six torpedoes were exploded singly, each containing 180 lbs. of powder, and this was sufficient to raise an enormous column of water. The counter mine, consisting of six, of 50 lbs. each, was exploded in line, showing how a passage for vessels could be cleared of obstructions.

STEAMERS from Europe arriving at Boston, says an American paper, report that they encountered immense fields of ice. The *Virginian*, from Liverpool, when near the Grand Banks, skirted an immense field of ice for some hours, and was obliged to change her course to get out of the way of it. The *Virginian* met the steamship *Sidonian*, from Boston for Glasgow. The latter vessel had encountered an ice field on the 3rd Feb, and was many hours forcing her way through. A hole had been stove in her port bow, and her steering-gear was damaged. She is an iron boat, with five bulkheads, and did not require assistance. The *Kansas*, from Liverpool, passed four large icebergs in mid-ocean. Icebergs thus early in the season are regarded as indicating an open winter in Arctic waters.

ONE cannot but sympathise heartily with the project now on foot in this Settlement to combine several of the sporting associations into one strong club, really representative of Yokohama. The place is too small for such a division of strength as exists at present. In the discussion which the project has evoked, stress is laid on the possible injustice that may be done to members of the less important associations by requiring them either to sacrifice the peculiar game of their predilection, or to carry it on under the condition of supporting other games which, perhaps, they do not affect. It seems to us that this is entirely a question for the majority to decide. It is impossible to please everybody. There must be some sacrifices. If it can be shown that the balance of advantage is on the side of amalgamation, the few interests that will suffer must be content to suffer. Certainly the men who subscribe to all the associations and play all the games in question, have a right to more consideration, than those whose sporting capabilities are less fully developed. We confess that some of the objections urged against amalgamation do not commend themselves for profundity. We are told, for example, that the proposal "threatens the *raison d'être* of the Cricket Club and seems to turn it into an *olla podrida* of games, in which cricket—pure and simple—would be a thing of the past." Apparently the critic who wrote this is haunted by a phantasy that the results of amalgamation are to extend to the games themselves, and that in future the cricket-ground will be the scene of hybrid performances, partaking in part of base-ball, foot-ball, lawn-tennis, athletics, and cricket. To be sure, if cricket is so haughtily conservative that to share its account-books with other sports would contaminate it, the scheme must be condemned as sacrilegious. This novel view of the game appears, also, to be responsible for the notion advanced by the same writer, that because the Club in its present unadulterated form "produces" a good eleven, "any proposal

tending to radically alter its constitution, or to relegate cricket to the background" is to be looked on with suspicion. One would imagine that the strength of a team depended on the constitution of the club, and that the productive powers of the latter varied with its exclusiveness. Then, again, we are told that a Committee comprising members "elected on behalf of each separate game is, at once, enough to condemn" the scheme, "for the fact that different members are to be elected for the sake of advocating the rights of each particular branch of the sports, pre-supposes an antagonism between each—each member contending for his own particular hobby, as opposed to those of others—which would be destructive of any harmonious working of the Club as a whole." This chimera is about as comic as the apprehended disappearance of pure, unadulterated cricket. Why a foot-ball player should fight with a cricketer because both serve on the same Committee, or what idea of mutual antagonism is involved in the principle of each interest being fairly represented, we cannot pretend to understand. Neither, indeed, does the writer himself, so far as we can judge, for while foreseeing that everybody will fight if brought together, he admits that he could find a reason for bringing them together "had the Committee of the Cricket Club shown any particular objection to other games." That is to say, if cricketers were animated by a hostile spirit against base-ballers, they would be likely to work well together, but being friendly, their combination will involve disputes. Were cricket in any real danger, it would find, we trust, sounder support than this. But in fact, cricket, so far from suffering by the scheme, will be largely benefited. Mr. Abbott's letter to our contemporary, the *Gazette*, shows that the immediate effect of his plan will be to add 25 new members to the Cricket Club. Twenty-five new members means an increase of \$250 in annual income, or of \$200 net—deducting the Foot-ball Association's rent. This would enable the ground to be put in thoroughly good order, and other desirable improvements to be effected. Everybody concerned would gain, and we wish the proposal success if only for the sake of seeing Yokohama united in its sports, at all events.

It is not pleasant to live in company with the possibility of finding one's house tottering and crumbling at any moment about one's ears. Yet, on the whole, Japan's liability to earthquakes is compensated by her immunity from floods, tornadoes, and other horrors which visit more Western lands. The story that comes from America of the Carolina Cyclone is full of terrible details. The storm seems to have been first felt in Johnston County on the night of February the 19th. It was moving southward in a track from a quarter to half a mile wide, and everything it touched went down before it. Houses were wrecked, and whole families crushed to death or dashed into the woods and swamps. Wagons are said to have been lodged in tree tops, and beams hurtled along with such tremendous force that they cut off the heads, or broke the backs, of everyone they touched. After sweeping down a track ten miles long, the storm soared again into the air, to descend with renewed fury at a point forty miles distant. In its second onset it killed twenty-five people in one village and laid every house in ruins. Pitiably accounts are given of little children blown into swamps and killed by falling trees or

by exposure to the bitter cold. Altogether the losses of life in South Carolina are put at ninety, while the number of persons injured is a hundred. The wounds of the dead are described as most horrible; some having their heads crushed flat, others with immense splinters through their bodies, others impaled on broken trees, and others again "forced into piles of logs and having their intestines torn out."

It will be remembered that when General T'so T'sung-tang visited Shanghai last October, his escort showed themselves so truculent and disorderly that a complaint was addressed by the Municipal Council to the Board of Consuls. The Council's representations subsequently took the form of a request that limits should be set to the numbers of a Chinese high official's escort when passing through the foreign settlement, but as the Consuls declined to assume this position *vis-à-vis* the Chinese local authorities, the correspondence was ultimately forwarded to the Foreign Representatives in Peking. Since then, the new Chairman of the Municipal Council has again addressed the Senior Consul with regard to the outrages committed by T'so's soldiers on the occasion of that dignitary's second visit to the settlement in February. This last communication contains the following intimation:—

The Municipal Council, while according to a Chinese official the right to land in the Settlement with a well-behaved unarmed escort befitting his rank, take exception altogether to his landing with an armed force, and I have to request that you will communicate without delay the substance of this letter to the Diplomatic Representatives at Peking, urging that they should concert measures with the Chinese authorities to regulate official privileges in similar cases. Until the Foreign Ministers have had time and opportunity to arrive at an understanding upon the important subject which you are now requested to submit to them, it will be the duty of the Municipal Council to intimate to the Taotai through you, should the occasion arise, that in the interest of all nationalities only an unarmed escort should enter the Settlement, but that in all cases, Chinese officials of distinction, in Municipal limits will meet with the courtesies which usage and propriety entitle them to.

Undoubtedly this will hereafter be quoted as a very wonderful phase of foreign relations with the Middle Kingdom. The Municipal Council of Shanghai, primarily holding their authority from the Chinese Government, "accord to a Chinese official the right to land in the Settlement with a well behaved unarmed escort, but take exception altogether to his landing with an armed force." As a novelty, an unarmed escort is curious enough, but the notion of a municipal council interfering at all in such matters is still more curious. Conceive the municipality of Dover forbidding a guard of honor to carry arms when receiving General Roberts on his return from India! Chinese soldiers, it is true, seem resolved to misbehave themselves in foreign settlements, and the people of Shanghai have a right to claim immunity from outrages such as those they suffered at the hands of T'so's braves. But the position they have now taken seems quite untenable. The numbers and equipment of an Imperial Officer's escort are matters that come entirely within the province of the Imperial Government, and cannot, under any conceivable circumstances, be regulated by municipal authority. The Municipality of Shanghai, however, does not mean to wait for instructions from Peking. In the interim it takes the law into its own hands, and intends to intimate to the Taotai, if the occasion arises, that only an unarmed escort should enter the Settlement. But suppose the Taotai disregards this intimation, as he certainly will, not having any power to act upon it. Will the Municipal Police be then directed

to disarm the high official's escort? That would probably be a noisy business. We trust that dignitaries with armed followings will keep away from Shanghai for the present.

NEW YORK has done its best to honour the remains of the men who perished in the pursuit of that mischievous will-o-the-wisp, the North Pole. Perhaps in no part of the world and at no period in the world's history, were funeral rites invested with so much pomp and parade as they are in the United States at present. There is much that is shocking, if not revolting, in the morbid propensity that generally dictates these displays, but in the tribute paid to the memory of the *Jeanette's* dead one recognizes a feeling with which all can sympathise. After performing a species of triumphant procession half round the globe, the ten corpses, or what remained of them, reached the Hoboken Dock on the 20th of February. There, for the first time in their long progress, they seem to have been treated with some little neglect, for they remained, throughout the night, without a guard of honour or other mark of respect, and watched over by only two men, brothers of the meteorologist, Mr J. J. Collins, whose coffin was among the number. The following morning, however, this oversight was remedied, and a volunteer guard stood sentry over the dead, while hour by hour a crowd of respectful sight-seers surged beyond a barrier which the troops had erected. At noon Mrs. De Long arrived, and throwing herself upon her husband's coffin, "sobbed convulsively for many minutes." A curious, and, one cannot help thinking, fortunate, mistake seems to have been made by those who forwarded the caskets. When the latter were shipped at Orenburg, a quantity of cork chips were sent with them to serve as packing. The chips were, however, placed about the bodies inside the caskets as well as about the latter, so that the faces of the corpses were not visible when the shield plates were removed. On the 22nd the bodies were carried by water to the New York side, where, from the Battery to the City Hall Park, every building was either draped in mourning or otherwise prepared for the occasion. The crowds are described as immense. In fact the whole city seems to have turned out, and the colossal dimensions of the gathering were not more remarkable than the perfect decorum observed throughout. Arrived at the Navy Yard, the bodies were laid in state until the evening, there receiving visits from thousands on thousands of mourners. Ultimately they were carried off to be buried, each in the place chosen by its friends.

THE sudden death of the Duke of Albany was doubtless caused by a more severe attack than usual of the malady from which he has long suffered. That he was in no condition to excite alarm, up to the middle of February, is attested by the fact that, on the 15th of the month he took part in an amateur concert at Esher, in aid of a local charity, singing the ballad composed by Frederick Clay, to Kingsley's verses, "The Sands of Dee." A few evenings before, at Dorking, he was the victim of a most unpleasant contretemps. He attended a county ball, and at the moment of leaving, while lifting his hat in return to the farewell salute of the company, received in his face the greater part of the contents of a pot of beer, flung by one of the subscribers to the entertainment, whose name has not been published, although it is stated that he holds a good position in society, and belonged

to several clubs, from which he has since been expelled. The assailant immediately offered profuse apologies, declaring that he had intended the insult for another person; and with this lame excuse the Duke was inclined let the matter pass by. It had, however, been generally observed that His Royal Highness was at the moment surrounded by ladies only, one of whom was likewise drenched by the operation, so that the wretched attempt at explanation was held insufficient, and the culprit would probably have been subjected to severer penalties, but for the Duke's unexpected death.

MR. WALTER has offered the position of Editor of *The Times* to Mr. Leonard H. Courtenay, a gentleman well known in political circles, both as financial Secretary to the Treasury, and as member of parliament from Liskeard. He has long been a writer for *The Times*, holding about the same connection with the great journal as that of Mr. Lowe, in former years. It can hardly be doubted that he will accept, knowing, as he must from his associations with journalism, that the power and distinction attached to the editorial management of *The Times* are far in advance of anything that a secretaryship in a Government office can confer. The pecuniary advantage is also considerable, his official salary being only £2,000. His labors in the new sphere will be excessive, especially if he aims at restoring the paper to the condition of supremacy in which it was left by Mr. Delane. It may be questioned, indeed, if that feat is not beyond human accomplishment. To make *The Times* what it was ten years ago, two vigorous bodies and two powerful minds were sacrificed; the manager, so called, succumbing several years before the editor. The choice of Mr. Chenery as Mr. Delane's successor was not fortunate, and no newspaper reader needs to be told that the reputation of the leading journal began to decline from the time that it was controlled by an Oxford savant, instead to an active man of the busy world. A great daily cannot rest upon its past glories, and nothing but a constant renewal of intellectual energy can sustain its force. Mr. Delane contrived to supply this, while he remained in charge, not by his own personal effort altogether, but by the employment of the best available material. He seldom wrote, himself;—partly, perhaps, for the reason that while gifted with an admirable faculty of moulding the work of others, his own productions were anything but first class, but more particularly because a metropolitan editor cannot indulge in original composition without neglecting his proper duties;—and he devoted himself to the task of fusing all the elements under his sway,—often very discordant in their primitive shape,—blending them harmoniously, and stamping them with the unmistakable "hall-mark" of Printing House Square, before giving them publicity. How he toiled, year after year, few except those in his immediate confidence were aware. His heart was in his vocation, but his mind toward the end, could not stand the strain. Mr. Chenery's sympathies were with other walks of literature,—if, indeed, a daily newspaper comes fairly within the compass of literature. To the supreme requirement of enterprising journalism, the collection and distribution of news, he seemed indifferent; and of the vital necessity for disciplined organization he was apparently unconscious. His rôle was so lax that he permitted the

principal proprietor to take the reins out of his hands on more than one occasion; and this for purposes which were so palpably unworthy of an organ of English opinion as to call forth the severest public criticism. No one who followed the course of *The Times* during the last months of Lord Beaconsfield's administration can have forgotten the extraordinary surrender of independent spirit which then enfeebled its columns. Persons who pretend to speak with authority have stated that the losses of that period, in circulation and in advertising patronage, have never been recovered. But in spite of all this, there is only one *Times*, with its imposing dimensions, its mechanical perfection, its plenitude of omniscience, and its still haughty and autocratic bearing, which can never be found fault with, so long as it is sanctioned by popular submission. The mighty machine stands in its familiar place, a little rusty and out of gear, it may be, but capable of mighty deeds, if only the right hand to direct it be forthcoming.

THE *North China Herald* recently gave us a new and interesting version of the quarrel between Li Hung-chang and General Gordon about the slaughter of the Wangs at Soochow. According to the story told by our Shanghai contemporary, the massacre was ordered by Li's colleague, and the Viceroy's fault was limited to a want of becoming firmness. This information was furnished to the *North China Herald* by "an official who was attached to Li's person at the time of the occurrence and who spoke from personal knowledge." Another gentleman has now come forward with a different story which he publishes, in the form of a letter, in the same journal:—

When Soochow was taken, Li had been Futai of Kiangsu for about two years, and was not only in nominal but in very real command of the Forces by which it was recovered. He had made his mark under Tseng Kuo-fan, and, at the time you speak of, so far from being a struggling adventurer, was an object of considerable jealousy to the latter, and held the highest rank. As for his infirmity of purpose, he had shown on many occasions that he meant to have his way and would not bow to anyone, however great the odds against him, and I should have liked to see some of his Generals try to interfere with him. As for taking a man of six feet high, strong and vigorous as he was, by the waist, and pushing him into an inner tent, the thing is absurd. The Wangs were killed in his presence, and not in a tent at all, but in one of the Yaméns in the city.

Gordon did not become Li's adviser till he was well up. He certainly had a great liking for a man who served him well, but he used him as he used others, and never was indebted to him for more than loyal service. Li's was throughout the ruling spirit. Sir James Hope had some influence over him, but even him he met and dealt with as an equal, not as a dependent, and could and would say so very decidedly when pressed to any course he was not disposed to take, long before he was in the strong position he occupied when Soochow was taken.

Now, as for the supposed treachery. Thinking they had surrendered at discretion, Gordon had given his word that the lives of the Wangs should be spared; but he had done so without authority. The Wangs thought he had done more,—that he had guaranteed them continuance of power; and when they swaggered into Li's presence bearing themselves as if they were still the lords of the city, Li saw that the place was not taken though he was inside the walls, that in another minute the fighting would commence again, and the chances were he and his would be kicked out, possibly come to utter grief. It was no moment for hesitation; weakness would have been ruin, and the choice was given of instant submission or instant death. They would not submit, and off went their heads, and their followers were cowed. I never sympathized with Gordon's mad rage on the occasion, for it was always my opinion that he had not grasped the position, and that Li could not act otherwise. One can understand Gordon's rage, but it arose from a mistake as to what was the real state of affairs. We looked on him as the General in Command, and he did the same, but Li only looked on him as one of his lieutenants.

It is easy to see that here, too, we are listening to one who actually took part in the events he relates. But it is inconceivable that if Gordon

had acted without Li's authority in promising the Wangs their lives, he would have subsequently treated the Viceroy as a foresworn traitor. The English soldier was a just man before everything. He might have been incensed to the extent of immediately resigning his command when he found that his solemn engagement to the Wangs was not respected by the Chinese General. But would this have induced him to attempt the latter's destruction? Would he have tried to shoot his colleague and nominal superior merely because a slight had been put upon himself? We think not, and those that know Gordon will be of the same mind. We ourselves have heard it related by one who gave Gordon as his authority, that not only did Li promise to spare the lives of the Wangs, but that he also undertook to provide a banquet for them, and that Gordon's characteristic reply was, "I don't care about the banquet, but I want your word." On the whole, if Li is to be exonerated, it must be on the evidence of the *North China Herald's* first informant. The objection made by the correspondent quoted above—that a man of Li's size, strength, and known resolution could not have been thrust aside—loses its force when we remember that the story of Li being pushed into a tent by his subordinate is qualified by an explanation that he did not at the time suspect the latter of any immediate design upon the Wangs' lives. He might very well have yielded for the moment, believing that he still retained the power to keep his promise to Gordon.

THE Yokohama Bible Class holds a meeting every Sunday afternoon, at 3.30 p.m., in the rooms above the Bible Society, at No. 42. The class is open to all over sixteen years of age, and is presided over by the Rev. G. J. Smith.

MR. HENRY WATTERSON, who is about to introduce into Congress, in the interest of the press, a measure which he calls a newspaper "copyright" law, thus explains its object in the *New York Tribune*:—"It simply operates to protect property in news from piratical concurrent publication. This can be done by a clause in the copyright laws making collected news, the product of skilled labor and outlay, exclusive to those who pay for it, for twenty-four hours. I mean all news and news of every description and every association. As matters are, news is not recognized as property at all. Everything about a newspaper office, from the perfecting press to the newsman's pot of paste, is property, and he who steals it falls within the reach and compass of the law. But that which constitutes the real value of the newspaper property—its news franchises—costing vast sums of money and years of special enterprise, training, and labor—has no legal status whatever. It is practically outlawed; anybody can steal it with impunity. The proposed measure protects it from pirated use and concurrent publication for twenty-four hours. It creates, indeed, a new property; that is, property in news. No one can oppose it except those who want to rob others of their labor and money."

A LETTER from Constantinople, published in a Vienna paper, says that Secret Committees at Cairo, Beyrout, and the Turkish capital, are in active correspondence with Arabi, with a view to starting a general Pan-Islam movement in Western Asia and Northern Africa. The Sultan does not like the notion, it is said.

If we may judge by the rumours circulated in the columns of our Shanghai contemporaries, China is divided between two sentiments,—anger, bitter and deep, against France, and an eager anxiety to hide her own complicity in the resistance which the Black Flags have offered in Tonquin. It is stated that the recent publication by the *North China Herald* of the Imperial Edict appointing the chief of the Black Flags, Liu Jung-fu, to be Commander-in-Chief of the forces in Tonquin, has greatly incensed the Empress, and that a Secret Decree has now been issued to Admiral P'êng, ordering that official to inform all the Viceroys and Governors in the Eighteen Provinces that should such an indiscretion be repeated, immediate steps are to be taken for the arrest and decapitation, without further authority, of the guilty person; while the official from whose Yamên the document may have been stolen, is to be liable to the severest punishment and degradation. It is certainly highly inconvenient to a Government to know that its secret proceedings are likely to be blazoned abroad at any moment in the columns of a newspaper perused by its enemies, and we can sympathise with the Empress' indignation against the treachery of her subjects. "It would be difficult to exaggerate," says the *North China Herald*, "the consternation caused in official circles by the receipt of this Decree," and then naively adds, "we have hitherto been unable to obtain a copy of the document." Are we to presume from this that if our contemporary does obtain a copy he means to publish it? Liberty of the press is a fine thing in its way, and a newspaper's chief function is to procure news, but when the price paid for an item is the possible decapitation of one individual and the severe punishment and degradation of another, the claims of an inquisitive public begin to look insignificant. Regarding this matter from a Chinese standpoint, we should be disposed to doubt whether the privileges conferred by a treaty of commerce and amity extend to the publication, within Chinese territories, of a foreign journal in whose columns matter highly detrimental to China's national interests finds indiscriminate insertion. It ought not to be an extravagant claim that an English newspaper, printed and circulated on Chinese soil, should be as careful to avoid causing embarrassment to the Chinese, as to the British, Government. Certainly this would not be counted too high a code of ethics were the positions reversed.

A MOVEMENT is on foot in the United States to protect telegraphic and other original matter in newspapers for the period of twenty-four hours, by the introduction of a bill for that purpose which has been drawn up by Mr. Henry Waterson. This has become a necessity, according to many newspapers in the States, on account of the loose ideas upon the subject of *meum* and *tuum* entertained by some of their contemporaries. A recent *Alta*, says editorially:—"That news may become property is a fact too clear for dispute. To collect and transmit it requires skilled labor and a command of those modern agencies of commerce, the telegraph and post-office. The labor employed in collecting and transmitting the news costs money, and when it is purchased in this way, why should not news be subject to ownership, like other products of labor? If subject to ownership it is property, and if it is property, news ought to

enjoy protection as much as other descriptions of property. Property is a right, and the very essence of right, say the legal writers, is in the duty laid on others respecting the possessor of that right. Thus, liberty is a personal right, and liberty means nothing but the obligation imposed on others to respect the possessor of the right of liberty in the exercise of his personal faculties and the disposal of his property according to his own pleasure, subject to certain restrictions made necessary for the good of society. Property without protection is an anomaly, but that is the status of news at the present time. A great newspaper pays many thousand dollars every month for telegraphic news, and yet it cannot protect itself against the piracy of that news by dishonest competitors. It usually happens that a paper which pays a great deal for news has a large circulation, and it requires hours to print enough copies to meet the daily demand. The dishonest competing newspaper, which has but a small circulation, holds back its issue until it can obtain an early copy of its rival, when the telegraphic news is cut out, put in type, and the paper printed and sold on the street in competition with that which is the real owner of the news. One pays \$1,000 for the news and the other not a penny. Is it common justice or common sense that the law should give the latter the same enjoyment of this property as that possessed by the newspaper whose money has bought it! Or take the case of the afternoon paper which scissors all its telegraphic news out of the columns of its morning contemporaries. The latter are the sufferers by this practice, for the evening newspapers necessarily compete more or less with the sale of the morning papers. Many subscribers are lost to morning newspapers because they find a full summary of the morning news in evening papers which obtain it, not by purchase, but by a simple act of appropriation. The Waterson bill protects property in news only for the term of twenty-four hours, which is surely a very modest demand. If the public would be in any way the loser by the adoption of this bill—if it would tend to reduce the quantity of news collected and transmitted by telegraph—there would not be so good an argument for its passage. But instead of an injury to the news-reading public, it would be a benefit, for if protected in their rights, the papers which pay for telegraphic news would be able to buy more news and better. Now they are in the position of a merchant who not only has to pay for the goods he himself sells, but for those stolen from him by a dishonest neighbour, who daily replenishes his stock in this way. It is unnecessary to say the legitimate trader must charge a higher price, to keep even, than if a part of his stock was not regularly stolen."

At 11.30 p.m. on Sunday (30th) a fire broke out at No. 17, in the first ward of Honshirokanecho, in the Nihon-bashi district, Tokiyo. A strong wind, blowing from the north-west, fanned the fire into such vigour that about 50 houses were destroyed before the flames subsided at 12.40 p.m. It does not appear to be clearly established whether this fire was accidental or the work of an incendiary. The former, however, seems more probable. Tokiyo has been comparatively fortunate this season in the matter of fires, but, on the other hand, an improved system of statistics and detectives has removed all doubt as to the prevalence of incendiarism on a large

scale. In view of the facts which have come to light the efficiency of the present penal code to restrain this particular species of evil-doing is called in question. Incendiaries, it will be remembered, used to suffer death under the old codes, and of course the effects of such a law were more deterrent. But it seems to us that a change of social conditions has more to do with the apparently increased license of these times than a change of penalties. Fifteen years ago almost every man in Tokiyo was virtually a policeman in the pay of some *Yashiki*, with the safety of which his fortune was more or less bound up. Obligated, in case of fire, to repair at once to the *Yashiki*, whatever might be the danger to his own premises, he naturally spared no pains to avert such a contingency. Each householder was, in short, a spy on his neighbour, so far as the prevention of this variety of crime was concerned; while, at the same time, the very malefactors of the city were themselves enlisted in the cause of public security by a system which condoned their petty crimes for the sake of their services in more serious crises. These conditions, disappearing, gave place to a police service, which, until very lately, could not pretend efficiently to take the place of so thorough, though so peculiar, an organization. The two seasons, 1882-83 and 1883-84, have been, as we have said, comparatively free from fires, and to this freedom has now to be added the recent discoveries and arrests of incendiaries. Doubtless degrees of punishment produce varying effects, but it seems to us that with an efficient detective service, penalties ranging from five to twenty years ought to meet all the requirements of the case.

SAYS a writer in a London paper:—Trial by jury has been suspended in the districts of Vienna and Koenenbourg. Naturally there is much excitement over the business on the Continent. We fail to see the necessity for disquietude in the matter. Trial by jury has of late years become such a solemn farce that it would be of very little moment if it were abolished altogether. Were we called upon to stand in that prominent but uncomfortable position in a court of justice called "the prisoner's dock," and had we the choice of election, we should choose, if innocent, to be tried by one of her Majesty's judges; but, if guilty, we should much prefer a jury—there would be at least a 6 to 4 chance for us then.

JAPANESE artillerists, as well as the gentlemen who through the medium of these columns have instituted comparisons unfavorable to England's reputation as a scientific manufacturer of artillery, may be interested by the following passage from a letter addressed to *The Times* by General Sir J. Lintorn Simmons:—"The weight of guns is not the only direction in which artillery has progressed. The velocity of projectiles has been increased by means which were not even dreamt of formerly, and it is from the vastly increased penetration due to this cause (in great measure the result of the energy and scientific skill of Sir W. Armstrong) that the sea-forts run their greatest risk." It will be argued, no doubt, that this tribute to the genius of Sir W. Armstrong is an English opinion, and therefore not to be accepted without reserve as applying to English weapons. We readily admit the objection. But the verdict of General Simmons with regard to Armstrong's achievements seems at least as worthy of credit as the verdict of Mr.

Krupp with regard to those of Mr. Krupp. It is not to be expected that either manufacturer will readily admit the other's superiority, but so far as Japan is concerned, the comparison has hitherto been subject to very unequal influences. We doubt whether an English artilleryman has ever been present at, or ever taken part, directly or indirectly, in a trial that might have furnished trustworthy data; whereas, on the contrary, German experts, German agents, or persons more or less pledged to Krupp's interests, have, in the great majority of cases, assisted to ensure the results obtained with the Essen ordnance in this country. It is not by this meant to imply that any desire to be partial has been allowed to prevail. Japanese artillerymen presumably want to judge the various weapons on their merits. Nevertheless, the conditions have not been equal, and we should be sorry to see this country finally pledge itself to either system on the evidence of its experiments up to the present.

THE 5,000 lawyers of New York city embrace many ranks, classes, and conditions. Less than one-half the number enjoy a competency, but there are many who make immense sums every year. Some of the "shyster" lawyers—men who know nothing of law and practice only in the Police Courts—realize as much as \$25,000 a year. Dickerson and Dickerson, patent lawyers, have made \$5,000,000. Their present income is \$40,000 a year. Frederick W. Betts, also a patent lawyer, has an annual income of \$25,000 a year. Roscoe Conkling probably makes \$100,000 a year. The firm of which William M. Evarts is a member—Evarts, Southmayd & Choate—do a business of about \$80,000 a year. Mr. Evarts is supposed to be worth about half a million. David Dudley Field has made \$11,000,000 out of his profession. In the Tweed suits he received a fee of \$100,000. Lord, Day & Lord received a fee of \$175,000 in the Hicks Lord suits. Their income is about \$65,000. General Roger A. Pryor started in New York after the war without a dollar, and now has an income of \$10,000. The Covbert brothers do a large practice for foreigners and make \$60,000 a year.—*San Francisco Post*.

THE *Voltaire* says that in a house at Hanoi there was found a general order addressed to the Black Flags. It was written on a sheet of yellow paper, framed in a deep blue border, round which were depicted all sorts of warlike animals, as lions, dragons and mythical monsters. Translated the order ran thus:—"General Order issued to the Braves, by me their Mandarin and Chief. Tremble and obey. Thirteen days before the battle, eat tiger jelly so as to possess the wrath and ferocity of that animal. On the twelfth day before the battle, eat lion's liver roast, so as to absorb the natural intrepidity of the lion. On the eleventh day before the battle, eat serpent soup so as to acquire finesse. On the tenth day before the battle, eat chameleon cream, so as to dazzle the enemy by constantly changing colour and appearance. On the ninth day before the battle eat crocodile baillon, so as to be able to follow the enemy by water and by land. On the eighth day before the battle, eat jaguar's spleen steeped in wine, so as to fall on the foe with the rapidity and fury of the jaguar. On the seventh day before the battle, eat kites' heads, so as to discover the enemy with the incomparable vision of that bird of prey. On the

sixth day before the battle, eat the intestines of the zebra, to have the terrible voice of that animal. - On the fifth day before the battle, eat hippopotamus brains, so as to have the impenetrable skin of that amphibian. On the fourth day before the battle, eat monkeys' backs, so as to climb to the assault with the agility of that quadrumane. On the third day before the battle, eat a plate of scorpions, so that the wounds you inflict may be venomous and mortal as scorpions' stings. On the day before the battle, eat the breast of a panther, half raw, so as to be pitiless as the panther. On the morning of the battle, swallow twelve pinches of powder steeped in leopard's blood, so as to tear your foes like the leopard. And on the evening after the battle.—this is the *Voltaire's* addition.—*Mangez de la poudre . . . d'escampette*.

THE wrestling matches at Kobikicho, Tokyo, continue to attract immense crowds of spectators. On Sunday, shortly after one o'clock, the audience that had assembled, to the number of several thousands, occupied the whole of the sitting and standing room, and gate-money had to be refused. The sport was never allowed to flag, and some very exciting contests took place. In one bout, the antagonists, said to be two celebrities, had a "hitch" which lasted over four minutes, and after a terrific struggle, in which it was apparently anybody's "back," a splendid "fall" resulted, the winner giving his antagonist the "flying mare" in capital style. This raised a roar of applause from the assembled thousands that must have been heard a mile away.

THE electric light has been called into requisition, says a home paper, for the first time publicly, in aiding the microscope in the development of its marvellous powers. What has previously been done by the lime light and by battery current is now successfully effected at the Crystal Palace by the Gölcher electric light in combination with an exceedingly powerful microscope. The result is the entertainment entitled "Les Invisibles," which is given in the Entertainment Court of the Crystal Palace. The exhibition is not only interesting, but instructive, and at times even amusing, as when living animalculæ in stagnant water and the mites in cheese are projected on the screen. It is, in fact, a display of every variety of microscopical objects on a very large scale, so large that the eye of the smallest sewing needle made appears to be about six feet long by four feet wide, the needle itself appearing to be almost twenty feet thick. From this it will be judged how well the minutest details in the minutest specimens are brought out. One of the most beautiful objects shown was the process of the crystallisation of sugar and of salt, the forms of the crystals being in each case very elegant, but totally different in structure. The Gölcher dynamo machine which generates the current is placed outside the court, and is driven by a small Otto gas engine. The light produced is excellent, but slightly unsteady.

THE result of the prohibition of the United States Government against Chinese immigrating to that country and carrying on business there, is that the Chinese are moving in great numbers towards Hawaii. Lately the mail ships bound for San Francisco which have passed through Yokohama have always had about a thousand Chinese on board. In the *Arabic*, which arrived in Yokohama from Hongkong, on the 25th instant, there were 1,233 Chinese emigrants

bound for Hawaii, who in spite of their being packed below like so much cargo, seemed to be enjoying themselves as they were cheerfully playing their "gekkin" (guitars) and other instruments.

THE newly-announced determination of the Russian Government (says the *Pioneer*), with regard to the trans-Caspian Railway, namely, to hand over the working of the line to "a powerful Trading Company subsidised by the State," will not escape the notice of any one who cares to pay attention to the progress of the Russian advance. In the course of two years more, Russia will come very near India. The Railway will be pushed on to Askabad. That place is just half way between the Caspian and Merv; from Merv onward to the Oxus is figuratively but a step, and a railway line from Askabad that should reach the Oxus, would be just that link between the two great wings of the Russian Empire in Central Asia that her statesmen there have so constantly sought for.

THE Japanese have many curious ways of advertising their wares, but we think the latest novelty has been produced by a member of that enterprising guild, the patent medicine peddlers. The merchant carries his two cases of medicines at either end of a pole as usual, but fixed on the pole is a frame containing photographs of persons suffering from the ills which his nostrums are supposed to cure. One photograph is of a child being run over by a jinrikisha, another a lady with the tooth-ache. Several are depicted as suffering from rheumatism, and others with indigestion and stomach ache. We do not know whether the idea is taken from the fertile brains of American advertisers, if not, no doubt, it will soon be adopted by them.

THE Honganji Priests have recently effected great changes in the organisation of their sect, with a view towards starting wide-spread propaganda of their doctrines. Sermons are preached twice every month to the workmen employed in building the new temple in Kiyoto, and a great number of priests have been sent all over the country to "save the souls of the seven million believers" (*Jiyu Shimbu*). It is at all events certain that the Honganji Priests are making prodigious efforts to save their doctrines from falling into disrepute. Even the number of workmen employed upon the new temple has been greatly curtailed, in order to save money to defray the expenses of the itinerant propagandists. About one thousand workmen are still kept busy, and the building of the temple is progressing rapidly.

THE miserable poltroonery of the Egyptian troops is rendered plainer by each account that reaches us of the doings about Suakin. The very sound of musketry suffices to make them abandon an upright posture and fall on their hands and knees complaining of stomach-ache. The Arabs in revolt, on the other hand, appear to possess the courage of fanaticism. As an illustration of this an event that occurred at Suakin in the beginning of February is related. A spy was discovered lying outside the camp. He was a lad of fifteen, and a number of Egyptian soldiers, seeing a mere stripling armed with a spear only, surrounded him gallantly. The boy, however, fought desperately, and his opponents were obliged to bayonet him before they could overcome him. Lying afterwards in a moribund

condition, he was asked whether he wanted anything. His answer was:—"Let me spear one Egyptian before I die." Between men animated with this spirit and the wretched Egyptians, there cannot be much fighting. There can only be flying and pursuing. It is said that within eight minutes from the time when the Arabs commenced their rush upon Baker Pasha's forces, the latter were either in full flight or on their knees praying for mercy. Next to that piece of Puritanical persecution that drove one of England's finest cavalry officers "out into the wilderness," Valentine Baker's life probably includes no bitterer experience than to have been obliged to lead such cravens against a gallant foe. So far as his tactical dispositions are concerned, they appear to have been precisely the same as those adopted previously by General Hicks and subsequently by General Graham. But there is a difference between the fighting qualities of a square formed of Egyptian fellahs, and a square with Highlanders in its front face and English hussars as an advanced guard. From the detailed accounts of General Graham's first encounter with Osman Digna's force, it is plain that the latter fought fiercely, and that had the Arabs been properly equipped and fairly disciplined, it would have been no easy task to get the better of them. Their notion of the position in which they were placed could scarcely have been simpler. The true prophet, they said, had written to tell them of his successes over thousands of men led by English officers, and to bid them rise and join him. If they died, he promised them paradise; if they refused to join him, he promised to come and kill them all, sending their spirits straight to hell. Osman's army probably exists no longer. After its first defeat, it seems to have fallen back among the hills near Sinkat, and to have received there the second onset of Graham's little force, the result being the total rout of the Arabs with a loss of fifty per cent. of their number. The fight must have been sharp while it lasted, but the comparatively trifling casualties on the English side in the second, as well as the first, encounter show that the enemy's weapons were virtually harmless. Major General Graham, who commands the English force, is an officer of distinction. "He entered the Royal Engineers in 1850, and rose to his present rank in 1881. He served in the Crimea, and at the assault of the Redan gained the Victoria Cross for courage in leading a ladder party. He was twice wounded during the war. In 1860 he went to China and served in many engagements, being present at the assault of Tangku and the Taku forts; he was also present at the surrender of Peking. He was wounded in this war with a jingal ball. In the summer of 1882 he was appointed to the command of the Second Brigade in the English expedition to Egypt, the other brigade commanders being the Duke of Connaught, Sir Archibald Allison, and Sir Evelyn Wood. He was actively engaged in the preliminary movements of the campaign against Arabi Pasha and took a prominent part in the battle of Tel-el-Kebir. He is thus familiar with campaigning in Egypt." There has, of course, been talk in Parliament about the apparent anomaly of one English General negotiating with the Mahdi at Khartoum and another fighting with his Lieutenant, Osman, at Tokar and Sinkat. But the fact is that Osman was really fighting on his own account. He hoped to be ruler over all the north-eastern districts of the Soudan. His chief connection with

the false prophet appears to have been the use he made of the latter's prestige. He told his followers that the Mahdi would pass through Egypt from north to south; kill all the Egyptians, Turks, and Christians; overturn the world and then put it right; that other parts of his force would cross to the Hedjaz and Mecca, kill the Sultan of Turkey and take India. It is said, too, that Osman assembled his men daily, read them letters received from the Mahdi, and excited them to such fury that they danced, yelled, and clamoured to be led to the attack. Probably this mood underwent a slight modification when Graham's Highlanders appeared upon the scene. Whatever gentlemen in Parliament might think, however, and whatever negotiations General Gordon might carry on at Khartoum, it was obviously impossible to let Osman Digna get command of all the country between Suakin and Berber. That would have been to virtually cut off Gordon's retreat from Khartoum, and make the rebels complete masters of the situation.

THE *Figaro* of Paris is a mighty power on the continent of Europe. Its earlier years were years of struggle and poverty, but its profits last year were over \$500,000. No journal has a bolder, more talented editorial staff, and no paper is more widely quoted, praised and blamed. M. de Villemessant, a born journalist, was the founder of the *Figaro*. For a long time he was the editor-in-chief, head reporter, and business manager of his journal. When he died this work was parcelled out among three men, Magnard, Perivier, and Rodays. To these three men de Villemessant said on his dying bed: "Always make up the paper as though you knew I was going to read it the next morning." The placing of this triumvirate at the head of the *Figaro* was a wise selection. Magnard originated the piquant epitome headed "Paris from Day to Day," a column made up of many articles condensed from the newspapers of the preceding day. Each paragraph is short, terse, and to the point—the quintessence of common sense and condensation. Magnard's letters are signed "F. M.," and never exceed forty lines of long primer. This phenomenal journalist is a man of the size and build of General Grant, and is apparently about forty-four years of age. He is highly educated, a severe judge of "copy," and is withal a very pleasant gentleman. The staff of editorial writers is quite numerous. One of the writers, M. Wolff, earns as much as \$15,000 a year. He is the dramatic critic. On this journal reporters receive from six to twenty cents a line. The editorial rooms are fitted up with every luxury and convenience, embracing fencing rooms, card tables, etc. An American would not consider the *Figaro* a great newspaper, but it certainly displays more enterprise in the collection news than any other journal in Europe. It goes everywhere, and is read with as much pleasure on our Pacific coast, in South America, at the Cape of Good Hope, in short all over the civilized world, as it is in the Parisian cafés. It is without exception the most cosmopolitan journal in existence.

REFERRING to the entertainers about to visit Yokohama, the *Hongkong Daily Press* says:—"The Lynch Family of Bellringers gave their second performance at the Theatre Royal, City Hall, on Thursday (20th ult.) There was a good attendance, and amongst those present were His Excellency the Governor and the Misses Bowen,

Vice-Admiral Sir W. M. Dowell, Mrs. Marsh, the Hon. P. Ryrie, &c., &c. The programme was well carried through, and the bell-ringing was warmly applauded all through, "Come Home, Father," the "Blue Bells of Scotland," and "College Hornpipe" being especially well received. Mr. H. Lynch's performance on the musical glasses also met with applause. Mr. Farron's cosmic sketches caused much amusement, and his Irish impersonation "Biddy, the Pride of the Ballet" was loudly encored. Tonight the Company will make their last appearance in Hongkong, for which occasion an entire change of programme is announced. We strongly recommend those who have not yet seen them to avail themselves of the opportunity, as the bellringing is a performance seldom to be met with, and is alone well worth going to hear.

A TELEGRAM in the *Alta*, dated Chicago, March 6th, says:—"News has just reached El Paso of a terrible accident yesterday at the Precetas mines, Sonora. Only the most meagre details are yet stated, but it is known that twenty men are buried in one shaft, which is said to have caved in without a moment's warning. None of the bodies have yet been recovered. There is no hope entertained that any of the unfortunate miners at work in the shaft at the time of the accident are alive, as the cave-in was so instantaneous and complete as to cut off every chance of escape, or to make any kind of preparation on the part of the miners to protect themselves, until they could be dug out. The greatest excitement prevails here, pending the receipt of the names of those known to have been at work in the shaft when the accident occurred.

A RATHER serious hoax has been discovered by the *Bukka Shimpō*. It has been rumoured for sometime past that the Government would shortly issue convertible paper currency, and this report was so widely credited that the price of silver fell with amazing rapidity. But it now appears that the rumour was entirely unfounded, having originated solely in the scheming brains of some far-sighted speculators. A Japanese banker, who was believed to be *au fait* with the financial policy of the Government, gave considerable impetus to the rumour by buying \$400,000 of silver when the quotations had reached the lowest figure. Now that the truth has been made public, a general outcry has been raised against him, as what he did is said to be contrary to the principles of honest transactions.

THE British coal export trade is growing rapidly. In 1874 the United Kingdom shipped 13,927,205 tons abroad; in 1878, 15,494,633 tons; in 1881, 19,587,063 tons, and in 1883 it exported 22,771,348 tons of coal. From 1878, inclusive, the aggregate exported was 75,685,881 tons, while from 1879 to 1883, inclusive, the total was 98,465,135 tons, a gain in the second half of the decade of 30 per cent. At this rate the export will double itself in thirty years more. There was a slight falling off in the Russian takings in 1883, but more was sent to Sweden, Norway, Denmark, Holland, Spain, Italy, Turkey, Egypt, Brazil, Malta, British India and other countries. Germany took 2,425,298 tons as compared with 2,320,121 tons in 1882, and France, 4,476,995 tons as compared with 4,096,953 tons. France is Britain's largest foreign customer for coal. Including coal used by British steamers running to foreign markets and coal supplied to foreign steam-

ship lines, it is noted that 29,171,942 tons of coal were sent out of the United Kingdom in 1883 as compared with 26,509,608 tons in 1882, and 22,814,651 tons in 1881. This increase in two years of 4,357,291 tons attracts attention. British coal-owners derived £10,642,013 from coal sold to foreign and colonial customers last year.

THE Bureau in the Home Department charged with the censorship of the press has hitherto been known as the *Annai-kwa*. Henceforth its name will be changed to that of *Shimbun-Kenyetsu-gakari*, which, though more cumbersome, is more descriptive, than the former title. Nothing would give the Japanese or their foreign friends greater pleasure than to hear that the Bureau was about to be abolished altogether, instead of having the number of its officials increased, as is now said to be the intention. It is true that countries which can afford the luxury of a free press are in an unhappy minority at present, but it is none the less true that public opinion must always be the enemy of those who seek to restrain its open expression.

THE annual report of the Canadian Department of Indian Affairs contains, says an American paper, some statistics which furnish a possible basis of comparison with those of our own Indian Bureau. There is a total Indian population in the Dominion of 131,137, of whom 34,520 are in Manitoba and the North-west, 36,483 in British Columbia, 18,181 in Ontario, and 11,930 in Quebec. The number of pupils attending the Indian schools is 4,394. The agricultural and industrial statistics show that the Indian population resident on the reserves is 86,270; the quantity of land cultivated, 64,051 acres; new land cultivated during the year, 3,986 acres; houses or huts, 11,584; barns and stables, 3,391. There were large quantities of wheat, oats, peas, barley, rye, potatoes, and hay raised by the Indians in addition to considerable sales of fish and furs. Canada's Indians are more industrious than ours, and their cost to the Government is a mere trifle compared with what the United States annually pays for the support of its wards.

A WELL-KNOWN resident of this Settlement, who returned from San Francisco in the *Oceanic*, was made the victim of a practical joke, some of his friends having inserted in the passenger list "and Mrs." before his surname, which made it appear that he had brought back a wife to Japan. As the *Japan Mail* published the passenger list containing this error, we now apologise for having been unwitting parties to the deception.

THE official title of His Excellency Tokudaiji, hitherto Minister of the Imperial Household Department, is *Jijiyu-cho*; a term which may be rendered with tolerable accuracy by "Lord High Chamberlain." His Excellency's new post carries with it the same emoluments as his previous office, though in point of official rank it is of slightly inferior grade. The duties connected with it have reference entirely to the details of the Imperial Household.

A CASE came before N. J. Hannen, Esq., Judge, at H.B.M. Court, on Tuesday, in which F. Bischoff sued A. Clark for the sum of \$400, alleged to be due for wages as master of the British schooner *Guam*, and for dismissal without proper notice. Mr. Kirkwood appeared for the plaintiff,

and defendant conducted his own case. The point at issue, as alleged by the defendant, was the position of the plaintiff, Mr. Clark attempting to prove that he engaged plaintiff as a rigger and to fit out the *Guam*, and not as master of the vessel. Evidence was given, however, which showed that third parties had considered Bischoff in the light of master of the *Guam*, and His Honour proposed a settlement on a basis of \$5 per diem in addition to the sum of \$73 paid into Court. To this the defendant consented, as well as to costs to the amount of \$50.

"CORRESPONDENCE respecting the Co-operation of Neutral Powers for the Protection of their Subjects in China in Case of Necessity" is the title of a Parliamentary Paper just issued. It opens with the following despatch addressed by Lord Granville to Her Majesty's representatives at Berlin and Washington:—

In view of the crisis which appears to be imminent in China, I have to request your Excellency to propose to the German Government that the British and German Admirals should be instructed to concert together in case of necessity for the protection of their respective nationals.

I have instructed Her Majesty's Minister at Washington in a similar sense.

Count Hatzfeldt, on behalf of the German Government, acceded to the suggestion. The reply of the American Government was as follows:—

American Admiral will be instructed to act in concert with the vessels of England and other neutral Powers for the protection of their respective subjects.

In consequence of the wording of this telegram Lord Granville again wrote to Lord Ampthill at Berlin, suggesting that the reference to "other neutral Powers" should be introduced in the instructions which it was proposed to send to the British and German Admirals in the China seas. To this Lord Ampthill agreed, and subsequently the adhesion of the Italian, Russian, Portuguese, Japanese, and Spanish Governments was obtained to the proposal. On December 11 Lord Granville sent a despatch to Lord Lyons, the British Ambassador in Paris, reporting a conversation with M. Waddington respecting certain remarks in Lord Hartington's speech to his constituents which had excited some attention in France. Lord Granville reports the substance of the explanation he gave to M. Waddington as follows:—

The proposal which had been made, and which had been received favourably by the Governments concerned, had simply been that those Powers who had vessels in Chinese waters should instruct their naval commanders to concert together with the view of affording protection to foreign subjects in the event of a rupture between France and China. It was unnecessary to say that any measures which might be adopted in such a case would be taken in a friendly spirit both to France and China.

M. Waddington thanked me, and gave me the assurance that the French Government have no intention of going beyond the programme they had announced, unless forced to it by some extraordinary act on the part of China, and that they would do their utmost to avoid any measures of a nature to interfere with legitimate foreign trade such as a blockade of the Treaty ports.

—Times.

It is a recognized fact, says the *Choya Shimbun*, that certain curious European customs are coming into vogue in this country. In Kiyoto, on the occasion of the opening of the Tenman Temple, a number of photographs of the gentle sex were exhibited; the idea being undoubtedly adopted from the similar exhibition of favourite beauties which was lately held in London.

It has hitherto been the practice in Tokiyo when a child was found abandoned, to hand it over to the Divisional Officers, who either put it

out to nurse at the expense of the people of the Division, or handed it over, with a gratuity, to any person desirous of adopting it. In future, however, all foundlings are to be placed in the Foundling Hospital (*Yoku-in*) in Idzumicho. In consequence of this change more than 110 foundlings, now supported here and there throughout Tokiyo at the public charge, are to be all sent to that institution.

WE learn by telegraph that His Royal Highness the Duke of Albany died at Cannes, on the 28th inst. H.R.H. Leopold George Duncan Albert was born on the 7th April, 1853, and was married on the 27th April, 1882, to the Princess Helen, daughter of the Prince of Waldeck. The late Royal Duke leaves a daughter—Alice Mary Victoria Augusta Pauline, born on the 25th February last year.

THE German brig *Minerva*, Captain P. Duhme, the British bark *Velocity*, Captain R. Martin, and the German bark, Captain W. G. Roder, all arrived on Sunday from Takao, and report moderate winds and weather throughout. The German bark *Will Homeyer* left Takao for this several days before the arrivals above-named, and may be in harbour at any moment. The British barquentine *Glenury* and the British bark *Lucia* were loading at Takao for this port when the recent arrivals sailed.

MATSUDA, the convict who escaped from the Ishikawa-jima jail on the 27th inst., was recaptured early on the morning of the 28th inst. at Itabashi. It appears that he had engaged a jinrikisha at Hongo, but unfortunately for him, the jinrikisha-man was a detective in disguise. The other convict, Akai Kagetaru, is still at large.

It is stated that the Presidents of all the Courts of Appeal throughout the Empire will assemble in Tokiyo during the course of next month, for the purpose of discussing various reforms which it is in contemplation to introduce into the working of the law courts in their districts.

THE Society for the Preservation of Celebrated Places (*Hoshokwai*) has contributed a sum of one thousand yen towards the restoration and repair of objects of national interest in the provinces of Omi and Tamba.

WHEN Bismarck, or rather the Reichstag acting under his direction, excluded the American hog, the newspaper press of the United States was unanimous in denouncing the "outrage;" but now that Bismarck has snubbed the American Congress, about half the papers express indifference to the insult. This shows the relative esteem in which Congress and the pig are held by some thoughtful patriots.—*Alla*.

THE REV. T. J. Scott, D.D., for twenty-two years a missionary in North India, will preach at the Union Church Tsukiji, Tokiyo, at 11 a.m. on Sunday next.

THE Russian steamer *Kamtschatka* was towed to Yokosuka on Friday for minor repairs to her machinery.

THE British bark *Guiding Star* sailed on Monday for Takao where she expects to load a cargo of sugar for this port.

WE are informed that the *City of Rio de Janeiro* left San Francisco in the 29th ultimo for this port.

FOREIGN VERSUS DOMESTIC
LOANS.

FORTUNATELY, for the clear understanding of certain propositions stated—but not proved—in a letter which we produce to-day, the *Fiyu Shimbun*, in a recent issue, discussed, at some length, the relative advantages of foreign loans contracted by the Government and foreign funds introduced at the risk of foreign capitalists. We say fortunately for the clear understanding of this problem, not because "Protectionist's" letter, so far as it goes, leaves anything to be desired in point of lucidity, but because it confines itself, in two places, to an undemonstrated statement of points which are the reverse of self-evident. The writer avows his "firm conviction that neither MILL'S writings, nor those of any theorist whose studies are confined to the European field of observation, are applicable to the conditions of this Eastern empire," and deprecates "the practice of applying, to the exigencies of this country, the doctrines and arguments of Western writers who have no knowledge of, or regard for, Japanese affairs." Interpolations of this nature when found in the context of a purely economical discussion, naturally assume an economical complexion, and suggest the idea that the uses of wealth, its fashions of fructification, and the sources from which it is derived, are not subject to the same general laws in Japan as in Europe. Such a theory cannot be seriously propounded. Japan, whether she progresses towards opulence or lapses into indigence, must fit her feet into the footsteps of all those that have travelled the same routes before. There is no side-path for her. If she is ever to grow rich, it must be by improving her means of internal and external transport, developing her foreign commerce, and extending the now paltry area of her cultivated lands. Since, then, each and every one of these processes is a recognised factor of wealth, similarly employed and similarly effective, throughout the civilized world, it becomes necessary, if we are to regard Japan's case as exceptional, to show that she is otherwise affected by conditions beyond the ordinary domain of economical science. What those conditions are our correspondent fails to indicate, and we can only suppose that he alludes to the dangers incidental to pecuniary obligations contracted by a weak, *vis-à-vis* a strong, Power. We, however, desired to keep these political considerations out of the discussion. They deal with an entirely distinct class of problems; and certainly, whatever influence they may exercise on the people of this country, to mix them up with purely economical arguments is confusing and illogical. It seems, nevertheless, an indisputable fact that the instinct of the Japanese is against foreign loans at present. They see what has happened to Egypt; they see what

has happened to Turkey; and they ask whether Japan ought not to be warned by these examples. The *Fiyu Shimbun* states the case plainly enough; though underlying its arguments is a desire, natural but a little exaggerated, to show that nothing good can come out of Japan until the people have a share in the Government. It says that the possibilities of ultimate failure would more than outweigh the momentary benefits derived from enterprises inaugurated by foreign loans; that the national habit being still to rely implicitly on the Government, the latter could not count on enlisting the active coöperation of the people in its schemes; and that great misfortune would be inevitable did mismanagement or false calculations attend the employment of the funds obtained abroad. There is much truth in these remarks. The stories of the Kaitakushi and of the Kamaishi Ironworks are in themselves sufficient evidence that the Government is not infallible, and that the nation has reason to be apprehensive of industrial ventures under official management. But while heartily endorsing our Tokiyo contemporary's general position that Japan would be adopting a perilous and unwise course did she enter the European market as a borrower of money to be employed by the Government in the ordinary routes of industry and trade, we think that the line ought to be drawn distinctly on this side of roads and railways. The urgent need of such works in Japan, and the incalculable benefits that would result from them, are beyond all doubt; while the ability of the people to construct them—not expert, but financial, ability—cannot, in our opinion, be assumed for a moment. It passes our comprehension to understand what political risks Japan would run by borrowing money at a reasonable rate of interest abroad, and employing it to supply herself with works which are absolutely essential to the development of national prosperity, which involve no chance of failure, and which would be at once the security for, and the means of repaying, the funds expended in their construction.

The question of fixing large portions of a country's capital by employing it to build railways, is one that has received much attention at the hands of writers on political economy. At the time when MILL discussed the problem, a majority of his countrymen were disquieted by the idea that England's conduct was recklessly unwise in this respect. The great economist undertook to combat their apprehensions, and showed, pretty conclusively we think, that "the railway operations of the various nations of the world may be looked upon as a sort of competition for the overflowing capital of the countries where profit is low and capital abundant, as England and Holland." He called "the English railway speculations a struggle to keep our annual increase of capital at home," and "those of foreign countries an effort to obtain it." In short,

he rested his whole case, for or against the expediency of thus fixing home capital, on the presence or absence of accumulations seeking investment. His immediate purpose, it is true, was to prove that England, possessing such accumulations, need not fear the consequences of applying them to railway construction; but the converse of every argument he deduced from England's overflowing opulence applies, with logical rigidity, to countries where capital is scarce and rates of interest are high. We are quite willing to admit, however, that MILL is not an infallible guide. The confusion he fell into by attempting to fit a capricious terminology to inflexible ideas has discredited much of what he wrote, and is forcibly, though not always quite justly, we think, illustrated by our correspondent. But though he was sufficiently illogical to call the man who makes a musical instrument a productive labourer and the man who plays on it unproductive, and though he differed from MACDONNEL, ADAM SMITH, and M'CULLOCH as to what ought and what ought not to be included in capital, while these three, again, differed equally radically from one another, there never yet has been any writer of note who pretends that money in all its forms is capital. Our correspondent evolves a number of ingenious and entertaining paradoxes from the apparent vagaries of MILL'S definitions, but he will pardon us if we say that no one of these paradoxes seems so startling as his own assertion:—"For my part, I must adhere to the statement that Japan, five or ten years hence, in possession of her railway *plus* the capital required for constructing it, will be richer than if she had only the railway without the capital—which would be the case if the amount were returned to lenders in Europe." What then becomes of the capital which, by the hypothesis, she originally obtained in Europe? And what, during this interval of five or ten years, becomes of the home capital which would otherwise have been diverted to the construction of the railway? Does that, too, go abroad? It cannot be pretended that a country parts with its own capital when it only repays what it has borrowed. If "Protectionist" takes the trouble to reduce the problem to a mathematical statement, he will find that, in the case of a foreign loan, so far from having a railway *minus* the money—not the capital, but the money—spent in constructing it, Japan, at the moment the line is opened, would have the railway *plus* the greater part of the borrowed money (which would then be circulating in the ordinary channels) *plus* the capital and its earnings which, in the case of a domestic loan, would have been diverted from other uses. The former plan takes nothing away, but simply enables the work to be accomplished without any call upon the national funds until the benefits conferred by the line begin to facilitate the repay-

ment of its cost. When transport is cheapened, when commodities are made accessible at trifling expense, when new markets are opened for districts more or less isolated, when the necessity for accumulating stocks is dispensed with throughout the land, when production is stimulated, and when the innumerable advantages a railway brings are actually experienced, the burden of paying the original cost of the line out of its earnings would scarcely be felt at all, whereas the task of finding the money now may, and we believe will, prove seriously embarrassing. The subject is so vital that we will venture to quote at some length from the writings of a living economist—Mr. BONAMY PRICE—between whom and our correspondent there is this bond of union, that both are equally sensible of the confusion into which MILL'S inelastic definitions betrayed him :—

There is no cause so common of financial crises and commercial depressions as an excessive construction of fixed capital. Large quantities of wealth are consumed and disappear altogether in the opening of great mines, the formation of railways with their tunnels and embankments, or the creation of great iron works. The food, clothing, and materials have been eaten and drunk up and worn out; they are cleared away, and nothing left except the works which have been made. So far, the consumption is a creator of poverty; for tunnels and shafts by themselves alone do not restore the food and clothing which have perished. The deficiency is not filled up even if these mines and railways go to work, and produce profits and yield good dividends. The capital, the wealth consumed in their construction, is still unrestored, and is not replaced until out of the profits, and before dividends are distributed, the original cost of making these works is repaid. The nation is poorer in things to use. The inevitable consequence is that there is less trade, for there is less to buy with, less to exchange, diminished traffics, fewer and reduced profits—precisely because there are fewer things, fewer goods in the country. This excess of creation of fixed capital—of capital, be it remembered, which is destroyed, and is not, for a long time, practically restored by wealth available for use—commonly follows a season of exceptional prosperity. Men are then hopeful, profits are good and abound, extension of business fascinates, trade is active, and demand for goods ever on the rise. At such times, as happened a few years ago in the iron and coal trades, new works are commenced in profusion. All this while the consumption of the national wealth proceeds rapidly in maintaining many labourers and in the development of luxurious consumption, in the fine weather of large profits; and it is followed by the consequences just described. Amongst these offenders none are so mischievous as railways. Promoters, desirous of premium, stock-brokers, and many others, who eagerly excite one another: the railway works are begun, and often the revulsion overtakes them before they are completed: the nation is stricken with poverty by their construction.

All these events react on the money market. The depositors of banks are unable to meet their calls; many fail, the others press for loans to save them from ruin. Deposits diminish; on many mercantile accounts, or bad bills, the banks incur heavy losses. Suspicion spreads in every quarter, as to what house is sound, on what bank a run may take place. Failures multiply—often amongst those who were the most favoured chiefs of financing. Then finally comes the crisis, which is in substance the settlement of losses, the discovery who are to be the ultimate losers, whether banks or individuals. When the agony has subsided, a long depression ensues; trade is painfully slack from the reduced wealth in movement; bills are scarce in the banking world, and 1 per cent. becomes its king. The suffering reaches its height in those very trades which had been stimulated in the day of sunshine to multiply new works for enlarged production. The means of producing are found to be in painful excess above the power of buying, and shut-up mines and closed factories visit wages and profits with annihilation.

Such are the terrible calamities with which construction of machines, which are amongst the most enriching known to man, may visit a people when carried to excess. A man with £ 50,000 a year

who does £ 100,000 worth of draining in one year, must be poor and in difficulties. A single individual may borrow, but a nation which puts itself in that position has no resources beyond itself, and must suffer. Railways and other fixed capital are to a people what draining is to the landlord—most powerful instruments for obtaining wealth; but they cannot be constructed without great destruction of wealth involved in making them. It is long before they come into action to replace what they have consumed; meanwhile food, clothing, iron, coals, are gone. In this vital matter there is only one way to escape injury: not to make more fixed capital beyond the amount of savings. Within that limit there is perfect safety, and such an application of surplus wealth is excellent. Savings may be thrown into the sea, and no poverty will ensue; if converted into instruments for production they become permanent gains.

It may be asked, how is a people to learn the extent to which they may create fixed capital without loss? how are they to discover how much they are saving? No rule can be given; it is a matter of actual trial; it can never be ascertained accurately. But one influence may exercise immense power in guarding against the danger: a thorough understanding of the principle which governs this vital subject by all who take a lead in commencing new enterprises. If every banker, every trader, and every producer grasped firmly the truth that savings must not be exceeded by the nation, and profoundly felt the disasters which the neglect of this truth must entail, a spirit of caution and observation and prudent reflection would be engendered which would control extravagance in the costly investments on fixed capital.

Now what we would enquire is simply this—has Japan savings to invest in railways, and have her financiers “grasped firmly the truth that savings must not be exceeded by the nation, and profoundly felt the disasters which the neglect of this truth must entail”? We cannot honestly answer either question in the affirmative. The country is now passing through that crisis which has everywhere attended the resumption of specie payments; a crisis of which the most salient features are that capital is withheld from the channels of industry and production, and that the commercial energy of the nation is paralyzed. Yet this is the very moment chosen to divert large sums of capital to uses which cannot for several years begin to return the wealth they absorb. That the instincts of the people should turn, at such a time, in the direction of railways and roads as the only means of developing production and stimulating industry, is natural enough, but it will be truly unfortunate if a scheme so excellent in itself should entail fresh disaster by an unwise method of prosecution.

THE FOREIGN MERCHANTS AND THE CURRENCY.

THE Memorial of the Foreign Community, addressed to their Representatives in March, 1882, contains an interesting assertion; namely, that were industry stimulated by allowing the people to freely charter foreign vessels, a salutary “influence would be exerted upon the present seriously depreciated and fluctuating paper currency.” The reasons assigned for this statement are as follows:—“More trade means a greater demand for a circulating medium of exchange; a demand which would have a direct tendency to raise currency to a near approach to, if not entirely to par with, specie. The increased income of

the Government would enable them to undertake a moderate scheme of redemption of currency with specie; and that, combined with the cheering influences of a reviving commerce, would inspirit the people and exert a most beneficial influence upon the nation.”

This, being the first expression of opinion publicly placed on record by the community, as a body, with regard to the currency, deserves more than a passing notice. Speaking briefly, the memorialists, in 1882, advised Japanese financiers to leave *Kinsatsu* alone, and confine themselves temporarily to a measure which, by augmenting the facilities for marine transport, might stimulate production and trade, and so create a greater demand for a circulating medium. Then, subsequently, when the revenue from taxation increased, a moderate scheme of resumption could be undertaken. This plan has certainly the advantage of deliberation. The prediction of the memorialists depends mainly on a hypothesis that the production of cereals is already largely in excess of home consumption, and that agricultural industry languishes for lack of new markets. We have shown in a previous article that the annual crop of rice does not appear to be much more than the people require for their own use, and that the peculiar conditions under which the coasting trade is now carried on by Japanese junks, render it likely that their displacement by foreign bottoms, even if the latter were easily procurable, would be a very gradual process. The case might be different were foreign traders able to visit the interior, buy what they wanted, and ship it directly. We should then have the combination of merchant and carrier which the junks offer, and to which producers have become attached. But this means opening the country, and the measure on which the memorialists based their hope of currency appreciation did not ostensibly contemplate more than extending the employment of foreign vessels by Japanese. They assumed that the factor chiefly needed to develop trade is increased facilities for marine transport, and that those facilities could be obtained by permitting Japanese to charter foreign vessels; and on the strength of this assumption, they recommended the Government not to meddle with the currency until an increased revenue brought a moderate scheme of redemption within reach. It would certainly be unjust to hold this community responsible for the utterances of the local newspapers which profess to represent it, but we may be pardoned if we recall, here, the journalistic censure persistently uttered against the apparent inaction of Japanese financiers both before and after the period when this document was presented to the Foreign Representatives. And, indeed, it is difficult to believe that either foreigners or Japanese would have been content to

see the policy advocated by the memorialists adopted. The Government's only normal source of specie revenue, and therefore the only source from which it could derive funds for currency redemption, is the Customs. Assuming that in the course of four or five years the proposed shipping facilities produced an augmentation of 20 per cent. in the bulk of the foreign trade, there would be available an annual sum of half a million dollars to redeem *Kinsatsu*. If in five years more, trade doubled, redemption would be proceeding at the rate of a million a year; and granting this liberal rate of development, the total redemption affected in fifteen years would amount to twelve millions. In the meanwhile commerce would have been fighting an uphill battle against that most fatal of all opponents, a depreciated and constantly fluctuating currency; for it is impossible to suppose that such petty operations as these could sensibly increase the value or stability of *Kinsatsu*. Neither would the silver thus dribbled out remain in the country. It would be displaced by the inferior medium as fast as it came into the market. In general every objection advanced against meddling with the media of exchange may be freely endorsed. But it is difficult to believe in any measure that stops short of actual redemption, and to make redemption possible, it was necessary to bring the bulk of the *Kinsatsu* in circulation within manageable limits. That the Government has been somewhat precipitate in its efforts to secure that end seems proved by existing conditions. The memorialists, by increasing the demand for paper tokens, would have reduced the ratio their volume bore to the functions they had to perform: the Government, by diminishing their volume, has attained the same result in a different way. The former process would have been exceedingly slow, if, indeed, it could ever have succeeded entirely: the latter has been unduly rapid, and the consequences entailed are still severely felt. But it is only fair to observe that had the Government's proposals for treaty revision met with reasonable consideration,—had these privileges of trading passports and the free employment of foreign ships, together with other concessions, been exchanged for a slight modification of the present extraterritorial system—the measures recommended by the memorialists might have been in force long ago.

As things stand now, however, it can scarcely be contested that the mitigating influence of some measure calculated to foster industry and commerce would be widely beneficial. Unless the conditions of Japan have greatly changed during the past two years, such a measure is indicated in the Memorial of the foreign merchants. What is wanted is the opening of the country. Anybody might then charter foreign vessels to go anywhere, and if there are products waiting to be exported, foreigners could go in search

of them. It is impossible, with this Memorial before us, to doubt that the commercial community is generally sensible of the advantages to be derived from the abolition of restrictions which have long ceased to be necessary. We have the unanimous declaration of all the merchants in Yokohama that enlarged privileges of trade, travel, and residence "bear closely upon the future commercial progress of the Japanese and strike at the very foundation of the grievances of which foreigners justly yet vainly complain," and to this may now be added, that to these enlarged privileges alone can we look for any rapid revival of trade and consequent relief from the hardship and suffering inseparable from the period that precedes a resumption of specie payments.

A RECENTLY CONCLUDED CHAPTER OF JAPANESE HISTORY.

AS an illustration of the working of Japanese Government machinery under the old *régime*, the events which led to the recent issue of Notification No. 1 of the Imperial Privy Council possess much interest. The Notification itself was not likely to attract foreign attention. It simply gave expression to the will of HIS MAJESTY the EMPEROR that the posthumous title of DAJO TENNO and name of KEIKO TENNO should be conferred upon NORIHITO SHINNO, father of the Emperor KOKAKU. Hitherto this Prince had been known as DAZAI SOTSU-NO-MIYA, or the second KANIN-NO-MIYA. His father was NAWOHITO SHINNO, son of the Emperor TOZAN. As the Emperor GO-TOYEN (TOYEN the second, known after his death as MOMO-ZONO II.) had no child, he adopted the fifth son of SOTSU-NO-MIYA, a youth named KANEHITO SHINNO, who was not only HIS MAJESTY'S nearest relative but also conspicuous for intelligence and erudition. This adoption took place in 1779, and, in December of the ensuing year, KANEHITO ascended the throne. He is known in history as KOKAKU TENNO. The reigning EMPEROR is the great-grandson of KOKAKU, and consequently great-great-grandson of NORIHITO SHINNO or SOTSU-NO-MIYA.

The idea of conferring the title of DAJO TENNO upon NORIHITO SHINNO was first conceived by his son, the Emperor KOKAKU, but met with determined opposition at the hands of the nobles attached to the SHOGUN'S Court. The principle involved in conferring such a title is connected with the rites of ancestral worship. So long as this particular mark of respect was not paid, the body of NORIHITO would have to lie after death facing the north, and would be condemned to enjoy only the imperfect measure of rest attaching to that posture. On the other hand, NORIHITO had never ascended the throne, and precedents for raising him to the rank of TENNO (Son of Heaven, *i.e.* Emperor), if not absolutely

wanting, were, at all events, few. In old times there had been no instance of such a course,¹ though it had certainly been pursued in various cases from the twelfth to the sixteenth century. The proposal of the Emperor KOKAKU was, therefore, not absolutely without historical warrant, and, for the rest, could only have emanated from instincts of filial piety. Nevertheless it provoked vehement opposition. History says that the discussion commenced in 1792, but there is documentary evidence to prove that KOKAKU had conceived and given expression to the design as early as 1789. This evidence is in the form of a letter forwarded by the *Shoshidai* (Representatives of the SHOGUN) is Kiyoto to MASTUDAIRA YETCHIU-NO-KAMI, one of the SHOGUN'S Councillors of State. It ran as follows:—

Kanin-no-Miya, who now wields the Imperial sceptre under the title of Kokaku Tenno, desires to confer the title of *Dajo Tenno* upon his father. He communicated his wishes to us in the first year of Kwansei (1789); and in order to obtain an answer from the Shōgun, we forwarded a copy of a document addressed to us by the Court Nobles. In accordance with your instructions, we have now persuaded the Nobles to reconsider the question, pointing out to them, as you explained, that the bestowal of high titles is a matter of grave importance.

It appears, indeed, that all the Court Nobles approved the EMPEROR'S idea, for though some were disposed to think that the title of *In*, which is less exalted than *Tenno*, should be first given, and that of *Dajo Tenno* afterwards, the rest insisted that the whole matter should be left to the EMPEROR'S decision. Neither were they shaken in their opinion when instructed to reconsider it, and we find them once again admonished by MATSUDAIRA through the *Shoshidai*, in the following terms:—

Whatever peculiar custom may exist in the Imperial Court, or have been handed down from generation to generation, must not be observed without reference to the actual circumstances of the time and to public criticism. It is not imperative that all precedents should be followed. The Shōgun will doubtless give the Emperor's project his careful consideration, but it is not probable that he will express a definite opinion immediately.

The EMPEROR, finding himself thus opposed by the SHOGUN'S Representatives in Kiyoto, despatched two delegates to Kuantō, namely, the two Dainagon, NAKAYAMA TADANARI and OGIMACHI KIMI-AKIRA.² The SHOGUN was then IYENARI. By a strange coincidence, he, too, was anxious to confer exceptional rank on his father, who had not been SHOGUN, and was then occupying the post of Dainagon.

¹ It had not been pursued in the cases of Yamatotake-no-Mikoto, father of Chiuzi-Tenno; Ishibei Oshiha-no-Oji, father of Kenso Tenno; Hiko-ushi, father of Keitai Tenno; Oshisaka Hikohito Oye-no-Oji, father of Keihin Tenno, or Chimu, father of Kōkiyoku Tenno. In the middle ages administrative etiquette was more or less capricious, and posthumous honours were first conferred on Prince Kusakabe father of Bumbu Tenno. He was given the title of Okano-Miya Tenno. Subsequently the appellation of Sōdō Jinkei Kwotei was conferred on Iyehito Shinno, father of Juntei Tenno; and that of Tawara Tenno on Yoshimoto Shinno, father of Kōjin Tenno. Later on we find Morisada Shinno, father of Go-Horikawa Tenno (1222) called Go-Takakura-in; and Sadanari Shinno, father of Go-Hanazono Tenno (1429) called Go-Sōkō-in. These two princes received the titles during their lifetimes. The most recent example of a posthumous title had been that of Yōkō-in, conferred on Nobuhito Shinno, father of Go-Yōsei Tenno (1587).

² There are several books such as *Nakayama Yumono-gatari* and *Nakayama Mondōki*, which contain accounts of the arrival of the Imperial messengers in Kuantō, but these accounts partake rather of romance than of history.

IVENARI, therefore, was impatiently looking for an opportunity to relieve his father from active service and remove him to the Western Castle under the title of OGOSHO. Here, however, cropped up the same difficulty that stood in the EMPEROR'S way. The title of OGOSHO was usually confined to those who had actually held the rank of SHOGUN. IVENARI, then, hoping that if the EMPEROR'S proposal with regard to NORIHITO were carried out, a powerful precedent would be established in favour of his own design, eagerly awaited the arrival of the Imperial delegates, and in the meanwhile informed his principal officers of his purpose, which received their approval. But MATSUDAIRA YETCHIU-NO-KAMI again interfered. He repeated his arguments that, whatever ancient precedents might exist, to confer the title of DAJO TENNO upon a prince who had not ascended the throne would be a breach of etiquette, adding that if the SHOGUN were to follow the EMPEROR'S example, the result could scarcely fail to lead to trouble, and might possibly obscure the great distinction which ought to exist between the EMPEROR and the SHOGUN. MATSUDAIRA seems to have advanced these objections with many expressions of respectful reluctance, but his tone was exceedingly firm, and his reputation as a man not less virtuous than wise gave irresistible weight to his views. His colleagues ultimately came over to his way of thinking, and when the delegate NAKAYAMA, himself a noble of great erudition and eloquence, laid his Imperial Master's proposal before the Council, a vehement discussion ensued. Finally the delegates were told that a conclusive answer would be given after further consideration, and, obliged to be content with this, they returned to Kiyoto unsuccessful. The SHOGUN'S expression of a corresponding purpose had, in fact, added largely to the difficulties of the situation, for though a point might have been stretched in the EMPEROR'S case, the notion that this departure from etiquette was to be immediately made a pretext for a still more radical and unprecedented proceeding on the part of the SHOGUN, shocked the conservative propriety of the times.

The delegates, however, did not yet acknowledge their defeat. On August 9th, 1792, we find them addressing the following letter to the Shoshidai :—

Your Lordships—We await the Shogun's reply with regard to the bestowal of a title upon the Prince Kanin-no-Miya. We have already had the honour, in several despatches, to make you acquainted with the Emperor's real sentiments on the subject, and His Majesty will be much distressed if we fail to obtain a definite answer from the Shogun before the approaching Festival of the Harvest. Various unavoidable circumstances render the necessity of obtaining a speedy reply imperative. In the beginning of November steps will be taken with a view to conferring the title in question.

The EMPEROR, it will be seen, or at any rate his advisers, were determined to bring matters to a conclusion. Nevertheless, the Yedo Court remained silent until the 28th

of August, when the following despatch was sent to the Shoshidai in Kiyoto, over the signatures of all the SHOGUN'S Councillors :—

With regard to your recent private correspondence on the subject of conferring an honorary title upon Kanin-no-Miya, the Shogun has expressed an opinion that as the Emperor's desire is dictated by an earnest anxiety to show his filial piety, some measures should be taken with a view to satisfying His Majesty's wishes. But as the proposed title of *Daijo Tenno* is of an exceedingly exalted nature, it seems unbecoming that it should be conferred on the Prince. If, however, the Emperor desires to honour his father, he may augment his estates, or adopt some other method of accomplishing that end. In such event, the Shogun will take the matter into consideration and decide it in conference with his Ministers. You will be good enough to communicate the contents of this despatch to the Court Nobles.

It was plain enough from this that the SHOGUN'S Ministers were not disposed to yield. Nevertheless, the Court Nobles again addressed the Shoshidai as follows :—

Although the Prince's estates may be enlarged and palaces constructed for him, yet the existing rules of etiquette would require him to lie facing northwards after death, so long as he possesses only the rank of Shinno (Prince). The Emperor cannot reconcile himself to this notion. It is nevertheless true that the measures contemplated by His Majesty will, if carried out, furnish a precedent to future generations, so that the question demands the Shogun's careful and disinterested consideration. We consequently take the liberty of giving expression to the Emperor's ideas in the sense indicated by himself. His Majesty, it appears, is obliged by unavoidable circumstances, having reference to the approaching Harvest Festival, to put his intentions into practice, and he intends to bestow the proposed title on the Prince in November. Although we have been instructed to persuade His Majesty to devise some other plan of accomplishing his purpose, we fail to see how he can suggest anything unsupported by precedent.

On the 2nd of October this despatch was followed by another from the same source, announcing that the EMPEROR had become still more fixed in his purpose, and that he had actually communicated his intentions to the Prince, his father. But the day after its receipt this communication was handed back to its writers by the Shoshidai, accompanied by a despatch in which the SHOGUN, while giving credit to the EMPEROR'S filial piety, repeated his refusal to sanction the Imperial proposal without further consideration, and desired that the EMPEROR'S delegates, who had again repaired to Yedo, should be instructed to leave the Kuantō without delay. The EMPEROR at last yielded to this determined opposition. His Nobles handed to the Shoshidai a despatch couched in these terms :—

Considering that to enforce his ideas without regard to the circumstances of the time can scarcely fail to create serious complications between his officers and those of the Shogunate, the Emperor has signified his willingness to put off conferring a title upon his father until he receives a definite answer from the Shogun.

The EMPEROR'S remarkable moderation did not save his Councillors from punishment. The delegates NAKAYAMA and OGIMACHI were ordered to remove from their residences to a temple called Seishoji, and during their confinement there, steps were taken to have them deprived of their offices at the Imperial Court. Others were similarly disgraced and several received severe reprimands. Writers of the

present time,³ while agreeing that intelligent public opinion was opposed to the EMPEROR'S design, and that MATSUDAIRA YETCHIU-NO-KAMI was well-advised in his opposition, condemn the proceedings he subsequently instituted against the Imperial Councillors, and hold that the considerate yielding of the Court ought to have ended the affair. Had MATSUDAIRA and his fellow-thinkers, say these critics, refrained from finding fault with the EMPEROR'S intention after its abandonment, and apologized for the opposition their duty had obliged them to offer, they would have left behind them the reputation of wise statesmen and loyal subjects. Unfortunately, however, they fell into the vulgar error of pushing their advantage beyond the accomplishment of their object. The EMPEROR himself seems to have harboured no umbrage on account of the rebuff he had received. On the contrary, he celebrated the restoration of concord between the two Courts in the following couplet :—

The sweet notes of the harp that sounds in the East (Yedo)
Are now harmonized with the melody of the birds
That warble songs in the trees of my courtyard.

Yet when we remember all that is meant in Japan by filial piety, we can readily understand with what reluctance and chagrin the EMPEROR must have yielded to an opposition so careful of the form and careless of the spirit. KOKAKU reigned more than twenty years after this event, but he never made any fresh attempt to carry out a purpose which now, more than a century after it was first conceived, has been consummated by a Sovereign less dependent and not less pious than his ancestor. It is a strange episode in the history of this strange country, and those who read it carefully will not fail to find food for reflections of larger scope than we can attempt to note here.

AS OTHERS SEE US.

AT the last meeting of the Shanghai Literary and Debating Society, the Rev. Y. K. YEN, a Chinese divine, delivered a remarkable discourse on Foreign-Chinese intercourse. Mr. YEN is a courageous man. He does not hesitate to stand up before an English audience, and tell them plainly what he thinks, whether his statements are calculated to flatter or to offend. Not less creditable than his pluck was the courteous appreciation it received from his hearers—an appreciation which goes far to show that if English generosity does not always display its best aspects in Oriental intercourse, it is, at least, ready to accord its accusers a fair hearing. Mr. YEN commenced by disputing the theory that international law imposes on nations any obligation to enter into commercial relations. He held that intercourse of that nature is nothing more than "a duty, an exercise of good-will." To the former fallacy he ascribed many unjust phases of

³ Vide the *Nichi Nichi Shimbum*, from which most of the above facts are extracted.

the treaties that have been concluded between Western and Eastern states. He did not travel to Japan for an illustration of his proposition, but one cannot help reflecting how truly his words are borne out by the state of affairs actually existing in this country, where foreign journalists and writers in the local English press insist on elevating into perpetual and inalienable rights privileges granted under terminable treaties; and where, on the other hand, the same persons disavow any obligation to extend their commercial intercourse with Japan beyond the narrow limits they themselves laid down a quarter of a century ago. Mr. YEN did not travel to Japan probably because he thought there was sufficient material for his purpose at home; and it seems to us, perusing his lecture, that he was right. He admitted, frankly, that "the average European, in his normal condition, is more honorable, humane, and noble than the average Chinese of the same class," but of the average European in an abnormal condition—that is to say, in the Orient—he entertained a less favorable opinion. None but principles so deep-seated as to be almost innate survive the shock of life among men who are less enlightened than oneself and moreover of a different race. There is a law of evolution, but there is also a law of reversion. Even the civilized Western is more or less the creature of his environment. At one time the instinct of self-preservation impels him to be aggressive; at another, the absence of restraint tempts him to be immoral. In fine, living in the Orient, he retrogrades in character and conduct. So, at any rate, thinks Mr. YEN, and in support of his plausible theory he adduced some facts worth quoting:—

Certain foreigners, under the avowed object of building a tramway, so blinded the Taotai that he stretched his paternal influence in making the farmers sell their lands. When they got the title deeds, lo and behold! they laid a railway. The official remonstrated, and even threatened to lie on the track to stop the locomotive. Their answer, which was worthy of a sophister, was that as they were owners of the road, they could do what they chose with it, and that as to the threat, the life was his and in his power to keep or to lose. Did this affair reflect honour or dishonour on those concerned? Again, when our government, in order to preserve its right of saying when, where, and how the rail-road will be, bought the company up at the full value, instead of making an international question of it, the foreign press generally taunted it with stupid waste of money and with anti-progress. Was not this taunt adding insult to injury? Several years ago, a European bought goods from the Chinese with promise to pay as soon as they were shipped. When the steamer had gone, it was found that he had used the bank advances, to satisfy his own countryman. Now, whatever he was to them, certainly he was not honourable to the Chinese. There is a European selling his name to a Chinese hong to aid him to defraud his government; there is another doing the same to a river lorch; at every port, there are members who make it a regular business to obtain transit passes for Chinese-owned goods. In each case a treaty privilege is outrageously misused, which, even if legally enjoyed, is nothing less than an over-reaching, and therefore utterly wrong from the beginning. It is yet more incredible, that when such abuses had been noticed at all by Consuls, it was the buyers of the privilege who were punished, while the sellers were allowed to go their way rejoicing.

It may well be supposed that Mr. YEN did not fail to notice the physical violence so

generally resorted to by Europeans in their dealings with Chinamen, as well as the strange sense of justice which induces the foreign rate-payers of Shanghai to withhold all share in the municipality from their Chinese fellow-residents, who, nevertheless, contribute equally to the municipal funds. We in Yokohama are accustomed to the often re-iterated assertion that the foreign residents are entitled to a voice in the local government. Here, however, the simple answer is, that in no part of the world does such a right belong to aliens who neither pay taxes nor are subject to the laws of the State. But on what grounds the exclusion of the Shanghai Chinese is justified, we have never heard and cannot conceive. Another point made was that while Chinese in Shanghai are tried by a Mixed Court with mixed penalties, the foreigner is tried by his own Court, "his judges being often his friends, or of the same club or society." Altogether the lecturer concluded that the character of foreigners in China is not the same as their character when in their own countries, and that a corresponding difference ought to exist in the codes of law applied to them. Whether it was intended by this to assert that Chinese Laws are good enough for foreigners in China, Mr. YEN did not explain. Probably his secret opinions inclined in that direction; but, openly, he confined himself to claiming that for foreigners also there ought to be a Mixed Court "where those who behaved like savages or barbarians should be governed by barbarous laws."

This is a startling proposition, and it might be supposed that the statements upon which it was based would have been combatted by Mr. YEN'S audience in the debate that followed the reading of his paper. Two or three gentlemen did, indeed, take exception to a general charge of inhumanity or injustice being preferred against foreigners in China, but no one questioned the lecturer's facts. Perhaps the most interesting explanation was advanced by a speaker who referred the antagonism between foreigners and Chinese to the circumstance that the whole Chinese nation is impregnated with the idea of its intellectual superiority to other nations. This was treading on dangerous ground. The average foreigner in Japan, if asked why he refuses to pay to Japanese rights even a measure of the respect he claims for his own, will complacently reply that he is a superior being, and that the Japanese, being inferior, must not expect equal consideration. He does not perhaps carry his self-sufficiency quite so far as to expect that the Japanese will be pleased with this comparison. But among the rights he denies them is certainly included that of being displeased. Yet if the Chinaman's arrogance entitles him to be disliked by foreigners, it is difficult to see why the latter's openly asserted superiority should seem less unattractive in Japanese eyes.

We do not believe in the advisability of applying severer codes to foreigners in the East, first, because it is rather the apathy of public opinion than the leniency of the law that is in fault; and secondly, because, although there are Western ruffians as well as Oriental ruffians, the former are the exception not the rule. But we do wish that there were a good many Mr. YENS both in China and Japan, to tell us candidly how we look in Chinese and Japanese eyes.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

DOMESTIC AND FOREIGN LOANS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In asking permission to discuss still further the question of the relative advantage of domestic and foreign loans, I am not moved by any vain desire to persist in a public controversy, but by a sincere anxiety to support, as far as I am able to do so, a policy which I regard as essential to the welfare of this nation. I would have been glad, if possible, to hold strictly to what concerns Japan; to limit myself by considerations of her interests only; and not to wander into economic inquiries which relate especially to Western States, and are not precisely suited to a country so peculiarly circumstanced as this is. But you have thought it desirable to draw so largely upon a distinguished English author, that I am in a manner compelled to examine the various statements you have quoted from his works; notwithstanding my firm conviction that neither his writings, nor those of any theorist whose studies are confined to the European field of observation, are applicable to the conditions of this Eastern empire. I am compelled, I say, to do this, partly because I am appealing to readers, many of whom are in the habit of regarding an advocate as vanquished in a debate, if he allows any strong—or apparently strong—argument against him to pass unanswered. I am not ambitious to be set down as vanquished, any more than the next man;—above all, when I believe myself to be absolutely in the right. I shall therefore take the liberty to investigate certain remarks of Mr. Mill,—by which you are largely influenced,—upon their own merits, before proceeding to show that, even if they were invulnerable in themselves, they would have little or nothing to do with the subject in hand.

I believe I am correct in saying that you accuse me of a general inability to understand the question at issue, because I do not appreciate the difference between capital and money. "Underlying the whole of 'Protectionist's' argument, and for the most part vitiating it," you declare, "is an apparent confusion between money and capital." Again,—"all through his argument there is observable the same tendency to confuse money and capital." To prove that there is, and must be, a broad distinction between the two things, you cite a passage from the Fifth Chapter of Mill's First Book. I might reject this evidence entirely, if I chose, for the reasons, (1) that it refers to a subject quite apart from that immediately under scrutiny; (2) that you have omitted a line which, I think, would demonstrate its inapplicability, and (3) that, in the original, the word "capital" does not occur at all. The phrase which you give thus:—"simply confounding capital with money,"—appears in Mill's work in these words,—"simply confounding money with wealth." But I shall not take advantage of either the oversight or the slip of the pen. I admit that Mill does, in various places, strive to set capital and money apart, and that in this effort he has been followed by numerous disciples, greatly to the bewilderment of students,

and by no means to the advantage of his own reputation for consistency. It is no doubt true that, among the primary teachings of what is called "political economy," certain clear statements as to the meaning and the importance of money are necessary; together with warnings of the impropriety of considering money and capital identical. But it is one thing to say that money is not exclusively capital, and quite another to attempt to dissociate them utterly. In doing the latter, Mr. Mill pushed a favorite idea of his to the verge of fanaticism. He undertook to establish, as an axiom, a mere sophism which no other great authority in economic science ever attempted to demonstrate, and which he found it impossible to maintain in his own pages. The one teacher to whom Mill looks up with unvarying admiration is Adam Smith, and it is worth while to glance back, for a moment, to that eminent master's view of this matter. A few brief extracts will serve the purpose as well as a hundred, and I will avail myself of the privilege, (here and throughout this communication), of italicising such words as are decisive:—

That part of the capital of the farmer which is employed in the instruments of agriculture is a fixed, that which is employed in the wages and maintenance of his labouring servants is a circulating, capital. . . . Both the price and the maintenance of the cattle . . . are a circulating capital.

The third and last of the three portions into which the general stock of the society naturally divides itself, is the circulating capital. . . . It is composed of four parts:—first of the money by means of which all the other three are circulated, etc.

Money, no doubt, makes always a part of the national capital, etc.

Further examples are, I trust, unnecessary. Probably the last sentence, by itself, would have been sufficient. Let me now turn to Mr. Mill, himself.

In the Fourth Chapter of his First Book, he gravely propounds theories which I find it as difficult to take seriously as the enunciations of the grave-digger, in "Hamlet," concerning "crown's quest law." "What capital does for production," says Mill, "is to afford the shelter, protection, tools, and materials which the work requires, and to feed and otherwise maintain the labourers during the process. . . . A manufacturer has one part of his capital in the form of buildings. . . . Another part he has in the form of machinery. A third consists, if he be a spinner, of raw cotton, flax, or wool," etc. These things are capital; but money, we are told, is not. Suppose we inquire how the manufacturer got them. He did not erect the buildings, nor make the machinery, nor grow the cotton, with his own hands. Certainly not—he bought them; paid for them with money. Nevertheless, we are expected to believe that until he had paid over the money, and become the owner, he was not a capitalist. But how is it with regard to the food and maintenance? Mr. Mill explains that "it is not the custom of the present age that he (the manufacturer) should directly provide" these. "Instead of this, each capitalist has money, which he pays to his work-people and so enables them to supply themselves." Now, we are instructed, this money is not capital while the manufacturer possesses it, nor is it capital after he has paid it to his work-people. With it, however, the latter buy food, which is capital, if you please.* Mr. Mill would affirm that, though a man may have a million dollars, in coin, notes, bills of exchange, or what-

* I may mention incidentally that Mr. Mill gives the following definition of capital:—"Things destined to supply productive labour with its various pre-requisites,"—including food. His use of the word *pre-requisites* is not accidental, yet he forgets that the employer does not as a rule, pay out wages until after the day's work, or the week's work, is completed. Now, suppose a labourer to have finished a job for one capitalist on Monday, and to begin another, for a different capitalist on Tuesday. The food which he eats on Tuesday, before he gets any return for the second job, is of course capital, according to Mr. Mill. Then who is the capitalist, in this instance? Not the first employer, certainly; his enterprise is at an end, and under any circumstances he would not be the capitalist of a stranger's enterprise. Not the second employer, for he has not paid over even the money which Mr. Mill admits may be converted into capital. Not the labourer, on any ground recognized by that author. Who, then, is the capitalist that supplies the capital eaten on Tuesday morning, as a "pre-requisite" of the work to be that day performed by the labourer? Accepting Mr. Mill's doctrine, it seems to be nobody. As a matter of fact, the money paid by the first employer was that employer's capital, until it had been used for his purposes and handed over to the workman. Then it became the latter's capital, until he exchanged it for the food of Tuesday,—which was capital in another form until it was eaten,—or, to be more minute, until it was digested.

ever, and may be seeking for opportunities of investing that sum, he possesses no capital until after he has bought the several implements required for a particular enterprise. He actually draws the picture of "the arrival of a foreigner in a place, with a treasure of gold and silver," and sends him into business there. But he scrupulously avoids admitting that this stranger possesses any capital. He calls it "treasure," "fortune," "money," "funds," and exhausts his vocabulary of synonyms; yet diligently guards himself from designating it as capital. But are you, Mr. Editor, prepared to assert that theory? If a foreigner should come to Japan, bringing a hundred thousand dollars to invest, would you say he had no capital—would you decline to call him a capitalist—until he had actually exchanged a portion or the whole of his money for machinery, tools, houses, or what might be needed for his undertakings? Mr. Mill would seem to go still further, for he announces, in so many words, that "the distinction between Capital and Not-capital" lies "in the mind of the capitalist"—in his will to employ them (*i.e.* the commodities he has purchased) for one purpose rather than another,—so that, if we accept this proposition unreservedly, a man is or is not a capitalist, according to the temporary turn of his imagination. When he is thinking of employing his property for productive purposes, he possesses capital; when he fancies he will use it otherwise, he possesses no capital. I am afraid some readers who are unacquainted with Mill's writings may suspect that I am straining a point for a particular effect. I can hardly blame them; but I wish to have it understood that I consider the subject, in its broad bearings, much too serious for such levity of treatment. Anyone who will read the closing lines of Mill's Book I., Chapter IV., Section I., will see that I have quoted his words with literal fidelity.

Mr. Mill is never weary of reiterating his assertions as to the intrinsic insignificance of money. He makes it a text wherever he discovers an opportunity for doing so. In one place he goes to the remarkable length of stating that "it is not with money that things are really purchased." But when he enters upon practical discussion, he becomes inadvertent, and speaks of money in a less visionary way. Before he has finished the paragraph in which the above curious asseveration appears, he contradicts himself by speaking of labourers' selling certain articles, corn, hay, etc., "for money." In the paragraph next following, he remarks that "things which by barter would exchange for one another, will, if sold for money, sell for an equal amount of it." Thus, in the very same page, he tells us that things are not bought for money, and that things are sold for money. In the ensuing chapter, moreover, he observes that "if prices are low, money will buy much of other things," etc. Again, he informs us that "money carries its purchasing power wherever it goes." Numerous instances of similar wavering may be seen in his volumes. On one occasion he modifies his cherished theory by saying that "money and finished goods are not wholly capital;"—thereby admitting that they are partly so. On another, he talks of "£1,000, of capital." On another, he plainly refers to the funds used by a buyer of velvet as capital. On another, he alludes to the "portion of capital which is paid as the wages, or consumed as the subsistence, of labourers." Even in the supposed case, previously cited,—of a foreigner bringing "treasure" into a country, and investing it,—although he will not acknowledge that the new comer's "gold and silver" are capital, he speaks of their effect, when invested, on the "floating capital" of other persons in the same country, which he thinks may be sent abroad for foreign investment. Now this "floating capital" consists of money, and cannot be anything else; and is "sent abroad" in some portable form. So, mark you, the money which a foreigner brings to a country for investment is not capital; but the money sent out of a country for investment is capital. Finally, in a

moment of relaxed vigilance, one might suppose, he expresses himself in the following words:—"A fund may be seeking for productive employment, and find none adapted to the inclinations of its possessor: it then is capital, but unemployed capital." Into such entanglements does this distinguished writer lead himself, by his theoretical adherence to an idea which his practical sense rejects. These inconsistencies, which are plenty as blackberries in Mill's works, go far, I take it, to invalidate his allegations respecting the impossibility of associating money with capital. He has fallen into an error against which he warns others when he admonishes them how "fatal is the habit of thinking through the medium of only one set of technical phrases." The truth is, I make bold to affirm, that while money is not exclusively capital, and while capital has always existed in many other shapes besides money, the latter is, in all civilized societies, a form of capital the importance of which ought never to be disputed, nor even doubted.†

Carrying this branch of the subject to a legitimate conclusion, I might ask, Mr. Editor, why you object to the investments, by Japanese citizens, in the new railway bonds. What do they invest? Money, and nothing but money. What you contend against, however, is the "sinking of capital," which must not, you assert, be confounded with money. So long as the public offer only money in exchange for the bonds, you ought not to remonstrate. When they begin to offer (and the Government to accept) machinery, tools, clothing, and other articles, it will be time for you to protest,—these things being capital. But if I pursued this line of reasoning I should be justly accused of quibbling. Quibbling is a practice which affords me no satisfaction, nor am I overjoyed when others indulge in it. I think, therefore, I may omit further consideration of the fallacy that money is not capital, and endeavour to present, in words which will allow of no misunderstanding, what I believe to be your real cause of anxiety. It is premised that there is a certain amount of money "lying idle," at the present time, in Japan. Incidentally I must remark that in your article of March 1st (*Weekly Mail*), you threw the burden of that hypothesis upon me; whereas, in my previous letter, I simply adopted it from your earlier article of Feb. 9th (*Weekly Mail*), expressly quoting the words. But I assume there need be no dispute as to the existence of money lying idle at this moment. You are convinced that this money will be needed for "industrial and commercial enterprises," "so soon as prices shall have completely adjusted themselves to the altered value of *Kinsatsu*," and that it should consequently be kept lying idle until that time; or, at any rate, that it should not be used in an investment from which it cannot be promptly extricated. This, I think, is the true substance of your objection to the employment of Japanese funds in the building of the railway. I observe, necessarily, that you say nothing as to the character of the domestic enterprises to be developed in the future, nor as to the period when they may be set on foot. The latter item, indeed, can be only guessed at. From present appearances, no definite or fixed adjustment of prices can be looked for at an early date. It would have been convenient if you had named a time when these industries might reasonably be expected to awaken. You would hardly desire people to keep their money lying idle for a year or more. Adam Smith was of opinion that "in all countries where there is tolerable security, every man of common understanding will endeavour to employ whatever stock he can command, in procuring either present enjoyment or future profit. . . . A man must be perfectly crazy who, where there is tolerable security, does not employ all the stock which he commands," etc. I do not forget that, in the case of Japan, you do

† I should not deem it requisite to give such profuse evidence of the recognition of money as capital, but for my desire to supply Japanese students of industrial science with all the citations they may need, to convince themselves and others that money is considered capital, even by Mr. J. S. Mill, although capital is not necessarily money.

not blame the people for investing in railway loans, but rather the Government, for tempting them by placing such loans on the market. But how is the Government to know, any better than the simplest individual, when the predicted revival of industry is to make its appearance? Yet you think that the Government is not warranted in now proposing a good and advantageous investment, like that of the railway bonds, lest it interfere with other opportunities of investment, which may be indefinitely deferred.

And then the question arises,—What kind of enterprises would you approve and consider fit objects for the employment of Japanese capital? Railroads are barred out. So, also, on Mr. Mill's authority, are "machinery, permanent improvements of the land, and the like." He excludes, moreover, "manufactories, ships, canals, mines, and works of drainage or irrigation." It is difficult to say what he does not exclude. Everything, apparently, resulting in what he terms "fixed capital,"—not forgetting "all or most things known by the name of implements or tools." Now, if the "commercial and industrial enterprises" which you anticipate are of a different class from any of the above, and are of a nature even to forbid a workman from investing in "implements or tools," I fail to discern precisely how Japan is to be benefited by them. Trade alone,—the mere exchange of goods and commodities already on hand without continued productive operations,—is not likely to expand a nation's greatness or increase its power. A marked characteristic of "circulating capital," as described by Mill, is that it circulates itself out of existence. When it is all gone, what next? That is what we come to, if we lean upon Mr. Mill. But it is my conviction, Mr. Editor, that you place too much reliance on him, and make use of his arguments to an extent which circumstances do not warrant. To begin with, the whole purpose of his discourse on the proper employment of capital is not only different from, but is in one sense exactly the reverse of, that to which you seek to turn it, in your quotations. You assume that he is endeavouring to prove the impropriety of certain investments in poor countries. The fact is, that he is endeavouring to prove the propriety of those same investments in rich countries. That is the real burden of his theme. He is engaged in demonstrating that such investments are desirable and judicious in rich countries, and he casually mentions, as a wholly secondary consideration, that they *may be* undesirable in a poor country. He does not seem particularly sure about it; nor to care much, one way or the other. He simply admits that the rule he lays down for rich nations *may be* inapplicable to those which are poor. If any one doubts this, let him look at your first extract, beginning,—"*In a country where capital accumulates slowly,*" etc. It consists of fifty-five lines. Of these, forty-six are devoted to the proposition he wishes to enforce,—namely, the expediency of the investments in question in a wealthy State; and nine are surrendered to an acknowledgment that *perhaps* they are not suited to a nation of inferior resources. The forty-six lines have no bearing upon the situation of affairs in Japan; the nine lines concede the possible correctness—but do not affirm it—of a theory similar to that which you have adopted.

It does not seem to me, if I may venture to say so, that there is anything very tangible in Mr. Mill's testimony against the use of capital for permanent productive investments in Japan; but I will look for a moment at his reason for discouraging such a course in any nation. He says:—

In a country where capital accumulates slowly, the introduction of machinery, permanent improvement of land, and the like, *might be* for the time extremely injurious; since the capital so employed *might be* taken from the wages fund, the subsistence of the people and the employment of labour curtailed, and the gross annual produce of the country actually diminished.

And, again:—

If the sinking of capital in machinery and useful works proceeds at such a pace as to impair materially the funds for the maintenance of labour, it is incumbent on legislators to take measures for moderating its rapidity.

Observe the cautious methods of expression in these extracts. The measures referred to "*might be*" injurious, since the capital "*might be* taken from the wages fund." "*If* the sinking of capital" impairs the labour fund, then its rapidity should be moderated. Nothing could be more carefully guarded. And rightly so; for, as I have remarked, these statements are mere incidental acknowledgments of a possibility in poor countries, to which the author neither endeavours nor desires to direct the close attention of his readers. Moreover, it is important to remember that the whole theory of the "wages fund," as originally elaborated by Mr. Mill, twenty-five or thirty years ago, has been set aside by the majority of prominent economists, including Mr. Mill himself. Its first assailant was Mr. Longe. Its most effective was Mr. Thornton, by whose arguments Mr. Mill frankly declared himself to be convinced. Without stopping, however, to contend against a theory which its author abandoned, I may say that the danger you apprehend could not be proved to exist, even if the "wages fund" doctrine were accepted as fully established. Your assumption (without reference to Mr. Mill) is, I believe, that Japanese labourers will suffer for want of the money, or for want of their share of the money, which is about to be invested in the railway bonds. But we all know that the money is to be devoted, almost as soon as it is paid over, to a great enterprise in which the services of thousands of workmen will be required. I have already suggested that you do not specify the industrial operations which you see looming in the future; but if they are to be of the very limited number not prohibited by Mr. Mill in the passages you quote, they cannot possibly benefit the labourer in anything like the degree that the building of a railway will benefit him. In fact, whatever they may be, I fail to perceive how they can give more employment to, or contribute more directly to the maintenance of, working men. And if it comes to a question from which source labourers are likely to derive the greater and more immediate advantage;—the construction of a railway, to commence within a definite brief period, or the inauguration of some unknown and unnamed smaller undertakings, to begin nobody knows when,—I can conceive of but one reasonable answer.

It now remains to be considered whether the Government has done wisely, or the reverse, in relying upon a home loan, instead of borrowing from abroad. To a certain extent I have answered this inquiry (from my point of view) in the foregoing paragraphs; but it is desirable to examine it in direct opposition to the citations you draw from Mr. Mill. That eminent philosopher has much to say, in divers places, on the subject of domestic loans, and it is interesting (parenthetically), to note his candid avowal, in one part of his work, that a person who buys, *with money*, Government securities for the purpose of assisting in the construction of a railway, lends his *capital* for a productive employment. The most forcible set of utterances you have reproduced, and those to which you look,—I presume I may say,—for the most substantial support, are the following, gathered, though not quite consecutively, from his chapter upon national debt:—

If the capital taken in loans is abstracted from funds either engaged in production, or destined to be employed in it, their diversion from that purpose is equivalent to taking the amount from the wages of the labouring classes. The system of public loans, in such circumstances, may be pronounced the very worst which, in the present state of civilization, is still included in the catalogue of financial expedients. There are, however, other circumstances in which loans are not chargeable with these pernicious consequences: namely, first, when what is borrowed is foreign capital, the overflowings of the general accumulation of the world; or, etc.

It should first be pointed out that this extract does not, like others which you have chosen, refer especially to poor countries, but to all countries,—an illustration from English history being given in connection with it; and next, that it deals with loans intended *not* for productive and industrial development, but loans for the emergencies of war

or other wasteful requirements. It amounts simply to this: that when the Government of any nation, great or small, is in want of money for *unproductive* purposes, it should choose some other method of obtaining it than by a public loan. The proposition has no bearing upon money, or capital, needed for *productive* purposes. In other words, it has no bearing upon the transaction we are contemplating here in Japan. Instead of being used in "defraying the expenses of a war," or in any unfruitful operation, the sums subscribed for railway bonds will be devoted to a work of great public utility, and, in a large degree, will be disbursed in wages to labourers. You have yourself indicated that "Mill is here speaking of loans for unproductive purposes;" but I am surprised to see, appended to the acknowledgment of that fact, your remark that "even in that case he still prefers the introduction of foreign capital," etc. "*Even* in that case!" Why, what other case is there? That is the only case under discussion. Yet you would have it appear that there is no question about his preference for foreign capital when productive enterprises are concerned, and that *even* for unproductive enterprises his preference is the same. The truth is, Mr. Editor, that he is speaking of nothing else but unproductive undertakings. He has not a word to say, regarding the others. From beginning to end, his discourse is about expenditures incurred for war, or similar profitless operations. If the word "*even*" is to be properly used, it must be in this way:—Mill objects to domestic loans for unproductive purposes, but *even* for these purposes, he believes that under some circumstances, "the sum wanted may be obtained by loan, without detriment to the labourers or derangement of the national industry, and even perhaps with advantage to both," etc. That he really does say; but he never says anything remotely hinting at an objection to internal loans for productive objects.

It is unnecessary for me to prolong the examination of an argument which, obviously, was never intended to embrace such measures as those just instituted by the Japanese Government. But I have no intention of admitting that, even if Mr. Mill and all of his school had advocated foreign loans in the most emphatic and unmistakable terms, it would shake my conviction in the slightest degree. I regard it as more or less of an evil that strangers should have any opportunity of subscribing to a loan which the people of a country are themselves able to take up. In a case like the present, the outside investments are not likely to be extensive, and may therefore be no more injurious than those of Europeans were to the United States at the time of the Southern rebellion. But, opulent as America is, it did not enchant her citizens to see the annual payments of interest go abroad, after the war, nor to know that money lent to us when gold was at an immense premium, paid back and sent away, perhaps twice over, as the currency gradually returned to the normal rate. All bonds (with their interest) held by Americans were paid *at home*. Mr. Mill himself recognises the difference, as a matter of national gain or loss, between interest paid "when the creditors are members of the same community," and when they are not. For my part, I must adhere to the statement that Japan, five or ten years hence, in possession of her railway *plus* the capital required for constructing it, will be richer than if she had only the railway without the capital,—which would be the case if the amount were returned to lenders in Europe. I desire to remind you that on my side of the argument there is nothing supposititious. It is all straightforward fact. The railway *is to be* built with money voluntarily supplied by the Japanese; and the money supplied by them, with its interest, *is to be* paid back to them. But, as you put it, "the money expended is withdrawn from the available capital of the country where, *by hypothesis*, it is wanted, and where its absence *may be* seriously injurious,"—and so following, along a line of conditional and

mutually dependent assumptions. Yet you dispose of my remark, that "we have, when the work is completed, a new railway in Japan and also the twenty millions required to construct it,"—as simple and unadorned a truth as that there is water in Yedo Bay, or that two and two make four,—by averring that "this statement is most misleading." I do not so regard it, and, which is more to the purpose, I cannot believe that the rulers or the people of Japan would so regard it. Neither in the plain aspect of the affair, considered by itself alone, nor in the various theories and arguments drawn from distant sources and grouped about it, can I discover anything to awaken a doubt as to the wisdom and sound judgment of the policy to which the Government has adhered.

I apologize sincerely, Mr. Editor, for the demand I have made upon your space,—a demand which is not likely to be ever repeated, even if you permit me again to address you on economic topics since I have on this occasion departed, rather widely, from the strict boundaries of the question at issue, in order to "cleanse my bosom" with respect to a branch of the subject which has not before been fairly weighed, in this region, yet which, in my estimation, is entitled to careful consideration. I refer to the practice of applying to the exigencies of this country, the doctrines and arguments of Western writers who have no knowledge of or regard for Japanese affairs. One man, and one alone, since the days of Adam Smith, has studied economic science from an altitude which overlooks society in all its aspects and conditions, and has embodied his conclusions in general laws so harmonious and beautiful that it seems incredible to me how any mind capable of understanding them can conscientiously reject them. But Mr. Mill, like the majority of English economists, discusses his theme almost exclusively with a view to English interests, and without the least regard to such peculiar phenomena as are, for the present, inseparable from Japanese development and progress. Moreover, these foreign authors, with hardly an exception, fall into the habit of using words and expressions which obscure their meaning to all readers, and must render them well-nigh unintelligible to the Japanese. Each new expounder of "political economy" (so called) manufactures a set of fresh definitions and phrases, often antagonistic to all that have preceded them, and uses them as if they had been formally stamped with universal acceptance. Hence, the unaccustomed explorer is apt to find himself floundering in the midst of a jargon which is fully comprehensible to the inventor alone,—and perhaps not invariably to him. I will undertake to pick out half a dozen different, not to say conflicting, explanations, by standard authors, of such ordinary words as Wealth, Value, Trade, or Capital. How Mill has contradicted himself with respect to the last, is apparent in the extracts I have given. Whewell, in his lucid rules concerning technicalities, states that "when common words are appropriated as technical terms, their meaning and relations in common use should be retained, as far as can conveniently be done;" and that care must be taken that the words "are not ambiguous in their application." Political economists, however, are generally far too self-reliant to be guided by established laws of diction. For these reasons, not to speak of others scarcely less significant, I should, as a custom, oppose all attempts to appeal to the intelligence of Japanese readers by references to, or citations from, foreign works on this subject. Even Mr. Carey's masterly expositions may be rendered more effective by such modification as will adapt them to Japanese habits of thought and methods of reasoning.

Again offering my excuses for the extreme length of this communication,

I am, Sir, yours very truly,

PROTECTIONIST.

Tokio, March 6th, 1884.

[We have to apologise for the delay that has occurred in the publication of this letter. Its length obliged us to hold it over.—Ed. J. M.]

THE FRENCH AMATEURS' CHARITABLE PERFORMANCES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have the pleasure to enclose, for the information of the public, the accounts of the "Charity performances" given by French Amateurs in January and February last, and I take this opportunity of thanking, on their behalf, the local press, Mr. Hegt, Messrs. Lane, Crawford & Co., Mr. E. J. Moss, Mr. Culty, and all those who by reduced charges or gratuitous services contributed to the result obtained: i.e. a donation of \$364.31 to the local charities.

Yours truly, D. FITZ-HENRY.
Yokohama, April 2nd, 1883.

MEMO. OF RECEIPTS AND EXPENDITURE FOR TWO PERFORMANCES GIVEN BY FRENCH AMATEURS IN AID OF THE FUNDS OF THE YOKOHAMA GENERAL HOSPITAL AND OTHER CHARITABLE INSTITUTIONS.

	FIRST PERFORMANCE.	SECOND PERFORMANCE.	
Receipts.....			\$384.00
Rent of Theatre, gas, &c.....	\$33.02	\$50.00	
Painter, Carpenter, Coolies, Scenery and Stage accessories.....	76.91	39.95	
Costumes, wigs, &c.....	37.55	15.07	
Printing, copying parts, &c.....	14.03	15.00	
Piano hire.....	15.00		
Gatemen and Sundries.....	21.50	24.15	
Special train.....		38.61	
	198.91		182.78
	\$163.09		\$301.22

Total \$364.31 distributed as follows:
Yokohama General Hospital..... \$230.17
Société Française de Secours..... 67.07
Amateur Orchestra (for Charitable purposes)..... 67.07
\$364.31

KRUPP V. ARMSTRONG GUNS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—We have to trouble you again in reference to the Krupp-Armstrong question, and to request that you will inform your readers that as yet no further correspondence on the subject has appeared in the home papers, at least so far as we are aware, and certainly not in the *Engineering*, to which we are subscribers.

Should any reply to Mr. Krupp's letter be made by "Artillerist" we shall be happy to forward it to you. We are, Sir, Yours, faithfully,

TAKATA & Co.,
Agents for FRED. KRUPP.
Tokio, 28th March, 1884.

FIFTH LECTURE AT THE MEIJI KUAIDO.

The fifth lecture of the free series at the Meiji Kuaido, Tokio, was delivered, on the 22nd ultimo, by the Rev. Dr. Verbeck to an audience of about twelve hundred persons. The subject was Pantheism and Christianity, and in comparing the two creeds, the speaker necessarily touched the susceptibilities of his hearers somewhat roughly. He was nevertheless listened to with quiet attention, the rare exclamations of dissent his remarks elicited being confined to a few students, who were more disposed to be clamorous than reflecting. Dr. Verbeck commenced with a brief historical introduction, outlining the salient features of Pantheism. He explained the etymological meaning of the word, and then proceeded to derive its significance, first from substance, which is infinite in time and space; secondly from two attributes, namely, mind—or thought—and matter—or extension,—and thirdly, from the accidents of substance, which he called "mode." These three are coeval and inseparable from eternity to eternity. Considered internally, they are God; considered externally, the Universe. God may be called the Soul of Nature, and Nature, according to Pantheists, the body of God. Without God, there were no Universe; without an Universe, there were no God. Thus, in this creed, God and the Universe are not two things; they are identical. From these premises many strange conclusions follow. If the Universe is God, then all separate parts and

beings in Nature are components of God. If Nature is God, and all natural objects parts of God, then all powers, faculties, and workings contained in them are, wholly or partially, powers, faculties and workings of God. In this category would be included even the song of the nightingale and the perfume of the plum-tree. Pursuing this train of thought, Dr. Verbeck showed to what unreasonable and illogical tenets the Pantheists are committed. They confound Cause with Effect. Without God, they say, there can be no Nature, which is true enough; but then follows the paradox, without Nature there can be no God. They confound, too, the Finite with the Infinite. For God's infinity, they hold, consists in all the finities in Nature, as though any number of finities could ever make an infinite. They confound Mind and Matter, since they teach that God, the living Soul of the Universe, is, at the same time, the Universe itself. Their doctrine, further, involves a virtual denial of the Personality or Individuality of God, since their God is the sum total, the aggregate, of "all things and beings." An aggregate of persons and individualities may be an ideal person—as a corporation, society, or body politic—but cannot possibly be a real person, to whom the thoughts and prayers of sentient beings can go out. Again, they ignore man's personality or individuality, because they regard him as only a brief moment of God; as a wave on the surface of the sea; as a leaf on a forest tree— notions which are inconsistent alike with facts, with consciousness, and with reason. A further examination of this phase of Pantheism, shows that it denies man's liberty, and reduces him to the category of brutes or machines. "Our activity," says Cousin, "is only a temporary manifestation of God's activity; all our acts are God's acts." Man, then, "does" not, but is "made to do." His very sins are not his own. They are the deeds of a power beyond his control. He ceases to be responsible for the indulgence of his evil passions. He loses his free will, and losing with it his liberty, has no longer duties to perform or obligations to fulfil. It is not for him to distinguish between good or evil; virtue and vice; praise or blame. He is simply the creature of necessity, without motive or inducement to be virtuous. The basis of morality, in short, is swept away. Following this line of argument, we come to the grotesque aspects of Pantheism. If every object or being in nature is a part of God, then all the mutual actions of life, whether conflicting or concordant, are interactions between different parts of God. When a man murders his fellow, one part of God is destroying another. When Napoleon was pitted against Wellington on the field of Waterloo, it was one part of God manœuvring against another. Thus all history becomes a chain of necessities, and man's life a chapter of uncontrollable impulses. The speaker then passed to a direct comparison of Pantheism with Christianity. He showed, first, the resemblances between the two creeds. Both teach the existence of God: neither is atheistic. Both recognise the oneness of God: neither is polytheistic. Both condemn idol-worship. In both, God is omnipresent and omniscient. Both recognise the grand unity of the universe. In the scriptures of both are to be found common expressions, or, at any rate, expressions acceptable to both. But if these similarities exist, the dissimilarities are more striking and radical. Thus the God of Pantheism is dependent on, and his existence conditioned by, the Universe and its existence; whereas, the God of Christianity is the great and free Creator of the Universe. Nature is in no sense the necessary outward manifestation of the Christian God's inner substance. Again, while the God of Pantheism must be affected by every change in the things and beings on which his existence depends, the God of Christianity is changeless and the same from everlasting to everlasting. Neither can the former be worshipped, venerated, loved like the latter; for though Nature

may be admired, she is incapable of awakening in the hearts of her beholders those feelings so well expressed in the Christian Scriptures, where it is said that God's pity for his children is as that of a father, and that he must be loved by them as a child loves its parent. Pantheism robs man of his individuality, his personal liberty: it makes him the mere creature of impulses which he cannot control. Christianity, on the contrary, gives him the position of a free agent; a being endowed with the power to choose between good and evil, between reward and punishment. In the Pantheistic creed there is no sin, either of omission or commission, because the impulse that prompts our deeds, being God-directed, cannot be erroneous. Christianity, on the contrary, like a true teacher, tells men plainly that they are not what they ought to be; that their sins, as well as the power to abstain from them, are their own, and that there is always before them a higher standard of holiness and purity. Thus Christianity is the religion of Progress and of Civilization. Its object is to purify the world and make man conform to God's will. It is the basis of all true Civilization. Pantheism destroys the distinction of mind and matter; and at the time of death destroys man's identity, if, indeed, it every acknowledges that he has any. Like a wave of the sea, like a drop of dew, like a name written on the surface of a running stream, he disappears, and is extinguished. But according to the Christian creed, man, made in the image of God, does not die. His body, indeed, returns to the dust, but his spirit to the God that gave it. The glorious belief in an immortality of joy, is Christianity's gift to man, even as her doctrines teach him the way to attain it. The speaker concluded by telling his hearers an anecdote of some medical students who, listening to their teacher's lecture and hearing him explain minutely the symptoms of various diseases, began to be conscious that they themselves were suffering from ills they had not before appreciated. "Should there be any among my audience," said Dr. Verbeck, "who, like those students, feels, as he listens to what I have said, that all is not well with him; feels that he too is suffering from a malady hitherto unrecognised, then let me recommend him to have recourse to a medicine which knows no failure nor has any peer, Christianity."

YOKOHAMA CRICKET CLUB.

An Extraordinary General Meeting of the Cricket Club was held last evening at the Club Hotel, at which between thirty and forty members were present.

On the motion of Mr. GORDON, Mr. Barlow took the Chair, Mr. E. Flint Kilby, acting as secretary.

The CHAIRMAN said that this was an Extraordinary General Meeting, called by notice and under the rules, but he thought it really an extraordinary meeting, as since the Club had been first started twelve years ago there had never been occasion to call an extraordinary meeting. At the Annual Meeting the Committee had been elected in the usual way, but a short time after three of the committeemen resigned, leaving only two. Now, according to the rules, it took three to form a quorum, consequently the two left found themselves unable to act and therefore resigned. There being a deadlock, the late Secretary, not finding anyone to whom he could pass over the books, called the old committee together, and they came to the conclusion that the only thing to be done was to call this meeting. There was nothing in the rules to decide how the ballot should be taken, but it was customary that the first five should be elected, and that if any of them refused to serve that those next in point of numbers be elected. He wished to know if any member had any objection to the ballot proceeding in the usual manner.

No objection having been raised, the ballot was then taken, and the following gentlemen were elected to serve for the ensuing year, viz.:—B. Durant, Groom, Melhuish, Hamilton, and A. R. Robinson.

Mr. GROOM said that perhaps the members thought it was strange that he should accept office after refusing to serve on the previous committee, but the fact was that he had not the time to attend to the work, and he believed that this Committee was only a temporary one, as in a few days there would be another meeting to discuss the amalgamation scheme, and then he hoped the present Committee would hand the matter over to a general Committee.

After a vote of thanks to the Chairman, the meeting adjourned.

TRANSLATIONS FROM NATIVE JOURNALS.

FOREIGN INTERCOURSE OF JAPAN.

(Translated from the *Fiji Shimpō*.)

In like ratio with the progress of civilization do the relations between individuals of all classes become more frequent and more intimate. The true secret of such relations lies in the clear understanding of individual characteristics, for a considerable degree of intimacy is only possible when each knows and appreciates the condition of the other. A man met with for the first time cannot be made the confidant of one's pecuniary troubles; nor can a newly-hired servant be sent out to collect bills. A new acquaintance is not always unkind, nor is a new servant invariably untrustworthy; and yet it is a chief characteristic of human nature to be doubtful of anything with which it is not familiar, and, in an especial degree, to be reticent and shy with first acquaintances. And all this holds good in reference to international intercourse.

A true knowledge of each other is the key to international intimacy. A great sage* once declared, —over two thousand years ago—that a man should rather regret his ignorance of the condition of others than theirs of his own, and this apothegm is held in high esteem by slow-witted scholars and students. Such a saying, if consistently carried out, would give rise to very objectionable abuses. In the days long gone by, when as yet human affairs were in a state of torpid inactivity, men were quite content to live and die within the little circle of their daily life, a circle in which they played an important rôle; and so, whether they lived in seclusion and retirement or not, it had little or no effect on their national interests. But now that civilization is pressing to the front with giant strides, each moment is of importance, and ignorance of others is an inexcusable fault. The talented should endeavor to make their talents appreciated; the wise should use their wisdom for the public weal. In a word, men must strive to make themselves known before others chance to find them out. For, unfortunately many of the readers of foreign books of science in their translations only can never,—inexperienced and undeveloped as they are,—hope to make their names echo in the halls of Fame. The way to become famous is to strike out a new path for oneself, and not be content to follow in the tracks of others.

Since the opening of this country, Japan has been constantly adopting the civilization of the Occident, from steamers and telegraphic lines to such abstract matters as politics, literature, art, and science. In only twenty years time Japan has swept off all the dust of antiquity and antiquated fashions with the brisk broom of European civilization. Not one of our foreign imports but what has added to and increased our knowledge of foreign lands. The students of Western jurisprudence have seen that the love of justice is characteristic of the European; the disciples of moral philosophy have learned to appreciate the exactness of European logic; the students of mechanical science have been astounded at the marvellous adroitness of European mechanics. The more we learn of Europe the dearer do her countries become to our hearts, and this feeling is the true key to the maintenance of intimate relations. But foreigners are far from knowing us as we know them; as they are not really acquainted with this people, they feel no desire to respect them. And hence the contemptuous disregard for Japan which is so often apparent. The actions of a man show the true bent of his mind. Aliens despise us and treat us with contempt. Still, it is not judicious to angrily decry this spirit, before we have learnt the reason of its existence. Foreigners are

* Confucian Analects, Chap. XVI.—The Master said, "I will not be afflicted at men's not knowing me; I will be afflicted that I do not know men."

arrogant, it is true, but their arrogance will not continue to all eternity; they despise us because they know little or nothing of us, and it is thus our imperative duty to make ourselves known to them. It is the experience of many of those who have visited foreign lands that most people outside of Japan confound the Japanese with the Chinese, and are even not familiar with the whereabouts of this country. This seems strange enough, but it is a fact, nevertheless. Japan is a small island in the East; and though the foreigners which visit these shores are not few, and many officials, students, and merchants of this country have visited western lands, these facts hardly do more than introduce the name of Japan to European nations. For if we count all our people together, their number is limited in comparison with the countless millions of foreigners, and their mixing with other aliens is but a drop of information in an ocean of ignorant indifference. Our intercourse with foreign lands, intimate as it may seem to the people of this country, is but a passing event of minor importance in the eyes of Western Powers. It is natural enough that they should know little or nothing of us, and we must, therefore, adopt some way in order to being ourselves prominently before them. We belong to the great comity of civilized nations, and so soon as Europe knows us she will not withhold her respect.

And yet, the tide of national advance in Japan is at low ebb. The active revival of Chinese scholarship and learning has been a cause of anxiety to not a few of our people. But we are utterly indifferent to it, for the very nature of true civilization negatives the existence of such doctrines in these enlightened days. Confucius divided the human family into two great classes:—superior men (*kun-shi*), and inferior men (*shō-gun*), the former comprising those who act according to the moral standard, the latter, those who live but for the sake of self-profit; and so the Chinese sage declared that acquaintance or intimate relations should not exist between the two classes. This injunction, as well as the distinction implied, is certain to be the cause of mischief, and history is not wanting in examples which amply prove the baneful results of an implicit belief in this absurd principle. But the Confucianists would be quite content were all our countrymen to speak and act as did Confucius and Mencius.

In these times of enlightenment, however, our people must enlarge the circle of their intercourse as far as possible; they must act for the benefit of the whole community, and, for the present, include themselves in the category of so-called "inferior men." Should foreign residence in the interior be, once for all, permitted,—and this event is certain to ensue in no long time—the "inferior men" of western lands would crowd into this small island:—now those of England, then those of France, and so forth. The "inferior men" of all nationalities will then be able to occupy land in the interior as they please. Is it possible in such a moment to refuse to hold communication with the "inferior men" of foreign lands and to hold ourselves aloof in a self-sufficient spirit? The Confucianist, however much he may detest these alien profit-seekers, cannot stem the mighty tidal-wave of civilization. We ought and must compete with these foreign "inferior men." In the course of a few years, the Confucian ideal of Japan will be brought into active communication with "inferior men," but we congratulate this country in advance upon such an event,—in the interest of true civilization.

So much for the falsity of Chinese doctrines. Yet one spot which they have printed on the heart of the Japanese people is left untouched. We refer to that spirit of polite conservatism which is an obstacle to the national progress. Should our people adhere to the old worn-out principle of national seclusion amidst the ever-increasing complexity of human affairs, the tide of civilization will sweep past us, never to be overtaken. The true ideal of civilization is forever unattainable until we know as we are known.

THE BALANCE OF JAPANESE TRADE WITH AMERICA.

(Translated from the *Fiji Shimpō*).

America is our neighbour for her westernmost coast is opposite to our eastern shores. The Pacific Ocean, vast as it is, can be crossed in half a month by steamers; and it may not be a vain hope that, as science progresses, the duration of the voyage between the two countries will be reduced to ten days, or even a week. Should the Panama Canal be completed in 1888, Japan's trade with America will receive an extraordinary impetus; and the never-ending clouds of smoke pouring from the funnels of countless steamers, added to the constant shadows of the huge white sails thrown ever and anon on the surface of this vast ocean, will add one more glorious feature to the panorama of sublunary civilization. The communication between the two nations is constantly increasing, as are our hopes for its future.

In reviewing the Japanese foreign trade of 1882, we see that the total exports amounted to 27,230,000 *yen*, America's share of which reached the respectable figure of 14,250,000 *yen*. It will thus be seen that six-tenths of the total exports from Japan are destined for the American market. Now silk is the most valuable item in our exports, yielding an annual revenue of 19,000,000 *yen*; and tea comes next, which brings in about 7,000,000 *yen* every year. These two articles contribute mainly towards the wealth and strength of this country. But America annually consumes 6,370,000 *yen* of our silk and 6,910,000 *yen* of our tea, and this fact alone more than establishes the vital importance of Japan's trade with America. The United States form a great and prosperous nation, and although their population does not exceed 50,000,000, the industrial activity of the inhabitants has brought the country into the first rank of the nations of the world; nor is it behind England in financial power; nor does it yield an inch to any European country in point of commerce. If the America of to-day be in so prosperous a condition, there can be no doubt but that, as time rolls on, her wealth and influence will increase with enormous rapidity, so that there is really no saying what an affluent and influential position she may hold at the end of the next two decades. The evidence of such rapid progress is as clear as can be. The export of silk to America is increasing year by year; the sole cause for apprehension being that the supply will fall short in future. As to tea, despite a lively demand for other articles, a decline is distinctly noticeable; yet the reason of this decline is not due to decreased consumption of the article, but rather to the poor quality manufactured in this country for the sake of a trifling temporary profit, and this defect of manufacture has produced an unfavourable impression upon American buyers. Should Japanese producers take proper care to encourage the excellence of this staple, and appeal to the taste of the buyers by treating them with the utmost fairness, it would be a by no means difficult task to increase the present demand for tea ten-fold. In a word, our general produce, outside of silk and tea, does not fall short in any particular of being in active demand in America. From the manufactured lacquer-ware, porcelain, paper, and *shoyu*, to the crude produce of copper, sulphur, and coal, there are unlimited stores of goods which will tend to enlarge Japan's future trade with America.

Turning to the import trade of Japan for the same year, we find that America's share of the whole, 29,160,000 *yen*, amounts only to 3,100,000, or about one-fifth of the goods exported from this country to the United States. And of this sum, 2,320,000 *yen* represents the value of the kerosene we import; so that we can justly state that our import trade with America consists of kerosene and nothing else. This does not augur well, at all events. Japan has a population of say 37,000,000,

who are not so very idle as to waste the night in sleep alone, and we may rest assured that the demand for kerosene will, as a matter of course, increase many fold. But, when we take the future into consideration, and remember that the oil-lamp is already superseded by gas, and that gas itself is threatened with the electric light, we require something more stable on which to place our hopes. Except, perhaps, in the remotest villages, all of the larger towns will soon be illuminated by gas or electricity. Progress demands that the customs of olden time should fade away before the inventions of the present, and this regeneration is rapidly going on in Japan. Therefore, as we earnestly desire to see the trade between Japan and America materially increased, we do not wish our American import trade to be restricted to kerosene, but we sincerely hope that the description and nature of the imports will be enlarged, so that there will be a practical equilibrium of trade between the two countries. In good truth, our demand for butter, condensed milk, salted meats, leather, hides, rope, wheat-flour, and timber—the principal articles of American agricultural export, as well as for all kinds of machinery, iron-ware, watches, and rifles, will be rapidly and greatly increased in the course of the next few years; but what we expect from the American people is not limited to these miscellaneous imports. Should they pay greater attention to the wants of this country and export wools, yarns, cotton-goods, and others of like description, it would not be a difficult matter for them to supply the demands of our thirty-seven million inhabitants. If the people of the United States have the least intention to increase their trade with this country, they will certainly export their produce to Japan in greater quantities and of better and more universally useful quality, and not be content with sending us but 3,000,000 *yen* of miscellaneous articles in return for the 14,000,000 *yen* which they import from Japan.

TRADE IN KOREA.

(Translated from the *Bukka Shimpō*.)

The Consular Trade Report from Ginsen, Korea, as published in a recent number of the *Kwampō*, says:—"The total amount of exports from this port for November, 1883, was 16,342.40 *yen*; of imports, 168,600.38 *yen*, giving an excess of 152,257.98 *yen* over the exports. As trade in this country is rarely carried on in specie, but is mostly the outcome of barter in exports and imports, the above-mentioned amount of exports represents the actual transactions done in imported goods, while other goods worth 152,257.98 *yen* remained unsold, and were kept over till December. The exports for the month of December reached 36,673.20 *yen*, as against imports amounting to 48,369.29 *yen*, showing again an excess of the latter over the former of 11,696 *yen*, which sum, added to that of the preceding month gives a total of 163,155.06 *yen*. And this total represents the value of the goods accumulated at the end of December, 1883. The depressed condition of trade at this port needs no further explanation." The same report says further:—"Copper, lead, and shirtings, the most important articles in the import trade, have already given signs of a future decline; shirtings, in especial, being no longer in the hands of our merchants. The import of copper is destined to fall off rapidly, as this metal has only been used in minting the new coins. But should the trade in copper and lead cease, our merchants would be utterly without employment. Should this unpleasant state of affairs come about, our merchants would fail to reap any profit whatever, despite the fact that we were the first in starting the foreign trade of Korea. It is most important that some means should at once be devised, whereby our merchants may be enabled to maintain their trade with the Koreans in perpetuity. And the maintenance of trade with Korea cannot

be effected otherwise than by giving the initiative to a demand for articles other than copper, lead, and shirtings."

Although the above remarks are taken from the important parts of the Consular Report on the trade of Ginsen alone, they enable us to gain a fair idea of the state of trade not merely in Ginsen or Pusan, but in all the Korean ports. We stated, some time ago, that our trade with Korea would not yield us great profits commercially, but would be rather of a diplomatic value. Last year, trade depression was not restricted to Korea, but was felt by the whole world; but where barter takes the place of specie payments, where commodities of other than one or two kinds never find a market, where commerce is in a state of steady decline, where the settlers are like shipwrecked people cast away upon some lonely island, anxiously awaiting the sight of some passing vessel to rescue them,—it needs no lively imagination to picture their sufferings. Were there the golden hope of a future improvement in commerce, they might endure the present misery without murmuring; but the stagnant trade is on the verge of total cessation, and there is no hope of future amelioration. It is, of course, in these days most important to assist our Korean trade, and we must, to that end, awaken a demand for other goods outside of copper, lead, and shirtings. But how can this be effected? Certainly not by folding our hands and bemoaning the stagnation of commerce. A radical change in the customs, requirements, and present commercial system of the Koreans is absolutely indispensable. To make our meaning clearer, we shall refer to the Korean trade of 1882. The total imports of the two ports of Pusan and Ginsen amounted, in that year, to 1,773,379 *yen*; 1,587,682 *yen* being the value of the goods imported from European and other foreign countries, the remaining 185,697 *yen* being the whole value of the Japanese imports. This was due solely to the reason of the demand in Korea being for articles other than those produced in this country. The total exports were 1,202,475 *yen*. But then these sums were obtained simply because our merchants were then the sole licensed vendors of foreign goods. Now that English, American, and other foreign firms are themselves opening establishments in the interior, our agencies yield us no profit whatever. And so our merchants will have to relinquish all their former ideas and go to work on a totally different plan.

This new plan will be a very keystone to the maintenance of our Korean trade, and may, perchance, alter the customs and fancies of the Koreans, thereby opening up a new channel for the export of our produce. And yet this is by no means an easy task. Korea exports her own productions not for the sake of the development of her national industries, but in order to defray the cost of the imported goods she consumes. Our object may, therefore, be obtainable only when Korea has grown eager to develop her national resources. Just at present, there is nothing to justify us in looking for any over great amount of gold-dust, cereals, hides, and the like. We cannot, in sober truth, discover anything in Korean trade which promises to yield our merchants a golden harvest. It remains to be seen how England, America, and China will proceed with regard to their trade with Korea.

The Imperial Household Department has ordered a large number of porcelain flower-vases, of excellent workmanship, from Kiyoto. These vases will be presented to foreign dignitaries on occasions of their having an audience with H.I.M. the Mikado. The same Department is making arrangements for a great exhibition of fencing, to which all the swordsmen in the country will be invited. H.I.M. the Mikado will be present.

More than 400 cases of compromise were filed at the Yokohama *Saibansho* on the last day of March.—*Mainichi Shimbun*.

IN THE MINISTERIAL COURT OF THE
UNITED STATES OF AMERICA
IN JAPAN.

Before the Honorable JOHN A. BINGHAM, Envoy
Extraordinary and Minister Plenipotentiary.

THURSDAY, 3rd April, 1884.

THOMAS B. VAN BUREN V. THOMAS H. TRIPLER.
SLANDER.—\$5,000 DAMAGES.

General Van Buren conducted his own case.

Mr. Weiller appeared for the defendant.

The plaintiff waived his right to open the case, to save time, and agreed that the Counsel for the defendant should plead first and he should reply to their arguments. The evidence taken at the last session was then read and filed on the record of the Court. The letter from defendant to the Department of State was placed on the file, not as evidence, but as part of the record of the Court.

The Court remarked that it had allowed the letter to be filed, but it could not be received as evidence for the reasons previously stated. It appeared to have been sent in good faith to the Department of State and therefore was privileged. It had been referred to a subordinate officer to see whether anything ought to be done about it, this was a matter for the Department of State. His Honour considered the letter in the first place privileged, in the second irrelevant, in the third case if it were admissible it would be evidence in chief, and therefore could not be admitted as the case was closed, and lastly it could only be admitted by way of rebuttal or impeachment. The objection was therefore sustained, and the plaintiff's exception noted.

Mr. Weiller, for the defendant, said that no doubt the Court would agree with him that before it decided the case there were four points to be considered. First, were the words alleged in the petition uttered by the defendant of and concerning the plaintiff. Secondly, if the said words were uttered by the defendant, were they slanderous and had they injured the plaintiff in his office. Thirdly, was the utterance if made privileged, and fourthly was the utterance if made justifiable. As to the first point, he would briefly call the attention of the Court to the discrepancies in the evidence. Mr. Pritchard had undoubtedly given conscientious testimony, but the said evidence, besides being contradicted by the defendant, was not corroborated by the plaintiff's other witnesses. Mr. Pritchard had said that Messrs. Beato and Walker, besides numerous others, who were in or had gone through the hall overheard it. Mr. Walker did not remember hearing the defendant speaking of the plaintiff between the hours of 5 and 7 when Mr. Pritchard said the conversation took place, but he heard a similar conversation after dinner about 9 o'clock. Mr. Beato could not remember the defendant saying all that Mr. Pritchard said, and further he said the conversation took place on the opposite side of the hall. The defendant had most positively denied using the words alleged. It was in evidence that at the election most of the members of the Club were excited and that the candidates for Presidency were more or less abused. His Honour knew that under such circumstances all the items of a conversation could not be correctly remembered. Mr. Pritchard had drawn one inference as to what Government was meant, might be not have drawn another inference as to whether the word swindled was used, at any rate it was admitted that considerable excitement prevailed. There was a distinct difference between the main witness for the plaintiff and that for the defendant, and as neither had been impeached each was of equal value, and the term swindler as stated by Mr. Pritchard had not been corroborated. Although Mr. Rossettsu said that the defendant had used the expression "swindle on the Government," it was a privileged communication, he being in the defendant's employ and he (the

counsel) thought that evidence ought to be struck out. The question was, if the words already quoted were uttered, did they amount to a slander? To justify a verdict for the plaintiff, it must appear that such act was imputed to the defendant, and that such an act was of a criminal and indictable nature, and cited Folkard's Starkie on Law of Libel, page 120. Even if the defendant had used the words alleged, these words were connected with a certain line of facts. It might be unlawful for the plaintiff to buy the buildings, but it was not a criminal offence, and therefore the words if used could not be slanderous. He might call a man a thief, and say that he had stolen something, but if the article that was stolen was not subject to larceny it would not be a slander. As to the third point, that of privilege, the counsel insisted that what passed between Mr. Pritchard and defendant was privileged as a communication from one member of the Club to another. Defendant had only made the statement after Mr. Pritchard had remonstrated with him, saying that he was doing himself an injury in trying to persuade members not to vote for General Van Buren, and was making himself inimical. It was then that the defendant in a private and privileged communication said that the plaintiff had wrongfully purchased the buildings, and he (the counsel) held that he had a perfect right to use any knowledge he had to defeat the plaintiff. Again, it was a privileged communication as between one American citizen and another, and he had yet to learn that any officer in the United States service was so high, so great, and so almighty, that his actions were not open to be criticized by any American citizen, no matter how poor or lowly he might be. Mr. Weiller cited the following authorities on privileged communications:—Bouvier's vol. II., page 375, and Starkie on Libel and Slander, page 526, which read: "A privileged communication was one made *bona fide* upon any subject matter in which the party communicating has an interest, or in reference to which he has a duty. If made to a person having a corresponding interest or duty, although it contain criminating matter, without this privilege, it would be slanderous." The counsel also quoted Cooley on Torts, page 210. Continuing, he said that the defendant had received certain information as to the purchase of the buildings by the plaintiff in his capacity as Consul General. He had also received information that the price paid for them was small and the rent charged excessive. He understood that the plaintiff stood in the position of an agent of the United States Government and therefore any benefit that might accrue ought to go to the Government. Whether the inference he drew was right or wrong did not matter, he had a right to state what he had heard. He had written the letter to the Department of State and said he had done so, and had a perfect right to comment upon what he had written. As to the fourth point, namely, justification, it was shown that before the defendant made any utterance he had taken care to find out what he supposed were the facts. That information was used in his letter, and upon it he did some of the things alleged by plaintiff. The counsel alluded to the plaintiff's strange conduct in saying he had nothing to conceal, but when the documents were called for he objected to produce them as "it would take a train of cars to bring them up to Tokiyo." It was only when ordered by the Court that he had produced them. The plaintiff had not missed a point in the case, and had laid his finger on every weak spot of the defence. He had tried in every way to evade handing the documents in. He said the Japanese Government would not like it known what price they had sold the buildings for, although his own witness said that he had permission from the Kencho to tell all about the transfer, and the ex-Governor of Kanagawa had written to say that the whole of the documents referring to the transaction would be found in the Kencho archives. Lastly he said that the United States Government might not like

it known what rent they paid for the buildings, although the expenses of the Consulates were open to any American citizen to examine at the Department of State in Washington. There was a rule of law that, if any material evidence be suppressed, it was *suppressio veri, expressio falsi*, that was to say that the suppression amounted to a falsehood. The letter to the Department of State from plaintiff was not disingenuous. It did not explain to the Department that the lot was in a part of Yokohama that no American citizen was allowed to hold private property in. It also did not mention the price to be paid for the buildings. In the first communication the price mentioned was \$5,000 or \$6,000 for the jail alone, and that was only one sixth of the area. Had the Department known that the purchase price amounted to little more than one year's rent, it might have changed its mind. This knowledge coming to the ears of a third party, what inference might he not draw? Counsel cited Starkie on Slander, page 42:—"In the next place it seems to be clear that a party who acquires an advantage by concealing the truth, which he could not have attained to had he divulged it, is so far guilty of fraud in the concealment that he cannot upon any principle, claim a right to acquire that benefit and therefore cannot complain that he is injured by a publication of the truth." There was one thing he (counsel) had tried to understand and failed. That was how the plaintiff divided himself between being Consul-General and a private citizen. The title deeds were drawn as Consul General, the ground rent notices were sent to the Consul General, and the plaintiff signed the cheque as a private citizen. There were only a few more words he had to say in the matter, if the Court should find that the defendant had a plausible reason to believe what he had stated was true, the Court could not give the case against him; it was not necessary for the defendant to prove the truth of the statements. In confirmation of which he quoted the *Albany Law Journal*, vol. 28, page 433. Counsel claimed that defendant had offered sufficient proof to show that he was justified in holding the opinion that plaintiff's action had been wrong and unlawful, and even if he had drawn a false inference from the facts within his knowledge, it was done *bona fide* and without malice, and therefore he had not perpetrated a slander on the plaintiff.

Mr. Litchfield said that, after the exhaustive speech of Mr. Weiller, he had only a few remarks to make. The question arose as to whether the defendant was legally liable or not for damages. He did not propose to enquire whether the words were uttered or not, but what was the defendant's legal liability if they were so uttered. The plaintiff had claimed \$5,000, and no evidence had been produced to show that he had suffered anything. Of course it was well-known that juries have given heavy damages to soothe the very highly sensitive feelings of some people, but he thought it had never been done in the case of a high official; a man in the position of the plaintiff could afford to despise comments. Some evidence must be produced to show that damage had been sustained; no such evidence had been produced. Even if the Court ruled that the defendant was not justified, the damages must be merely nominal. As to the charge itself, the words uttered by a person, in order to render the person liable, must be false and maliciously uttered, the person knowing them to be false and the occasion not justifying them. There was no end to the comments that might be made about the actions of a public officer. On the occasion in question there was an election for the President of the Club and he brought up this point to show that if the words were uttered it was on a justifiable occasion, and they were free from malice. Mr. Pritchard and Dr. Tripler had a conversation on the 31st December last, and, some remarks being made about the election, Mr. Pritchard asked the defendant why he worked against the General, having at previous elections worked for him. He

also said that the defendant was doing himself no good. Dr. Tripler then stated his reasons, which were the words complained of. They were therefore uttered on a justifiable occasion as comments upon a public man to a person interested in the subject matter of the conversation. The case was a similar to a character given to a servant, which although it might be injurious to him, had been held to be justifiable. It had been held, and rightly so, that a man should be allowed to speak his mind freely in the interests of society. That being so it now remained to consider the bearing of the words used. The defendant had taken pains to get the best information in his power, he was entitled to procure that information, if he thought that it would interest him as was the case in connection with the acts of a public servant. If defendant made a wrong deduction he was not responsible, and should not be made to suffer either in pocket or otherwise. Drawing a false impression was not sufficient to criminate a man; it must be false and malicious. No man would seriously say that using the words "swindling the Government" as a phrase was a criminal offence. It would be as bad as saying that a man stole an umbrella or that he exchanged a dude-like silk for a gamp. Shortly before the words were supposed to have been uttered, the phrase "who stole the library" was quite common, and if there had been a sufficiently unscrupulous lawyer in Yokohama at the time there might have been sufficient actions for slander to keep all the Courts fully employed from that time till the country was thrown open, if such an event ever occurred. He referred the Court to Starkie on Slander, page 276, and 1st Law Report, Queen's Bench, page 699, to show that comments might be made upon anyone holding a public office on any fitting occasion, and especially when made to a person interested in the matters in hand. Upon these grounds he argued that the comments were justifiable. There had been no evidence of malice in fact, and he asked the Court to dismiss the petition with costs.

Plaintiff, in addressing the Court, said that he had been very strongly inclined to submit the case to his Honour without a word, and would have done so had the defendant's counsel done likewise. He was so convinced that the complaint had been proved and the defence had lamentably failed, that he was at a loss as to what point to address himself. He would, however, proceed to break down the flimsy barricade and tear aside the curtain from behind which they had fired their shots. He thought that his Honour in common with all who had read the case could not have failed to observe the pitiable exhibition that the defendant had made of himself in this matter. They had been old friends and the defendant had been a constant guest at his table. They had a trifling dispute which had been submitted to arbitration and settled. From that moment defendant became his active and malignant foe. He heard of him all over Yokohama abusing him and using outrageous threats and accusations. After a time, finding that he (the plaintiff) did not take any notice, he became emboldened, and, losing all discretion, employed an attorney to enquire into his private affairs. From a common defamer he blazed all at once into a flaming patriot, and boldly charged the Consul General of his own country with a violation of law and with swindling the Government. To use his own choice language, he boasted before admiring crowds that he would smash him into a thousand pieces. All this went swimmingly, and the blazing patriot was all right till the strong arm of the law seized him by the throat. Then he whined out that he did not say all these naughty things, but only wrote a nice letter. He swore in the Court that he did not make the statements, or any one of them, and tries to justify himself. Then, as the minstrels observed, the "trouble begins." Then an amusing scene occurred, almost without parallel.

Defendant's Counsel both made frantic endeavours to draft a plea, however, the effort was not successful and an adjournment had to be made.

At this point the plaintiff was interrupted by the barking of a dog in the Court. His Honour ruled the dog out of order, and it was ejected. The plaintiff remarked that he was unaware that he had three counsel against him.

Plaintiff, resuming, said that at the next meeting the defendants counsel came in triumphant with an answer in which he (the defendant) said he did not make any of those statements, and in the next paragraph said he had uttered most of them and could justify them. He respectfully wished to say that the law did not allow oaths to be trifled with in that manner. Perjury in a document was just as foul as when given from the witness-box. The plaintiff wished to remind His Honour of the appearance of the defendant whilst on the stand. A more forgetful, a more wandering, or a more completely demoralized witness he had never seen in his life. He remembered nothing, and when his own answer was placed in his hands it became as unmeaning as Sanscrit. When asked did he make the statements in the answer, he asked what statements, and the Court had to ask him could he not read, and called him to order. This blazing patriot was a very different man when in the United States Court to what he was in the atmosphere of the Y.U. Club. Here this modern Cicero stood a trembling and convicted slanderer. Referring to the issues, the plaintiff said that the defendant was charged with uttering certain false and malicious statements concerning the plaintiff, viz.:—that the Consul-General had improperly purchased certain buildings and swindled the United States Government. That this statement had been made before many people, some of them strangers, was proved beyond doubt by Mr. Pritchard's evidence who gave the exact language as he had previously detailed it to him. The second witness, Mr. Beato, did not give the exact words, but added that the defendant had, two months before, said that plaintiff had swindled the Government. Mr. Rossettsu, a witness for the defendant, also said that he had used the words "swindle on the Government." The defendant pleaded that these words were privileged; he would remark that he had learnt more about privilege during this case than he had ever known before. Mr. Rossettsu said he was employed by Mr. Weiller, and when the defendant thanked him for his information he said he did not know that he had been getting it for him. The defence set up was that he did say that the plaintiff had unlawfully made the purchase, and that it was true. Now the defendant had not proved anything about it. There was not a word in the proceedings to show that it was unlawful. The only evidence on the subject of the purchase was what the Court had compelled him to bring into Court and hand to the defendant. He renewed his contention that this evidence was improper, and ought to be struck out of the record. The gravamen of the charge was that he had purchased the buildings as an official and had deceived both the Japanese authorities and the United States Government. It would have been a swindle had he made the slightest attempt to tamper with the rights of his office. But it had been proved by the defendant's own witness, Mr. Osborne, that it was conveyed to him as an individual and that it was a private transaction and the price paid was the price asked. He submitted that that should have ended the evidence, and the defendant should have been estopped from producing evidence to the contrary. The Court had ordered him, on the motion of the defendant, to produce his private papers about his private business, and he thought it was a piece of impertinence on the part of the defendant. Moreover, he had been obliged to state the price that he had paid for the buildings, and he did see how that affected the case.

The Court said it had explained this point before. The United States Government were the original lessees, and it went in mitigation of damages. Plaintiff remarked that he did not see how it could help them. As to the letter from defendant to the Department of State, an objection had been raised by the defendant's counsel to its being put in, on the ground that the case was closed and that it was too late. This was a matter in the discretion of the Court and the Court, had ruled adversely to him. He had endeavoured to prove to the Court that all he could prove in chief was simply the speaking of the words, and he could not at that time bring the letter in. It was material for the Court to know what statements the Department of State were replying to. As to the question of privilege, he would like to know to whom it applied; if to the defendant, he submitted that he had repeatedly waived it. In the first place the defendant had made no objection on those grounds to its introduction.

Secondly he waived it by putting the most of it into his first answer; and thirdly he had entirely waived it when he put in the letter from the defendant to the Department. If it were privileged by the Government, the privilege was violated by the defendant. He was compelled to produce the Department's correspondence, and he contended that if one part of the correspondence was introduced they were bound to admit the other. He then quoted Greenleaf, vol. 1., sec. 201:—"Where one party produces the letter of another, purporting to be in reply to a previous letter from himself, he is bound to call for and put in the letter to which it was an answer as part of his own evidence." He argued that no one letter could be produced and the others left out. It was not within legal rights that one man could bring in a letter and the other not be allowed to put in the reply. His papers had been brought in and had established the fact that he had the temerity to purchase some buildings in Yokohama without the permission of T. H. Tripler, M.D., and that after he had purchased them he had rented them without the permission of T. H. Tripler, M.D. Who this gentleman was the Court had not allowed him to show out of his own mouth. But sufficient had been shown to establish the fact that his opinion on any subject could not be of much use. "He who touches pitch," etc. He was free to confess that where they were both known, the defendant could do him no damage, but when he spoke before strangers and threatened to publish them at home he appealed to the laws of his country. The plaintiff cited from Kent as follows:—"However contemptible the slanderer, however illiterate, mendacious, ignorant, and revengeful, the just and righteous law says the slandered shall be protected." If the evidence did not establish the fact of utterance, no comment of his would do so. Two witnesses for the plaintiff and one for the defendant had given their evidence. As to Mr. Walker's want of memory, he could only say that he remembered a great deal more before he came into Court. As to the contention of the defendant that to make a case actionable a criminal offence must have been imputed, he cited Folkard's Starkie, pages 112 and 119; also 2 Kent, page 16. Now came the question of the defendant claiming privilege because the words were uttered in the Club on the eve of an election. He failed to see how the defendant could so plead as he had thereby not only tried to prejudice him in his office, but had also tried to injure him socially. He was as mild as a lamb on the stand, not the belligerent foe. He said he only wanted to defeat the plaintiff, as he was inimical to making it a member's club. That was his only reason. Where did the privilege come in to make use of the words he did. He contended that it amounted to a criminal offence, but whether or not he had proved that the words were actionable, in support of which he quoted Folkard's Starkie page 293. As to malice, the authorities stated that it was inferrable where the words themselves were actionable. The learned counsel for the defendant had dwelt at some length on the point that the defendant had heard these statements and drew certain inferences for which he was not responsible. When a man repeated something that he had heard, and believed it true, it was different to when he employed another to ferret out matters that proved to be wrong. Could anybody believe the defendant was not influenced by malice. He had never spoken to the plaintiff about the matter: if he had he would have been told all about it. It was all above board. Plaintiff had told it to everybody. His friend Mr. Weiller knew all about it. He had told everyone who had come to the Consulate. The defendant had failed to show that there had been any impropriety in his actions. There had been no law violated. The Department of State had sanctioned the transaction and put its seal on it. It was a matter solely between the Japanese Government and himself. As to the price, it did not matter if he paid five or five thousand dollars for it. If he had thought there was any impropriety in the transaction, he would as soon have handled a black snake. He did not think that there was any impropriety then, and he did not think so now. Regarding his paying the ground rent by a private cheque, he did so as he had before stated so as to simplify the vouchers. The Department was satisfied. He had not been injured very much by defendant's words, but the law said that a slanderer was not only liable for actual damage, but such damage as the judge or jury might see fit. He wished the defendant to know that there were some things a United States citizen might not do, and one was he could not take away a man's character in the way defendant had tried to do his.

Both parties having agreed that the Court should send copies of the Judgment to them without their going to Tokiyo, subject to exceptions the case concluded, His Honour remarking that he would deliver Judgment in due course.

[FROM THE "NORTH CHINA DAILY NEWS."]

(THROUGH CHINESE SOURCES).

Haiphong, 20th March, 4 p.m.

On the 12th instant, the French commenced their attack on Bacninh, whereupon Liu Jung-fu, the Black Flag Chief, carrying with him all his Black Flag and Chinese soldiers, evacuated the place and fled to Chên-nan Kuan. The French Commander, suspecting that there might be a trap set for his troops, kept them at a considerable distance from the Citadel and sent a few scouts on ahead to reconnoitre. These men, on their return, reported that there were large supplies of arms and provisions, whereupon the Commander appointed a party to go into the city and bring them out.

On the 15th, at 9 p.m., Liu Jung-fu attacked the French on two flanks, when each Black Flag soldier proved himself the equal of ten Frenchmen, and a heavy slaughter of the invaders was the result, in which the leader of the French was killed.

London, 24th March.

Sir Robert Peel, the Conservative Candidate, has been elected by a narrow majority as Member for Huntingdon.

THE POPE LEAVING ROME.

The Cardinals will consider the expediency of the Pope leaving Rome.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 6.45, 8.00, 8.50,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 6.45, 8.00, 9.15,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-SHINMACHI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and SHINMACHI at 7 and 11.30 a.m. and 4 p.m.

The Fares are:—Special-class (Separate Compartment), yen 3.00; First-class, yen 1.78; Third-class, sen 89.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.30, 2.30, and 4.30 p.m.; and leave Yokosuka at 6.40 and 9.45 a.m., and 12 m. and 1.45 and 4.15 p.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, MARCH 28TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
Dotted line—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 38.2 miles per hour on Wednesday at 4 p.m.

The highest reading of the barometer for the week was 30.303 inches on Thursday at 9.27 p.m., and the lowest was 29.411 inches on Tuesday at 11 p.m.

The highest temperature for the week was 54.8 on Sunday, and the lowest was 29.7 on Thursday. The maximum and the minimum for the corresponding week of last year were 61.0 and 25.5 respectively.

The total amount of rain for the week was 1.809 inches, against 1.152 inches for the corresponding week of last year.

NOTES FROM JAPANESE PAPERS.

Professor Gottsche, who has resigned his appointment in the Department of Science, has been presented by the Daigaku with a pair of copper flower-vases, as an acknowledgement of his valuable services whilst in the University.

Noto is a mountainous district inhabited by numbers of deer and wild boars, and, especially about Haguigori, the whole country swarms with game, owing to so few hunters having visited the place of late years. Towards the beginning of the warm season, the deer and boars wander out into the fields and do much injury to the crops; but during last winter more than 300 head were killed, so that the farmers in the vicinity can look forward to a better summer.

Silk is one of the chief productions in Akita Prefecture. In Okatsugori alone the annual silk output weighs some 5,400 *kwamme* (over 45,000 lbs). Some time since the silk-producers engaged a skilled instructors to aid them in improving the quality of the silk, which had grown very coarse, so that silk produced this year on the new system has fetched 70 *sen* in advance of other silks, per 100 *kwamme*.—*Kwampo*.

In reply to a question brought forward by the Court of First Instance in Yamagata, the Judicial Department decided that the sending of defamatory and insulting letters to officials was criminal, and should be dealt with under Article CXLI. of the Penal Code. This decision was based on the argument that the writing is the transcription of an expressed sentiment, and that the sending of defamatory letters amounts, in fine, to making verbal use of the obnoxious expressions in the presence of the defamed party.—*Choya Shimbun*.

During 1883, thirteen foreigners had audiences with H.I.M. the Mikado.

The last section of the Ueno-Takasaki line of the Nippon Railway Company will be completed on the 15th inst. The opening of the new line will be celebrated on the 18th inst., when H.I.M. the Mikado will go to Takasaki by the first train.

Admiral Yenomoto, Minister to China, who is at present in this country, will return to his post about the middle of this month.

The Tea Exporting Company, which was established by Mr. Fukuda and others in Miye Prefecture, has opened a branch office at Kobe.—*Fiji Shimpô*.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Tamaura Maru*, from Oginohama:—12 Japanese.

Per Japanese steamer *Tsuruga Maru*, from Kobe:—42 Japanese.

Per Japanese steamer *Niigata Maru*, from Hakodate via Oginohama:—Messrs. Aritake, Mayebara, Ishikawa, Sugawa, Yamakawa, and Misawa in cabin; and 82 Japanese in steerage.

Per British steamer *Oceanic*, from San Francisco:—Mr. and Mrs. A. Rottmann, Messrs. J. Mayers, H. M. Kersey, Thomas McGrath, P. Schlichter, and Frank W. Harrell, M.D. in cabin; and 6 Japanese in steerage. For Hongkong: Messrs. J. A. Wilson and A. Robinson in cabin; and 200 Chinese in steerage.

Per Japanese steamer *Hiogo Maru*, from Kobe:—Messrs. Schniten and son, Pojarsky, Chamberlain, Watanabe, Yoshizaki, Hirai, and 106 Japanese in steerage.

Per Japanese steamer *Kairio Maru*, from Kobe:—48 Japanese.

Per Japanese steamer *Saikai Maru*, from Toba:—25 Japanese.

Per German steamer *Lydia*, from Kobe:—12 Japanese in steerage.

Per French steamer *Mensaleh*, from Hongkong:—Madame Blat, Messrs. P. Grillo Garberoglio and Pustau in cabin.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—68 Japanese.

Per Japanese steamer *Totomi Maru*, from Hakodate:—63 Japanese.

Per Japanese steamer *Seisho Maru*, from Kobe:—18 Japanese.

Per Japanese steamer *Yoshino Maru*, from Kobe:—48 Japanese.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—82 Japanese.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Mr. and Mrs. Simpson and 2 children, Mr. and Mrs. Cutter, Miss Lena Cobden, Mr. W. H. Morse and servant, Mr. A. P. Adams and servant, Mr. Kawada Koichiro and servant, Messrs. John Walker, Duncan Glass, G. S. Piper, D. S. MacPhee, G. Prat, H. Blum, M. Mariaus, W. Alexander, R. H. Adams, Yoshikawa, Tsuge, Saijo, and Ota in cabin; and 2 Europeans, 11 Chinese, and 188 Japanese in steerage.

Per Japanese steamer *Onoura Maru*, from Fukuda:—19 Japanese.

Per Japanese steamer *Uke Maru*, from Shimidzu:—28 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—78 Japanese.

Per Japanese steamer *Tsuruga Maru*, from Kobe:—34 Japanese.

Per Japanese steamer *Kowyeiki Maru*, from Handa:—46 Japanese.

Per Japanese steamer *Okame Maru*, from Toba:—28 Japanese.

Per Japanese steamer *Sekirio Maru*, from Hakodate:—56 Japanese.

DEPARTED.

Per Japanese steamer *Sekirio Maru*, for Oginohama:—Mr. Y. Kawamura in cabin; and 25 Japanese in steerage.

Per Japanese steamer *Tsuruga Maru*, for Kobe:—20 Japanese.

Per British steamer *Oceanic*, for Hongkong:—Messrs. J. A. Wilson, and A. Robinson in cabin; and 200 Chinese in steerage.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—Mrs. Conrad and daughter, Miss Shaw, Messrs. W. J. Manifold, G. H. Rhodes, A. Clark, and Kobayashi in cabin.

Per British steamer *Khiva*, for Hongkong via Kobe and Nagasaki:—Rev. and Mrs. Wladimer and 2 native missionaries, Mr. and Mrs. E. B. Watson and child, Mr. and Mrs. Potter, Mr. and Mrs. Thomas and servant, Messrs. Dolling, Shaw, Buchanan, Owens, Mynoes, Pollock, H. M. Kerserg, Schlichter, Hellyer, Tanabe, and Lye Lin in cabin; and 12 Japanese and 2 Chinese in steerage.

CARGOES.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—\$218,800.00.

Per French steamer *Mensaleh*, from Hongkong:—6,899 packages.

Per British steamer *Khiva*, for Hongkong via Kobe and Nagasaki:—29 bales for France.

REPORTS.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Hakodate on the 27th March, at 10.15 a.m. with fresh S.E. winds and foggy weather to Sanemura Point; thence strong N. and N.W. winds to Oginohama where arrived on the 28th, at 1.30 p.m. and left on the 29th, at 6 a.m. with light variable winds and cloudy weather till arrival. Arrived at Yokohama on the 30th March, at 11 a.m. Passed *Takasago Maru* on the 29th March, at 11 a.m.

LATEST COMMERCIAL.

IMPORTS.

The general tone of the Market has been steady, but there has not been a large amount of business passing in any department.

COTTON YARNS.—The firm tone of holders and the small supply of spinnings in demand has limited transactions in English Yarns. Buyers are offering fair prices for early arrival. Bombay 20's have become rather dull, but a small demand has sprung up for 16's of certain spinnings.

COTTON PIECE GOODS.—Velvets are difficult of sale at lower rates; a fair quantity of Turkey Reds have again been disposed of; some small sales of Grey Shirtings 9lbs. have been made at quotations, but the demand has been small.

WOOLLENS.—There is no change to report, Mousseline de Laine being the only article in moderate demand.

White, No. 5	4.60 to 4.75
Brown Formosa	3.40 to 3.45

EXPORTS.

RAW SILK.

Since our last issue, on 26th March, there has been rather more business in this Market, Settlements for the eight days reaching a total of 200 piculs. Buying for the *Arabic* was completed at full rates, and since her departure there has been a brisk enquiry for the same destination, buyers paying long prices for some favorite chops. *Kinsatsu* have steadied, and holders of *Hank* sorts are

apparently more disposed to entertain business, especially for the Good Medium grades.

The bulk of the Settlement has been returned in *Filature* kinds, the remainder consisting of *Hanks* with a modicum of *Kakedas*. Arrivals have been very small, and the Stock is reduced to 1,500 piculs.

The M.M. steamer *Volga*, which left for Hongkong on the morning of the 29th ultimo, carried no more than 14 bales entered as going to France. The O. & O. steamer *Arabic* with the American mail of 28th ultimo took a fair shipment consisting of 407 bales, and of these 18 bales were direct shipment on native account. The Export now stands at a total of 28,484 bales, against 24,710 bales last year, and 16,374 bales at 3rd April, 1882.

Hanks.—Business done amounts to about 50 piculs on the basis of quotations given below. The business done by foreigners has been in Good Medium kinds, and a fairly large parcel has been sold to a native dealer, the prices paid for *Hachoji* being reported as equivalent to \$465. Among the sales we observe *Shinshu*, \$520; *Annaka*, \$500.

Filatures.—These have again commanded the greater share of buyer's attention, and the Stock of desirable kinds is much reduced. Settlements are quite 150 piculs, and all grades must be quoted at an advance over last week's prices. *Tokosha* has cleared out the balance of his holding at \$650 for regular cargo, with \$570 for defective and rejections. Prices have been somewhat irregular, a parcel of *Hida*, which some time back was offered at \$580, being now settled at \$630. *Tajima* and *Hikone* are noted at the same figure. *Oshu* sorts at \$600, with Medium *Koshu* at \$590, and Common *Foshu* at \$580 to \$570, complete the list.

Re-reels.—The only transaction reported is a very medium parcel of *Koshu* at \$580, and even this may be rejected on inspection. Stocks of Good *Maibash* are reduced to nothing, although some small arrivals are looked for during the current month. Prices in the absence of supplies are all more or less nominal.

Kakeda.—Beyond one small purchase at \$600, the list is a blank. Stock remains practically unchanged—there are a few enquiries, but the divergence between the view of buyers and sellers appears insurmountable just now.

Oshu and Coarse Kinds.—Once more we have to report no business. Shipments coastwise are not so large, but arrivals do not come in to any extent, and there is very little Stock in Yokohama of these descriptions.

America	8,960	8,191	5,093
England	2,639	3,868	3,013
Total	28,484	24,710	16,374

WASTE SILK.

We note an increased trade in this branch, the Settlements for eight days reaching 400 piculs; an average of 50 piculs per diem being a very good business for the time of year. The purchases have been about equally divided between *Noshi* and *Kibiso*, other sorts not participating. Dealers are beginning to unload some of their holdings in low Waste at prices which look dear, having regard to the mixed quality. The arrival of a few bales good *Noshi* was notified, but we learn that they have been sent on to Kioto without being offered on this Market.

The M.M. steamer of 29th ultimo carried 92 bales bringing Export to date up to 21,601 piculs, against 21,449 piculs last year, and 20,788 piculs in 1882. Supplies have been more plentiful during

the week, and the Stock on offer is not reduced below 500 piculs.

Noshi.—The chief feature has been the final Settlement of about 100 piculs fine *Foshu* and *Hachoji*, at \$115; negotiations had been pending for a long time, but the bargain was at last concluded and part of the lot went forward by the *Volga*. A small line in *Oshu*, at \$150; and some medium *Foshu*, at \$80 to \$85, bring up the rear. *Filatures* are reported settled for the interior on basis of \$155 for a parcel *Utsunomiya*.

Kibiso.—Considerable purchases have been made chiefly in the lower grades, but the quality is very unsatisfactory; we fancy the lots purchased will entail great trouble in sorting and cleaning. From the list we cull the following:—*Oshu*, \$82½, \$60; *Yechigo*, \$52; *Goshu*, \$47½; *Foshu*, \$37; *Kaga*, \$29, \$23, \$22; *Hachoji*, \$27½. *Neri* is in request, and some small parcels have been put through at \$14½ to \$11, uncleaned.

TEA.

There is no new feature of any importance to note in the position of our Market. We give the Settlements as reported for the past week, viz.:—Common 25, Medium 125, Good Medium 35, total 185 piculs, for which buyers have been found at unaltered quotations. The equivalent of 80 piculs arrived during the week. There appears to have been a cold wave swept over the New York Tea Market, for judging from the latest wire information from that port the Market has collapsed. Everything now seems to point to a quiet and dragging course of the Market for the remainder of the season. The following were the number of pounds Tea shipped on the *Arabic*, which sailed on the 28th ultimo:—for New York 48,109 lbs., for Chicago 8,325 lbs., for Portland (Oregon) 1,000 lbs., for California 67,465 lbs., and for Canada 7,170 lbs., making a total of 132,069 lbs. Fired Tea.

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Treval, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S FLORIDA WATER,

a most fragrant Perfume distilled from the choicest Exotics

ATKINSON'S QUININE HAIR LOTION,

a very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

ATKINSON'S**ETHEREAL ESSENCE OF LAVENDER,**

a powerful Perfume distilled from the finest flowers.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 12TH, 1884.

SUMMARY OF NEWS.

THE Shidzuoka Local Assembly is said to have vetoed a proposition to build a railway through the province by means of a local loan.

RUMOURS are current pointing to slight changes in the Cabinet. It is said that His Excellency Mori, whose return from England is daily expected, will be appointed Minister of Education.

A TEA-EXPORTING Company, established last year in Miye prefecture, has opened an office in Kobe, where it will offer for sale teas fired and prepared for immediate shipment.

It is stated that Messrs. Saito, Takahira, and Kurino have been appointed to act as Secretaries at the approaching conferences on Treaty Revision.

THE electric light is at present used in Kiyoto to illuminate the performance of a celebrated dance called the *Miyako Odori*, which takes place in the spring of every year at the Western Capital.

A HEAVY rain-fall on the night of the 5th instant resulted in a land slip (on Monday) of a portion of the Yokohama Bluff. Three Japanese houses were destroyed, but the inmates were not injured.

At a Special General Meeting of the Yokohama Cricket Club, held at the Club Hotel on the afternoon of the 7th, it was decided that the Cricket, Foot-ball, Base-ball, and Athletic Clubs should be amalgamated, under the title of the Yokohama Cricket and Athletic Club. It is

expected that the results of this step will be to strengthen all the Clubs concerned, and increase their popularity as well as their finances.

It is stated that His Majesty the Emperor recently inspected the works now in progress in connection with the building of a new palace, and desired that the estimates should be reduced from fifteen million *yen*, to two and a half millions.

AN American citizen, named Portell, has been sentenced to six months' imprisonment at Kobe for theft. The man is said to be one of a gang of disreputable characters who have come from Hongkong to carry on operations in Japan.

ADMIRAL YENOMOTO, H.I.M. Minister to China, and Mr. Kitagaki, Governor of Kiyoto, were amongst the passengers by the Mitsu Bishi steamer *Hiroshima Maru* which arrived on Wednesday.

A CURIOUS gathering for social and athletic purposes was held on the 10th of March at the foot of Asama-yama. About 1,000 youths are said to have attended, and flags were displayed with inscriptions "Liberty for ever," "Away with the evil customs of the Orient," &c.

THE *Bukka Shimpō* explains the apparent anomaly of a contemporaneous appreciation of rice and silver by saying that the farmers, taking advantage of the high prices ruling for barley, beans, &c., have paid their taxes by sales of those cereals, and are holding their rice in expectation of better quotations.

THE Order of the Rising Sun, Fourth Class, has been conferred on Messrs. William Gowland and Robert MacLagan, who have for several years been employed at the Imperial Mint in Osaka, where their valuable services have deservedly won the high approbation of the Japanese Government.

A COMPANY has been formed for the construction of a railway in the provinces of Shinano and Yechigo. The line is to run through Naoyedzu, Niigata, and Uyeta, a distance of about 140 miles. The company is to commence operations with a capital of 5½ million *yen*, and it is expected that the work will be completed in 10 years.

THE work of Treaty Revision has not yet actually commenced, but it is expected that when the Conferences commence no lengthy delay will take place, as the questions to be discussed have been reduced to practicable limits. H.E. the Honorable F. R. Plunkett, Her Majesty's new Representative, has produced a most favorable impression in Japanese official circles by his genial and courteous demeanour.

TRADE in Korea is said to be suffering from complete stagnation. Japanese newspapers in Tokiyo publish correspondence from Gensan and Pusan to the effect that constant disputes take place between the soldiers organized *à la Japonaise* and those organized *à la Chinoise*; that the Chinese settlers carry on a species of com-

merce of compulsion, and that the Government's financial difficulties are becoming serious. Some Japanese fishermen are about, it is said, to form a company for whale fishing in Korean waters.

THE *Tokiyo Trade Journal* (*Bukka Shimpō*) has published statistics showing that the rice harvest of 1883 was slightly above the average. In ten provinces the crop was poor, owing to long continued drought; in fourteen, it was abundant, and in two (Shima and Tsushima) something very like famine was experienced. Taking 100 to represent an average yield, the figure for 1883 was 108.75. An average crop in Japan is reckoned as 31 million *Koku*, in round numbers, so that the crop of 1883 was 33½ million *Koku*, approximately.

THE vernacular press has contradicted a rumour recently circulated in Tokiyo and repeated by the *London Daily News*, to the effect that the Japanese Government has it in contemplation to establish Mixed Courts for the trial of cases in which foreigners are concerned. It is suggested that in all probability this rumour owes its origin to the proposal that, in connection with the first modification of extraterritorial jurisdiction, the Japanese Judiciary should include a number of foreign judges, who would be associated with the Japanese judges in all mixed cases.

NO SYMPTOMS of commercial revival are yet discernible in Japan. The post office returns for February show that the number of letters which passed through the post during that month was 208,878 less than the number for January, and the number of postal cards 699,187 less. It seems to be generally felt that the only source from which a healthy impetus can come in the immediate future is the recently issued railway bonds, which, if they were used as means of bringing foreign money into Japan, might restore some vitality to industry. Unfortunately, however, political considerations appear to have more weight in Japan at present than financial, and public opinion is opposed to contracting any pecuniary obligations towards foreign countries.

THE question of Treaty Revision still continues to be keenly discussed by the foreign local press. One English journal declares it "unnecessary that merchants should penetrate the interior in pursuit of their respective callings," and says that "at the places appointed for foreign residence and trade, operations, practically unlimited, can be carried on." Another journal, in accord with memorials presented by the foreign mercantile community and the Chamber of Commerce, advocates the opening of the country to trade under a passport system, and adds that "all foreigners, while beyond the treaty limits, should be upon the footing of Japanese subjects in all things with the exception of trial for breaches of the Imperial law or as defendants in civil suits." The more liberal and just view of the latter journal is probably endorsed by the great majority of the leading merchants in Yokohama.

NOTES.

DR. S. WELLS WILLIAMS, long known in the Far East as an attaché of the United States Legation at Peking, and as one of the few thoroughly accomplished American sinologues, died on the 16th of February, at his residence in New Haven, Connecticut, where he had filled the position of professor of the Chinese language and literature at Yale College. He was seventy-two years of age, and had passed the greater part of his life in this part of the world, having settled in Canton as early as 1833, where he originally served as printer to the American Missionary Board. In 1835 he had an opportunity of studying the Japanese language, a ship from  country having been wrecked on the Chinese coast, and the sailors temporarily entrusted to his care. It is stated that the knowledge thus acquired enabled him to translate parts of the Old and New Testament into Japanese. He wrote and published several works of reference and instruction, during the first twelve years of his sojourn in China, and in 1845 returned for a short visit to the United States, where he delivered the lectures afterward reproduced in the volume entitled "The Middle Kingdom." Resuming his labours in Canton, he took charge, in addition, of the *Chinese Repository*, until that periodical was discontinued in 1851. He joined Commodore Perry's expedition to Japan, in 1853 and 1854, and conducted the diplomatic communications between this country and the United States until the arrival of Mr. Harris, the first Minister. For several years following, Dr. Williams served as interpreter and Secretary to the American Legation in China, also occasionally acting as Chargé d'Affaires. In this latter capacity the usually placid course of his career was sometimes disturbed by vexing international questions, the incidents of the Japanese expedition to Formosa creating, in particular, complications into which he was drawn, possibly against his inclination, but from which he did not escape without reminders from the State Department that his interference with the Japanese proceedings was scarcely warranted. After the publication of his most important work, the Syllabic Chinese Dictionary, in 1874, he took final leave of Asia, and accepted the newly endowed professorship of Chinese, at Yale. His health was good until two years ago, when a serious accident was followed by a paralytic stroke, from which he recovered only partially. He was not, however, considered in danger until about two weeks before his death.

THE announcement of the proposed attempt to dive for the remains of Greek and Persian ships sunk in the great sea-fight off Salamis has caused (say the *Whitehall Review*), much fluttering in archæological circles. We know very little about the vessels of the antique world; the great galleys with their banks of oars are not familiar things like Greek temples and Roman houses. Mr. Alma-Tadema had to evolve the splendid ship in his "Antony and Cleopatra" picture "out of his moral consciousness" more or less. We have indeed descriptions preserved to us in the delightful gossip of Athenæus of two ships built by Ptolemy Philopater and one built by Hiero, tyrant of Syracuse. But these accounts are devoted chiefly to the interior of the vessels. They seem to have been even more sumptuously fitted up than the *Livadia* of the late Czar of Russia. We read of rooms in these ships with

columns of Milesian cypress and capitals of gold and ivory, of marble statues of Venus, of purple hangings, and exquisite carvings, of gardens with trees and plants, and all varieties of bath-rooms. One of these marvellous vessels, we are told had twenty banks of oars and another forty, but we are unable to form any clear idea from the description of what they looked like externally. It is hardly to be hoped that the divers of the Ægean Sea will bring up any vessels of this magnificent description.

THE *Meiji Nippo* says that the next financial estimates will contain an appropriation of twelve and a half million *yen* for the War Department. The appropriation in former years was eight millions, but it was subsequently reduced to six, and afterwards gradually increased till it reached ten and a half millions. Under the revised conscription regulations greater expenses will be inevitable, and to cover these an additional two millions are, according to the above authority, to be granted from July next. It must be confessed that if Japan manages to support a standing army of nearly a hundred thousand men with two and a half millions sterling, she will deserve credit, but, at the same time, one cannot help regretting this unproductive expenditure, especially just at present.

IF the Anti-opium Society would procure and lay before the public some trustworthy information with regard to the attitude really taken by the Chinese Government towards Chinese cultivators of the poppy, people would be in a better position to form a sound judgment. So long as China herself produces, and derives a revenue from the production of immense quantities of the drug, her efforts to prohibit its import must be regarded as part of a fiscal, not of a moral, policy. The general belief, promoted by the writings of such high authorities as Sir R. Alcock, is that the cultivation of the poppy is virtually unrestricted within the limits of the Middle Kingdom, and that the prohibitory edicts which have been issued from time to time are dead letters. It appears, however, that this is not always the case. In a Poscript Memorial recently addressed to the Dragon Throne by Chang Chih-tung, Governor of Shansi, authority is requested to dismiss a certain District Magistrate, who, among other offences, "had neglected to show proper energy in enforcing the edict against the cultivation of the poppy," and who had "gone so far as to tax the yield in many places under pretext of augmenting the *likin* revenue." The officer has been dismissed, and it is evident that, so far as at any rate as the province of Shansi is concerned, the Chinese authorities are sincere in their desire to stop opium-smoking.

AMONG those who barely escaped with their lives from the terrible disasters which overtook Baker Pasha's force outside Trinkitat was Colonel Burnaby, of "Ride to Khiva" fame. The curious in such matters are naturally asking how it comes to pass that the officer commanding one of her Majesty's regiments of Household Cavalry should find himself in such straits. "Que diable allait-il faire dans cette galère?" The correct solution of the enigma is that Colonel Burnaby applied for leave of absence from his regiment, and, with the Horse Guards' sanction, betook himself to Egypt. It was, however, little imagined that he intended to join Baker's force in the vain attempt to relieve the garrisons

of Sinkat and Tokar. His love of adventure of course took him to Suakim, and very nearly caused a regrettable vacancy in the colonelcy of the Blues. Oddly enough, Colonel Burnaby, who is always "so spoiling for a fight," has never yet had the opportunity of drawing his sword in her Majesty's service.

Entrance into the army by enlistment is still apparently in favour with the younger sons of some of our best families. The sergeant gazetted last week to a commission in the 13th Hussars bears a name which will be found in the pages of "Burke," and is cadet of a family which has returned a member for Tewkesbury in four successive generations. Mr. Hamilton Martin, the officer in question, rode in the ranks of the 19th Hussars at Kassassin and Tel-el-Kebir, and has successfully gone through the experiences which have been so well chronicled by Captain Acland Troyte in his work "Through the Ranks to a Commission." It would be interesting to know how many young gentlemen are at present serving in the ranks with a view to similar advancement. The cavalry is of course the popular branch of the service for such enlistment.

Many old gunners will hear with regret of the death of Lieut.-General "Nat" Turner, C.B., a name of note in the siege operations before Sebastopol and in the Oude campaign. To his battery—B, 4th Brigade—the Duke of Connaught was first attached on his joining the Royal Artillery at Woolwich in 1868. General Turner had only recently retired from the active list of general officers, and has died at the early age of fifty-five.—*Whitehall Review*.

THE "Travelling Correspondent" of the *Daily News*, who appears to have reached London just after the appearance of the first of the two articles published in that journal over the signature "Asiaticus," has addressed to the *Daily News* the following letter:—

TO THE EDITOR OF THE "DAILY NEWS."

SIR,—Since my return to England I have seen a letter addressed to you by the Secretary of the Japanese Society, in which he points out "the danger of criticising foreign customs through the measure of one's own country." He proceeds to cite, in illustration, three statements from my letter descriptive of the festivities on the Mikado's birthday. It is not necessary to occupy space by recapitulating these, since the Secretary severally admits that the description is perfectly accurate, and proceeds to refute inferences which he himself draws. I write simply to express my regret that, by any perversity, words of mine could be construed as importing unkindly criticism of Japan and the Japanese. The efforts now being made by the enlightened statesmen who guide the destinies of Japan are, as I hope to show in an article I have undertaken to write for the *Fortnightly Review*, full of interest for the Western world and claim the sympathy and respect of younger nations.—I remain, Sir, obediently,

YOUR "TRAVELLING CORRESPONDENT."

London, February 4th.

We may observe here, though indeed the statement seems superfluous, that the reprints of "Asiaticus" articles published in the *Japan Mail*, were taken directly from the columns of the *Daily News*. The *London and China Express*, in reproducing the latter of the two articles, appears to have unaccountably mutilated it, by omitting certain portions and neglecting to indicate the omission in the usual way. It does not concern us to discuss the motive of such a strange and unprecedented proceeding. Plainly, if there rests with a republishing journal discretion to cut out as much as it pleases of the article it professes to reproduce *in extenso*, not only the sequence of the writer's arguments, but

even the very spirit in which he writes, may be confused and misrepresented. What seems most probable is that the compositors of the *London and China Express* failed, through some momentary carelessness, to insert asterisks in the place of the sentences omitted. We cannot for a moment suppose that any intention to mislead existed.

Says the *Alta* of the 6th ult. :—A Washington despatch was printed a couple of days ago by all of the city papers except the *Alta*, to the effect that Congressman Rice had charge of the Newspaper Copyright Bill and would report it adversely. This elicited a chirrup of joy from a few obscure dailies which depend upon the scissors for their telegraphic news; but both the exultation and the Washington despatch were premature. At the time Rice was represented as pronouncing the sentence of death on the bill, it had not even been introduced in the House, and, inasmuch as Rice constitutes the tail, and not the head, of the Committee on Patents, it is improbable that he will ever be charged with the duty of reporting either for or against the News Copyright bill. There are still some who hold the belief that a news-despatch cannot be copyrighted, because it is not a sufficiently high order of literature, or because news is something too evanescent and unsubstantial to be protected by law. But a city directory, a catalogue, or even an advertisement may be copyrighted under the existing law, and news-despatches certainly have as much literary quality as a mere list of names, and are, therefore, equally entitled to protection.

THE Lord Chief Justice's Court, in the case of the Duke of Vallambrosa against Mr. H. Labouchere, proprietor and publisher of *Truth*, seems to have laid down the curious principle that a dead man is legally beyond the reach of libel. *Truth*, with characteristic brutality, had placed before its readers the following spirited version of the Duke's accession to wealth and title :—"The Duke of Vallambrosa is, of course, *plus royaliste que le roi*, his father having been an army contractor, who was nearly hanged on the charge of supplying as meat to a French army corps the flesh of soldiers who had died in the hospital and who had been killed in action. Luckily for him, the first Empire came to an end before the trial could take place, and the contractor having returned to Italy and purchased a dukedom became a Grand Seigneur and an ardent adherent of the Bourbons." The Duke found this story a little disagreeable. He described it, in his application to the Court, as "a false and malicious statement, libellous in itself on the memory of his father, and calculated to bring himself and his family into public hatred, ridicule, and contempt." The defendant appears to have confined himself to two pleas—first, that the application for a criminal information was not admissible, inasmuch as the Duke was resident in France where he held no official, or public, position; and secondly, that the *fiat* of the Public Prosecutor had not been obtained prior to the commencement of the proceedings. Lord Coleridge partly admitted the justice of the first plea, did not notice the second, and gave it as his opinion that "the libel was not on a person who had been individually aspersed, but on his ancestor," and that "there was no precedent that an action could be maintained for libel on a deceased person." The law, then, is not tender of the

reputation of the dead. If it does not acknowledge that a man is wronged when his father is publicly accused of cannibalism, one wonders how it would treat a charge of immorality against his mother.

A CORRESPONDENT of the *North China Herald*, writing over the signature of "One who knows better," confirms the story originally published by that journal with reference to the actual facts of the treacherous murder of the Wangs at the fall of Soochow. The *N.C. Herald*, it will be remembered, stated, on the authority of an officer serving under Li Hung-chang at the time, that the murder had taken place without Li's consent, and had been caused by a precipitate order of his second in command. To this version a correspondent, "One who knows," took exception, on the grounds that Li was not a man to let his authority be defied, even temporarily, by his subordinate, and that, in truth, he never gave any promise to save the lives of the Wangs: the promise was Gordon's, and Gordon's only. "One who knows better" explains that Li's second in command, Chên Hsüch-chien, was the fighting man of the pair. Li worked with his head; Chên with his arms. The former knew well what he owed the latter, and would have been careful to avoid offending him. When, therefore, Chên pushed Li into an inner tent, and insisted on the execution of the Wangs, Li made no very vigorous resistance, believing fully that no steps would be immediately taken. In this he was mistaken, for Chên ordered the Wangs to be decapitated forthwith. "One who knows better" concludes his letter thus :—

As to the charge of treachery, none of course can so well explain the matter as Li and Gordon themselves. Your correspondent says that Gordon gave his word to spare the lives of the Wangs without authority. It could not have been possible that the Wangs surrendered to the foreign General only. They must have given themselves to both the Generals or to the Chinese Commander only. Li and Gordon knew the surrender of the Wangs to be conditional, for the Taipings could well fight on, and sell their lives more dearly, and a joint consent was given to spare them. It is certain that Gordon with his vast experience and superior knowledge in military matters could not have failed to grasp the situation in which Li and his army were placed; and it is equally certain that the Wangs could not have been so foolish as to trust to the word of Gordon only and to think that he guaranteed a continuance of power, when before and during the siege they heard of Imperial proclamations resounding everywhere inviting any one who could capture Soochow to be the Fu-t'ai of that city and the province of Kiangsu. Experience and instinct alone would have kept the Wangs from swaggering into Li's presence and bearing themselves as if they were still lords of the city, as your correspondent so graphically describes the scene. Gordon's rage was perfectly justifiable, and I conclude by saying that the version given you by your informant coincides exactly with the character of the Great Chinese statesman who erred in being indecisive and not in being teacherous.

THE following curious history of a ship that has been on the stocks for nearly 70 years, is taken from a recent *Nautical Gazette* :—"Between 10 and 11 o'clock on Saturday morning the old line-of-battle ship *New-Orleans*, which has been on the stocks in Sackett's Harbor since 1815, and has been undergoing demolition the past three weeks, parted directly in the centre and fell to the ground, instantly killing a workman named John Oates and seriously injuring Ralph Godfrey, M. Jeffrey, and a man named Hemens. Eight other workmen narrowly escaped. Oates was terribly mutilated, a spike being forced entirely through his head and a bolt through his back. The *New-Orleans* was begun by Henry Eckford, of New York, about the 1st of January, 1815, under contract with the Government. Her name was fixed by the authorities after Gen. Jackson's victory at New-Orleans

on Jan. 8, the same year. She was to be 3,200 tons burden, 187 feet length of keel, 56 feet beam, and 40 feet depth of hold; pierced for 110 guns, but could carry-120. When Eckford was awarded the contract a large force of men was secured and timber was gathered from the surrounding forests. Nails, spikes, and bolts were forged on the ground, the bolts being entirely of copper. The timbers were mostly cedar and oak, the beams in the keel being of an extraordinary size. The gun carriages were carted across the country from the Mohawk Valley, and were composed of mahogany and lignum vitæ, and are still in the storehouse at Sackett's Harbor. The Peace Commissioners from England and the United States met at Ghent, Belgium, and declared peace on Dec. 24, 1814. The news did not reach Washington till the February following, and it was not until two weeks later that Eckford received orders to cease work, which he did about March 1. During 60 days the immense ship had been nearly finished, the main deck was laid and supports for the bulwarks raised. The *New-Orleans* was intended to be used as a sort of floating battery, to be stationed at the head of St. Lawrence River to prevent the British fleet from entering the lake. As she was constructed entirely of green wood, it is an open question whether she could ever have been navigated. Eckford some years later accepted the position of Superintendent of Naval Construction under the Turkish Government, and he died abroad. In 1823-4 he built several vessels for the United States, among others the *Jefferson*, whose hulk may now be seen during low water at Sackett's Harbor. The Government caused a house to be erected over the *New-Orleans* several years ago, but that was finally destroyed, although the place was visited by hundreds of tourists and curiosity seekers each season. In 1882 Congress ordered the sale of the *New-Orleans* at auction. Last August Alfred Wilkinson, of Syracuse, bid her in for \$400. While being demolished under his orders the accident occurred. Wilkinson, it is said, will net about \$4,000 from his investment.

Few men have ever been so popular in England as General Gordon is just at present. That in itself would account for the sneering comments his religious proclivities elicit from certain American newspapers, which think it necessary to distinguish themselves from the respectable journals of their country by an unreasoning hatred of everything English. Here is a story told by one of them, or rather by its London correspondent, of the truth of which our readers can judge for themselves :—"General Gordon is very much to the fore here, of course. He is, to begin with, a very religious man. Shall I say from Soudan to Beersheba? Indeed, he impresses one as a sort of half fanatical Cromwellian. He is, perhaps, as great a believer in himself as an instrument of Heaven as is Mahdi, the prophet of the desert. Canon Wilberforce, in a sermon last Sunday preached in Canterbury Cathedral, read a letter from "Chinese [now Egyptian] Gordon," asking for congregational prayers. When this letter was dated General Gordon was *en route* to the Congo, as an agent of the King of the Belgians, on the well known expedition. The letter said :—"Pray for me that I may have humility and the guidance of God, and that all spirit of murmuring may be rebuked in me." When the General reached London, and the fickle-minded Gladstone Government

changed his destination to the Nubian desert, etc., he wrote Canon Wilberforce a second letter in which it was said:—"Offer thanks at your next prayer meeting. When I was upborne upon the hearts of these Christians I received from God the spiritual blessing that I wanted, and I am now calmly resting in the current of His Will."

THE following account of the eruption of Aso-yama has been sent the *Fiji Shimpō*:—About 7.50 a.m. on the 21st of March last, the mountain could be heard at a great distant rumbling with subterranean thunder. A short time afterwards, immense clouds of pitchy-black smoke and ashes arose out of the crater, so that the sun's rays were completely darkened and the country for miles around was under a shadow. About ten minutes later, stones began to fall, the largest of which weighed 26 *momme* (15 oz.) Then again came a shower of ashes, which kept on till about noon, when the ground was covered with a layer over an inch deep, while the colour of the trees and grasses was completely changed. This dangerous eruption happily did not result in loss of life, as it took place in broad day-light. At Nobeoka, thirty-five *ri* from the volcano, not a cloud was seen until 9.20 a.m., when dark clouds suddenly covered the sky, and a horrible smell of sulphur was noticeable. The inhabitants in the neighbourhood of the volcano call the eruption *Aso-are*, "the tumult of Aso."

THERE were some curious exhibitions in the House of Commons on the occasion of Mr. Gladstone's powerful defence of the English Government's Egyptian policy. The "grand old man" seems to have been in a mischievously playful humour. He developed a most inconvenient knack of setting traps for his opponents, and they, on their side, fell into them with obliging precipitancy. The first of these pretty tricks seems to have been in part accidental. Mr. Gladstone, in the opening of his speech, had occasion to repeat the words of Sir Stafford Northcote's vote of censure, whereupon the Opposition cheered lustily. "Yes," said the "grand old man," and one can imagine the regretful solemnity of his tone, "Yes, you are ready to cheer these words or any words, it matters not what, provided only they are sufficiently condemnatory." Again the Opposition cheered loudly, and then Mr. Gladstone, to use an American expression, "shut down" on them. "I am delighted," he said, "with the frank and truly English response which that affirming cheer gives to the sentiment I have indicated. I was not sanguine enough to hope for it. I admit that it was in the nature of a decoy offered to honourable gentlemen, and they took it and cheered it to the echo when I said it did not matter whether the proposal was this or that, provided it was condemnatory." The Opposition had certainly put their foot into it, and they doubtless became, thenceforth, more circumspect. But it is not easy to escape the "grand old man's" rhetorical ruses. After fifty or sixty minutes of eloquence, he became mischievous again. He eulogized General Gordon; spoke of him as a hero; said that he has "that faculty which produces effects among those wild Eastern races almost unintelligible to us Westerns," and worked the House up into quite a fever of excitement about the modern Bayard upon whose shoulders such an immense burden has been placed. Then, seeing that the memory of their previous mishap had faded from the minds of the Con-

servatives, he continued thus:—"Perhaps it may be said, 'if General Gordon has all these gifts why did you not call him sooner?'" Thereat the Opposition again cheered themselves hoarse, and again the wily old politician held up a warning finger:—"You have fallen into the decoy. The suggestion to employ General Gordon in the Soudan was made at a time when it did not come within the practical responsibility of the present Government. As early as November, 1882, Sir Charles Wilson suggested the employment of General Gordon. There were difficulties in the way. It is difficult to marry persons, one of whom has an aversion to the other. It is still more difficult if unfortunately there is an aversion on both sides. That was found to be the case between the Khedive and General Gordon. However, when an increased responsibility was placed on us by the defeat of General Hicks, it became our duty again to have regard to the possibilities of what might be done through General Gordon. It was already known to us that the Egyptian Government objected to General Gordon. On the 1st of December, Lord Granville had reason to believe that he was in a position to offer the services of General Gordon to the Egyptian Government. Unfortunately they refused the offer, but refused it not entirely without reasons. Those reasons did not satisfy us, but they went far to silence us. The objection was this—the Soudan is a country of strong Mahommedan fanaticism, they said, and to send a Christian as our agent with a view to its recovery would be a dangerous course, and might cause a still worse outbreak. We were not satisfied, but it was difficult to brush that objection roughly aside, and there was some further delay after the offer of Lord Granville; but we became acquainted with the sentiments of General Gordon as time went on; the aversion of the Egyptian Government became mitigated, and at length entirely removed. It was not until the 16th of January that we obtained an intimation that the Egyptian Government would accept the services of General Gordon; on the 18th General Gordon was on his way to the Soudan." After this the Conservatives probably became timid of cheering. They could not trust themselves to be sure whether the "grand old man" was not slyly inviting them to applaud their own discomfiture beforehand.

* * *

The Home Rulers seem to have made an amusing blunder on the same occasion. They had an unimpeachable opportunity to cheer when Mr. Gladstone said:—"Few, indeed are the people so degraded and lost to every noble sentiment that it shall be a matter of indifference to them whether they are governed by persons who belong to the same political constitution with themselves, or whether they are governed by those who come from remote quarters, with foreign instincts, sentiments, and faiths." The Irishmen might have hollered then, but they let their chance slip, and watching too keenly to recover it, made themselves a little ridiculous. "The Soudan," Mr. Gladstone presently observed "is a vast country, equal in size to France, Germany, and Spain; a desert country with a deadly climate, inhabited thinly by sparse and warlike tribes, but still it is the country of those tribes and they love it as their country." Then the Home Rulers shouted with delight. They did not mind recognizing the political comrades of struggling Irishmen in the semi-

barbarous tribes of the Soudan, or confessing that some parallel might be established between the Emerald Isle and that desert country with a deadly climate. This sort of burlesque must be a little shocking to sober Britons.

AMONG our translations will be found an article from the *Meiji Nippo* containing an interesting account of the action taken by His Majesty the Emperor with regard to the new palace. The foreign public will probably be surprised to hear that it was in contemplation to spend fifteen million *yen* on the work. Such an outlay would be enormous even in the wealthiest country in the world. In Japan, just at present, it seems almost reckless. This country can afford a good deal, no doubt. People are apt to be misled by the fact that it suffers from the curse of an inconvertible and depreciated currency; but in reality its financial condition is not only sound, but remarkably sound. The Government, however, has a duty to perform before it can think of sinking a fifth part of the annual national income in such an unproductive work as a palace, if, indeed, it ever seriously entertained such an intention, for we can scarcely persuade ourselves to believe that our Tokiyo contemporary's information is quite trustworthy. Even assuming, however, that the appropriation were only half the amount named, the Emperor has acted most wisely in interposing his veto. Whether His Majesty spoke under advice or of his own motion, his Ministers have probably been considerably relieved by his words. We do not share the opinion of the *Meiji Nippo* as to the embarrassment the Cabinet is likely to experience in choosing between obedience and loyal instincts. Those who are at the head of affairs know very well that the country would benefit as little in reputation as in pocket by such a piece of extravagance, and they will doubtless shape their course strictly in accordance with the Emperor's economical recommendation. The sum of 2½ millions indicated by His Majesty will suffice amply to construct and furnish a really handsome palace in foreign style. If, indeed, the building is to be of wood according to Japanese models, there is probably no limit to the millions that may be sunk in it. But we trust that it is not yet too late to alter that part of the project. The *Meiji Nippo* says that ostentation and grandeur characterize foreign architecture. It would be far more correct to say that extravagance and peristability are the distinguishing features of Japanese. Few persons will be disposed to credit what is, nevertheless, an incontrovertible fact, that first-class Japanese buildings cost half as much again as foreign. Add to this that they last about one-tenth of the time, and we find a somewhat startling ratio between the relative cost of the two. The Japanese building has its architectural beauties, many beauties, indeed, which all men of taste would be sorry to see sacrificed. But if Japan means to record her verdict in favour of wood as a building material, she will be taking a line which all the rest of the civilized world has long agreed to abandon.

WRITERS on Japan are occasionally met with, who, though knowing little of the country and less of the people, have expatiated upon the immorality of the Japanese as a nation. If the figures in the following paragraph from the *Whitehall Review* are correct, there are nations

who cannot afford to cast the first stone:—"Scotland is still in a very bad way so far as illegitimacy is concerned. It looks as if she tries 'to atone for sins she is inclined to, by damning those she has no mind to.'" Here are a few facts from the official returns for the last quarter of last year fitted to make Scotchmen well-nigh ashamed of their country. In one parish in Nairnshire 24.4 per cent. of the births are illegitimate, while in an Aberdeenshire parish about 50 per cent. of the births were of this kind. In the country of Wigtown about one fourth of all the births were illegitimate, namely 19.7 per cent., and most of the northern counties show anything but clean bills of health. If Free Kirk pastors would turn their attention more to the consideration of this evil and that of whisky drinking, and let politics alone some improvement might be hoped for. But to most of these the placing of a Liberal at the top of the poll in a Parliamentary election is apparently of more importance than placing their county or parish in a good position on this black-list of the Registrar-General."

THERE has been published at Berlin a volume called "Bismarck; or, Twelve Years of German Politics," which contains some startling statements. The author asserts that immediately after the conclusion of the Austro-German alliance in 1879, the great Chancellor laid before M. de Saint-Vallier, Ambassador of France at Berlin, certain propositions framed with the view of putting an end to the antagonism between France and Germany. According to the scheme then mapped out, France was to enter the alliance of Central European Powers, and assist in achieving a programme of which a leading feature was the settlement of the Eastern question on a basis excluding England and Russia from the Turkish succession, in favour of France, Germany, and Austria. M. Bismarck is said to have opined that the Alsace-Lorraine problem ought to appear quite insignificant in the presence of these vast interests, and to have undertaken that, in any division of proceeds, Germany would spare no pains "to heal France's wounds." The book goes on to explain that France neither accepted nor rejected these advances, the Government considering that its duty was to organize its forces thoroughly before attempting to play a rôle in foreign politics. Some of the European journals profess to credit this story. They hold that the dream of Prince Bismarck's declining years is to see the *entente cordiale* re-established between France and Germany, and that to secure such a result, no sacrifice would deter him. They say, too, that to be prodigal of other people's belongings has always been a propensity of the Great Chancellor: that, in 1864, he offered a slice of Denmark to Austria; subsequently tendered Belgium to France; caused Bosnia and Herzegovina to be given to Austria, and would dispose of Constantinople to-morrow if the opportunity presented itself. M. Bismarck is too conspicuous a figure in the international arena not to be made the mark of many slanders. We are quite prepared to believe that his most earnest wish is to see Germany and France sincere friends. That would be a noble ending to his wonderful career. But to set about compassing such a purpose by deliberately provoking the enmity of England and Russia would be a clumsy and reckless process, quite unworthy of the Chancellor's reputation. There is here another point, too, which demands

some credulity. Why should France plead the incompleteness of her military preparations as a reason for rejecting a proposition which would have removed her principal cause to prepare? She might, and most probably would, have refused to take part in any such scheme of international spoliation, but the pretext assigned for her reluctance is illogical and unlikely. This last political brochure will not seriously disturb the public mind, we suspect.

M. HUGUES KRAFFT, on his return to Paris after two years' travelling in India, China, and Japan, exhibited, in the hall of the Geographical Society, a collection of Japanese articles of daily use and of photographs taken by himself. The photographic part of the display included portraits of celebrated *danseuses*, as Tsuru, Kodzuma, and so forth, but the *Révue Scientifique*, from which we extract these details, particularly emphasizes as worthy of note "a group of youthful runners, who tie themselves to carriages and carry you from place to place with unheard-of rapidity." The notion of taking to Paris specimens of Japanese dress, furniture, utensils, &c., such as are now in actual use among the people, is novel and excellent. It has often been said that the most charming and genuinely artistic articles to be found in Japan are those which attract least attention as not coming properly within the category of so-called curiosities. Such things, however, are more truly characteristic of the national habits and civilization than rare specimens of porcelain or lacquer, and from an ethnological point of view, M. Krafft's collection will doubtless prove most valuable and interesting.

WE have long ago abandoned the fruitless task of disavowing the strange sentiments and assertions constantly attributed to this journal. Experience showed that to persevere in such an attempt, it would be necessary to devote our whole time and space to a series of contradictions and refutations. Even if the performance were at all congenial in itself, we should hesitate to enter upon it, believing, as we do, that the chief function of a newspaper is not literary pugilism. Nevertheless, it may be worth while to give our readers a specimen of the methods pursued in the Far East by way of elucidating "the broad principles of truth, justice, and expediency." In a recent issue we said:—"The fact is that Lord Elgin's tariff was fixed on a twenty per cent. basis. Certain articles paid duties of only five per cent., and as cotton and woollen manufactures were included among these, the average duty actually leviable did not, probably, exceed 9 per cent." Here was a simple and perfectly unmistakable assertion, that the duties actually leviable under Lord Elgin's tariff were about 9 per cent., on the average. Would anybody imagine that in the face of such a statement this journal could be charged with asserting that the duty was 20 per cent.? Such, nevertheless, was the version attributed to us, by a very easy process of ignoring everything we said except the words "the fact is that Lord Elgin's tariff was fixed on a twenty per cent. basis." The possibilities of this controversial method are infinite. An expression may be clipped and twisted into any convenient shape by skilful manipulation. Here is another example. In our issue of Monday last, we wrote:—"But now, foreign writers, falsely claiming to represent the views of the mercantile community, contend that the balance of advantage resulting from extended intercourse

would be on Japan's side; that she has no sufficient equivalent to offer foreigners for consenting to emerge from their isolation, and that things being very well as they are, any radical change is to be deprecated as dangerous and unnecessary." This assertion also is subjected to an abbreviating process. The semi-colon at the end of the first clause is replaced by a full stop, and we are severely censured for pretending that the balance of advantage would not be on Japan's side. It is scarcely necessary to say that we pretend nothing of the sort. We have pointed out over and over again that the total benefits accruing to Japan from the free introduction of foreign capital and foreign enterprise, would be much greater than the benefits accruing to foreigners, just as Japan's national gain by foreign intercourse up to the present has been far larger than the gains of the Treaty Powers. It is not there that the views of the mercantile community are falsely represented, but in the pretence that things had better be left as they are, because Japan cannot give as much as she gets. That, we assert, is not the view of the foreign mercantile community, and we base our assertion, not on the Memorial of 1882 alone, but also on the action recently taken by the Yokohama Chamber of Commerce. The foreign merchants as a body, and the foreign Chamber of Commerce, are, in our opinion, more trustworthy exponents of their own views than any newspaper.

WITH reference to the discussion which is anticipated in the matter of the Hawaiian Treaty, American journals publish some strange details about the actual state of affairs in King Kalakaua's dominions. That monarch is now said to be the puppet of one Claus Spreckels, a German-American speculator, to whom a large tract of so called "crown lands" have been hypothecated for a loan of \$1,000,000. The story is that the King had no valid title to these lands, and Spreckels, having discovered the fact, holds the dusky potentate in terror of legal proceedings. The capitalist first used his power against the adventurer Celso Cæsar Moreno, who, in 1879, attempted to obtain from the King a subsidy for a Chinese line of steamers to the Sandwich Islands. The following account of this incident and of Spreckels' present position, is given by the *Brooklyn Eagle*:—

Soon after Moreno's arrival at Honolulu, he captured the ambitious King, and also practically controlled the native majority of the Hawaiian parliament, then in session. He filled the King and his ministers with the idea of forming an island confederation, of which Kalakaua would be the chief. He persuaded him that the French, German, and Italian governments, with possibly the Russian Government, also, and certainly those of China and Japan, would be sure to encourage the organization of the brown races in the world's mid-ocean island and countries, with the view of checking the progress thereby of the English speaking peoples—Great Britain and the United States. To accomplish this magnificent scheme, Moreno was to be sent to Europe as Ambassador and Envoy Extraordinary, just as China had sent Anson Burlingame accredited to all the Powers of Europe. He was also to be guardian to the King's sons, who were to be sent to Germany for education. While this was in progress, Moreno did not forget his Chinese employers, but pushed their project of a subsidy for the proposed line of Chinese steamers. It is well known that plans of men and mice, "aft gang agley." And the sententious wisdom of Burns received a new illustration by the landing one day at Honolulu of an American named Oakford or Oaksmith, I don't remember which. He was an accredited agent of the Pacific Mail Steamship Company, and of Claus Spreckels, but Moreno did not know that and opened his hand wide to Oakford's view. Spreckels was to follow in the next steamer, and the first thing to be done was to knock the underpinning from the Chinese subsidy scheme. By thus discrediting Moreno, the work of destroying his political influence would be very much easier for Spreckels to tackle. The agent went at his task. Moreno, to emphasize his policy, had sought to abrogate a subsidy of \$1,000 or \$2,000 per month (I forget

which sum), that had been paid the Australian branch of the Pacific Mail Steamship Company, for calling each voyage to and from San Francisco, California, and Sydney, New South Wales, at Honolulu. Oakford's first business was to defeat this measure and thereby secure also the defeat of the Chinese subsidy.

The manner in which this was achieved is worth telling. It illustrates, too, the absurd conditions that prevail in that bouffé kingdom. The bill for the Pacific Mail subsidy finally passed. After it had gone through the Parliament, the native Minister of War, a bright and reckless Kanuck, well educated, witty and corrupt, informed Oakford that he had to "be seen," or the next day he would secure a reconsideration. Under the Hawaiian constitution, however, the reconsideration motion must be made before noon the next day. Oakford determined not to "see" the Kanuck, but to endeavor to prevent a session, or at least to bring about an adjournment before the motion could be entered. And this was his mode of procedure:

Among the talents possessed by the Secretary of War was that of caricature. His chief parliamentary victim had been a German member from one of the smaller islands. Hans was a big, good natured person, who had some peculiar habits, which the Kanaka humorist had reproduced by his sketches in a most indecent but witty manner. Oakford had secured a number of these for his own amusement. He took them with him, and found the German representative. Having wine and supped him well, the caricatures were shown and his anger excited. He was taken care of that night by one of Oakford's friends; next morning the worst specimen of the caricature, which put our German along with a certain long eared animal, in a nameless attitude, was shown to the half drunken member of the Hawaiian House of Commons. He was urged to get up in the Chamber and walk over to the ministerial seats, and there and then personally chastise the offending cartoonist. This he was only too ready to do. Soon after the House opened, Hans came in. He did not wait long, but, just as the Secretary of War arose to move the reconsideration, Hans unsteadily but deliberately walked across the floor with the offensive cartoon in one hand, and, with the other, after showing the picture to the Kanaka, he proceeded to give him an unmerciful mauling. No sooner was the blow struck than confusion reigned supreme, and, one of Oakford's friends moving to adjourn, the motion was carried and the Pacific Mail subsidy remained law. The company's agent has chuckled over this neat little plot a good deal, reciting the fact that it only cost \$50. He does not tell what it cost the company, however.

But to return to Spreckels, himself. Moreno's success endangered every interest of the sugar monopolist. He had been in favor of Chinese labor there; Moreno would make their presence in large numbers a chief source of the Californian's undoing. The English interests, and the German also, were as hostile to Moreno as were those of Spreckels himself. But the Italian would have won, still, but for the King's impetuosity. An appropriation of \$15,000 was secured for the diplomatic move. But it was not enough. So Moreno persuaded the King to turn out his ministry shortly after the parliament adjourned and make him (Moreno) Prime Minister. The object, of course, was to get the revenues under his own control. At this point in the game, Spreckels came in with his legal backing as to the so-called crown land. The King had decided to raise money on large leases of land adapted to sugar plantations. Other parties beside Spreckels and a few other Americans stood ready to step in. Among these were both European and Chinese operators. Spreckels waited on the King, routing him out of bed, it is affirmed, and frightened him with threats of suits (which he had arranged for), so that Kalakaua consented to restore a ministry subservient to Spreckels, and to accept from the latter a loan of \$30,000 with which he was to visit Europe and the United States again. Moreno, in the meanwhile, had secured the \$15,000 and left with the princes for Europe. His powers as Ambassador were revoked. Since then he has disappeared from the stage, but it is to be supposed without feathering his own nest, except so far as the \$15,000 is concerned.

Spreckels has virtually been the King of the Cannibal Islands ever since the events above narrated. Curiously enough he has also been in the Kingdom of Hawaii since then a bitter opponent of Chinese labor importations. "John" and the Italian, Moreno, came very near being too much for him. He has gone on from one thing to another, absorbing all sources of trade and profit, and gradually and quite openly consolidating his control. Mr. Spreckels is willing to pay for Kalakaua's follies. The tour of the world was one; the coronation absurdity was another. With all this, the King has become more and more dissipated. The revival at the coronation festivities of the bestialities of the old savage and lascivious native songs and dances does not sit well with the small but genuinely Christian and educated portion of the native race, or with the influential element that still remains of the American and English merchants and missionaries, by whom this people were civilized—or at least whose parents did that work.

The Spreckels influence tends to debauch the Hawaiians. The American and European laborers that, under contract, have been obtained for work on the plantations are intensely dissatisfied. Spreckels and his confrères have obtained the passage of infamous labor laws and the magistrates are their tools. The

Californian has secured a monopoly of the carrying trade, contrary to the Reciprocity Treaty. He has also negotiated this loan of \$1,000,000, which it is said threatens the dethronement of Kalakaua and the placing of ex-Queen Emma in possession. That, of course, means the re-establishment of English influence, as Emma is of mixed blood—her father having been an English dentist, Dr. Rock. Spreckels has acted only as any other of the new rich would do, placed where he could use and bamboozle an inferior or helpless people. He has no sense of the responsibilities of power or civilization, and, like the Californian millionaire in general, exercises and uses the appliances of both with no purpose other or higher than the merest lust of gain. It is, of course, true that he has set in motion extensive industries; that he had constructed large works for irrigating and manufacturing purposes, that he has made a vast fortune, that in its accumulation he has employed thousands of persons and enabled several score to get rich—but none of these things prove him to be other than he had been described herein. The Government of the United States is practically in this matter of the Reciprocity Treaty only the tool and agent of Claus Spreckels and of the Pacific Coast Sugar Refinery Company, which controls the Californian market and monopolizes the produce of the Sandwich Islands.

As an instance of absence of mind, a French surgeon's recent experience is without parallel. Dining at a friend's house in the country, where still prevailed the good old fashion of showing people what they are about to eat before it is dissected, the doctor was asked by his hostess to carve a turkey. Rousing himself from a reverie in which he was plunged, the practiced expert, with two rapid sweeps of the knife, nearly severed the bird's wing. But before the operation was completed, he lapsed again into his brown study, and looking pensively at the gaping wound, took out of his pocket a case of instruments, lint, etc., and proceeded to bandage the turkey's limb with infinite care and skill. The guests, too much astounded to interfere, looked on in silence, till the doctor, his task completed, was heard to murmur:—"Avec du repos et des soins.....ca ne sera rien."

THE *National Gazette*, a German newspaper, says of the Lasker incident, "That the courtesy of a foreign legislative body could be regarded as an act of interference and likely to provoke ill feeling, could be the opinion only of people who cannot hear a word of praise addressed to a political adversary." This is an eminently sensible view of the matter. Bismarck not only forgets the rule which requires charity toward the dead, but strains a point when he says he could not conscientiously approve of the Lasker resolution because it took a view of the political influence of the deceased which he (Bismarck) could not approve. The resolution spoke of Lasker's "firm and constant exposition of and devotion to free and liberal ideas," and this is presumably the offending expression. Now, during the greater part of his political career, Lasker was a follower and supporter of Bismarck, and if the latter had the least liberality of sentiment, he would be prompt to overlook recent differences of opinion between himself and the deceased, in respect to their former harmony. Political rivalries and animosities are pretty bitter in the United States, but we do not carry them beyond the border of the grave. Both the fact that it was an obituary tribute, and the courtesy usual among nations should have inclined Bismarck to overlook minor points of difference and accept the resolution, which, after all, was intended more as an international than a personal compliment, in the spirit in which it was tendered. The oddest thing about the whole affair is the position of those American newspapers which can see nothing to complain of in the conduct of the German Government toward our own; though in Europe,

disinterested witnesses regard it as an unpardonable discourtesy. But, then, there are persons who, after being kicked, require to be told of it, in order to bring the circumstance fairly into the field of their consciousness.—*Alta*.

THE Finney-Garmoyle case is going on, says the *World*. "Sassiety," with Boss Booboo at its head, is greatly scandalised at the young lady's proceedings, and thinks she ought to be content with a stipulated sum, and not expose "one of their order" to vulgar comment. But a great many people, who care nothing for "Sassiety" or its head, think otherwise. The trial will take place, Lord and Lady Cairns will be put in the witness-box, and many of the youth's letters, including the last one, with its singular mixture of hyperbolic regret for the loss of his "blue-eyed darling," and its practical desire for the name of her solicitor, will be read in court. The Savoyards, under their leader, Schwenk, are confident of victory. Meanwhile, Manager Abbey cables from New York his willingness to engage Miss Fortescue as a star, and there is talk of her going on a provincial tour, under the auspices of the *Carte du jour*.

IN this age of testimonials it is a rare occurrence for an employer to receive one from his servants, except on the occasion of a marriage or some such special function. That Lord Falmouth should become the recipient of such an unprecedented compliment from his trainer and jockey will not create much surprise, perhaps, when the undisturbed relationship between the triumvirate is duly considered. No similar precedents exist in connection with the Turf, as the testimonials presented to Lord George Bentinck—which assumed the shape of the Bentinck Benevolent Fund—and Admiral Rous in years gone by were from the general public, in recognition of their services on behalf of racing. The gift to Lord Falmouth consisted of a handsome silver salver of large dimensions, bearing the following inscription:—"Offered for the kind acceptance of the Right Hon. the Viscount Falmouth, by his trainer and jockey, Matthew Dawson and Frederick J. Archer, as a token of gratitude and esteem to the best, kindest, and most generous of masters on his retirement from the Turf, January 1884." The simplicity of this language is eloquence itself, and cannot fail to be duly appreciated by the recipient, whose Turf career has ever been *sans peur et sans reproche*.—*World*.

THE progress of morals in England during the last quarter of a century formed the subject of a recent interesting address by Professor Leone Levi before the Manchester Statistical Society. The general result of Professor Levi's researches did not indicate a very remarkable progress during the period mentioned, though an improvement in certain particulars was shown to have occurred. There appears to be a tendency towards an increase in the number of divorces in England, though the proportion of the number of divorces to marriages appears to be considerably smaller in England than in most other countries. A decrease in the number of irregular relations of the sexes in proportion to the population is noted. Some improvement is noticeable in the case of offences against the person, but the statistics of suicides show a considerable increase. Offences against property are still numerous and a marked increase appears to have taken place in the cases of burglary, house-breaking, breaking

of shops, frauds and forgery, offences which require ingenuity and a certain amount of planning to accomplish. The statistics appear to reveal the existence of a direct relation between the state of trade and the number of offences against property, those offences increasing as trade declines and diminishing in number as trade revives. It is not certain on the whole that any improvement has been made by the working classes in habits of providence. The amounts on deposit at the savings banks show a slight increase, but on the other hand the number of cases of drunkenness has increased from 1857-61 to 1877-81 to the extent of 68 per cent. The morals of trade still leave much to be desired. Complaints are often made of want of good faith in commercial transactions, of the prevalence of customs in trade and manufacture often altogether at variance with the principles of equity, of the wretched condition under which shipping property is subjected to the danger of the sea under the protection of marine insurance, and of a great variety of modes in which the requirements of morals are set at naught, whilst the character of the stock exchange transactions often illustrates the prevalence of a speculative spirit approaching to gambling, but of these it is difficult to produce statistical evidence.

THE *St. James's Budget*, after commenting on the Park Club gambling prosecution, relates the following story of a brace of gamblers who, after staking their last coin, tossed for their clothing and ultimately for the life of one:—"Two men, one tall and stout and the other short, were charged under the following remarkable circumstances:—A Bow-street officer named Croker was passing along the Hampstead-road when he observed the two prisoners at the top of a wall. A moment later he saw to his horror the tall man hanging by his neck from a lamp-post attached to the wall, being that instant tied up and turned off by the short man. Croker rushed to the spot, when the tall man fell to the ground, the handkerchief with which he had been suspended having fortunately given way. Croker produced his staff, said he was an officer, and demanded an explanation of the proceeding; the only reply he received to his inquiry being a violent blow on the nose from the tall man, which nearly knocked him backward. The short man ran away; but the officer procuring assistance, managed to capture both. They explained to the bench that they worked on canals. They had been tossing for money, and afterwards for their clothes. The tall man, who was hanged, won the other's jacket, trousers, and shoes. They then agreed to toss up which should hang the other, and the short man won the toss. They got upon the wall, and the tall man paid his debt of honour by allowing the short man to hang him. They both agreed in this statement; and the tall man said if he had won the toss he would assuredly have hanged his friend. The magistrates expressed their horror and disgust at this method of gambling, and ordered the tall man to find bail for his unjustifiable attack upon the officer; and the short man also to find bail for hanging the tall man. Not having bail, they were both committed to Bridewell for trial."

THE following is the text of the document, given by the Mahdi to his five Lieutenants, sent to organise the insurrection in Darfour, Sennaar, &c.:—"Written in my camp at El Obeid, on the 11th day of the month of Muhorrum, in the

year 1301 after the advent of Mahomed, for ever our Lord and Prophet. To all my brethren in Darfour, who believe in Mahomed and the 120,000 Prophets, and who pray for the Four Caliphs.—Hail blessing, and long life:—As soon as you shall have read this epistle, hesitate not, but girt your loins with the sword, to join the fight for Islam and its purification, so that you may do away with your present ruler who is more the servant of the Christian than of the faithful. I will then be your chief, I will govern you with kindness, I will rid you of your burdens, and make you masters of the country you inhabit. Until I arrive amongst you, obey my representative, who is taking you this letter and my greeting. Take up the sword and pray for me —(Signed) Mahomed Achmed, Servant of the Prophet and Leader of the Faithful."

THERE were three fires in Tokiyo on the last day of March. The first occurred at 6 o'clock P.M. in a bath-house in Himono-cho, Nihon-bashi: it was immediately extinguished. The second was at 8.30 P.M., in the suburb called Hachimondzuka: it destroyed two houses. The third was in Aomono-cho, Nihon-bashi: it also broke out at 8.30 P.M. but was extinguished before attaining serious dimensions. During the first week in April the capital enjoyed comparative immunity, only one fire—in Yotsuya—having occurred: it destroyed two houses.

THE *Yomiuri Shimbun* says that the deliveries of imports in Yokohama during last month (March) amounted to \$1,100,771, while the sales of exports were \$489,658, the balance in favour of imports being \$611,113. The same journal states that, between February 28th and March 28th, the weight of silk sold to foreign merchants was 84,700 *kin* (112,227.5 lbs.), and that of tea 706,700 *kin* (273,877.5 lbs.)

THE total number of cholera cases in the six years 1877-1883 amounted—according to the *Fiji Shimpō*—to 239,952, of which 154,714 were fatal. In 1879, the epidemic raged with extreme virulence. The disease originated that year in Yehime Prefecture, in the month of March, and spread all over the country. Out of 162,637 cases in 1879, 105,786 resulted fatally. The average death-rate amongst those attacked by cholera is 54.9 per cent. Many more cases occurred in the south-western districts than in the north-eastern.

THE next American beauty promised to us from across the Atlantic, says a home paper, is Miss Julia Jackson. Her name ought to insure her as enthusiastic a reception in English society as her reported beauty, for she is the daughter of one of the bravest and the most gallant of Confederate generals—Stonewall Jackson, whose untimely and unhappy death—he was killed, it will be remembered, by his own men in mistake—was as bitterly regretted by his foes as by his friends.

THE Emperor of Russia, says an Indian paper, will commence racing on an extensive scale this year, and intends to send some horses to run in England at no distant date. General Havaisky, Director of the Imperial studs of Russia, has recently visited England and France, and, during his stay in the latter country, purchased a dozen thoroughbreds which were recently shipped to Russia.

THE reply of Secretary Chandler to a Senate resolution calling for a statement showing the

date of construction, original cost and total expense for all repair, since their construction, of vessels borne on the Navy Register in November, 1883, has been sent to the Senate. The report shows that there were 92 vessels on the register. Of these 20 were built prior to the Rebellion, 31 during the war, and 41 since the close of hostilities. The original cost of the 29 vessels amounted to \$40,796,613. Repairs on all the vessels aggregate \$41,200,822, making the total cost amount to \$81,997,435. The repairs, as the figures shows, have exceeded the original cost by \$404,209.

A good story is current in Scotland, says a London journal, regarding a noble lady of pronounced temperance habits, and whose name is a good deal in people's mouths just at present. She had invited to dinner at her shooting lodge one day the young clergyman of the parish. Talking to him in the drawing-room before dinner, her ladyship said: "You are a moderate drinker, I think, Mr. So-and-so." "Yes, Lady —," said the clergyman; "I am a moderate drinker. I take a glass of wine when I feel disposed." "Ah!" said her ladyship. "Now, Mr. So-and-so, can you tell me if you ever heard of a confirmed drunkard who was not first a moderate drinker?"

A PATENT has been taken out in Germany for a new process of enamelling ceramic articles. The glass, terra-cotta, stoneware, porcelain, or similar article is covered with a film capable of conducting electricity, by painting the article with a solution of chloride of platinum or nitrate of silver, and burning this in, and then decorating as desired with enamel. This is burned in, and the article is afterwards covered electrolytically with the metal. The galvanic coating does not adhere to the enamel, and very varied effects can be produced by gilding, silvering, colouring, polishing, platinising, &c., the metallic surfaces of the articles.—*Pottery Gazette*.

THE use of beef, mutton, and pork as articles of diet is growing in Tokiyo. According to figures furnished by the vernacular press, the number of oxen slaughtered in the capital during 1883 was 9,855, the number of pigs 1,108, and the number of sheep 2,311.

IT is announced that the necessary arrangements have finally been completed for inaugurating a system of return postal cards, and that this addition to postal conveniences will be made without delay.

THE *Iroha Shimbun* says that a number of Annamese arrived in Nagasaki a few days ago, but that they were not allowed to land until communication had been held with Tokiyo.

OWNERS of ponies are reminded that the entries for the Spring Meeting close on the 15th instant, and that the measuring mornings at Negishi will be the 10th and 15th, from six to eight o'clock.

THE American ship *Frank Pendleton* sailed for Victoria, B.C., on Tuesday, in ballast, and the British bark *Annapolis* for New York *via* Kobe.

THE British schooner *Guam*, from this port, arrived at Kobe on Friday the 14th inst.

JAPANESE FINANCING.

THE article which we reproduce to-day from the *Manchester Guardian* on the subject of "Japanese Finance" deserves the attention of those charged with the duty of tiding this country over the commercial depression from which it is now suffering. The *Manchester* journal takes, in our opinion, a sound and impartial view of the situation. There can be no doubt that, considering what the Japanese Mediatized Government was called upon to do, and what it has actually done, it deserves, in the main, credit—not condemnation—for its financial record. It came into power with an empty treasury, with a considerable burden of debt, and with a seriously disordered currency. Looking back now at the course things have taken, we can scarcely doubt that, so far as her finance is concerned, Japan has benefited by what, under ordinary circumstances, is anything but a benefit—the autocracy of her rulers. A representative government could never have succeeded in carrying through, even if it might have ventured to propose, a measure so partial in its bearings as the capitalization of the pensions of the *Kwa-soku* and *Shizoku*. History furnishes no instance of any step so radically hurtful to the pecuniary interests of these that took it. There are writers who have applied to the proceeding terms as harsh as "spoliation" and "dishonesty," but it seems extravagant to deny that the country had a right to expect the speediest possible relief from a burden which had been gradually imposed upon it by a military despotism. Out of Japan's total national debt of 260* million *yen*, in round numbers, 176 millions come under the heading of Pension Bonds, so that the debt actually contracted by the Government since 1871 only amounts to 84 millions, or say, sixteen millions sterling. When we consider that with this sum 231 miles of railway have been laid; all the principal places in the empire connected by 12,580 miles of telegraphs, with 207 telegraphic stations; a standing army of considerable dimensions armed and equipped in European fashion; 5,080 post-offices established, and 13,467 miles of postal routes put in working order; 9 mines opened and supplied with machinery; 16 industrial works and manufacturing establishments; 47 light-houses built and 23 light-ships, buoys, etc., moored in their places; the nucleus of a mercantile marine formed; 122 hospitals, besides alms-houses, opened; a mint, chemical laboratories, survey, and meteorological,

departments, observatories, etc., established; 28,139 schools and colleges organized and supported; large numbers of students sent abroad and educated; 15 libraries and 7 museums opened and stocked; 1,496 police offices established with a force of twenty-five thousand police; prisons, courts of law, and many other public buildings, dock-yards, and arsenals provided; a navy of twenty-five ships formed, six of them being ironclads; legations and consulates established in all the principal cities of the Treaty Powers; large numbers of foreigners employed in various capacities; a rebellion subdued at an expense which still figures for 15 million *yen* in the national debt; and sundry other matters undertaken or completed—considering all this, we say, the wonder is, not that Japan has a domestic debt of 16, and a foreign debt of less than 2, millions sterling, but that her liabilities are not two or three times as great. Nevertheless, it cannot be denied that the public is a little bewildered by what it sees, and that nothing has puzzled it more than Japan's last feat of financial energy. In two years she has brought her fiat notes from a depreciation of 40, to a depreciation of only 9 per cent., and the way she has achieved such a result is by diminishing their volume to the extent of 50 millions, approximately. That her financiers have been able to accomplish this, shows that the depreciated condition of the currency was never any measure of their competence to deal with it. But that they have resorted to such a sweeping measure shows, also, a certain amount of recklessness. Men cannot help asking whether this state of affairs is stable, and the answer, after all, is that the volume of the currency in circulation, and therefore its specie value, varies with the option of a virtually irresponsible Government. There is nothing, *prima facie*, to prevent the reissue of as many millions as have been recalled, and until the public begins to feel quite confident that such a catastrophe is in the last degree unlikely, industrial and commercial enterprise will not revive. The *Manchester Guardian* says all this plainly enough, and its opinion is the more valuable on account of its evident impartiality. It regards the most recent measures adopted,—the issue of Railway, and *Kinsatsu* Redemption, Bonds—as "intelligible and definite," and says that, "if they are honestly carried out," a general improvement of trade may be expected. This opinion is based upon the hypothesis that the object of the loan is "to enable Japanese to substitute foreign capital for the native capital invested in the railways, and thus, as far as possible, prevent any stringency on this account." But this, it seems to us, is just what the Japanese are not doing. There is a possibility, of course, that native holders of these Railway Bonds may employ them as security for obtaining advances from foreigners, but nothing of

that sort is likely to take place on any considerable scale within Japan, for the very sufficient reason, that neither the foreign merchants nor the foreign banks at the open ports have money to lend at present. The *Manchester Guardian*, alluding to the fact that the Bonds may be held by foreigners, applauds "this removal of the old conservative restriction," not reflecting, apparently, that at the root of the so-called "conservatism" is the difficulty of allowing foreigners to hold property outside treaty limits. However this may be, we doubt whether the new measure will continue to be so favorably regarded when it is known that no earnest attempt has been made to bring the Bonds really within foreign reach. The advertisement which appeared in the local English press, calling for tenders, had scarcely been understood when it was withdrawn, and the public learned that nearly double the amount of the first instalment—five million *yen*—had been subscribed by Japanese banks and capitalists. It seems scarcely necessary to demonstrate the recklessness of sinking home capital in railways at the very moment when the country is suffering from the effects of currency restriction. Most persons believed—and the *Manchester Guardian* echoes the belief—that the Bonds would have been employed as a means of bringing specie into the country, and that, with this view, active measures would have been taken to place them on the foreign markets. Such a course would have shown that the Government is not careless of the consequences its very drastic financial policy has entailed, and would probably have supplied the impetus needed to move enterprise from its present dormant condition. We can only hope that these considerations will commend themselves strongly to Japan's financiers before the opportunity ceases to be available.

PAST AND PRESENT.

A STRIKING illustration of the change that has come over Japanese ideas during the past ten or twelve years is to be seen by comparing the recent writings of the vernacular press on the subject of treaty revision, with the articles and essays that appeared in the same journals between 1871 and 1873. In one respect the sentiment of the two periods is identical. There is observable the same urgent, almost impatient, desire to compass the integration of Japan's "rights as an independent power." But, whereas, in 1871, a majority of the Tokiyo newspapers combatted the notion of extending the treaties so as to remove all restrictions upon foreign intercourse, even though the extension should simultaneously achieve this national aim; we find, in 1884, a much larger majority either openly advocating an extension in the former sense, or opposing it only so

* The *Manchester Guardian* is not quite accurate in its figures. The actual state of the national finances, as shown in the last Budget, was as follows:—

New Debt	10,852,925
Specie Bonds	5,844,800
Loans for Public Works	11,649,050
Loans in connection with Satsuma Rebellion	15,000,000
Domestic Debt not bearing interest	8,555,196
Various Pension Bonds	176,267,375
Paper Money	98,290,352
Foreign Debt	8,906,488
Reserves, Loans due to Government and other funds	335,366,186
Total Debt	75,259,252
	260,106,934

long as it is unaccompanied by the latter desideratum. A dozen years ago the idea was that to admit the strong-minded, strong-bodied, fat-pursed alien to competition on equal terms with the inexperienced, simple-hearted, impecunious native, would be a proceeding somewhat analogous to letting the fox into the hen-coop or the wolf into the fold. Now, on the contrary, these apprehensions seem to have disappeared. Writers in the vernacular press either treat them as unworthy of consideration, or dispose of them by pointing out that if Japan is ever to progress permanently it must be by complete emergence from her shell, and by fearless contact with conditions which, to be beneficial to either side, must be beneficial to both.

Turning to the foreign local press, we find a change equally radical but in an opposite direction. When vernacular journalists were setting forth the material perils of unrestricted intercourse between nationals so differently endowed with experience and resources as Westerns and Japanese, foreign writers ridiculed the pusillanimity, or combatted the irrationality, of this notion; pointing out that commerce, being from its very nature reciprocal, could not be extended so as benefit aliens without conferring corresponding advantages on natives, and that so long as Japan withheld from her Western visitors any portion of the privileges her own subjects enjoyed abroad, she must be content to rank with semi-civilized nations. But now, foreign writers, falsely claiming to represent the views of the mercantile community, contend that because the balance of advantage resulting from extended intercourse would be on Japan's side, and because she has no sufficient equivalent to offer foreigners for consenting to emerge from *their* isolation, things are very well as they are and any radical change is to be deprecated as dangerous and unnecessary.

These contemporaneous variations of opinion have a significance too plain to need comment. For our part, we do not propose to insult the intelligence of our readers by pausing to consider whether this particular phase of the position taken by foreign conservatives is, in any sense, defensible. That the onus of opposing extended intercourse should ever be shifted from Eastern to Western shoulders was a contingency which the most bizarre prophet could not have foreseen one moment before it became an accomplished fact. Even less likely was it that, within the limits of a still brief career, the same Japanese statesmen should find themselves obliged to combat, first the reluctance of their own nationals to yield to foreign insistence, and next the reluctance of foreigners to permit the consummation of the object on which they formerly insisted.

To complete this comparison of past and present, a point of close resemblance must be noted between the consequences of foreign conservatism to-day

and those of Japanese conservatism twenty years ago. It is matter of history, that the Government which admitted foreigners to Japan in 1858, placed in the hands of its enemies a weapon it could never successfully parry. It is matter of observation, that the Government which fails to overcome foreign conservatism in 1884, is in danger of losing its prestige and forfeiting its title to public confidence. At the former date, it was easy to unite the hereditary enemies of the House of TOKUGAWA against rulers who had violated the patriotic traditions of the country; at the present time, it is not less easy to rouse public opinion against a Government which fails to obtain from Foreign Powers any recognition of the nation's efforts.

Nothing could be more misleading than to omit the latter fact from any review of the situation professing to be complete. Doubts have recently been expressed by prominent members of this community with regard to the degree of interest really taken by the nation at large in the question of treaty revision, and some writers have even gone so far as to assert that the attitude of the people in general is quite apathetic. This erroneous estimate ought not to surprise us, when we remember what very faint echoes of the thoughts that move Japan can permeate Yokohama's environment. The Settlement is virtually in a state of siege. Its commerce is a commerce of investment. It is cut off from free communication with the people of the country, and surrounded by an army of monopolists, to whose interests any radical relaxation of existing restrictions would be fatal. No wonder that within the lines of the *saitori* and *hikitori* nothing is heard of an agitation directly opposed to the monopolies they enjoy. Yet that such an agitation exists, that it is daily extending and gathering strength—not from the patriotic instincts of the people alone, but also from the friction of political parties,—is absolutely certain. Underlying everything that is written in the journals of the opposition is a strong current of suggestion that, were the Government more careful of the national dignity and more resolute in asserting it, Foreign Powers had long ago restored to Japan the rights inseparable from independence. This is what political agitators have been teaching the people everywhere for years, and there can be no doubt that by their persistence, many a man, otherwise indifferent to such questions, has been roused to regard them as vital to his country's honour. The tendency of history to repeat itself would be curiously, and not very creditably, illustrated, were this latest phase of foreign intercourse to become a second factor of disturbance, and did foreign illiberality prove as fatal to the Government of the Restoration as Japanese liberality proved to its predecessors. Happily this peril is not likely to become more than a possibility. Blind conserva-

tism preferring certain evils to every change that is not absolutely guaranteed against risk, is the creed, not of the majority, but of a small minority, of thinking foreigners. Things have already begun to move out of their rusty groove, and we may hope ere long to see the day when antique timidity and distrust will have given place to a more liberal and rational mood.

KOREA'S TROUBLES.

IF the statements of the *Fiji Shimpō's* Sōul correspondent are correct, the state of affairs in the Korean capital have a very ugly look. One can easily understand that there should be enmity and hard feeling between the Chinese and Japanese troops, or rather those trained after Chinese or Japanese fashion, but that their bickerings should result in serious disturbances without authoritative intervention shows that the Government is practically powerless. Taken altogether, the news from Korea is anything but encouraging. From the Consular Trade Report of Ginsan,—a translation of which was published in the *Japan Mail* of the 28th March—it appears that both imports and exports are falling off with amazing rapidity; though, it is true, the fact that the port of Ninsen is nearer to the great commercial provinces than Ginsan, is somewhat to blame for this. But, beyond all doubt, the trade of Korea may be expected to collapse totally unless some radical changes are brought about without loss of time. The cause of the prevailing commercial depression lies not so much with the people or the mercantile classes as in the palpable inefficiency of the Administration. That the Government itself is in great financial straits is apparent to the most casual observer. Not long ago the news reached us that the Chinese loan of \$200,000,—a very paltry sum, by the way, taking the size of Korea into consideration,—was not only completely expended, but that there seemed to be no way in which to pay off the loan, and that the Peking Government had expressed unwillingness to make any further pecuniary advances. In order to retrench, the Korean Government thereupon proposed to do away with the foreigners employed in the costly and nearly useless Customs' Service, under the excuse of engaging natives and Japanese, who would not have to receive nearly so high salaries as the foreign employés. This proposal, however, came too late, as Mr. VON MÖLLENDORFF, Vice-President of the Korean Foreign Office, very justly opposed its being put into execution. He represented that it would be decidedly undignified, as well as insulting to the foreign employés, to dismiss them after barely six months' service, and though his advice was followed, its justice does not seem to have been acknowledged by the Korean Government. Of course, his position of authority effectually prevented the proposed change, but the Government has,

apparently, borne him an ill-concealed grudge ever since. Moreover, it seems from trustworthy sources that Mr. VON MÖLLENDORFF has been an unpaid member of the Foreign Office ever since his tenure of office. For our own part, we have always believed that his position as Vice-President of the Foreign Office is merely an honorary appointment without any over-enticing pecuniary advantages included; and that he is rather a Chinese than a Korean pillar of state. Be this as it may, his influence with the Korean Government is said to be considerably diminished.

It is a question whether the opening of Korea to foreign intercourse has been of direct benefit to that country up to the present. That it will be so in the future admits of little doubt; but for the moment, Korea has lost certainly more than she has gained. Yet this fact is chiefly due to Chinese mismanagement. So far as Japan has been, and is, concerned, her traders have given a decided impetus to Korean commerce, and it is well to remember that the first trading-vessel, since the ratification of the treaties, ever sent from the Hermit Kingdom, made her way to Japan. It is undeniable that the Chinese have the first claim upon Korean commerce, but the manner in which they have established trade in that country savours more of the entry of a victorious army than of the honest dealings of peaceable merchants. According to the correspondent of the *Fiji Shimpō*, their mode of dealing with the Koreans is in the most highly developed form of mercantile speculation. Natives inveigled into any of the smaller Chinese shops rarely leave with much ready money in their possession, and the rapacity of the petty store-keepers seems absolutely without a limit. If the Japanese writer may be credited, there is more force than persuasion employed to induce Korean customers to invest in Chinese commodities. This practice has been appealed against by the authorities, but the Chinese Consul seems powerless to control his countrymen. Altogether, the lot of a Chinese consul in the Korean ports is evidently far from being a luxurious sinecure, for no day passes without its attendant complaints and remonstrances from the local authorities.

A great deal of this trouble is directly traceable to the presence of the Chinese soldiery. These errant warriors are stalwart, muscular men, mostly from Shantung and Pechili, naturally of kleptomaniac propensities, and as unruly and rough customers as one would care to meet. Their officers, whatever may be their own standard of morality, seem completely powerless to check the unruly spirits under their command. Thieving, highway-robbery, and house-breaking are the least vicious pastimes in which a great part of the Chinese soldiers are wont to indulge; and ugly whispers of still darker crimes are not wanting. There are some unpleasant re-

reflections suggested by the rumour that the wealthy merchants of Sōul are sending their wives and daughters out of the capital to save them from the violence of the Chinese troops. The latter's ill-treatment of the natives is public, for they have little or no respect for anything Korean, Foreign Office and KING included. That this sort of thing should continue is a matter of serious reproach to the Chinese Government. Whatever position Korea may hold in the eyes of the sages of the T'sung-li Yamên, China's pretensions as a tutelary Power will be much weakened in the eyes of her so-called tributaries, should it appear that the cost of receiving assistance from her is barbarous immorality and violent rapacity. On the whole, the position of a country tributary in word or deed to the Middle Kingdom does not bring over-many blessings with it.

JAPANESE CHARACTER.

TO those who have lived long in Japan, and whose knowledge of the language enables them to enjoy something like intimate converse with the people, there is gradually brought home a conviction that while some traits of Japanese character are difficult to reconcile with each other, or with any of our preconceived standards, others, again, are so strange as to be incomprehensible. Without any desire to speak slightly, it may be truly asserted that by one class of foreigners only is any pretence made to a thorough comprehension of this problem. There are to be found in this Settlement of Yokohama many men who, claiming to have analyzed exhaustively every phase of Japanese disposition, do not hesitate to announce that their education is complete in this respect, and that what they do not know on the subject is not worth knowing. It must be confessed that the extent of this knowledge looks a little incompatible with the opportunities enjoyed for acquiring it. The French guest at Mrs. POTTS' *déjeuner* who occupied himself piecing fragmentary conventionalities into a picture of English social life, was, in truth, more rationally engaged than are men who, living entirely apart from this nation and having no access to its written or spoken thoughts, undertake to describe accurately all the processes of the national mind. The probable fact is that, by the great majority of Westerners living in Japan, Japanese character is counted a profitless study. Recognizing the hopelessness of obtaining any trustworthy data for an independent estimate, and, at the same time, constrained to form some estimate as a basis for mercantile intercourse, they deem it shrewdest, and find it safest, to suspect and distrust everything. It must be confessed, however, that when the basis of this distrust comes to be examined closely, it looks but a frail affair. Take Yokohama, for example. We venture to assert that the conditions

under which commerce is carried on there are of a nature to test severely the strongest moral fibre in the universe. The Japanese trader enjoys virtual immunity. Whatever he does will not disgrace him in the eyes of his countrymen, who are always ready to attribute his failures to foreign guile, rather than to his own want of integrity. In nine cases out of ten, he believes that to show any consideration for the men he deals with would be mere silliness, since, however he protects himself, they will be sure to get the lion's share of the profits in the end. Nothing can possibly persuade him that this is not the case, so long as the foreign merchant's scale of living is far beyond anything he can think of affording himself. "The strangers tell me," he says, "that their gains are only so much or so much, but if that be true, they must spend on their food and houses a great deal more than they make by their business, and they are much too shrewd to behave so thoughtlessly." Thus he labours constantly under the conviction that somehow or other the balance of advantage is against him, and that the utmost exercise of his five wits is needed to avoid discomfiture. This idea is probably at the root of a peculiarity often attributed by foreigners to Japanese merchants; namely, their inability, or unwillingness, to perceive that every one legitimately engaged in a transaction ought to have a share of the profits. By no people in the world, perhaps, is this fundamental principle more strictly observed than by the Japanese themselves in their dealings with one another. But when a foreigner joins the *partie*, they seem to imagine that he will take care to have his full portion with or without their consent, and that unless they keep their eyes very wide open, it will be a BENJAMIN'S portion indeed.

Our immediate purpose, however, is not to conduct an independent investigation into the peculiarities of Japanese character, but to speak of a lecture recently delivered on the subject by the Rev. D. THOMPSON, a gentleman whose qualifications to express an opinion are of no common order. Mr. THOMPSON, having divided character into "native" and "acquired," declared that, so far as his experience went, he could detect no material difference between Japanese and Western native character. The essentials he pronounced the same in both cases. Referring to the general notion that Japanese regard for truth is small, he said that even here the difference was not so great as is commonly supposed, and that in Japan, not less than in Europe or America, there are to be found many men who will sacrifice a great deal in the cause of abstract truth. Despite Mr. THOMPSON'S dictum, however, we are disposed to think that the love of truth for truth's sake is an exceedingly rare trait of Japanese disposition. The general creed is that circumstances are a man's safest

guide. To insist upon speaking the truth when some positive or probable evil may be avoided by a trifling subterfuge, is counted rather a senseless performance. This doctrine, so far as our observation goes, is not less altruistic than egoistic. The *hōben no uso*, or fib of convenience, is a justifiable device in one's neighbour's interests quite as much as in one's own. The same principle leads to another species of insincerity, which has induced superficial observers to pronounce the Japanese a passionless people. A man will tell of some terrible calamity that has befallen him, the death of his wife or the loss of half his fortune, with an air of unconcern so unsuited to the circumstances that one concludes he is either a hypocrite or heartless. The fact is that he is only obeying a social creed which requires sorrow to be unobtrusive before everything; which tells a man that dissimulation is not only legitimate but imperative when its purpose is to avoid making others participate in griefs that do not belong to them. Certainly this is not honest, as Westerners understand the word, but it closely resembles a quality not less admirable—unselfishness. Were it possible to pursue this analysis accurately, we should probably find that what Japanese character seems to lack in one direction is compensated by a peculiar development in another.

After treating "native character" very briefly, Mr. THOMPSON passed on to consider "acquired character," which he defined as "character inscribed or engraven by environment;" that is to say, by social life, customs, maxims, literature, education, religion, polity, and so forth. This phase of disposition is naturally of minor importance, since, being engendered by external circumstances, it can also be altered by them. Among the traits thus developed, the lecturer placed an apparent inability to distinguish easily between what is practicable and what is impracticable, and a consequent proneness to undertake impossibilities and neglect possibilities. The same trait is displayed, he thought, in a tendency to precipitancy—a disposition "to do things with a rush." He ought, perhaps, to have added, that the prelude to this precipitancy is generally considerable hesitation. A Japanese is essentially slow to make up his mind, but having once adopted a resolution, he wants to carry it out with a minimum of delay. Such, at any rate, is the impression his conduct conveys to Westerners. But it must be noted that the judgment of the latter is, for the most part, formed by observing the Japanese under conditions comparatively novel to him. We do not see him in his every-day life, dealing with circumstances to which he has long been accustomed; but we see him confronted by problems which, simple as they may seem to us, are for him full of perplexities and strangeness. Mr. THOMPSON did not, in our opinion, sufficiently recognise this point. He was

inclined to think that the apparent lack of practical discrimination he detected among the Japanese is the outcome of the feudal system, when the struggle for existence was comparatively easy, and the instincts of self-help were not largely developed. This is not the estimate we should have been disposed to form of life under a military despotism.

Pliability, or readiness to adjust oneself to circumstances within certain limits, is another feature of Japanese acquired character which Mr. THOMPSON discussed, referring its origin to the Buddhist religion. "Of all religions in the world," he said, "the Buddhist in its spirit is the most pliable, the most flexible, the vastest, vaguest, most indefinite and most uncertain. Since its origin in India it has adjusted itself harmoniously to all the Gods of the Brahmans and the Chinese without annihilating any or provoking any. It also absorbed all the Gods and sages of Japan." This conclusion would have had more value were the premise better established. But pliability is about the last characteristic we should have attributed to a Japanese. True, he seldom formulates a direct refusal, and will carry the etiquette of assent to almost-curious lengths, but at the point of action, his opposition is little short of invincible. Strangers who attach to his forms of expression the precise value of their sound, are often deluded into believing that he is still open to conviction or has not yet pronounced his ultimatum. Experience soon dispels this delusion.

The whole subject of Japanese character is as full of interest as it is difficult to investigate. Mr. THOMPSON has made a good beginning, and it is much to be desired that his example may be followed by others of his cloth, for certainly the missionaries are in every way best qualified to conduct the investigation.

CORRESPONDENCE.

DOMESTIC AND FOREIGN LOANS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You have so well exposed the unsoundness of the leading idea of "Protectionist's" last letter on the above subject that it is like trying to "slay the slain" to offer any further refutation of his fallacies. But he has raised such a cloud of argumentative dust with his powerful pen, that you may be willing to accept some aid from me in laying it.

Having no copy of Mill's works at hand, I must assume that "Protectionist's" citations are verbally correct. But it seems to me that he wholly fails to comprehend Mill's dominant purpose, which was to show that the functions and utility of Money being only that of an instrument or medium of exchange, it is not itself the subject of exchange, and consequently cannot be properly called Capital, the latter term being applicable only to those forms of Wealth which are used reproductively. Although Adam Smith did not actually draw this distinction between Money and Capital, it is a logical deduction

from his principles. Mill was, if I remember rightly, one of the first to draw it; but it has been followed by most of the later economists. Thus Fawcett says, "The Wealth accumulated with the object of assisting production is called Capital;" and again, "The Capital of a country is that portion of its Wealth which is appropriated to reproductive purposes;" and, in distinguishing between the working of circulating Capital and fixed Capital, he says, "All Capital is intended to be, sooner or later, consumed; circulating Capital is destroyed by once ministering to the production of Wealth—implying immediate consumption it must also necessarily imply immediate reproduction. But fixed Capital is only gradually consumed, and therefore the Wealth so expended is not immediately reproduced."

Now Money is a form of Wealth which is practically *unconsumable*, that being one of the requisites of good Money. Consequently Money is held not to be Capital in the sense of the strict definition above given.

This restricted definition of Capital, and the exclusion of Money from it, may appear to some minds pedantic and unpractical. But it is, nevertheless, a true definition, and the statement that Money is not Capital is also true, and involves important practical consequences. If "Protectionist" could but once apprehend this fact, it would greatly contribute to clear his view.

Regarded as a mere instrument of exchange, like a yard-stick or a pound-weight, it is easy to see that Money is not the thing invested in reproductive works, but only the *unconsumed* medium of that investment. *Capital* is the thing invested, and has to be consumed to be productive. But the Money employed remains, after the investment, for other uses. Therefore it cannot be called Capital. No one denies that Money (*so far as it has intrinsic value*) is part of Wealth, but it is generally agreed that it is not that part of Wealth which, being devoted to reproduction, and necessarily consumed therein, is entitled to be called Capital.

A clear apprehension of this economical rule, would, I repeat, have saved "Protectionist" from his strange delusion that Japan could have, at the same time, both her railways and the Capital (which he calls Money) invested in them. He would have seen that, Money not being Capital, its survival in circulation after the investment, did not imply that the Capital invested also survived.

He insists, however, that Money *is* Capital. He admits that Capital does not consist solely of Money (though even this he puts in the bewildering form that "money is not exclusively capital"); but he contends that Capital comprises Money, and from this he draws what he calls the "legitimate conclusion" that when people build railways they "put Money, and nothing but Money, into them;" and, again, that "the railway is built with Money."

It will be readily seen how naturally his first error leads to this second one; and how both are sure to induce further errors.

Now it is an obvious fact that neither railways nor mills, nor reproductive agencies of any sort, are "built with Money." No Money whatever is "put into" any of them, but only iron, wood, labor, and similar commodities. No sensible person will dispute this fact. Your correspondent will probably not himself dispute it; but he completely ignores its profound significance, when, thinking only of the Money employed in procuring these commodities, he declares that railways are "built with Money." He could not have written "built of Money" without seeing his fallacy, nor could he write "by means of Money" without perceiving that Money was a mere instrument in the business. But he says "*with* Money," leaving us to find out, as best we can, what he really does mean. Perhaps he does not know his own meaning quite precisely. For if he did he would perceive that there *must* be something wrong in his proposition that Japan, by using her own Money in building railways, could get them for nothing (that being what the proposition logically comes to). He

recognizes that the Money which he declares was put into railways, is afterwards found circulating among the people; and to account for this surprising fact he propounds the doctrine that railways, and the like, may be built without cost to the country which builds them with its own Money.

Had he understood Mill, he would have comprehended that it is Capital, not Money, which is put into these works, and that this Capital, consisting of the commodities consumed in the work, is withdrawn from the Capital of the country, becomes fixed, and is no longer available for other uses, while the instrument employed in procuring the commodities, the Money, remains for fresh service.

"Protectionist's" delusion on this fundamental point naturally leads him into other errors. Having brought his mind to believe that Japan may invest twenty millions worth of Capital in a railway, and then possess both the railway and that Capital (which proposition he considers as indisputable as that two and two make four), he easily reaches the conclusion that any assistance from foreign Capital in making railways in Japan, is quite superfluous. He does not deny that Capital is scarce in this country, but, holding that it can be used in reproductive works without being consumed, he finds its scarcity of no consequence whatever.

If he were himself in need of a coat, and had not enough Capital of his own to induce the tailor to make the exchange, he might perhaps admit that a loan of Capital from some friend's stock might be serviceable; but when Nations want railways this simple principle is, it appears, inapplicable.

And then, again, he considers the conditions of Japan so peculiar that borrowing Capital from foreigners might, under any circumstances be dangerous for her. Better even to go without the coat than incur any obligation to obtain it.

Now this is the common Japanese view, and one may, perhaps, admire its lofty independence of spirit.

But is it not somewhat fantastical and impractical? Here is a country notoriously deficient in Capital. Industry and commerce in every department are suffering terribly for want of it. Yet the few individuals who have it at command (possessing the Money required to bring it into action) are gravely urged, not to employ it as circulating Capital in quickly reproductive operations, but to bury it, as fixed Capital, in undertakings which can, at best, be only slowly reproductive. All the Capital required for such undertakings could be easily obtained from foreign countries, and domestic Capital would then be free for ordinary industry. But no! Japan must not borrow, because borrowing may give foreigners too lively an interest in this country.

But why do not people who reason in this timid manner see, that to interest foreigners in Japanese development is far more likely to be a source of security, than one of danger? Creditors, if not mad, are not generally hostile to their debtors' prosperity. How, then, could Japan have anything to fear from those who should lend her Capital?

In most foreign countries she is now regarded with indifference, being but little known. But should she appear as a borrower, she becomes immediately an object of interest to all lenders. They begin at once to study her geography, her history, her character, and her resources, and to feel a direct personal concern in her welfare. If their own or any other Government proposed by some unjust act to provoke war, and imperil that welfare, the lender's interest at once impels him to cry out against such provocation and to try to avert the rupture of peaceful relations. For he knows that, by the law of nations, war cancels all obligations to enemies. He is, therefore, against war and all that could lead to it.

It may safely be said that England and America would have quarrelled seriously many times during these last fifty years, but for the immense sums which the American people have borrowed from England for railway construction. This indebted-

ness inclined England to peaceful conduct, and has had no small influence at some critical moments. Has American independence suffered—have American interests been injured, by her borrowings? Even protectionists would hardly assert the former. To the latter they might answer—Yes! because their theories oblige them to believe that, if the American people had only known how to do it, they might now have had their 100,000 miles of railways without owing foreigners a dollar for them, whereas it is well known that they do owe foreigners hundreds of millions.

But somehow the Americans themselves, though in general a very shrewd people, do not take this view of the matter, and most of them consider that but for foreign Capital, they would not to-day have had all those railways, nor have been either so prosperous, so strong, or so much respected as they unquestionably are.

But I fear that neither the American example, nor the many other examples which support the arguments of this letter, will have much influence in Japan as long as such clever writers as "Protectionist" are in the field. I must, however, leave him in possession of it, for I have already taken too much of your space in merely trying to clear away some of the dust he has raised.

Yours truly,

L.

Yokohama, April 2nd, 1884.

NO COMPULSION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Considerable attention has been bestowed, by one writer and another, upon the recent pronunciamentos of two esteemed Yokohama merchants, whose identities of thought and expression recall the pleasant Ephesian legend which the genius of Shakespeare has perpetuated. But I have seen, as yet, no mention of a curious lack of perception by which they appear to be afflicted,—although the infirmity does not manifest itself in the discussion of the same subject by both of them. I refer to their inability to distinguish between permission and compulsion, in their criticism of anticipated actions on the part of the Japanese Government. In certain important particulars, they seem to discern no difference between what they may be allowed, and what they will be constrained, to do. This deficiency of analytical power throws them into no little uneasiness, from which a simple explanation may perhaps extricate them. One of the couple is disturbed by apprehensions of the conjugal confusion which may light upon foreign households in the event of a general submission to Japanese jurisdiction. The other recoils before the exhausting prospect of being obliged to "perambulate the country," whenever the restrictions upon internal trade and residence are set aside. In neither case is there the slightest ground for the anxiety so naïvely confessed. It resembles the trepidation experienced by conservative opponents of English and American legislation for the extension of women's privileges. The painful spectacle of their wives and mothers, not to speak of "their sisters and their cousins and their aunts," exposed to the horrors of an election, is always vividly before them; and in their agitation they overlook the circumstance that no woman will be compelled to vote, if she is disinclined to. Even in the home of Mormonism, where supplementary espousals are sanctioned by local authority, no man is obliged to wed more wives than he wants; and if he considers one sufficient, although he may be set down as eccentric, he will not be required to add to his encumbrances. So far as Japan is concerned, the renunciation of extraterritoriality will in no wise render it necessary for alien heads of families to depart from the decorous, steady, and moral course of life to which they have been accustomed. Not one of them will be expected "to tell his wife she may go," or that "he does not want her any more."

They will stand just as high, in Japanese estimation, if they never do anything of the kind. I venture to say that no native of any class—official or mercantile—will exhibit the least surprise or dissatisfaction if he discovers that his foreign friends continue to remain on perfectly good terms with their wives. The ladies of Yokohama would labor under a sad misapprehension if they thought that the abolition of consular jurisdiction would inevitably be the signal for them to settle their affairs and pack their trunks, preparatory to being told "they may go," and that they are "not wanted any more." They must not be led astray by the groundless apprehension of a single individual. As regards the supposed fatiguing increase of labor which would fall upon the "already hard worked merchants," if the empire were thrown open,—the assumed necessity of "perambulating the country,"—that, also, is a visionary evil, the outgrowth of an incapacity to discriminate between the potential and the imperative conditions of a compact, or a notification. If the Japanese Government chooses to proclaim that foreigners may freely visit the interior, and trade there, the announcement need not be interpreted as a peremptory order for them to do so. They will be wholly at liberty to remain where they are and have been, in the open ports, if that suits them better. There will be no forcible suspension of trade in the settlements,—no closing of counting houses, or interruption to the existing methods of commercial intercourse. The ex-chairman of the Chamber of Commerce appears to see himself and others driven out into the by-ways and villages, "to dispute the vantage ground of local market places with their native competitors," "to buy at cottage doors the skeins of silk fresh from the reeling basins"; and permitted to dispose of their "yarns and shirtings," only on condition of being "brought face to face with the consumers." He does not appear to realize that this course of procedure would be entirely optional. There may be some among us whose poetic instincts would by no means be shocked at the pretty pastoral picture of the European merchant, escaped from the "hard worked" atmosphere of Yokohama drudgery, wandering blithely over lane and meadow, his pack well stored with alluring variety, and singing, like the prince of ideal peddlers, as he meets some shy and blushing customer "face to face,"—

"Will you buy any tape,
Or lace for your cape,
My dainty duck my dear-a?
Any silk, any thread,
Any toys for your head,
Of the news't and fin'st, fin'st wear-a?"

Many a delightful bargain, I dare say, might be consummated in this off-hand fashion; and if Autolycus in the Far East should diffidently distrust his aptitude for the new style of enterprise, an attentive study of "The Winter's Tale" would qualify him without further effort. From its pages he might learn how to "dispute the vantage ground of local market-places" with

"Lawn as white as driven snow"

and other gay commodities as flattering to the peasantry of modern Japan as to that of ancient Bohemia. But I presume, in the language of the ex-Chairman, that "any such ideas may at once be dismissed as impracticable." He, at least, would prefer to "carry on" his trade "within the confines of the open ports." There is not the slightest doubt that he can do so. Even if every other dealer in "yarns and shirtings" should rush, in headlong rivalry, to meet the rustic consumers "face to face," he alone, provided he can resist the contagion, may remain at his post, and resolutely conduct his business on the old principles and at the old stand. There will be no compulsion,—none whatever; either in the choice of locality for trading, on the one hand, or in the unloosening of marital ties, on the other. The gentlemen who entered this wide-spreading controversy in such close kinship of misconception may now retire from it, as free from all disquieting delusions as the twins of the comedy go forth from their error,—"like brother and brother; hand in hand, not one before another."

I am, yours, etc.

LIBERTAS.

Yokohama, April 2nd, 1884.

YOKOHAMA CRICKET CLUB.

A Special General Meeting of the above Club was held at the Club Hotel on Monday evening, at which about fifty members were present. Mr. BRYAN DURANT, the Chairman of the Committee, took the chair, and in opening the proceedings said that he did not think it necessary to read the minutes of the last meeting, but would proceed to business and ask the Secretary to read the notice calling the meeting. (Read). He continued and said that sufficient members had signed the application calling the meeting. The proposed changes in the rules had been printed, and by them the constitution of the Club would be materially altered, the idea being to bring all the sports under one ruling body, as it would add to the popularity of the club. The Committee had received a letter signed by the majority of the members of the foot-ball Club advocating the amalgamation.

Mr. MILNE asked the Chairman whether the present meeting had power to alter the rules, as according to the bye-laws notice must be given before the 1st March.

The CHAIRMAN said that, under Rule 21, ten members could call a meeting, and after due consideration the Committee had allowed them to call the present one.

Mr. MILNE argued that a special meeting could not alter the bye-laws.

Mr. GROOM was of the opinion that the ruling of the Chairman was final, but if it was disputed he thought the question should be put to the meeting.

The CHAIRMAN said that the Committee had discussed the question, and had called the meeting. The meeting was in order.

Mr. DODDS agreed with Mr. Milne. The question had frequently been discussed by the old Committee who had come to the decision that a special meeting could not alter the bye-laws.

The CHAIRMAN said he did not think the new Committee were bound by the actions of the old one.

Mr. GROOM said that the Committee did not propose to alter the rules. They called the meeting and left the question to be decided by a majority of the members.

Mr. MILNE did not see what a majority had to do with the matter. If they altered the rules and found out afterwards that the meeting was informal the new rules would fall through.

The CHAIRMAN thought the best plan would be to put the question to the meeting. The meeting was called under Rule 21, as to Rule 24 regarding notice of any alteration having to be given before the 1st March and circulated among the members, this could only apply to the Annual General Meeting. He then put the question as to whether the present meeting was in order (carried by 20 to 13).

Mr. BARLOW wished it entered on the minutes that he and Mr. Milne had raised the question.

The CHAIRMAN said the scheme had been fully discussed by the press, he therefore had very little to say. The majority of the members of the Foot-ball Club and the Captain of the Base-ball Club had expressed their approbation of the scheme. It had been favourably received by nearly all the people who liked sport; they had received promises of donations amounting to \$310.00 for the purpose of enlarging the ground and improving the pavilion should the amalgamation be effected. He trusted that the members would look at the matter in an unselfish light, not giving undue preference to one particular sport, but would consider whether the union would not be beneficial to all.

Mr. ABBOTT proposed, and Mr. HAMILTON seconded that Rule I. read:—

That the Club be called the Yokohama Cricket and Athletic Club.

Mr. BARLOW rose to order, and wished to have the ruling of the Chair. It appeared to him that if the rule were so altered it would amount to a dissolution of the Cricket Club, and the question arose could it be dissolved. In most clubs there was a

rule by which in case of bankruptcy, etc., the club could be dissolved, but in their bye-laws there was none. Again, how far could the majority of members force the minority to hand over their property which they had subscribed for for years, to a new Association which was not yet formed? Could the majority dissolve the Cricket Club and divide the property?

The CHAIRMAN said it was not proposed to dissolve the Cricket Club. This meeting was called under the rules, and it was only proposed to alter some of those rules.

Mr. BARLOW remarked that the Chairman had previously stated that the proposed alterations would materially alter the constitution of the Club.

The CHAIRMAN said a majority of the members had power to alter the constitution of the Club.

Mr. MILNE said that had the new Association proposed to take over the ground, pavilion, and material, and pay for it say \$2,000, he could understand it, but as it was, if the members who played cricket were ever in the minority it might be decided that there should be no cricket.

Mr. BARLOW again asked the Chairman to rule as to the power of the meeting.

Mr. KINGDON said that, to stop the discussion, he proposed that the opinion of the meeting be taken as to whether they should hear the proposed alterations.

Mr. WILSON seconded the proposition.

Mr. DODDS asked whether the proposers were prepared to force the alterations upon a minority of the members. He thought they would be unwise to do so, as they might lose several members.

Mr. GROOM said that if the majority were in favour of it they could get on without the others.

The CHAIRMAN said he had already given it as his opinion that a rule affecting the constitution of the Club could be passed by a majority of the members.

Mr. TOWNLEY thought it was their own property, and it was quite in the discretion of the meeting to decide what should be done with it.

Mr. Kingdon's proposition was then put and carried.

Mr. BARLOW did not think there was the slightest reason for altering the name of the Club even if the amalgamation scheme were carried out.

Mr. ABBOTT's proposition was then put and carried by 25 to 15.

Mr. ABBOTT proposed, and Mr. MELLUISH seconded that Rule II. read:—

That the affairs of the Club be managed by a President and Committee of Fifteen Members, to be elected annually at a General Meeting to be held during March. Captains to have full control with regard to arrangements of their respective matches, and selection of their teams.

The following to constitute the Committee:—

THE PRESIDENT.
Cricket.
Captain of Eleven and two Members.
Base Ball.
Two Members.
Foot Ball.
Two Members.
Athletics.
Two Members.
Lawn Tennis.
Two Members.
The Hon.-Treasurer.
The Hon.-Secretary.

Mr. GROOM proposed an amendment that there be only a President and Committee of Ten, viz., President, Vice-President (to be Captain of Cricket) two members for Cricket, one Base Ball, one Foot Ball, one Athletics, one Lawn Tennis, Hon. Secretary, and Hon. Treasurer.

Mr. KINGDON seconded the amendment, which was carried by 26 to 2.

Mr. DODDS presumed that, as they now had a President and Vice-President, one of them would take the chair at the meetings, but he would like to know, in the absence of both of them, who would be Chairman. This was the first time that the Chairman had not been elected by the meeting. It made a difference as to who was Chairman, as at the present meeting several questions had been decided by the chair which might have been ruled differently.

The CHAIRMAN informed the meeting that, as

soon as the business was over, the resignation of the Committee was in the hands of the members. He was always under the impression that the Chairman of Committee took the chair at the meetings.

Mr. GROOM proposed a vote of confidence in the Chairman.

Mr. DODDS said he had not meant any reflection on the Chairman, he simply asked the question whether the Committee meant to make any proposition as to who should be Chairman in the event of both the President and Vice-President being absent.

Mr. GROOM said that, if he had misunderstood Mr. Dodds, he would withdraw his proposition and apologize.

Mr. ABBOTT proposed, and Mr. ROBINSON seconded, that Rule III. read:—

That Seven Members of the Committee shall constitute a quorum.

This was carried by 19 to 2.

Mr. ABBOTT then proposed, that Rule IV. read:—

That in the event of any vacancies occurring in the Committee, the remaining Members of the Committee shall have power to elect Members to fill such vacancies for the unexpired term of office.

This was seconded by Mr. ROBINSON.

Mr. DODDS proposed an amendment to the effect that in the case of a President the office shall be filled by a ballot among the members.

Mr. LITCHFIELD seconded, and it was carried unanimously.

Mr. ABBOTT proposed, and Mr. MELHUISH seconded, that Rule VI. read:—

That at all General or Special Meetings twenty shall form a quorum, the Chairman having a casting vote.

This resolution was carried unanimously.

Mr. ABBOTT proposed, and Mr. HAMILTON seconded, that Rule VIII. read:—

That non-resident Naval and Military Officers and visitors be eligible as Hon. Members, free of subscription for a period of one month, and for a further period on payment of a subscription of Two Dollars per month without Entrance fee.

Mr. PLAYFAIR proposed that the subscription be \$1.00 per month.

This was seconded by Mr. E. J. Moss, but upon being put to the meeting was lost.

The original proposition was then put and carried.

Mr. ABBOTT proposed, seconded by Mr. PLAYFAIR, that Rule IX. read:—

That the election of Members and Hon. Members be by ballot of the Committee, two black balls to exclude.

Carried.

Mr. BARLOW asked if the present Committee would not act till another had been elected.

Mr. COPE proposed that a ballot-box be open for a week at the pavilion.

Mr. MILNE seconded this proposition. He objected to the ballot being taken then as proper notice had not been given. Many of the members present were not prepared to vote, although no doubt the promoters of the scheme had come with their ticket all ready.

Mr. PLAYFAIR said it would be very inconvenient to have the ballot-box at the pavilion.

The CHAIRMAN ruled Mr. Cope's proposition out of order, as he had not given previous notice.

Mr. BARLOW wished the sense of the meeting to be taken on the question.

Mr. GORDON said they were not prepared to vote, some might vote for members who after being elected would not act and the votes would be thrown away. If the committee would act for a few days then everyone would know what he was doing.

The question was then put to the meeting, 23 being in favour of the election taking place at once and 12 against it.

The ballot was then taken which resulted as follows:—N. J. Hannen, Esq., President; B. Durant, Esq., Vice-President and Captain of Cricket; Messrs. Abbott, Melhuish (Cricket), Townley (Tennis), Sutter (Foot-ball), Samuels (Athletics), Hepburn (Base-ball), Robinson, Secretary, and Harris, Treasurer.

The CHAIRMAN said that the Club flannel and ribbon had arrived that day, and he hoped it was an omen of success to the new Club.

After a vote of thanks to the Chairman, the meeting adjourned.

REVIEW.*

We presume that the intention of the publishers in issuing a second edition of Mr. W. E. Keeling's "Tourists' Guide to Yokohama, Tokiyo, Hakone," &c., is to provide something cheaper and less bulky than the Guide Book of Messrs. Satow and Hawes. It seems a pity, however, that with such a source of information as the latter volume at hand, this smaller essay should not have been purged of its grosser blunders and inaccuracies. It does not, of course, pretend to be anything more than a guide book in the most ordinary sense of the word. Yet, apart from itineraries and maps, it embodies a great deal of useful information, none the less excellent because the matters enlarged upon are often of the commonest and most familiar nature. People writing about Japanese things after many years of residence and research, are apt to forget their own early impressions, and to pass over much that strikes the new-comer as novel and interesting. Mr. Keeling does not fall into this fault, and we should be the more obliged to him were it possible to avoid a suspicion that his good-natured simplicity marks the novice rather than the sympathetic man of knowledge. But when we find him gravely telling his readers that *Yoshiwara* means "good plain," that the most famous bridge in Tokiyo is called "Nihom-bashi," and that a bazaar is translated by *akrankai*, we are constrained to think that his consideration for very ignorant people is more the result of affinity than of study. There is one charming feature about his book: it is very old-fashioned. Thus, in describing the reception a foreign way-farer may expect to receive at a Japanese inn, after telling of the host or hostess bowing his or her head upon the floor by way of salutation; of the bringing out of the brazier and of the offer of tea and cakes, he proceeds thus:—"These preliminaries being attended to, the host, hostess, and servants attending upon the visitor enter, in succession, and bowing in the manner before described say: *Yoku irashaimashta*." Mr. Keeling has been fortunate in his travels. These successive bowings from host, hostess, and servants are not within the range of our experiences, and are probably to be reckoned among the extinct species of Japanese etiquette, so far as foreigners are concerned. Ceremony, however, is a small matter compared with comfort, and we could readily forgive the author for inculcating conventionalities were his advice equally sound in practical matters. But he is scarcely kind when he recommends the traveller "not to encumber himself with eatables when going into the interior; for unless an invalid or very particular, he will find at every respectable hotel, a sufficient variety of good and wholesome food to satisfy ordinary requirements." We trust that, for the present at all events, this counsel will not delude many unoffending wayfarers. Some of Mr. Keeling's theories are equally deluding. "*Gesha*, or dancing girls," he says,—*gesha*, by the way, does not mean "a dancing girl," but "to get out of a carriage"—"are an order of society in themselves, above the actors in social standing and about on a par with the concubines of the higher classes." How pleased the little *geisha* would be to hear, and how disgusted the actors and concubines of the higher classes! But Mr. Keeling is not particularly accurate. He writes thus, in another place:—"Until within the last few years, men and women, boys and girls, bathed together indiscriminately. But now in Tokiyo and other large towns, a railing divides the males from the females. This is only sufficient to prevent the mixing of the sexes, but not to screen them from being seen by each other." It would be extremely difficult, if not impossible, to find a bath-house in Tokiyo answering to this description; nor have we ever met a Japanese who could recall

a time when the male and female bathers were divided only by a railing. Such a statement is on a par with the extraordinary assertion that the tableaux at Asakusa are made of wax. Mr. Keeling surely ought to know the difference between clay and wax. His historical knowledge, too, is occasionally somewhat mixed. Consider, for example, the following:—"Near this place happened the assassination of the Gotaïro, or Regent of Japan, March 23rd, 1860. The Shogun who concluded the treaty with the United States, died August 15th, 1878, and his remains were interred (*sic*) at Ueno. As his successor was a boy of only 12 years, Ii Kamon no Kami was appointed Regent. His arbitrary and domineering conduct roused the wrath of the *daimios*. Sixteen *ronins* (wanderers without a master) determined to put an end to the existence of one they considered so odious," etc. That the Minister Ii, having been assassinated in 1860, should have served the successor of a Shogun who died in 1878, is a startling piece of history, but that the real motive of the Regent's murder should be described as above, is even more surprising. Mr. Keeling is not, however, always so unfortunate. His information is generally correct, and of a thoroughly useful nature to passing tourists: his maps are clear, and the volume is of a handy size. At the same time it must be confessed that, having regard to the almost immediate issue of a second edition of Messrs. Satow and Hawes' Guide Book, this reprint of Mr. Keeling's compilation does not seem likely to be a financial success.

TRANSLATIONS FROM NATIVE JOURNALS.

THE NEW FIRE BRIGADE.

(Translated from the *Nichi Nichi Shimbun*.)

During this year's session of the Tokiyo Fu Assembly, the Government submitted certain bills for discussion relating to the improvement of the method of extinguishing fires, and the expenses incurred in adopting the improved system. These bills were passed with alterations of only minor importance, to the unbounded gratification of every resident in the Capital. Our readers are only too familiar with the fact that Tokiyo is annually the scene of immense conflagrations, and that the misery of the sufferers from these calamities is great. It is popularly said that, if the number of houses burnt every year be compared with the whole number of dwellings in Tokiyo, it will be found that the Capital is reduced to ashes once in every seven years. Though this may be somewhat exaggerated, it proves, at least, the immense destruction by fire that annually occurs in Tokiyo. According to the Government returns, the number of fires in the Capital since the establishment of the Police Bureau in 1874 up to the end of 1883 amounted to 3,224. Out of these, 2,645 were speedily extinguished; 257 resulted in the destruction of the houses in which they originated; and 322 spread to other houses. The number of houses burnt to the ground was 67,185, covering an area of 674,677 *tsubo*.* Granting that the average value of one *tsubo* is 28.91 *yen*, the actual loss by fire amounts to 18,507,150.44 *yen*. Besides this, 115 lives were lost. And so a simple calculation will show that annually 6,700 houses are destroyed, worth upwards of 1,950,000 *yen*. This is, indeed, a most serious matter.

It is true that the Police Bureau has done all in its power to suppress conflagrations, and that the fire brigades as well as all the members of the Police have readily risked their lives in combatting the flames,—the public has ever acknowledged their untiring exertions,—but the Capital is, nevertheless, constantly exposed to the risk of great conflagrations. This can only be ascribed to the want of the necessary fire-extinguishing apparatus

and the defective system adopted. Our Government therefore proposes to dig new wells; to buy improved engines; to alter the organization of the fire brigades, and to pay for the services of the firemen; and has, finally, appropriated 50,000 *yen* towards defraying the necessary expenses. With these plans the Government sought the approval of the City Assembly. It must, however, be remembered that forty thousand *yen* of the above mentioned sum are to be disbursed at once, the remaining ten thousand *yen* to be added year by year as necessity demands. And the members of our City Assembly, who have acquired great skill and experience in such matters, did not hesitate to approve the proposals of the Government, although, as a rule, they are inclined to reduce the amount of proposed appropriations. In doing as they have done they have showed themselves worthy of the confidence of the residents. According to the new system adopted, it appears that the firemen are to be divided into forty, instead of thirty, brigades, each brigade to consist of fifty men instead of seventy as formerly: six stations, with branch-stations, are to be formed in fifty-seven different localities. Each station will have twelve men; each branch-station ten men; while twenty men will stay at the head-quarters. Two of the force in each branch station must patrol the section under the immediate supervision of their station. Whenever a fire breaks out, some of the men at the head-quarters must proceed at once to the spot in a carriage, in order to render assistance and call together the men from other stations. According to these provisions, at least one brigade may be expected to arrive at a fire within two minutes of its breaking out; while seven or eight other brigades can reach the spot in less than six minutes. During the winter season, 662 men out of a total of 2,000 will be in constant attendance. The former system of extinguishing fires, by means of a *tobiguchi*, a kind of small pick-axe, and weak pumps, which were chiefly instrumental in keeping the clothes of the firemen moist, is to be abolished. Two handy hoses, which can be managed by five or six men, are to be provided for each brigade; while two hundred and ten wells are to be dug in the three urban divisions of Nihonbashi, Kiyobashi, and Kanda. The firemen are to be properly clothed, and will receive pecuniary compensation in case they sustain any injury, and their families will receive the same in case of death. Good service will be rewarded in a similar manner.

We do not doubt for a moment that, if the new system be carried out, that fires in the Capital will be more quickly extinguished than ever before. In the days of the Shogunate, there was a special fire brigade in Tokiyo known as the *Fiunin Hikeshi* (Ten-men Brigade). This brigade received an allowance of 112 bags of rice, and had stations in Iida-machi, Akasaka, Hanzo, Ichigaya, Surugadai, Tameike, Ochano-midzu, and Yayosugashi. Each station had several tens of firemen, who were commanded by thirty policemen and six head-constables. Ten officers were further chosen from among the *Hatamoto*, who were to be present and assist in extinguishing conflagrations. Again, there was another brigade styled the *Daimiyo Hikeshi*. This brigade was supported by the Daimiyo in various provinces whose income exceeded ten thousand *koku* of rice. The members of this brigade kept watch at the following places:—the great gate of the Castle, the Sakurada gate, the citadel of *Ninomaru*, the parks at Momijiyama and Fukiage, the rice-godowns at Asakusa and Hongo, the timber-yards at Saruye, and the buildings of the Seidō School. The Zōjoji and Ueno temples were placed under the care of the great Dukes, while four Earls were ordered to look after the fire brigade at the great gate of the Castle, and another four were required to superintend the Sakurada brigade.

The stations of the firemen under the direction of these Earls were established in several places,

* "Tourists Guide to Yokohama, Tokiyo, Hakone, Fujiyama, Kamakura, Yokoska, Kanazawa, Narita, Nikko, Kioto, Ōsaka, Kobe," etc., compiled by W. E. L. Keeling, M.A., 2nd Edition, revised and enlarged. A. Farsari & Co., No. 80, Main Street, Yokohama.

* About 562 acres.

while they themselves kept men in their own mansions, in proportion to the amount of rice they received from their estates; and thus held themselves ready to render assistance whenever a fire broke out within a distance of four or five *cho* (about 600 yards). Besides these brigades, there were forty-eight companies of firemen in the Capital, who were maintained by local taxes levied upon the residents in the various streets. The total number of firemen in the metropolis was very large. But from the time of the Restoration up to the present date, there have been only forty-eight brigades upon which we could rely. Although these men were sufficient in number to suppress the breaking out of serious conflagrations, especially with the help of the police and the gallant exertions of the firemen, it is not to be wondered at that the results were far from being satisfactory. Now that the Government has devised a new system, matters look decidedly brighter. Although the City Assembly slightly diminished the amount of the appropriation originally suggested by the Government, as well as the number of wells to be dug, the new system has introduced considerable improvements; and we most sincerely trust that the result will be eminently satisfactory.

THE EMPEROR'S PALACE.

(Translated from the *Meiji Nippo*.)

After the great work of the Restoration was accomplished, Tokiyo became the capital of the empire and the internal administration of the country was remodelled. Yet His Majesty the Emperor has lived in a temporary palace for more than ten years. Is there even one Japanese subject who is content with the condition of His Majesty's present residence, or who does not desire to see the Imperial comfort better consulted? On the contrary, his people are animated by no wish more earnest than that of constructing for him a palace worthy of the respectful gratitude they owe him. Not only do they remember that the comfort and repose of their Emperor and his descendants depend, in great measure, on the nature of the palace, but they also wish that the building shall not disgrace their country in the eyes of foreign nations. Considerations of domestic and foreign policy alike dictate the construction of a handsome and spacious building suited to His Majesty's state and requirements. Under no circumstances can we be content with his present temporary residence. The Cabinet, fully sensible of all this, took steps some years ago to construct a suitable palace. But the magnitude and importance of the work forbade anything like precipitancy. Plans and projects were frequently changed, so that those responsible for the undertaking might not be open to a charge of having proceeded without due thought. We, on our side, devoted our editorial columns to advocating the advisability of constructing a sumptuous palace, and the same opinion was expressed by the *Fiyu Shimbu*, which urged that the building should be substantial as well as handsome. It thus appeared that public sentiment was unanimous on the subject. The Cabinet, after mature consideration, resolved to increase the appropriation for the building to fifteen million *yen*, and the work was finally commenced. A few days ago, however, there reached us information of such a nature that we find no way to express our admiration and gratitude for His Majesty's benevolence. It appears that the Emperor recently paid a visit to the place where the work is in progress, and after inspecting the plans and such portions of the foundations as are completed, began to show signs of grave dissatisfaction. He remained silent for several moments, but at last, calling to his side one of the high officials who were in attendance, enquired how much the building was to cost. The official respectfully replied that the estimate was fifteen million *yen*. The Emperor frowningly asked why the original design has been so much increased in

magnitude. To this the official made no answer, and the other dignitaries who were present stood equally silent for some time. At length, the situation becoming irksome, one of them stepped forward and said:—"Your Majesty's question causes us some embarrassment, but we pray Your Majesty to remember that all countries, whether great or small, Occidental or Oriental, are possessed of palaces, characterized by grandeur and beauty, for the residence of their sovereigns. Your Majesty's Council accordingly decided that Your Majesty's palace must be constructed on a scale demanding an expenditure of fifteen million *yen*." It is said that at these words a flush of indignation rose to the Emperor's brow, and that he addressed the attendant officials in tones of grave command, as follows:—"So far as I can judge from what I see and hear, the condition of my people is by no means so happy as I could wish, nor are the sovereign rights of my Kingdom recognized fully abroad. Under these circumstances, I cannot permit myself to live luxuriously in a splendid palace. The efficient maintenance of the prerogatives handed down to me by my ancestors does not depend upon the beauty of my residence. Should it be my good fortune to succeed in augmenting the prosperity and strength of my country, I may hereafter think of constructing a magnificent palace. When that time comes, it will not be at all too late to undertake the work. I desire, therefore, that the plans of this building be at once altered, so that the total cost may not exceed two and half million *yen*. Let my wishes be made known to the officers charged with the execution of the work." The Emperor expressed himself with the utmost clearness and decision, and the officials in attendance were deeply moved by the Imperial benevolence.

History contains many examples of the practice of frugality by wise monarchs of antiquity, whose abstinence from all manner of indulgence won for them a high reputation. Ostentation and grandeur are characteristics of foreign architecture, and the simple tastes of our Emperor must excite not less admiration among the high officials of the Government than among us, His Majesty's humble servants. His Majesty observed, as we have said, that since the happiness of his people is not such as he deems satisfactory, and since the national prestige is not extended, he cannot be content to undertake the construction of a magnificent palace destined to promote his own welfare only. These sentiments ought to act as a powerful incentive to those charged with the conduct of our domestic and foreign policy. The nation must strive to hasten the day when its Sovereign will be able to have a suitable residence. What steps will the Government take with this end? The present palace is only temporary, and ought to be replaced by a permanent building as soon as possible. Yet, however splendid a palace may be built, the Imperial mind cannot be at rest unless our home and foreign affairs are in a satisfactory condition. On the other hand, if the plans now adopted be not such as the nation thinks worthy, the National Assembly, which is to be convened at no very distant date, may censure the Government. The people's representatives will remember that the palace is the place where their Sovereign and his family reside, and will desire to see it spacious and handsome. They will ask why it was not constructed on a scale worthy of the country's loyalty, and whether the question of expense was allowed to interfere. They will say that things are not now as they were in old times, when the people had to participate in the construction of palaces by forced labour; that, the expenses being disbursed by the Treasury, there ought to be no lack of funds; that though the Emperor forbade any extravagance or magnificence, his object was simply to save the people expense, and to obey those instincts of virtue and benevolence which distinguish a great Sovereign; and that his sympathy for his subjects ought to make it impossible

for them to be content with such an insignificant palace for their Sovereign. The representatives will feel that the nation will not pardon any faithlessness or want of loyalty to an Emperor who has shown himself so benevolent and virtuous, and while expressing the utmost respect for His Majesty's wishes, they will pray him to let them carry out their purpose in a manner worthy of the feelings that animate them. "It is our duty," they will say, "to place the welfare of the Emperor above that of our wives and children, above even our own lives; questions of a pecuniary nature ought to have no weight whatever, in such a matter"; and they will deem the Cabinet deserving of censure for having consented to construct a palace unworthy to be His Majesty's residence. It is not unlikely that the proceedings of our National Assembly in this affair will offer a strong contrast to the utterances sometimes heard in Western parliaments on the subject of the expense of royalty. We look, at least, for that degree of loyalty and disinterestedness in an assembly of our country's representatives. The Cabinet is, therefore, placed in a difficult position. Its undoubted desire is to build a palace that will satisfy the nation's loyal sentiments, and yet the Emperor's wishes must be respected. On the other hand, so far as the people are concerned, this expression of His Majesty's benevolence will still further strengthen their grateful purpose.

THE RISE OF RICE AND FALL OF SILVER.

(Translated from the *Bukka Shimpo*.)

The experience of the last two or three years has clearly proved that the price of silver and rice are closely connected; that when silver is appreciated rice goes up in value, and when silver is depreciated rice falls, too, as a matter of course. But the market now presents an altogether different phenomenon. During the past few days, when silver fell to abnormally low quotations, rice showed a decidedly upward tendency; even yet, though silver is still quoted at 110, or in that neighbourhood, rice holds firm. This is too surprising a circumstance to admit of any ready explanation. We have in vain directed our attention to the market-reports of the local districts, but they all tell the same tale,—the farmers are unwilling to sell, and keep the market tight. The term for the payment of the land-tax was to end with last month, and it was very generally expected that the farmers would make large sales, and so this universal reluctance to sell caused us great anxiety. We have, however, found a possible explanation of this strange state of the market. Ever since last year, wheat has gradually gone up in value, owing to the increased demand for export, while barley and beans have fetched considerably higher prices owing to their scarcity. The farmers have taken advantage of this opportunity and paid the last instalments of the land-taxes by selling wheat and other cereals, and, having done so, find no need to cast their rice on the market. They have determined, therefore, to hold out for their quotations, and will shortly rule the market. Very little rice has reached the market, nor will a large business be done until the staple commands a still higher price than it does at present. We do not, however, affirm that this is the true explanation of the present phenomenal condition of the market, but would rather let the public form its own opinion.

THE RICE HARVEST OF 1883.

(Translated from the *Bukka Shimpo*.)

The subjoined statistics of the rice harvest of 1883 have been compiled by the National Debt Bureau from the reports of each local government office; and, as these offices have made particular inquiries with regard to the yield of every rural district within their jurisdiction, the tables are beyond all doubt correct. These statistics are all the more deserving of notice as the importance of the

annual harvests in connection with the political economy of every nation cannot be too highly estimated. The crops in some of the provinces were, last year, very poor, owing to long-continued drought, while other provinces enjoyed an abundant harvest. Among the former were Yamato, Kawachi, Idzumi, Settsu, Shima, Tamba, Tango, Oki, Kii (in Wakayama Prefecture), and Tsushima; among the latter, Suruga, Sagami, Musashi, (in Kanagawa Prefecture), Shimosa (in Chiba Prefecture), Kodzuke, Iwashiro, Suwo, Awa, Iyo, Tosa, Chikuzen, Chikugo, Buzen, and Bungo. Shima and Tsushima experienced actual famine. Lands bordering on lakes and swamps, as well as marsh land, which are always sure of a good supply of water, yielded an unusually fine harvest; and so the good crops in many of the provinces more than balanced the poor crops in others. On the whole, last year's harvest fell only slightly short of that of the year before.

NOTE.—In this table 100 represents a yield of 1 koku 5 to each tan of land: an unusually good harvest. The average yield is reckoned eight-tenths of this amount. Therefore, .64 means 64 per cent. of the highest yield.

CORRESPONDENCE FROM SÖUL.

(Translated from the *Fiji Shimpō*).

The following intelligence reached us from Söul on the 30th of last month:—Since the latter part of 1882, more than 900 Chinese troops have been stationed in the Great Court of Söul, and relieved from time to time by fresh detachments sent out from China. Some time ago, however, these troops were enrolled as a permanent guard. As not a few of these soldiers were regular ruffians and even committed flagrant robbery, the King, seeing no other way of preventing his subjects from being constantly exposed to their criminal proclivities, compelled Go-kei-cho, the Commander of the Chinese forces, to disband his men. This happened towards the close of last year. The troops in the Court at present consist of Koreans trained either by the Japanese or Chinese. There is still another company of Imperial Guards which has been already a long time in existence; these men are exceedingly bitter against the troops trained under Chinese supervision, all the more so as the arrogance of the latter's behaviour is constantly increasing. So there are at least three different bodies of troops in the capital, each of which hates the other, and many people are apprehensive of a serious outbreak.

The natives trained after Chinese fashion are put down at about 900; some six hundred of these carry bayonet-rifles, while the rest are armed with old-fashioned spears and bill-hooks. This force is known as the "Right Royal Regiment." Out of the 500 men trained in the Japanese military system, about 300 carry rifles, the others having no fire-arms; they are called the "Left Royal Regiment." A few weeks ago, when the King inspected the former regiment, the sole difference noticeable between them and the old-style Korean troops was that they carried bayonets and wore hats. They showed no signs of respect, nor did they salute, on the approach of the King; but, after he had returned to the Palace, the regimental trumpeters broke out into the most curious martial music. A few days after this event, the King inspected the Left Royal Regiment. On this occasion all the men carried knapsacks and were drawn up in strict military order, presenting a fine appearance. Immediately after the arrival of the King, the soldiers saluted him in right military style, to the unbounded satisfaction of His Majesty. He then proceeded to open one of the knapsacks and asked a number of questions as to its use and contents, and treated the officers with marked courtesy. Shortly afterwards, the King ordered the commanding officer, Kan-kei-shok, of the Japanese troops to purchase two hundred additional rifles and knapsacks. At all events, the Left Regiment has gained great prestige, and the perfect indifference the soldiers show to the challenges of the envious Right Regiment has added not a little to their reputation. But ever since the royal review, petty quarrels have been of almost hourly occurrence.

Go-kei-cho, the commander of the Chinese troops, will shortly return to China, but the troops will remain in the capital. He is very popular with the natives, and his influence has had considerable effect in quelling the disorderly spirit of his men. Nevertheless, several wealthy citizens have sent their families to remote districts in anticipation of the serious disturbances that are sure to follow the absence of the commander.

The Chinese shops in the capital are increasing in number, but the traders combine gross malpractices with their legitimate business. Four of these shops were recently closed by order of the Government, and one trader was decapitated and his head exposed to public gaze on the Naima Bridge. Most of the traders are almost without capital, and their stores are but scantily furnished with saleable articles. Their victims are generally women and little girls, for the traders rarely let one of the weaker sex out of their shops without having possessed themselves of all their pocket-money. The Governor of the capital recently requested the Chinese consul to put an end to these flagrant evils. Robbery is rife everywhere after dark, and it is as much as one's life is worth to walk through the streets after nightfall. It is true that an occasional Chinese soldier strolls through the thoroughfares, and a sentinel of the same nationality is posted at every corner,—but the current belief is that these fine fellows are themselves chiefly instrumental in despoiling the citizens of their property.

JAPANESE FINANCE.

The Yokohama papers bring two very important notifications which have just been published by the Japanese Government. They relate to the extension of railway construction in Japan, and to the bringing of the paper currency to par as a preliminary step to the ultimate resumption of specie payments. Two new internal loans are to be issued, one for 20,000,000 yen (say £3,700,000), the proceeds of which are to be devoted to the railway works, while the other, for an indefinite amount, is simply for the redemption of as much paper as the loan itself may ultimately amount to. The railway loan is also obviously designed to be a means of bringing the paper up to par, for though it may be subscribed for in paper it is to be redeemable by annual drawings within thirty years, in silver or "its equivalent." Interest is to be paid at the rate of 7 per cent., and one important provision is that the bonds, unlike those of former internal loans, may be held by foreigners either as subscribers, purchasers, transferees, or as lenders to the owners. It is not considered probable that foreigners will subscribe for Japanese railway bonds, but it is considered probable that they will accept them as securities for advances to natives. The removal of the old conservative restriction may be accepted as an indication of growing financial enlightenment in Japan—at least it indicates the desire of the Government to facilitate the raising of the loan by enabling the Japanese practically to use the capital they may invest in it in ordinary trade, or, in other words, to enable them to substitute foreign capital for the native capital invested in the railways, and thus as far as possible prevent any stringency on this account. The plan devised is in fact an indirect way of utilising foreign capital as far as may be necessary in the construction of railways. As for the currency loan, it is to be subscribed in paper, but both the principal and interest are to be repayable in silver. On this loan 6 per cent. interest is to be paid.

For some considerable time past we have occasionally directed attention to the special efforts which were apparently being made in Japan to bring the paper up to par. The Government is believed to have been inspired by the success of the Italian Government in resuming specie payments. The Mikado's Government since its establishment has been compelled to sustain itself by means of paper money. There has practically been no check to its powers of issue, and hence the exchangeable value of the currency of the country, and general prices have been to a large extent at its mercy, and have fluctuated in accordance with its necessities or the manipulations in which the various Ministers of Finance may have thought it desirable to indulge. Even such a severe critic of Japanese finance as the *Japan Herald* admits, however, that, considering what the Government has had to do and the difficulties it has had to encounter, "it has only abused its powers to a moderate extent," compared with other paper-issuing Governments. The Mikado's Government has had to satisfy the creditors of the Daimios, to buy up and extinguish feudal rights, to pay its own way, and to develop the new civilisation. Specie enough was got together to pay the foreign creditors of the Daimios, but the native claimants had to accept bonds payable over periods more or less remote and bearing different rates of interest, or paper money which speedily fell to a discount. According to the last financial statement the national debt represented by bonds, paper money, and foreign loans, less reserve and other funds in hand, amounted to 262,004,649 yen. Of this total the paper money, including the issues of the national banks, is stated to represent about 138,000,000 yen, the amount of the strictly Government paper (*Kinatsu*) included in this latter sum being 98,000,000 yen, say about £18,000,000 sterling. It is argued that the country really needs about 100,000,000 yen in paper for the purpose of circulation, and, therefore, should the Government succeed in borrowing the balance (or in other words, the amount of the National Bank circulation), the remainder would be naturally maintained at par. As the railway loan is to amount to 20,000,000 yen, it follows that the currency loan is expected to be an equivalent sum. The Government would thus practically call in about 40,000,000 yen, against which interest-bearing bonds would be issued; and the paper circulation being thus

relieved of redundancy, it would, it is believed, acquire and maintain its full value. Resumption would thus be practically achieved, the only additional step required being the provision and maintenance of a moderate metallic reserve to meet any special demands for coin which might occasionally arise. This being done the paper might be declared convertible at will.

The operation seems to reduce itself, therefore, into a conversion of the excess of paper currency extant into bonds. The paper thus obtained will be presumably destroyed, and the bonds will be transferable to foreigners, so that foreign capital may, as far as the requirements of trade go, flow in to fill any void which an absorption of capital in railway construction may cause. The operation will of course really amount to a contraction of the currency, but this has been already partly accomplished by the operations of the Government during the past two years in forcing up the exchange value of the paper. Two years ago the paper was quoted at 170 per \$100 silver. The quotation advised by the mail is 109. The paper therefore already stands, comparatively speaking, almost at par. The method by which the Government has brought about this improvement, which has been the continuous work of the past two years, is not quite clear. It seems probable that a considerable amount of paper must have been locked up on its account through the agency of the banks, and that it has meanwhile accumulated liabilities which will be discharged by the issue of the bonds. If this be so it seems not unlikely that the Government may make a considerable profit by the operation, as it will have obtained the paper at its depreciated price and will discharge some, at least, of its liabilities at the par price. It may be remembered that the Nippon Ginko, which is virtually the Government bank, lately announced that it would allow 4 per cent. for deposits in paper and only 2 per cent. for deposits in silver. The precise object of their remarkable proposal is not quite clear, but it seems probable that it was partly designed to facilitate the locking-up of the paper. Meanwhile trade has been brought almost to a standstill. The process has been too arbitrary and rapid, and widespread ruin and distress have been the consequence. The growing scarcity of the paper currency and its rise in value have caused all native prices which are quoted in terms of paper to decline. Debtors have been rendered unable to meet their obligations; landed property has fallen in price enormously—in Fukushima 27 per cent., in Minami 33 per cent., in Kofu 70 per cent., and in Aichi 100 per cent. The Government in its turn may suffer to some extent, for the railway receipts have fallen off, farmers have petitioned to be allowed to pay the land tax in kind, and the revenue has declined. The paralysing influence of the contraction, however, appears to have been all along increased by want of confidence in its continuance, or, in other words, in the continuance of the improved value of the paper. There has been a feeling that the whole action of the Government was artificial, and that the paper which was being withdrawn might at any moment be thrown into circulation again. Thus not only has everybody hesitated to buy in the face of a constant decline of prices, but they have also hesitated to sell lest the buying or exchange-power of the paper received in payment should itself fall again. Now, however, that the Government has apparently announced its definite intention of fixing the value of the paper about par, and is adopting perfectly intelligible and definite measures to assure that end, a general improvement of trade may be expected. Assuming that the measures proposed are honestly carried out and that no ulterior design exists, one great drawback to Japanese trade—a constant fluctuation of the currency, which has made all trading operations uncertain and has even exposed them to the machinations of the native gamblers in exchange—will be got rid of, and a steady basis of operations will exist. Silver may be expected to get gradually into circulation, and ultimately the two forms of currency may become convertible at any time. If this is to be the case—that is, if all prices are practically to be silver prices—wages, rents, and in fact all native prices and charges will have to fall to the equivalent of the par value of the paper. But this has already taken place to a considerable extent and, in the end will not be a disadvantage, for the buying-power of the paper will of course be proportionately increased. The former paper prices were practically inflated prices resting on an inflated currency. Should the new loans prove successful and the paper withdrawn be destroyed, it seems reasonable to expect that the long-existing dead-lock in Japanese trade will be terminated and that an immediate improvement will set in. The proposed extension of the railway system may also be expected to give an impulse to trade and to contribute to the further development of the country.—*Manchester Guardian*.

LATEST COMMERCIAL.

IMPORTS.

Scarcely any change has been noticeable in the general state of the Market since the last report.

COTTON YARN.—A further rise with the Manchester Market has caused holders to require higher prices, but so far dealers do not seem inclined to buy freely, and sales have consequently been small. A considerable sale of 16's Bombay's has been reported, but the demand is rather feeble for these spinnings.

COTTON PIECE GOODS.—A few 9 lbs. Grey Shirtings have been sold at full rates, but holders are not inclined to sell largely at present prices. Fair sales of Turkey Reds have been made and small sales of Velvets.

WOOLLENS.—Mousseline de Laine sales to a fair extent are reported daily, but there is little demand for other goods: Cloths and heavy goods being quite nominal.

White, No. 5	4.60 to 4.75
Brown Formosa	3.40 to 3.45

EXPORTS.

RAW SILK.

Our last issue was dated 3rd instant, and we have again to notice an increased business in the staple. The demand for *Hanks* has revived during the last two days, in addition to the current business in American sorts: consequently the list reaches a total for seven days of quite 400 piculs. Buying for the *City of Peking* was completed at a further advance on last week's prices, and quotations all round must be marked up. *Kinsatsu* have been fairly steady, and sellers have apparently striven to get the last cent that buyers would pay.

Filatures and *Kakedas* have had their share of attention at the advance, and the choice of parcels is now very much restricted. Arrivals of all descriptions have been very light, and a revised estimate of the Stock in Yokohama gives a total of only 1,150 piculs. The enquiry for native use has slackened considerably.

The P. & O. steamer *Khiva*, which left for Hongkong at midnight on the 4th instant, carried 29 bales for France, and the P.M. steamer with the United States mail of this date has on board 262 bales, of which 7 bales only were "direct" shipments on Japanese account. These vessels bring the Export to date up to 28,775 bales, against 25,068 bales last year, and 16,769 bales at 10th April, 1882.

Hanks.—This class so long neglected has at last received marked attention, and about 250 piculs are supposed to have been settled on the basis of \$535 for a large parcel *Foshu* Hanks called *Shimonita* and grading 2 or thereabouts. A parcel Medium *Shinshu* reported sold at \$520 has been returned again, and really prime *Hanks* do not appear to exist now.

Filatures.—These have been readily and steadily taken in all grades from Common to Extra. Holders have screwed prices up another peg, and it is to be feared that the present high range of values may bring down fresh supplies of carelessly reeled thread. The list of transactions includes *Nihonmatsu*, at \$665; *Yonedaawa*, \$645; *Tamba*, \$640; *Yamagata* and *Hida*, \$625; *Shinshu*, \$620; *Mino*, \$617½; *Koshu*, \$620 to \$570, with very common "Mixed *Filatures*" at \$560. The settlement of these mixed skeins shows to what a low point the assortment on offer has come.

Re-reels.—Very little business actually put through. For a few bales "Tortoise" \$640 was asked, but without finding a buyer. The trade has run principally on Common sorts, the daily list showing *Bushu* at \$585, *Foshu* at \$575, with some low rejections and nibby at \$540.

Kakeda.—There has been some enquiry resulting in the purchase of about 40 piculs on basis of \$625 for No. 1½, \$620 for No. 1½, and \$610 for No. 2. Stock is reduced to a very small compass, current qualities being the scarcest.

Oshu and *Coarse Kinds*.—A few of these pass through Yokohama en route for Kioto, but the Stock remains about the same, and quotations are quite nominal.

QUOTATIONS.

England	2,639	3,970	3,013
Total	28,775	25,068	16,769

WASTE SILK.

Transactions have been reduced to a minimum, the sales for a week being 90 piculs only. Would-be operators complain much as to the very limited assortment of poor and low quality now remaining; the promised supplies of better grades do not arrive in any quantity, although we think there should be still a few good parcels left in the interior.

The P. & O. mail of 4th instant had on board 126 bales, bringing the Export up to 22,006 piculs, against 21,680 piculs to same date last year, and 20,822 piculs in 1882. Arrivals have been very light, and the Stock is something under 500 piculs.

Noshi.—A few more *Oshu* have found their way in and been settled at \$1.47½; these will probably go forward to the Continent by outgoing French mail. Beyond these two parcels, nothing else has transpired.

Kibiso.—About two-thirds the purchases have been in this class, ranging from *Sandanshu* at \$80, with Common *Foshu*, at \$25, the balance being rubbish and running down to \$10. Nothing done in *Neri*.

QUOTATIONS.

Exchange has been inanimate throughout the week and closes limp at the following quotations:—LONDON, 4 m/s., Credits, 3/8½; Documents, 3/8½; NEW YORK, 30 d/s., 88½; 60 d/s., 89; PARIS, 4 m/s., fcs. 4.64; 6 m/s., fcs. 4.67. *Kinsatsu* have not varied more than a half per cent., closing at about 108½ per \$100.

Estimated Silk Stock 10th April, 1884:—

	RAW.	PICULS.	WASTE.	PICULS.
Hanks	810		Pierced Cocoons	—
Filature & Re-reels	170		Noshi-ito	80
Kakeda	70		Kibiso	250
Sendai & Hamatsuki	100		Mawata	80
Taysam Kinds	—		Sundries	70
Total piculs	1,150		Total piculs	480

TEA.

The season 1883-84 may now be considered as practically closed. There has only been 30 piculs transacted during the interval and receipts during the week aggregate only 35 piculs, the remaining Tea in Stock in Yokohama does not amount to any thing of importance. Prices are all nominal, which of course makes it impossible to give any reliable quotations, they are therefore withdrawn. Garden musters of New Crop Teas are expected in on Monday, the 14th instant.

EXCHANGE.

But few transactions have taken place during the week, and with a further fall in Bar Silver, rates have again slightly declined.

Sole Export Agent—BROOKER, DORE & Co.,
Corbet Court, London, E.C.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylangylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S GOLD MEDAL EAU DE COLOGNE
is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S OLD BROWN WINDSOR SOAP,
celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,
a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,
and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 19TH, 1884.

MARRIAGE.

On April 15th, at H.B.M.'s Consulate, Yokohama, before Russell Robertson, Esq., H.M.'s Consul, and afterwards, at Christ Church, by the Rev. E. Champneys Irwine, M.A., JOSEPH HENRY LONGFORD, Esq., of H.M.'s Consular Service in Japan, to MARIA LUCY ALICE, second daughter of the late Walter Johnson, Esq., of Trench Hall, Gateshead, Durham.

SUMMARY OF NEWS.

SIXTEEN brokers have been arrested in Yokohama for gambling in margins.

A NEW school for the study of the French language has been opened in Tokiyo.

CENSUS returns just published give the total population of Japan as 36,684,602.

NINE workmen were killed by an avalanche in the prefecture of Akita on the 2nd instant.

FIFTEEN prisoners escaped from the Ibaraki jail on the 3rd inst. Four were quickly recaptured.

STEPS have been taken to extend the line of telegraph between Yokohama and Yokosuka to Uraga.

THE cutting of two canals for purposes of irrigation has been commenced in the prefecture of Shidzuoka.

THE entries for the Spring Meeting of the Nippon Race Club have been published. They show that the promise of sport this year is as good as ever.

It is said that the Bank of Japan is about to issue convertible bank-notes of seven different denominations.

THE construction of a new light-house at Kuraga promontory, in the province of Hiuga, has been commenced.

A HAWAIIAN Representative has presented his credentials to the Mikado, and taken up his residence in Tokiyo.

MR. FUJISHIMA, one of the Secretaries of the Finance Department, has been appointed Japanese Consul at Lyons.

PETITIONS against vivisection have been addressed to the Japanese Government by the Victoria and Scandinavian Societies.

HIS EXCELLENCY MORI ARINORI, Japanese Representative at the Court of St. James, returned to Japan on the 14th instant.

A THUNDERBOLT fell in the village of Isobe, Shimotsuke, on the 13th instant, destroying a house and killing four oxen.

TWELVE young ladies, the daughters of noblemen, have become pupils at the School of Silk-worm Breeding, at Naito-Shinjiku, Tokiyo.

AN attempted incendiarism in Yokohama, on the night of the 12th instant, was extinguished by the police before any injury was done.

TWENTY-SIX medals and first-class certificates have been awarded to the Japanese exhibits at the Calcutta International Exhibition.

THE official opening of the Uyeno-Takasaka Railway is announced to take place on the 1st of May. The Emperor will perform the ceremony.

THREE notorious gamblers were sentenced, at the Criminal Court in Yokohama on the 15th instant, to five years' imprisonment with a fine of 250 yen.

THE Second Competitive Exhibition of Paintings has been opened at Uyeno, Tokiyo. The opening ceremony was performed by H.E. General Saigo.

THE formation of a Japanese and Foreign Club in the Rokumei-kwan, Tokiyo, has been decided upon, and the first election of members took place on the 18th instant.

THE construction of a race-course round the Shinobadzu lake at Uyeno has been commenced, and it is said that the course will be ready for the Autumn meeting of the Union Club.

THE Japanese Government has acceded to the request of Holland, and promised to send specimens to the Agricultural Exhibition which will be opened in Amsterdam next August.

THE Projectile Foundry, within the compound of the Iron Works at Akabane, Tokiyo, was destroyed by fire on the afternoon of Good Friday. About twenty of the soldiers and police

who attempted to extinguish the flames were injured, and three subsequently died.

THE spring routine commenced at the various Departments in the capital on the 12th instant, the hours of attendance now being from 9 a.m. to 3 p.m.

THE agrarian riot recently reported from Iwaki prefecture has been quelled without loss of life. The chief object of the rioters seems to have been to destroy the records of their debts.

THE traffic receipts on the Kobe-Otsu Section of the Government Railway continue below the average of previous years, but the receipts on the Tokiyo-Yokohama Section are improving.

THE construction of a road across the Kobotoke range of mountains, in Koshiu, has been commenced, the Central Government contributing one third (sixty thousand yen) of the total estimated cost.

THE inhabitants of a place called Inariyaya, in Nagasaki, have forwarded a petition praying that the telegraph may be extended to their district, and offering to contribute 1,500 yen towards the expense.

SOME agitation has been set on foot in Yokohama with a view to reducing the wages of Japanese *employés* who are paid in *Kinsatsu*, in consequence of the large appreciation of the latter during the past year.

THE weather, which was unreasonably warm during the early days of the week, underwent a change on Friday, and became almost cold. The cherry blossoms at Uyeno are beginning to fall and those at Mukojima are in full bloom.

THE price of rice continues to advance slowly, while that of *Kinsatsu* remains steady at a discount of from 8 to 9 per cent. Government securities have fallen again to the place they occupied before their recent abnormal appreciation.

MR. SUZUKI, formerly attached to the Japanese Legation in Paris, who absconded in consequence of a deficiency in his accounts, has been convicted of embezzlement and sentenced to 7 years' major confinement by the Central Criminal Court in Tokiyo.

CAPTAIN JOHANNES FRAHM, late of the Mitsui Bishi S.S. *Akitsuishima Maru*, appealed on the 16th instant, to the Tokiyo Court of Appeal, against the Judgment of a Marine Court of Enquiry by which he was deprived of his certificate for 12 months. The case was adjourned in order to procure evidence.

THE latest feature of the Buddhist revival which the Priests of Japan have recently been endeavouring to excite, is the erection of a theological college, in the grounds of the Higashi-Honganji, at Kiyoto. The estimated cost of the college is 350,000 yen. It is said to be a rival to similar institutions established under Christian auspices.

NOTES.

We have alluded, on more than one occasion, to the meetings of the *Kangwa-kwai*, or Association of Art Critics, recently formed in Tokiyo. Up to the present, the Association has held three meetings, which were all well attended, and many pictures of great merit were exhibited. Those shown on the first occasion were of the *Kano* School; those on the second were paintings of religious subjects (*Butsu-gwa*), and those on the third were chiefly masterpieces of Sesshiu. The places chosen for these *réunions* were not happy, especially in the case of the last, which was held at a temple in a remote and almost inaccessible quarter of Asakusa. This question of position is, indeed, one of the chief difficulties that beset enterprises of this sort in Tokiyo, where, with the exception of official buildings specially set apart for exhibition purposes, suitable places for hanging pictures or displaying works of art are virtually non-existent. We have felt that this drawback is particularly regrettable in the present instance, because not only is the public offered an unique opportunity to study the *chefs d'œuvres* of Japanese pictorial art, but also instruction of an exceptionally valuable and erudite character is provided in the lectures of Mr. E. F. Fenollosa, whose knowledge of Japanese pictorial art renders him incomparably the highest living authority on this subject. We learn with much pleasure, therefore, that the next meeting of the Association, on the 20th instant, will be at the Meiji Kwaïdo, which not only offers excellent facilities both in point of space and comfortable accommodation, but possesses also the great advantage of being within ten minutes' drive of the Shinbashi terminus. The paintings exhibited will be of the Kiyoto School, from the great artist Okiyo downwards, and their interest will be exceptional, not less on account of their rarity, than because of their great beauty and suitability to Occidental taste. The lecture by Mr. Fenollosa will be on the subject "Can Japanese Art be revived?"—a question which certainly needs elucidation just at present, having regard to the very low quality of the new paintings now on exhibition at Uyeno. The Meiji Kwaïdo will be open to visitors from 10 o'clock a.m. on the 20th instant, and the lecture will be delivered at 3 p.m., both in English and Japanese. It will be remembered that the Association also undertakes to criticise pictures, and to furnish written certificates at a trifling cost. We believe that a large number of these certificates have been already issued. Their value will be understood when we say that their issue is contingent upon absolute unanimity of opinion on the part of the four members of the examining committee, and that they bear the signatures of all the four. They are, in fact, a radical departure from the method hitherto pursued, which made the authenticity of a painting depend wholly on the *ipse dixit* of some ancient connoisseur. It is much to be hoped that the efforts of the *Kangwa-Kwai* will exercise a large influence upon public opinion in Japan with reference to the important question which is now agitating the country, namely, the revival of Japanese art. There is a considerable party among the Japanese who seek to suppress everything like originality in new work, holding that the canons of the old masters were the best, not only for their own age, but for all ages. To this fatal misconception the *Kangwa-Kwai* is resolutely opposed, and its opposition deserves

the support of everybody interested in the art of this country. Those who care to compare what Japan is capable of now with what she achieved between 1750 and 1850, can not do better than pay a visit in the morning to the Competitive Exhibition at Uyeno, and in the afternoon to the exhibition of the Art Association at the Meiji Kwaïdo. Below we give a *résumé* of the three lectures already delivered by Mr. Fenollosa:—

The art of painting is no superficial accomplishment, as some Chinese and Japanese think. It is the outward expression of one of man's noblest capacities, the power to perceive by intuition ideas of perfect beauty. This power, which we sometimes call inspiration, is rare; is not to be taught and learned, like the mechanical skill of an artisan, and therefore distinguishes its possessors as a superior class, who, like priests, have the ability to reveal to ordinary men, facts of the universe, which they would never have been able to see for themselves. Therefore great artists have been most highly honored in Europe, China, and Japan.

This view of art and the artist must be kept in mind as a first principle in criticism. It is not enough to make application of abstract rules, or look for the presence of some external quality. Style is only a medium for expression, not the thing expressed. It is not to be judged by its own abstract correctness, nor to be taken as any standard for judging art as an entity. Its whole excellence lies in its adequacy to express the intended revelation; and thus all criticism must work from the artist's intention or idea. Now Japanese critics usually ignore this necessity. They judge of genuineness and excellence only from the standard of some abstract rule of touch or other external manner. They do not regard each painting as a new idea whose heart has to be penetrated, but as another case of wares stamped with the trade-mark. This explains why they will worship any painting, however bad, which has the certified label of Motonobu attached, while they despise some of the finest paintings by men who are not celebrities. True criticism implies the full appreciation of the peculiar truth revealed in each picture. It must take a new standard for each. The poorness of a critic is measured by the fewness of his tests.

This view might be opposed by one who thinks that the pleasure we take in works of art defines their excellence. But pleasure is not always art-pleasure. Many people are pleased with bad pictures for extra-artistic reasons. It is not pleasure which guarantees excellence, but excellence which guarantees the legitimacy of pleasure. Again, others seem to suppose that a picture which has been skilfully executed is therefore good. But skill is mere mechanical workmanship, unless it embody an idea of beauty; and any one can learn it. The skilful juggler is not an artist: art-skill can itself be defined only by art-excellence. Touch alone is not the soul and body of art, as the modern Japanese critic thinks.

These differences are well expressed by the very ancient Chinese classification of paintings into *no*, *miyo*, and *shin*. At the present day critics hardly know what these words mean. But their originators have well explained *no* to be mere technical skill; *miyo* to be the quality produced by a talent for combination of elements which are still external; but *shin* to be the quality produced by true genius, namely, a complete internal idea from which the external character immediately flows. It is not in the thoughtless and childish formalisms of such modern writers as *Kaisuyen*, that Japanese critics should seek for a guide, but in the profound thoughts of the great *To* (Tang) essayists.

Eastern criticism has never been based upon a profound knowledge of historical laws. Art is a social fact, and so subject to the necessity of growth and decay. Each school and method can aim only at progressing in conformity with a growing environment of popular need, appreciation, and selection. It reaches culmination when it has met these concrete stimuli, with the clearest and strongest expression of the peculiar powers which it embodies. It decays because, thereafter, it is possible, within its own limits, to do no more than imitate the external manner of the perfection. It dies, when its limits are outgrown, and its dead forms are pushed aside by the new forces of a changed social environment. This law applies equally to individual, academic, and national peculiarities. The history of art is a cycle of cycles, in which each phase and each fact finds its single moment of possibility and necessity. But Japanese traditional criticism sees no difficulty in placing any quality anywhere in time. Based upon the collective assertions of past authorities, who worked independently in their respective narrow spheres of experience, who can wonder that it is a medley of contradictions? The science of criticism cannot even be founded in Japan until its votaries are willing to follow reason, and admit that blind opinion, however old, is untrustworthy.

If the accounts contained in our Shanghai exchanges just to hand do not convey any accurate idea of the policy contemplated by the Chinese Government, they show at least that the counsels of the Middle Kingdom are seriously perplexed. We are told, indeed, by the *North China Herald*

that "the news of the fall of Bac-ninh was received by the Ministers of the Yamèn without any outward sign of perturbation," and that "their attitude has since been one of apparently enviable repose." Our contemporary, however, wisely bids his readers "judge for themselves how much of this is comedy," and now, aided by the light of recent telegrams, we can see that Prince Kung's imperturbability was less real than assumed. He doubtless knew enough of his country's methods to foresee that if peaceful counsels, prevailed some scape-goat must be found to bear the bellicose errors committed in the past, and since going into and out of office is a feat tolerably familiar to him, he could contemplate its probable repetition with comparative indifference. The Empress, it is said, wishes for peace with France at all hazards, and if that be so, it is not wonderful that she has sacrificed some of her officials by way of smoothing the path to her desires. Neither is it likely that we have heard the end of these sacrifices. The rumours so industriously circulated by the vernacular press in Hongkong to the effect that Bac-ninh and Sontai have been retaken by the Chinese, indicate pretty clearly that somebody down in that quarter is gravely concerned for the security of his tenure of office, and we shall not be surprised to learn that the deposition of Prince Kung and his colleagues has been followed by the recall of one or two local dignitaries from Yunnan or the two Kwang, to be tried and punished for their sins of omission and commission. As for the Marquis Tsêng, it is difficult to tell what will become of him. To recall him would be an act of the greatest kindness, for loss of office, nay even degradation, could scarcely be so bitter as his present position. It has been truly said that the French army of occupation had only one Chinese opponent, and he was at Paris, but we doubt whether the history of diplomacy includes any item half so humiliating as the experience of the Marquis Tsêng. It is really a moot question whether China would not do better to recall all her Representatives abroad. If, when it comes to the test of action, she means to make bubbles of all their menaces, she can only look forward to being regarded as a species of gigantic buffoon.

We publish in this issue the entries for the Spring Meeting of the Nippon Race Club, but although these are not quite complete—some Japanese griffins are still to be added—they are in the total equal to those of the meetings last year. This is an agreeable surprise in face of the fact that a general belief existed that, for want of support, the dissolution of the Club was near at hand, and the Committee are to be congratulated upon efforts which have led to so satisfactory a result. In this connection, we publish below two rules of the Club having reference to the admission of honorary members, which cannot be too prominently brought before the public notice. These rules give honorary members all the privileges of the Club except entering ponies, riding on the course, and voting at meetings, and it may be safely said that there are scores of men in Yokohama to whom honorary membership under the new rules will be a boon, as the subscription only amounts to the gate-money for the two meetings. The Nippon Race Club deserves more support than it receives, and when it is remembered that it is entirely due to a small band of

foreign owners that we have any races at all here—for the Club would certainly collapse if the foreign element backed out—we trust that the new rules will induce many honorary members to join. It ought not to be forgotten that the Club gives six days' holiday in the year to many persons who, if that institution ceased to exist, would be chained to a desk or otherwise following their occupations. To many men these six days are worth more than ten dollars, and such are in duty bound to take advantage of the privilege offered by honorary membership under the new rules. In a community mainly composed of Englishmen, it would be little short of a national disgrace, if, with a good racecourse, and ponies—such as they are—not hard to obtain, the Nippon Race Club were allowed to subside, but this is what must be looked forward to if the whole burden of finding the sinews of war is permitted to rest entirely on the shoulders of the few lovers of sport who at present are the means of providing the two principal holidays the Yokohama community enjoy. The following are the rules referred to:—

7.—Honorary members shall be elected in the same manner as ordinary members. When so elected, they shall be entitled to all the rights and privileges of members, excepting the right of voting at meetings, of riding on the Course, and of entering ponies at the Races.

9.—The subscription to the Club for membership shall be \$20 (twenty dollars) and for Honorary Members \$10 (ten dollars) annually, payable in advance on the 1st January in each year.

THE article we translate elsewhere from the *Fiji Shimpō* will repay perusal. Among the many wonderful changes which have come over Japan since 1867, none is more remarkable than her recognition of the good that grows out of apparent evil. She is ready to-day to kiss the rod that smote her twenty years ago. The writer in the *Fiji Shimpō* does not, indeed, allude directly to the Spartan discipline his own country had to endure, in the times of her early intercourse with foreigners, but he lets us interpret his mood easily enough when he says that, "China's real benefactors are those who awake her, however roughly, from her slumbers." If the shock of her collision with France moves her, ever so little, out of the groove she has worn for herself by centuries of conservatism, the *Fiji Shimpō* thinks that she will owe her aggressor a heavy debt of gratitude. Opinions of this sort expressed by a journal which has the credit of reflecting public sentiment more accurately than any of its contemporaries, are the best conceivable evidences of Japan's thorough conversion to the creeds of genuine liberalism. We believe that if it were possible to take the nation's verdict to-morrow, there would be found few, if any, to assert that the country did not reap large benefit even from the fight at Kagoshima and the bombardment of Shimonoseki.

THE Japanese Court at the Calcutta International Exhibition seems to have achieved a most remarkable success. No less than fifteen gold and silver medals, and eleven bronze medals and first-class certificates, were awarded to Mr. M. M. Kuhn, to whose enterprise the furnishing of the Court was entirely due. We observe, also, that the Viceroy, Lord Ripon, in his speech at the closing ceremony, on March 10th, said:—"There is another Eastern country which has contributed largely upon this occasion to our interest and our pleasure, and I think that all who have visited this Exhibition will agree that one of the most beautiful and interesting Courts in it has been the Japanese Court. We have seen there ample and striking proof of the artistic

skill and graphic power of that remarkable people." Mr. Kuhn deserves great credit for the energy he has displayed in this business. But for him Japan would have been entirely unrepresented at the Exhibition, and it cannot be doubted that whatever advantage he may have derived himself from his enterprise will be fully shared by Japanese art industry, to which he has opened a new and important market.

At the Royal United Service Institution, recently, Admiral H. Boys Presiding, a paper was read on the present position of the armour question, with a summary of the principal recent plate experiments." The lecturer was Captain C. Orde Browne, late of the Royal Artillery, and at present lecturer at Woolwich in the Department of Artillery Studies on the subject of Armour Plates. The paper was illustrated by diagrams, and the object of it was stated to be the presentation of such features of the armour question as appeared to be peculiar and of great importance. Captain Browne began by explaining that "soft armour" applied to plates which yielded to perforation, and "hard armour" meant that which would not so yield and was destroyed by breaking up. The first experiments noticed were the Krupp Meppen plates trials in 1882. The trials were against soft armour, either directly or obliquely, and he showed, in respect to the direct firing, that a projectile with a striking energy of 2,328 foot-tons, for which it would have been sufficient work to have penetrated 12 inches of iron in two thicknesses, went through two 7-inch plates, and passed 328 yards up the range uninjured. He thought this was to be accounted for by the fact that 10 inches of wood between the plates was sufficiently thick to allow the point of the projectile to get clear of the bent and broken edges of the front plate before meeting the second, and thus the maximum resistance was not got out of the plates. The best thickness of wood was about five inches, and with this, while the plates were prevented from jarring one upon the other, the projectile could not get clear of one plate before it was resisted by the second. In the second experiment, that of the oblique fire, the projectile, with a striking velocity of 1,750 feet, was more than a match for the plate, 7.9 inches, with a backing of 9.84 of wood and 0.98 of skin. The Spezia trials of November 1882 were afterwards examined by the lecturer, who described the hard armour-plates made by Cammell, by Sir John Brown & Company, and by M. Schneider, and the damage which was done to them by the guns, results being shown in diagrams, and dealt with in exhaustive figures. Captain Browne urged the need of a better system of estimating the effects of artillery on hard armour than was now possessed, the need for developing the manufacture of steel projectiles for artillery, and the necessity for making experiments in this country on very hard armour. He said that our steel-faced armour was unrivalled, and in all the most important experiments abroad the English *matériel* took a prominent place; but, nevertheless, we could by no means afford to shut our eyes to the elements in which we might be weak, and in which foreign Powers might be gaining an advantage over us.

A CORRESPONDENT, referring to the Nippon Race Club rules for the admission of honorary members, and our remarks thereupon, published on

Thursday, says:—"I don't see where the 'boon' comes in, in the new rules 7 and 8 of the Race Club. If the new honorary members are allowed to ride their hacks round the course it may be an inducement to join. There are plenty of men in Yokohama who keep a pony of their own, and would be happy to subscribe to the maintenance of the race course if they are allowed to use it. At present, although they may take no interest in racing, they have to pay \$20 for the privilege of using the course, which no doubt many of them agree with me in thinking is too much." Precisely: and we also have no doubt that our correspondent is not singular in his opinion; but unfortunately there is a tinge of selfishness in the complexion of a man's remarks who appears willing to pay a small sum for the privilege of indulging in his own particular hobby—that of obtaining health and exercise in cantering round the Negishi Hill—but gives no thought to anything beyond. As a promenade for ladies, and a healthy romping ground for children, the use of the racecourse may also be considered a privilege, but then, perhaps, our correspondent is not a married man. We trust, however, that there are many who take a broader view of this matter, and that although some may have no direct "interest in racing," they will not consider ten dollars per annum too extravagant a sum to contribute to the support of one of the few events that bring the community together and give them a holiday of their own making.

EARLY Friday morning a man about 30 years of age was found hanging under the eaves of a house in Fujimi-bashi, Takashima-cho, having apparently strung himself up during the night. He had used a cotton handkerchief in place of the customary hemp, and his impromptu scaffold was a saké tub, which he had mounted and kicked from under him.

It is plain that all possibilities of Chinese resistance to French advances in Tonquin are at an end. Those who have followed the course of the campaign will see that General Millot's vigorous operations in the direction of Bac-ninh were intended to clear his flank, preparatory to a steady advance up the Red River. With this view, he ordered a rapid pursuit of the flying Black Flags (or Chinese regulars?), and General Négrier seems to have pushed the outposts of the army of occupation to a point half-way between Bac-ninh and Lang-son, which is one of the frontier towns of China proper. Meanwhile General Brière de l'Isle appears to have advanced, with another flying column, in a more Westerly direction, towards the frontier town of Ko-bang, capturing two citadels and completely crushing all opposition. The result of these manœuvres, which occupied the troops up to the 23rd of March, was to put the French in possession of all the important places between Bac-ninh and the Chinese frontier. Their object having been thus thoroughly accomplished, the columns of Négrier and Brière de l'Isle, after detaching forces to hold the new outposts, returned to Haiduong and Hanoi, to prepare for a general advance up the Red River. Immediately above Son-tai, on that river, lies Hung-hoa, whither the Black Flags were supposed to have retired after the fall of the former place. Hung-hoa is an important position, not only because it is the last village of any size below the first rapids on the Red River, but also because it is the point

where one of the main roads to the Chinese frontier, *via* Thai Nguyen and Ko-bang, débouches. It will therefore be seen that before proceeding to the attack of Hung-hoa, the French did well to push their pursuit from Bac-ninh as far as the citadels on this road. In fact, General Brière de l'Isle's operations put an end to any hopes the garrison at Hung-hoa might have entertained of receiving aid from the Chinese regulars. When, therefore, they became conscious that the French were really moving up the river from Son-tai, they only waited to hear the sound of the bombarding artillery, and by the 12th instant this place, also, had been secured. The distance from Hung-hoa to Laokai—the last stronghold of the Black Flags, near the point where the Red River crosses the frontier of Yunnan—is much the same as the distance from Hung-hoa to the sea, and though there are few, if any, fortified places between the two towns, it must be remembered that the French gunboats will be of little use in the upper reaches of the river, and that the nature of the country will greatly increase the difficulties of an invading column. Meanwhile, the Chinese forces in Yunnan and Kwangsi appear to be utterly disorganized, and a rumour reaches us that two high officials of those provinces have been summoned to Peking to answer for the fall of Bac-ninh and Son-tai. Possibly the policy of the Middle Kingdom is to degrade its diplomats by way of apology to France, and to punish its generals by way of excuse to its subjects. But the French, we presume, will not trouble themselves about these matters. It will not matter much to them, for the moment, what vagaries of statesmanship go on within the Chinese frontier.

SIR WILLIAM HEWETT, says the *Whitehall Review*, is losing the services of one of his oldest and favourite lieutenants, Commander Ernest Rolfe, of his flagship the *Euryalus*, he having been given the command of the *Dragon*, in the East Indies. Commander Rolfe—the mysterious “Ralph” so frequently mentioned in the telegrams of the *Standard* correspondent at Suakim—has been with Admiral Sir William Hewett almost uninterruptedly during the last twenty years, and was with him in the *Basilisk* and *Ocean*, in China, in the *Active*, and in the Egyptian campaign.

MR. IRVING, says a home paper, has created a deep impression upon both the critics and the theatre-going section of the American public. Wherever the great English actor has gone he has utterly spoilt the people for shows of the old-fashioned stamp. At St. Louis he has evidently made more than an impression, for a writer in a local paper says:—“Never again will a ranting star and a lot of sticks pass for a dramatic company. Never again can cheap-john American managers make our people take John M'Cullough or Booth or Barrett or Tom Keene, supported by a gang of knock-kneed supers in tin helmets, and female boarding-house keepers in ten-cent cambrics, as a substitute for a full-grown, evenly-balanced theatrical performance. The strolling gangs of barn-stormers with one boss ranter as the main attraction, must go.” This, it will freely be admitted, is rather tall.

THE late M. Rouher used to tell an amusing story of an ex-Imperial Prefect and his *administrés*, which illustrates the dense ignorance that prevails in the French rural districts. At the time of the

plébiscite, in 1870, the official in question made the round of his prefecture to stimulate the zeal of the different mayors, the functionaries on whom the success of the vote practically depended. The mayor of a remote town in one of the outlying districts showed certain symptoms of hesitation, and the prefect asked for an explanation of his difficulty. Had his feelings changed towards the dynasty which he had hitherto so warmly supported? “No, Monsieur, it is not that at all,” was the mayor's answer, “but I have some doubt if this measure is a wise one. When Napoleon first wished to be elected deputy we elected him; when some time afterwards he wanted to become President we gave him our votes again. Finally, when he wished to be Emperor, we did not hesitate; he had a larger majority than ever. Now he wants to be made Plébiscite—whatever that may be—and I fear he is going too far. However, as he wishes to be Plébiscite, I shall give him my vote again; only, for Heaven's sake, M. le Préfet, warn him of the danger of over-ambition, and tell him to stop now. Another title might prove his ruin.”—*St. James's Gazette*.

THE *Meiji Nippo* gives the following statistics of oxen, sheep, and pigslaughtered in Tokiyoduring the months of January, February, and March:—

	OXEN.	SHEEP.	PIGS.
January	153	11	19
February	307	18	31
March	352	19	29
Total	812	48	79

MR. A. A. SARGENT, the able Representative of the United States at Berlin, whose suspected lack of reverence for “the ambrosial curls” of sovereignty is reported to have excited some German hostility, says many interesting things in the dispatches he sent to Washington at the time of Arabi's rebellion. When Europe was still wondering who would step to the front in the impending crisis, Mr. Sargent concluded that Germany, at all events, would not interfere actively. She had tried to preserve peace by persuading the Sultan of Turkey to take some action which would satisfy England and France, but these good intentions were “thwarted by the hesitation or craft of the Porte, which sought to regain its hold upon Egypt, and, while watching for such advantage, let matters drift into dangerous conditions.” Germany, therefore, suffered things to take their course, confident in her own strength to meet every contingency. Then came “the resolute and rapid action of England in Egypt, which seemed to take Europe by surprise and to make that Power complete master of the situation.” The Continental idea, “the prevailing tone of influential German newspapers,” had been that “England would bluster and not fight.” The German press, however, was the first to acknowledge the logic of facts. “A direct, positive man like the Chancellor” could appreciate “celerity and decision.” Yet even then Mr. Sargent did not fail to comprehend the complications of the situation: complications which Gladstone so thoroughly appreciated that to this day he stoutly refuses to acknowledge any intention of holding Egypt. “It would be difficult,” wrote the United States' Minister, “to limit the questions that may arise were England to prevail in Egypt to the extent contemplated by her military preparations. French interests in the Mediterranean are inconsistent with permanent English control of Egypt. Germany is not likely to view with complacency any

great accession of power by England or by any other Power within striking distance, and will probably obstruct measures looking to the ultimate humiliation of the Porte. Austria is but the second of Germany in the diplomacy of this decade. Further, it is difficult to see how England can treat Egypt as its sick man, and Europe permit it, and yet object if Russia shall apply the same regimen to Turkey generally.” England finished at Tel-el Kebir what she had begun at Alexandria, and Europe, seeing how the Egyptians who had “grovelled to Arabi now grovelled to Tewfik,” ceased to regard the former as “the representative of a party struggling for a higher national life,” and abandoning its sympathy for the rebels, abandoned also its objection to England's control. “Singly,” says Mr. Sargent, “she fought the fight which is now more and more admitted to have been in the interest of Europe; though had defeat, instead of prompt and brilliant victory, attended her efforts, the harmony of opinion in her favour would probably have been less. * * * Disregarding the refusal of her associate to co-operate in putting down anarchy in Egypt, and without waiting for the express concurrence of the Eastern Powers, she gallantly urged the fight with her single resources, while holding the Porte, and perhaps the Eastern Powers, quiet by her able diplomacy. It is not a matter of surprise that a strong Government like Germany should recognize such strong policy, and give its respect to its authors as well as its implied assent thereto.” The fates, indeed, seem to have willed that England's Egyptian policy should furnish a series of surprises for Europe. The last *coup* is the most wonderful of all. Nobody could have imagined that sober, practical Britain could ever persuade herself to send a solitary man against a nation of fanatics in rebellion. The Mahdi of Islamism launched a few unarmed Arabs at Hicks Pasha's rabble, promising them that the prophet would give the foe into their hands. England has outdone this. She has sent a Christian Mahdi absolutely unsupported to deal with a host of Arab tribes as brave and resolute as the Egyptians were cowardly and reluctant. We wonder whether the issue will be another surprise.

If any man deserved to be buried with military honours, it was the veteran General Schramm, who was laid to his rest recently at La Courneuve. The departed warrior must certainly have been the oldest general, if not the oldest soldier, in the armies of the world. The Emperor of Germany and Marshal von Moltke were in their cradles, and the fathers of General Gordon and Lord Wolseley probably not born, when Schramm first came on parade eighty-five years ago. When Austerlitz was fought, Schramm was an old soldier with six campaigns behind him; and when after Waterloo he retired for a time into private life, he had earned his repose by fifteen years of active service, which included the terrible Russian expedition of 1812. He emerged in 1830, and for a quarter of a century afterwards took an active share in all the military affairs of his country, became War Minister under the Second Empire, and as a hale old veteran lived to see the armies of the nation he had helped to crush at Jena take their revenge a second time at Gravelotte and Sedan. The “Chronicle of the Drum,” as told by General Schramm, should have been worth hearing.—*St. James's Budget*.

THE National Exhibition of Paintings (*Kwaigwa Kiyoshinkwai*) was opened at Ueno on Friday the 11th instant, by the Minister of Agriculture and Commerce, H.E. General Saigo, the Vice-Minister of the Imperial Household, H.E. Sugi, the Governor of Tokiyo, H.E. Yoshikawa, and a number of other officials. The building where the pictures are hung is a great improvement upon that of last year, being spacious and well lighted, with a glass roof down the centre. It is not possible yet to pronounce any verdict upon the pictures themselves, as about a third of the exhibitors have not sent in their contributions, but so far as we have been able to judge, the prospect is not brilliant. The promoters of the Exhibition made an unaccountably senseless rule, that every specimen must be what is called *riugaki*, that is to say, must conform strictly to recognised canons. This means simply that no attempt to strike out a new line is permitted; the exhibition, in short, is a collection of copies. The spirit which dictated this rule is fatal to the progress of pictorial art. Highly appreciative as Japanese connoisseurs are, it never seems to have occurred to them that such masters as Kohōgen, Sesshiu, and Okiyo were not copyists; that every generation of men has its own ideals which differ from those of the generation that preceded and are only partially appreciable by the generation that follows. The wretched fallacies that prevail upon these subjects have been ably exposed by Mr. E. F. Fenollosa in a series of lectures recently delivered in Tokiyo, and we do not doubt that his words will ultimately bear fruit. But in the meanwhile, the much talked of exhibition of 1884 will probably show only that the Japanese artists of the day are not competent to copy the works of their ancestors. Of their ability as originators it can tell nothing.

THE are those who say that the women of the East are satisfied with polygamy and do not understand the injustice of it. To believe this one must be ignorant not only of the East, but of the human soul itself. If it were true, that would not happen which does happen—viz., that there is scarcely any Turkish girl who, accepting the hand of a man, does not make it a condition that he shall not marry again during her lifetime; there would not be so many wives returning to their families because their husbands have failed in this promise, and the Turkish proverb would not be in existence which says: A house with four women is like a ship in a tempest. Even if she is adored by her husband, the Eastern woman can but curse polygamy, which obliges her to live with the sword of Damocles above her head. * * * It is impossible that she should not feel the injustice of such a law. She knows that when her husband introduces a rival into her home he is but putting into practice the right given to him by the law of the Prophet. But in the bottom of her soul she feels that there is a more ancient and sacred law which condemns his act as traitorous and an abuse of power; that the tie between them is undone; that her life is ruined; that she has the right of rebellion. The Turkish women seek to know Frankish women in order to learn from them something of the splendors and amusements of their world, but it is not only the varied and feverish life of gaiety that attracts them; more often it is the domestic life, the little world of a European family, the circle of friends, the table surrounded

age; that sanctuary full of memories, of confidence, of tenderness, that can make the union of two persons good even without the passion of love; to which we turn even after a long life of aberration and faults; in which, even after the tempests of youth and the pangs of the present, the heart finds refuge and comfort, as a promise of peace for later years, the beauty of a serene sunset seen from the depths of some dark valley. But there is one great thing to be said for the comfort of those who lament the fate of the Turkish woman; it is that polygamy is declining from day to day. It has always been considered by the Turks themselves rather as a tolerated abuse than as a natural right of man. Mahomet said, That man is to be praised who has but a single wife—although he himself had several; and those who wish to set an example of honest and austere manners never in fact marry but one wife. He who has more than one is not openly blamed, but neither is he approved. The Turks are few who sustain polygamy, and still fewer those who approve it in their hearts.—“*Constantinople*,” by EDMONDO DE AMICIS.

THE lady correspondent of the *Pall Mall Gazette*, whose prettily written letters of gossip that journal recently published, has excited curiosity by her allusions to some Irish residents of Kiyoto. She speaks of them as people whose father had been in the Indian Civil Service, and who “came to Japan to live cheaply, and learn such drawing and painting as the natives could teach them.” Under what pretext they are permitted to live in Kiyoto we are not informed, but it may be assumed that they are nominally or really in Japanese employ. The chief charm of Kiyoto in their eyes, we are told, is that it is a deserted old Court city, where are no English officials “to inflame Irish blood.” This sounds somewhat curious as the sentiment of a family whose head is himself an English ex-official. But Irish fancies are often eccentric. The funniest part of the thing is that these good folks left Tokiyo “because the attachés and secretaries there are simply intolerable, and the ladies have introduced snobbism into society.” We could scarcely have imagined any description less applicable to Tokiyo society, where cliques, mischief-making, and the other characteristics of gregarious snobbism are absolutely unknown. There is no accounting, however, for the tastes of Irish people who confess themselves followers of Parnell.

ONE result of the recently promulgated stamp regulations has been largely to diminish the number of civil suits. The regulations came into force on the 1st instant, and between that date and the 7th instant, the cases brought before the Courts in Tokiyo were, one before the Court of First Instance (*Shishin Saibansho*), three before the Court of Appeal (*Kōso Saibansho*) and three before the Supreme Court (*Daishin-in*). Briefly speaking the principle of the reform affected by the new regulations is to make the stamp duty depend, not on the size of a petition, but on the magnitude of the issue involved. Formerly, parties to a suit were charged according to the number of sheets their petitions or rejoinders contained; now, they pay according to the amount of property in dispute. The latter system, though obviously the more logical and convenient, involves a larger initial outlay, especially in trivial cases, and hence the diminution now observable in the

latter class of litigation. The public is to be congratulated upon this result. Of recent years the facilities offered by the Courts of Law and a growing confidence in the justice of their decisions seems to have encouraged an undue propensity to put their machinery in motion, and an idea that no question was too insignificant to justify an appeal to the judiciary. We have had occasion, from time to time, to note that arrears of litigation were beginning to look formidable, and though the ease induced by the working of the new system is probably abnormal just at present, we may reasonably hope that while the Courts will be as accessible as ever for the hearing of serious questions, they will be permanently freed from a class of suitors whose claims upon the public time are of the slenderest description.

THE February number of the *Monatsschrift für den Orient* gives the continuation of Dr. Lorenz von Stein's remarkable essay on Consular Jurisdiction in the East, the first part of which we summarised on its appearance a month ago. Continuing, the law relating to Consuls is, the writer says, the most obscure of the many branches and institutions of public law. Except where it is positively laid down in Consular Treaties, it is the most uncertain department in all international law. States in their intercourse with each other may be divided into two classes or groups; first, when the States in their mutual relations assume juridically an individual position, and are represented to each other by Ministers and Ambassadors, who are in no wise under the jurisdiction of the State in which they reside and perform their duties. Secondly, when States come together, not as collective organisations, but by means of the individuals comprising them, as in trade. The general principle that every act performed in a country, as well as all the property there, is under the territorial law and the national courts, is recognised by several of the best established maxims of law, such as *locus regit actum* and *actor sequitur forum rei*. These rules can only be modified, altered, or suspended in times of peace in one way, viz., by explicit treaties between the two nations concerned to that end. “Every deviation from the consequences of these principles is a deviation from the first principle of the sovereignty of States, and can, therefore, only be expressly altered by the sovereignty itself; every such deviation is a special exception to the common right of States.” It is acknowledged by the writer that a strict adherence to these principles would in some cases, as in Moslem countries, stop all trade. Coming now to Consuls and their relation to this discussion, and to what may be termed Jurisdiction Treaties generally, Dr. von Stein divides the history of the development of the institution of Consuls into three different periods. In the earliest period of all, when consulates originated, trade was carried on either with countries with which there were no treaties at all, or with those in which there was no organised system of government and administration, and where consequently no one thought of enforcing the maxim, *cujus regio ejus jurisdictio*. Hence it became the custom to send with ships an official whose duty it was to administer justice to all on board, *inter se*. In course of time came settlements for trade. The institution is thus an extension of the jurisdiction originally exercised over aliens by one of themselves. But there were two fundamental differences between these early

with children, the honored and beloved old Consuls and the authorities now called by that name. First, there is no trace of a recognition of their jurisdiction by the lords of the soil, nothing resembling the modern *exequatur*; and, secondly, this jurisdiction did not extend to causes in which a native was a party. Such causes belonged exclusively to the Courts of the country. But there was nothing resembling a consular system in Europe in the Middle Ages. Every country or town did what appeared to be necessary for its own wants, without consulting any of its neighbours. Wiquefort and Vattel, in his last edition in 1758, makes no mention of Consuls. The first mention we find of them is in a small tract in the year 1751. The second stage in the development of the Consular system was when "capitulations" were made with the Ottoman Empire in the latter half of the fifteenth century. With the present century, however, and the vast increase of intercourse between different nations, came the third stage of development, viz., Consular treaties, as we know them to-day. The system which we have seen arise in Turkey was transplanted by the European Powers to the Far East. "This was explicable at first" (we translate Dr. Stein here). "But during half a generation many things in Eastern trade have greatly changed; and the question of the day in these regions in this respect is the removal of the Oriental Consular system, and the substitution of that of Europe. We are ourselves convinced that this alteration of the Consular system, at least for Japan, the most advanced of these countries, has become necessary, and therefore unavoidable."—*London and China Express*.

EVERYTHING seems to indicate that Yukao will be the favorite Summer resort this year. Not only does the railway to Kumagaye render the journey much easier than it used to be, but the fact that a palace for the Empress is in course of construction there will prove an immense attraction to the Japanese. The Nikkwo folks are apparently beginning to fear the consequences of such competition, and they have accordingly made arrangements for an unprecedented display of ancient relics which the priests have hitherto guarded religiously from vulgar gaze. These curiosities include the armour of Iyeyasu and Oyama Hangwan; the arms of Tamura, and a number of precious heirlooms given to the temple by Yoritomo. The exhibition commenced on the 5th instant and is to continue till the end of September.

THE changes in the Chinese Cabinet, as reported by telegram, are not, of course, quite intelligible at this distance. Prince Li, who succeeds Prince Kung, as President of the Grand Council, is to all intents a *novus homo*. Nothing has been hitherto heard of him by the public, and we are disposed to think that the influence attaching to the high post he is now called on to fill will be exercised in reality by another. He is not a Prince of the Imperial blood, but only the representative of one of the Eight Houses ennobled, at the time of the overthrow of the Ming Dynasty, for signal military services. According to latest detailed advices from China, the Empress was gravely dissatisfied with the incompetence her Ministers had displayed in their management of the Tonquin affair, and it was anticipated that the weight of her displeasure would fall upon the War Party, which after all its thrasonic

utterances and costly preparations, had failed to accomplish anything respectable against the French. Whether the Imperial mood inclined in the direction of a more pacific or a more resolute policy, there was, however, nothing to show conclusively. For our own part we are disposed to regard this last move as a sacrifice of statesmen to subterfuge. China, probably, has not yet quite made up her mind what path she will tread, but by way of a preliminary indication that she means to take a new departure, and as an intimation that the blows which have almost annihilated her prestige would have been parried but for the incompetence of a group of worthless Ministers, she has deposed half a dozen dignitaries. The world will not object to this blame-shifting device, provided only it is followed, as we believe it will be followed, by a less vacillating and more intelligent policy.

A PIGMY voltaic battery of great power for its size has been devised by M. Shirwanov, and is now employed to furnish the star-lights on the heads of the ballet of *La Farandole*, Paris. It is superior to the accumulator hitherto used in yielding a more lasting current. It gives an ampère for one hour, and has an electro-motive force of 1.45 volt. Two of these cells, contained in ebonite cases buckled to the belt of the performer, keep a star-light going, and the light is readily controlled by the wearer. Each cell consists of a zinc plate bent into the form of a U, and holding in its inside a plate of silver, surrounded by chloride of silver, as in the ordinary De La Rue chloride of silver cell used by electricians for testing purposes. The zinc plate forms one pole of the cell and the silver the other. A solution of caustic potash (75 parts potash to 100 water) is filled in, and, as a porous diaphragm, the chloride of silver is covered with parchment paper. The vessel is of ebonite, with a closed mouth, which, however, is opened when fresh liquid has to be put into the cell. This is necessary after every hour's run, and the chloride of silver has to be replaced after three or four hours' of use. The cell is thus expensive, but this is of minor importance in theatrical work as compared with its small size and weight—100 grammes.

THE *Yomi-uri Shimbun* says that the pay of the lady officials (*Niyokwan*) of the Imperial Household has been largely increased. Hitherto it has been two-thirds of the pay of the male officials, but from the beginning of this month the difference was abolished. If this be true, we congratulate the ladies of Japan on being the first to obtain a public recognition of equal rights with the stern sex.

ACCORDING to the *Official Gazette* (*Kwampo*), the numbers of foreign houses and residents in Yokohama up to the 31st of last December were as follows:—English; 55 houses, 327 males, 112 females, 76 boys and 80 girls; Austro-Hungarian: 1 house, 4 males, 1 female, 1 boy and 2 girls; French; 46 houses, 66 males, 19 females, 14 boys and 10 girls; American; 120 houses, 123 males, 58 females, 42 boys and 30 girls; German; number of houses unknown, 127 males, 14 females, 8 boys and 6 girls; Swiss; houses unknown, 27 males, 1 female, 2 boys and 3 girls; Danes; 4 houses, 17 males and 3 females; Portuguese; 21 houses, 21 males and 3 females, 7 boys and 4 girls; Dutch; 20 houses, 18 males,

5 females, 2 boys and 3 girls; Swedish and Norwegian; 24 males and 1 female; Belgian; 5 houses, 5 males, 1 female, 1 boy; Italian; 9 houses, 11 males, 2 females, 1 boy and 1 girl; Russian; 8 houses, 11 males, 1 female, 1 boy; Spanish; 1 house, 2 males, 1 boy; Chinese; 394 houses, 2,061 males, and 682 females, 347 boys and 273 girls. Total: 684 houses, 2,824 males, 903 females, 503 boys and 412 girls.

A WARM discussion is going on in Vienna newspapers in connection with the case of an officer recently dismissed from the army for refusing to fight a duel. Two young men, named Hintner and Mörl, both lieutenants in the Reserve, and both attending lectures in the University of Grätz, met last October at a railway station. Mörl made use of some offensive expression which Hintner thought was intended for himself. He asked Mörl if it was so, adding that if it was, or if the expression was repeated, he would box his ears. Mörl said it was intended for another person, and the incident ended. Four weeks later Mörl sent his seconds to Hintner, calling on him for a written apology and withdrawal of the words, otherwise challenging him to fight a duel. Hintner refused to withdraw his words; he also "refused absolutely to fight a duel, because it was against his religion, against reason and conscience, and also because duelling was forbidden both by the civil and the military law." Hereupon the matter was brought before a Court of Honour, consisting of superior officers of the 14th Army Corps. The decision of this Court was "approved" and published on January 12, and simply recites that "Josef Hintner, lieutenant in the Reserve of the Tyrolese Jäger Regiment of the Emperor Franz-Josef" is charged with "absolute refusal of a duel, and the sentence is that the accused be deprived of his commission and rank." This sentence, it appears, becomes forthwith operative.

During the recent experiments made with the Murata rifle at Shidzuhara, Shimosa, says the *Fiji Shimpō*, some very interesting results were obtained. The initial distance—1200 yards—was increased by 100 yards at every shot up to 1700 yards. At the longest range, the bullet struck the target within 3 centimètres of the centre. When fired at an angle of 23½ degrees, the bullet struck the earth between 3,100 and 3,300 yards distant from the marksman, penetrating into the mould to a depth of over 35 centimètres. The force of the wind during the experiments was between six and seven mètres.

IN a recent issue of the *Colliery Guardian*, Mr. G. G. André speaks in the following terms of electric light for mines:—"I have another word to say on the matter of electric safety lamps, on which I made some remarks a few weeks ago. All, so far as I have observed, who discuss the question in this country proceed on the assumption that the lamps are to be fed from wire leads, as in the case of lighting at surface. I think practical men are pretty well agreed that the lighting of fiery workings cannot be carried out in this way. Irrespective of the trouble attending the use of wire leads in underground workings, the dangers of rupture and 'short circuits' rob the system of the advantage which the lamp itself gives it. But to combat this system is to fight the wind. No one, so far at least as my observation has extended, is thinking of lighting in this way. Those who

are occupied in this work of lighting fiery places provide means for generating the current within the lamp itself by some form of galvanic cell of either a primary or a secondary nature. And it was to those efforts that my recent remarks were directed. The problem is beset with difficulties, but there is good ground for hoping that a sufficiently practical solution will shortly be arrived at. The chief difficulty has been the want of hearty co-operation on the part of mining men."

THE four-hundred-and-fiftieth anniversary of the death of the celebrated priest and artist Chodensu is to be celebrated at the temple of Tofukuji in Kiyoto during three days, from the 12th of May. At the last centenary, the great painter Maruyama Okiyo was among those who took part in the ceremony, presenting to the temple fifty pictures of sacred subjects from his own brush. It is stated that this example will be followed on the present occasion by the artists Kubota Beizen and Sachino Bairei, who have prepared thirty pictures for presentation. Lovers of Japanese art may look forward to a rare treat, as the pictorial treasures of this well known temple will doubtless be exhibited. We are somewhat puzzled to account for the method of reckoning adopted by the chronologists of Tofukuji. According to generally credited history, Chodensu died on the 20th of the eighth month in 34th year of the era Oyei, that is to say, 458 years ago. It is possible, however, that the priests exclude the first, third and seventh anniversaries (*Isshuki*, *Sankwaiki*, and *Shichikwaiki*) from the account.

A VERY common expression is "Not lost, but gone before," and yet its true source has been almost wholly overlooked. It has figured as an epitaph upon gravestones, and has been utilised by the poets and other writers. No doubt everybody is acquainted with it, and it may therefore be worth while to point out where it in all probability comes from. The writer of an interesting article in a recent number of the *Bazaar* gives various instances of its occurrence, and concludes as follows:—"The thought is indeed a Christian thought, but the words are the words of a pagan. It was the stoic Seneca who said 'Not lost, but gone before;' *Non amittuntur, sed præmittuntur*." No reference to any place in Seneca is given, and it may fairly be questioned whether that author uses the actual words ascribed to him. There is in his 36th Epistle a remarkable sentence in which we read, "Death which we dread and shun interrupts life, does not take it away; the day will come again which shall restore us to the light, and which many would shun unless it brought back those who are forgotten." The meaning of this is not that of the Christian, and nothing else in Seneca, so far as we can discover, can be compared with the phrase under consideration. But Cyprian, the martyr, who wrote in the third century, supplies us with something very definite. In his discourse "On Mortality," Cyprian speaks in this language:—"Our brethren should not be bewailed when by the summons of the Lord they are delivered from this world: for I know that they are not lost but sent before (*non eos amitti, sed præmitti*), that when they retire they precede (or, go before), so that they ought to be longed after as those who go on a journey or a voyage, and not lamented." He adds what might serve as a motto for the Funeral Reform

Association, "that black garments should not be put on here when they have already put on white robes there." It will be seen at a glance that our common saying is almost an exact rendering of the words of Cyprian, and to him we should not hesitate to ascribe the expression.

THE Judgment of Lord Coleridge in the case of the Duke of Vallombrosa v. the proprietors and publisher of *Truth* has naturally excited some comment in England. The *Spectator* takes a very decided, and, we can not help thinking, a somewhat peculiar, line in its criticism. It sums up the judgment thus:—"In the first place, it was held that the fact of the Duke of Vallombrosa being a non-resident foreigner was, if not an absolutely conclusive answer, yet a very strong argument against his right to take criminal proceedings in England. The technical reason for this, that there is no ground in such a case for apprehending a breach of the peace, conceals the more solid and substantial ground that no appreciable injury has been done. But the chief points settled in the case were that to say things against the dead is not libellous, and that, as a rule, the special remedy by information is not open to a private individual, nor indeed to a public person unless he is libelled as such." The Lord Chief Justice, then, has decided that the dead can not be legally defended against abuse, or the living against the effects of obloquy heaped upon their buried relatives. The *Spectator* contends that if abuse of a man's ancestors were recognised as giving him "good cause for breaking the peace or prosecuting the writer for libel, there would be no end to libel actions." What course, then, is a man to pursue under such circumstances? Suppose that he hears his dead mother openly accused of immorality and his father of fraud, is he to fold his hands and let the tongue of slander wag without restraint? Even among the most barbarous peoples of the universe there is nothing held more sacred than a parent's memory, yet we are now assured, on the highest authority, that insults offered to that memory are beyond the reach of redress. The libeller may neither be chastised nor cited before the public tribunals. So long as this principle obtains, it is well that trial by jury should be perpetuated. Juries judge by sentiment, not by law. American juries have decided that when a man's wife is seduced, he is justified in losing his temper to the extent of shooting the seducer. English juries have not yet gone so far as that, but we suspect and hope that it would be very hard to find twelve jurors in the United Kingdom capable of condemning a man to fine or imprisonment for thrashing the traducer of his mother's fair fame, especially since the Chief Justices' Court has ruled that the law can not interfere to punish the traducer.

* * *

Commenting on the libel case which elicited the strange dictum that to abuse the dead in not libellous, the *Spectator* says:—"The sensitiveness of people to things said in the newspapers, even in newspapers which no one reads or regards, * * * tends to become a public nuisance. The papers which live on libel would find their trade a poor one if there were fewer prosecutions for libel." It is pleasant to see how thoroughly this principle is recognised by Japanese officials and private persons alike. There is an English journal in this country which lives by libelling the people of Japan.

their Ministers, and their institutions. Yet not only does the Government treat its utterances with silent contempt, but even the vernacular prints preserve towards it an attitude of complete indifference. In this matter the Japanese show excellent judgment. They may confidently trust their defence to public opinion, which will sooner or later recognise that not Japanese, but English, reputation suffers by these displays of wanton malignity.

THE natives of the Chiloe Islands make use of a curious natural barometer, to which, from its having been first noticed by the captain of an Italian corvette, the name "*Barometro Araucano*" has been given. This novel weather guide was described at a recent meeting of the Linnean Society of New South Wales, as the shell of a crab, one of the *Anomura*, probably of the genus *Lithodes*. It is peculiarly sensitive to atmospheric changes, and is nearly white in dry weather, but exhibits small red spots on the approach of moisture, and becomes completely red in the rainy season.

THE writer of "Notes on News" in a recent *Sportsman* relates the following curious match against time:—A pleasant little match against time was brought off at Heckmondwick a few days ago. This charming town, it should be known, possesses a champion shaver, whose prowess has been often extolled, if not in poetry, at least in prose. Some time since a man offered to back the lightning shaver for money to shave sixty persons within the space of an hour. The challenge was accepted and a time and place appointed. On one hand it was laid down as a condition that the shaving should be clean, and on the other that the barber should have the privilege of selecting the individuals to be operated upon. Another barber was chosen as umpire, and the sixty people to be scraped duly selected. At the appointed hour the contest commenced, the operator having the full knowledge that for every case in which he drew blood he would have to shave another man. Two latherers went in front bedaubing the row of faces with suds; the razors, a dozen or so in number, all ready stopped, lay at hand. As the clock struck the starting hour the razor flew around the head of the first subject like a succession of flashes of lightning, and his face was clean as a baby's arm, number two following in quick succession, the referee passing his hand over the skin where the work had been done to find out whether the stubble had all been removed. In ten minutes the barber had cleared the superfluous hair from fourteen faces. In twenty minutes nine-and-twenty subjects had been operated upon, and still the razor rested not. Stiff, black stubble, and light sandy fluff, rich brown roots just showing above the soil, and grey spikes of mature age, all fell before the relentless razor as it swished up and down, back and front, and round about. In forty-two minutes the specified sixty had been shaved, but the lightning shaver thirsted for more. He must scrape or burst. Young and old, tall and short, thick and thin were hauled in, lathered and shaved until the hour struck, and then, and then only, the demon shaver ceased from his labours and "took a long pull at a foaming pot." He had shaved eight-four persons! This man should come to London. In company with a barber who trims our own broad cheeks at odd intervals he would make a fortune in a few weeks. The

pair would shave their way through the Strand, taking all comers nearly as quickly as the trains on some of our southern lines travel.

THE Osaka correspondent of the *Choya Shim-bun* writes as follows:—"The cold weather has been unusually severe and of long duration, so much so that the water was fast frozen in the tanks up to a few days ago. The tea plants throughout Yamato have suffered greatly, and the planters predict an unusually scanty harvest. As the young leaves cannot be picked, the retail salesmen are clinging to last season's teas in order to cause a rise in the quotations. Political lectures, social gatherings, and fencing, which were all the fashion during the winter months, have gone out of vogue, their place being taken by vocal and instrumental concerts. No one, be he an official or the meanest workman, can hope to enter within the precincts of the society of his class unless he plays the *shakuhachi* (a sort of flute)." This latter clause reminds one of the manner in which "Clarence Linden" is introduced to the "Duke of Haverfield" in Bulwer Lytton's "The Disowned"—"Most delightful young man, Your Grace, and plays the flute."

HERE is a very singular illustration of the optical delusion which a change of position will sometimes effect. Take a row of ordinary capital letters and figures:—

SSSSSSSSXXXXXXXXX888888888.

They are such as are made up of two parts of equal shapes. Look carefully at these, and you will perceive that the upper halves of the characters are a very little smaller than the lower halves—so little that an ordinary eye declares them to be of an equal size. Now turn the paper upside down, and, without any careful looking, you will see that this difference in size is very much exaggerated; that the real top half of the letter is very much smaller than the bottom half. It will be seen from this that there is a tendency in the eye to enlarge the upper part of any object upon which it looks.

SOME very successful experiments in communicating over long distances by telephone have been made by the officials of the electric telegraph department at Port Elizabeth. The first experiment, says the *Colonies and India*, was made between Port Elizabeth and Graham's Town, when the sound was freely transmitted along the line, a lively conversation being carried on. Songs sung were also distinctly heard at the other end. The Fort Beaufort line was then connected, and an extension made *via* Humansdorp, giving a total length of communication of over 400 miles, through which the sound travelled with astonishing clearness. It is probable that an attempt will shortly be made to communicate with Cape Town by the telephone. If this can be done it will prove a great boon.—*Electrician*.

Says the *Bukka Shimpō*:—"The public have by this time evidently become aware of the nutrition in beef and milk, for the consumption of these victuals has greatly increased of late, and pastures and butcheries have sprung up all over the country. Beef, however, differs in point of flavour and nutritive qualities in various districts; and so, too, does milk. Imported cattle generally yield a great quantity of rich milk, but their meat is poor, while the "Kobe" beef (a term applied to the cattle of Tango, Tajima, Harima, and Bizen) is well-flavoured, although the cows

give but a scanty supply of the lacteal fluid. Several live-stock owners have raised a cross-breed between the Oshiu and imported cattle, but these half-breds are invariably inferior to the native oxen. The Kobe cattle are worth 10 *yen* a head on an average, while those from Oshiu rarely bring more than 5 *yen*; it is not improbable that judicious interbreeding between Kobe and imported cattle would be attended with very favourable results. At present, 13,000 head are annually consumed in the capital.

THE *Feiri Shim-bun* states that it is the intention of the Government to dispense with the services of all the foreigners employed throughout the country in connection with mining industries, and to replace them by Japanese. That this would only be consistent with the policy pursued during the five years ending 1881, will be evident from the following tables:—

NUMBER OF FOREIGNERS IN GOVERNMENT EMPLOY.					
	1877.	1878.	1879.	1880.	1881.
Englishmen	204	180	132	111	81
Americans	43	41	37	39	21
Russians	1	5	4	4	1
Dutchmen	7	8	10	7	5
French	64	40	33	15	10
Portuguese	3	2	2	1	0
Germans	25	23	22	37	32
Swiss	2	1	1	2	2
Belgians	0	0	0	0	1
Italians	5	6	6	7	6
Danes	1	1	0	0	0
Austrians	4	2	3	4	3
Chinese	17	13	8	7	3
West-Indians	1	1	1	0	0
Malays	4	3	3	2	2
Totals	381	326	262	236	167

SUMS YEARLY EXPENDED IN SALARIES AND MISCELLANEOUS PAYMENTS TO FOREIGN EMPLOYÉS.

1877.....	\$975,612	1880.....	693,700
1878.....	863,988	1881.....	\$546,598
1879.....	737,544		

It is interesting to observe that the reductions were greatest in the cases of Frenchmen and Englishmen, and least in the case of Germans.

HOME papers received by the last mail announce that Mr. Buckle, who has for the last two years been sub-editor to Mr. Chenery, has been appointed his successor. Mr. Buckle, was called to the Bar at Lincoln's Inn in 1880, and was educated at Winchester and Oxford. His father is the Rev. Prebendary Buckle, of Weston-super-Mare. The number of people who have been disappointed over this appointment is said to have been amusingly large.

A MEMBER of the House of Commons experienced a curious and at first very startling surprise, says a home paper, at St. Stephen's one day last week. He had got down to the House very early, about a quarter past three, long before business begins, in order to consult some work in the library. Being on the spot, he thought he might as well go into the Chamber and secure his seat at once. What was his surprise on passing the threshold of the deserted room to see the Speaker actually sitting in the Chair. He paused for a moment in bewilderment and rubbed his eyes. Could he be dreaming, or was it some trick of vision? No. There the Speaker undoubtedly was, sitting with even more than usual solemnity and rigidity, calmly watching over an absolutely empty Chamber. What could be the meaning of this, the puzzled member asked himself. Was there a morning sitting? No, it was not Wednesday, and there had been no special summons of any kind, so it couldn't be that. Cautiously, almost timorously, he approached the table. The Speaker made no movement, but continued to gaze stonily before him. A terrible thought flashed across the

member's mind. Could regret at the loss of the speakership have unhinged Sir Henry Brand's mind, and have thus led him to assume his duties long before the appointed time. Full of fear, the member almost fled out of the House, and hurriedly inquired of one of the officials why Mr. Speaker had chosen to take his seat thus early. "Why, sir," the official replied, "he's having his photograph taken in official robes. The photographer is in one of the upper galleries."

NAVAL officers, scientific men, and others are interested in a terrible gun, invented by a Mr. Miffin, which is intended to throw dynamite. It is twenty-eight feet long, and the diameter of the bore is four inches. There will be an air compressor attached to it, which is now in process of construction with the gun at Norwalk. It would not do to use powder as a propelling power, for its sudden action would explode the dynamite cartridge at the start, and blow the gun to atoms. Compressed air, at a pressure of about 300 pounds to the square inch, will take the place of powder, and the gun is expected to throw a three-pound cartridge a distance of two miles. If the gun is a success, others of a size sufficient to throw 100 pounds of dynamite ten miles will be constructed. The gun, loaded with sand, is to be tested at an early day.—*Washington Post*.

A VERY good house patronized the second concert of the Lynch Family Bellringers on Wednesday evening, and applauded their efforts most heartily. The bellringing was as excellent and enjoyable as ever, while some of the numbers on the programme were still finer than before. The "Varsoviennne" was especially melodious, and equally pretty were "Send me a Letter from Home," "Nancy Lee," and "The Last Rose of Summer." Mr. W. Lynch's potpourri on the Clock Bells was a marvel of dexterity, but the ring of these bells is not nearly so soft and sweet as that of the others. Mr. Farron was in better form than on Monday evening, and again brought the house down by his Irish impersonations; his comic interludes are in the happiest vein of broad humour, and never fail to provoke merriment. The "Sailor's Hornpipe" was very gracefully danced by Mr. W. Lynch, who is one of the best dancers we have yet seen. Unfortunately for the enjoyment of the audience, some inebriated person near the entrance kept up an audible accompaniment to, and running criticism of, the entertainment, much to the disgust of his neighbours. It seems rather a pity that such customers are not excluded *vi et armis*. A matinée concert will be given on Saturday afternoon, for which a special programme has been arranged, and a third "Drawing Room Concert" takes place on Monday evening next.

THE Douglas Steamship Co.'s steamer *Fokien* (says the *Hongkong Daily Press* of the 9th inst.), which arrived from the Coast Ports yesterday, brings news that the Italian corvette *Cristoforo Colombo* had been ashore. The following is the *Fokien's* report:—"Nearing Amoy on Saturday, 5th, at noon, in thick, foggy weather, fell in with an Italian man-of-war's boat and crew, bearing tidings that an Italian man-of-war had gone ashore somewhere in that vicinity about 6 a.m. Arrived at Amoy, duly reported the same, and at once proceeded to her assistance. The facts showed that the Italian corvette *Cristoforo Colombo*, Captain Accinni, from Hongkong to Amoy, had grounded

on the Quemoy Bank at high water in a fog. As the evening tide made, and she failed to move with her engines going full speed, preparations were started to lighten her, the *Fokien*, at the Italian Commander's wish, going into Amoy for lighters. However, the flood tide in the morning canted the ship a little, and by again applying full pressure of steam to her engines, she glided off into ten fathoms of water without other assistance. The *Cristoforo Colombo* steamed into Amoy and anchored at 7 p.m. (Sunday), having apparently sustained little or no injury. It is worthy of remark that the German corvette *Stosch*, Captain Von Nostitz, left Amoy with the intention of rendering assistance, but owing to the thickness of the fog, she had made but little progress toward the scene when news reached her that the Italian was afloat again and proceeding."

THE *Official Gazette* publishes the following telegram from Peking, dated the 10th inst. :—An Imperial Decree has been issued to the Privy Council, ordering this body to manage the affairs of the Empire, in concert with Prince Shun, during the minority of the reigning Emperor. Another despatch, dated the 11th inst., states that Lün Shū has been temporarily appointed Keeper of the Great Seal of the T'sung-li Yamên.

It is stated that the two vessels of war now in course of construction in England, to the order of the Japanese Government, are to be called the *Naniwa Kan* and the *Takachiho Kan*.

A TEMPERANCE meeting was held at the Seamen's Mission on Tuesday, and was largely attended by the Good Templars of H.M.S. *Sapphire*, by whom songs and recitations were given. Mrs. Austin played the accompaniment and sung. The meeting was addressed in a most eloquent manner by the Rev. Mr. Bennett, and addresses were also delivered by Messrs. Hodnett, Austin, and Elmer, which brought a most agreeable meeting to a close.

WE learn from a vernacular journal that the first parcel of new tea reached Nakajimaya in Yokohama, from Shidzuoka, on the 8th instant, and was immediately sold to No. 20 at the rate of 8 *yen* per catty. The newspaper which tells this story adds that this means 800 *yen* per picul, an "immense price, but then there is no limit to what people will pay for *hatsu-mono* (the first of anything)."

A good story is told of the late Bishop of Winchester. Staying once in a country house, he retired to his room to write letters. When he had finished he rang his bell to see about their transmission to the post. A little serving-maid appeared, who had been specially drilled always to address the right reverend guest as "my lord," and was rather flustered accordingly. To his lordship making particular inquiries who was to be intrusted with his letters, she accordingly, dropping a timid curtsy, made answer, "The lord, my boy!"

THE *Hongkong Daily Press* of the 9th inst., thus refers to the departure from that Colony of H.I.M.'s Minister to Great Britain :—His Excellency Mori Arinori, Japanese Ambassador to London, with Mrs. Mori left here for Japan by the M.M. steamer *Volga* yesterday. His Excellency had been the guest of the Governor, and at about

eleven o'clock he drove down to the Murray Pier with Mrs. Mori in Sir George Bowen's carriage, accompanied by Lieut. Lewis, A.D.C. A guard of honour of 50 men of the Buffs, with the band of the regiment, were drawn up on the Cricket Ground, and saluted as His Excellency passed them, and salutes were fired by the shore battery and by H.M.S. *Audacious*.

As was but natural, Baker Pasha met with an enthusiastic reception from his old regiment, the 10th Hussars, on its arrival at Suakim, his former connection with the Prince of Wales's Own, dating back to the days when he joined it as a captain from the 12th Lancers, not having been forgotten. Valentine Baker must have been deeply affected by this ready recognition of one who was in his time one of the most popular and efficient cavalry colonels in her Majesty's Service. His many friends are again asking, Is a sin once committed never to be condoned? Apropos of the arrival of the British reinforcements at Suakim, what has led the usually accurate special correspondent of the *Daily News* to suppose that the "Royal Irish Fusiliers are already known for their service in South Africa"? The regiment has not been there in the memory of any of its officers, and has not been under fire for close upon twenty-five years.

Colonel Burnaby, who is with our expeditionary forces in Upper Egypt, can claim an old acquaintance with Suakim, as he was there in 1874 with the late Mr. J. F. Russell, and proceeded thence to Khartoum in search of adventure, and with an eye to the shooting of lions, hippos, and such like *fera naturæ*. As some surprise has been expressed at Colonel Burnaby's presence in the field with Baker Pasha, we may mention that he is on leave of absence from his regiment, and is thus enabled to fill four such widely different appointments as Lieut.-Colonel Commanding the Blues, Silver Stick-in-Waiting, special correspondent of the *Morning Post*, and acting commandant of a levy of raw Soudanese and Egyptian troops. Still—how does he do it?—*Whitehall Review*.

A MEETING of the Alpha Lodge I.O.G.T. took place on Wednesday, and was well attended, when one of the ladies present favored the audience with two songs, very nicely rendered. The audience was delighted with readings and recitations of members of the crew of H.M.S. *Sapphire*. After this the Rev. Mr. Smith delivered one of his popular addresses on temperance, the reverend gentleman being followed by Messrs. Hodnett and Bunting with a few well-timed remarks.

It is said that since watches and chains came into vogue the pickpockets of Tokiyo have developed remarkable skill. They succeeded in relieving no less than 173 persons of their timekeepers during the course of last month.

THE Osaka Garrison went through a series of very interesting manœuvres at Umeta on the 10th instant. A railway which had been temporarily constructed for the purpose was destroyed by the troops in fine form, the rails being torn up and the sleepers demolished. The work of destruction occupied two hours, and was intended to demonstrate the manner of wrecking the track of a hostile force.—*Fiji Shimpō*.

THE *Official Gazette* publishes the following telegram from Peking, dated the 14th inst. :—Kwan

has been appointed President of the T'sung-li Yamên, and Sū Ji-shien (Superintendent of Education) is gazetted Vice-President.

THE *Hongkong Daily Press* of the 8th instant says :—His Excellency Mori Arinori, Japanese Ambassador to England, who with Mrs. Mori arrived here on Sunday in the M.M. steamer *Yangtsé*, on his way home to Japan, was yesterday the guest of the Governor.

THE official opening of the railway from Tokiyo to Takasaki is now definitely fixed for the 1st proximo. The train conveying the distinguished personages by whom the ceremony is to be performed will, we believe, start from Uyeno at 7.30 a.m. and reach Takasaki at 10.30, returning in the afternoon.

THE work of constructing a race course around Lake Shinobadzu, Uyeno, is rapidly progressing. A large number of labourers are employed in filling up the lake, the water of which was nearly entirely drawn off by cutting through the embankment opposite to the Riukan Bashi, whence it was carried through a ditch leading to Shami-sen-bori, Asakusa. The course is expected to be completed in time for the Spring Meeting of the Union Race Club.

A SCHOOL, known as the *Tokiyo Futsu-go Gakko*, has been established at Kanda, under the auspices of several members of the *Société de la Langue Française de Tokiyo*. The institution gives every promise of being very successful.

It is stated that the antiquities in the Yushokwan at the shrine of Yasukuni-jinja, Kudan, which have hitherto been open for public inspection on Sundays only, will in future be shown to visitors on Wednesdays also.

HIS EXCELLENCY MORI, Representative of Japan at the Court of St. James's, reached Tokiyo on the 14th inst., having returned to Japan on leave of absence.

THE telegraph line between Yokohama and Yokosuka is in process of extension to Uruga, and a station will be opened at the latter place very shortly.

WE are informed that the P. & O. steamship *Thibet* left Nagasaki yesterday afternoon at 3 o'clock for this Port, *via* Hiogo, and that the Company's steamer *Kashgar* left the same port for Hongkong at 10 a.m. on Thursday.

THE British bark *Velotily* is chartered to load sugar at Takao for this port, thence to Newchwang, and there to load for Hongkong.

THE German bark *Wilhelm Homeyer* is chartered to load at Newchwang for Hongkong or Whampao.

THE German brig *Minerva* sailed for Takao on the 12th inst., where she loads sugar for this port.

THE German bark *Orient* is chartered to load at Chefoo for Amoy, and sailed on Tuesday.

THE British bark *Glenury* is fixed to load coals at Nagasaki for Taku.

THE Pacific Mail steamship *City of Tokio* left San Francisco on the 12th inst.

THE END OF A CHAPTER OF JAPANESE HISTORY.

IT has always been the desire of Japanese and foreigners alike to consign to oblivion the assassination which took place at Namamugi, on the Tokaido, nearly twenty-two years ago, and which ultimately involved the loss of many innocent lives at the bombardment of Kagoshima.¹ Now that we are in a position to review calmly and by the light of larger knowledge the story of Japan's early intercourse with Western nations, we can see that not a few of the outrages then attributed to wanton ferocity and lust for blood, had their real origin in a spirit which, however mistaken, was certainly patriotic. The Namamugi affair, too, was attended by this special circumstance, that, at the time of the assault, the sufferers were unwittingly violating a sumptuary law hitherto invariably enforced against Japanese themselves with the utmost rigour. To walk or ride across or beside the procession of a Daimiyo was an unpardonable offence, and had often been punished by immediate death. Of this, however, the party which set out to ride from Kanagawa to Kawasaki on the afternoon of September 14th, 1862, knew nothing. Proceeding in couples, a lady and gentleman in front, and two gentlemen behind, they became entangled among the armed escort of a Daimiyo travelling southward, and when, warned in part by the menacing looks, in part by the gestures of the Japanese soldiers, they would have turned back, swords were suddenly drawn and wounds inflicted of which one proved mortal. To what extent this cruel deed was prompted by a hatred of foreigners, we shall probably never know. One thing is certain; namely, that the chief whose retainers committed the crime was the head and front of the combination against the TOKUGAWA Shogunate, and that among the weapons employed by that combination none was counted more serviceable than an attitude of opposition to foreign barbarians. Japanese, speaking frankly of the events of those days, assert that probably half of the anti-foreign agitation was instigated by a desire to involve the Yedo Government in difficulties which might hasten its overthrow. While, therefore, there is no evidence whatsoever to show that the Namamugi outrage was either ordered or approved by the leaders of the cortège, there is fair reason to assume that the men who actually perpetrated the deed believed they were acting in accordance with the policy of their party. Of their fierce hostility to foreigners, whether from political or patriotic motives, there can be very little doubt. If any proof of this were wanting, it would have been furnished by the terrible wounds they inflicted on the body of the dying man when they found him lying on

¹ In addition to the losses on the English side, 1,500 Japanese were killed or wounded and property of the estimated value of a million sterling was destroyed.

the Tokaido half a mile beyond the place where he was first struck.

This unhappy page of history has long ago ceased to find any apologists in Japan. Whether RICHARDSON met his death because he was a foreigner, or because he inadvertently violated an uncivilized usage barbarously enforced, the disgrace remains equally heavy. One thing only could in part efface it, namely, its hearty condemnation by the country whose annals it disfigures. That condemnation has been unequivocally pronounced, not by any definite expression of public opinion, but by the far more trustworthy evidences of national regeneration with which the records of the past fifteen years abound. To such evidences, too, must now be added an episode of singular significance—an episode which, to our thinking, bears wonderful witness to the change which has come over the spirit of this nation.

In addition to an indemnity² and apology exacted from the SHOGUN'S Government, it was resolved that direct steps should be taken to force the Prince of SATSUMA to arrest RICHARDSON'S murderers, and to pay a sum of \$100,000 by way of compensation to the dead man's relatives as well as to the wounded survivors. Seven British ships of war were despatched upon this service. The results of their operations were that three steamers, five large Riukiu junks, an extensive arsenal, the greater part of the town of Kagoshima, and all the batteries of Satsuma, were destroyed, while about 1,500 Japanese were killed or wounded. These terrible effects were produced in a bombardment lasting only a few hours, and, as a not unnatural consequence, the clansmen of the great Southern Daimiyo concluded, then and there, that their strength was quite inadequate to cope with that of European nations. It is not necessary for our present purpose to enter into the details of this now celebrated Kagoshima expedition, or to note the grave faults unquestionably committed on the English, as well as the Japanese, side. The issue is all we have to deal with, and that, as we have said, was the final abandonment of anti-foreign designs by the Satsuma clan. To the Namamugi outrage are, therefore, attributed by thinking Japanese the first great blow struck at their country's seclusion, and the initial impulse which has since been followed by such remarkable and salutary reforms.

The episode to which we allude is the outcome of this radically altered mood. It is the erection of a monument to RICHARDSON'S memory, not by any party of politicians or progressionists, but by the farmer to whom the land belongs. RICHARDSON, a man of herculean frame, managed to keep his saddle for some time though he had received a wound which nearly cut him in two. Ultimately, falling to the ground, he struggled to a well by the road-side, and there,

² Four hundred thousand dollars.

a few minutes afterwards, received the blows which ended his life. About this well a mound has now been built, and on the top a monument raised, bearing the following inscription:—

In memory of
C. D. RICHARDSON,
An Englishman, who lost his life at this spot,
September 14th, 1862.
This monument is erected by the proprietor of
the land,
Kurokawa Sozo,
At whose request the following epitaph was
composed by
Keiu Nakamura Masanao,
December, 1883:—

君 我 萬 援 耳 強 我 君
其 今 國 々 目 藩 邦 流
含 作 有 生 新 起 變 血
笑 歌 史 死 兮 兮 進 兮
子 勤 君 崎 唱 王 亦 此
九 貞 名 知 民 室 其 海
原 珉 傳 聞 權 振 源 壩

"Shed by this sea-shore, the blood of a stranger
"Flowed in a fountain of national progress.
"Strong clans uprising, the hands of the Emperor
"Swayed once again the sceptre of Sovereignty;
"And towards reform the mind of the nation
"Turning, awoke to the rights of the people.
"Who in the homes of the dead or the living
"Knows not this brave man? His name shall be
written
"Wherever the pages of history are open.
"I, on this stone his story recording,
"Pray that the thoughts of the blessings he
brought us
"May gladden his heart in the land of the shades."

The language of this epitaph speaks for itself. It necessarily loses much in translation, but the thoughts that inspired the writer cannot be robbed of their earnestness and beauty. A brighter obverse could scarcely have been conceived for so dark a page of history, and while we greet this monument under the pine-trees at Namamugi as a silent yet eloquent witness that Japan has completely emerged into the light of a better civilization, we may be permitted to express a hope that her liberal mood will be educated, not discouraged, by the treatment she receives at the hands of her foreign friends.

THE NEW BUREAU.

THE formation of the *Seido-tori-shirabe-kiyoku*, or Bureau of Constitutional Reform, and the appointment of His Excellency ITO to preside over it, have not attracted much attention among foreigners, probably because accurate information with regard to the functions of the new office, or the peculiar relation in which it stands to His Majesty the EMPEROR, is not accessible. Ever since the promulgation of the celebrated edict of October, 1881, and more especially since Mr. ITO'S return from Europe, it has been expected that some definite step would be taken to pave the way for the political changes promised in the twenty-third year of Meiji (1890). At first sight, it seems an exaggeration to say that the interval still remaining before the convention of the National Assembly is not at all too long for the necessary pre-

parations; yet when the nature of those preparations is considered minutely, the possibility of accomplishing them thoroughly in six years begins to look doubtful. We may, however, presume that the scheme to be pursued has been outlined already with tolerable accuracy, and that the work of filling in the details will now proceed with vigour. But beyond presumption the public is not permitted to go. So little is known that, with the exception of the *Nichi Nichi Shimbun*, whose article we translate to-day, the Tokiyo journals have refrained from comment on the new Bureau, as well as on the dual nature of its President's functions. Students of Japanese history will not be surprised at the exceptional steps taken to associate the EMPEROR with every stage of the preparations for a Constitution. So far back as we have any trustworthy information, it has been the custom in Japan to regard as an act of rebellion every political change not accompanied, in fact or appearance, by Imperial sanction; and if the new Constitution is to secure the loyal assent of the nation, there can be no better place to arrange its preliminaries than within the precincts of the Palace. To persons not familiar with the inner workings of Japanese institutions this reason will scarcely seem sufficient for the additional office conferred on His Excellency ITO. As our Tokiyo contemporary points out, the Household Department had hitherto remained untouched by any of the changes introduced since the Reformation. Its Minister had always been a noble of Imperial blood, and whether the policy of combining or separating Departmental and Legislative functions was in vogue, his office continued independent and unassociated. People had thus learned to think that the affairs of the Palace and the business of managing them, were something outside the pale of official interference, and no small astonishment was expressed when, simultaneously with the establishment of the new Bureau, its President was gazetted to the place previously held by His Excellency TOKUDAIJI. The probable explanation is, that in electing to adopt the leading features of the German Constitution, Japanese reformers have recognised the necessity of creating some machinery for the exercise of that autocratic authority which is still a prominent feature of the great European Empire, and which appears naturally adapted to the Governmental traditions of this country. In pursuance of such a project, the first step which suggests itself is to extend the sphere of the Household Department's functions, to make it, in fact, an active part of the Administration, not a mere office of ceremonies. This, we are disposed to think, and not the mere accessibility of the EMPEROR, is at the root of the nomination which has excited so much interest in Japanese circles.

Other reflections will not fail to occur to foreign observers in connection with

this new appointment. It is now just twenty years since the news of the violent closure of the Straits of Shimonoseki by the Prince of NAGATO reached the ears of five Japanese youths who were studying in England. Themselves retainers of this warlike chieftain, they had made their way to Europe with no little trouble and risk,—some (of whom the present Minister for Foreign Affairs is one) actually working before the mast as common sailors,—not in pursuit of peaceful erudition like students of the present day, but, if possible, to acquire such a knowledge of Western military science as might avail to expel from their country visitors whose advent they had been taught to consider fatal to the nation's happiness and independence. A very brief contact with European civilization, as seen in London and other great cities, effectually opened their eyes to the errors of their traditional creed, and when intelligence reached them that their own clan had actually drawn the sword against foreigners, the two most active spirits of the five lost not a moment in returning to Japan, resolved that, so far at least as they were concerned, no effort should be spared to divert their country's policy into wiser and more enlightened grooves. On reaching Yokohama they found a large squadron of English, French, and Dutch ships assembled, and learned that the guns of these vessels would shortly be turned against their own clansmen. Immediately they placed themselves in communication with the British Representative, and offered to proceed to Nagato as his envoys, believing that what they had to tell their chief of European civilization would have more effect than the arguments of twenty fleets. They knew well the nature of the perils that awaited any envoys visiting CHOSHU on such an errand. Even the Foreign Representatives understood the situation sufficiently to warn the British Admiral that he must "allow for obstacles and causes of delay, since it was impossible to doubt that there were collected in CHOSHU'S territories many *Ronin* who might make short work of any messengers of peace." The two youths were carried to their destination in H.M.S. *Barossa*. The Nagato clansmen, persuaded that they were acting in accordance with the EMPEROR'S wishes, refused to abandon their hostile attitude, but asked for three months' delay to communicate with Kiyoto. This was refused, and the bombardment of Shimonoseki took place shortly afterwards, not, however, before one of the young envoys, Mr. INOUE, had been waylaid and almost cut to pieces by those of his clansmen who believed that every advocate of foreign intercourse was a traitor to Japan. The other, Mr. ITO, who remained for many weeks disguised in the house of a foreign official, escaped a similar fate with infinite difficulty. That these two youths, of comparatively insignificant social position, who were not only the first Japanese openly to

risk their lives in the cause of foreign intercourse, but also first to recommend the course afterwards followed with so much success—the opening of treaty relations directly with the MIKADO—that these two youths, we say, have since then risen, little by little, to the highest positions of State, and continued, through evil report and good report, to direct the policy of this country, is, to our thinking, the best possible guarantee of the sincerity and earnestness of Japanese progress. As Minister of the Household Department and President of the Bureau charged with the compilation of the Constitution, His Excellency ITO has virtual control of the internal administration of his country; while, as Minister of Foreign Affairs at a time when the hopes of a great part of the nation are centered upon the recovery of Japan's independent status, His Excellency INOUE occupies a position of no less trust and responsibility. Fortune certainly had wonderful things in store for the two students who sailed from Yokohama in the *Barossa* on the morning of the 21st of July, 1864.

AN ECHO OF A CONSUL-GENERAL'S SPEECH.

ONE of the pleasures we enjoy in Japan is that long after our controversies have ceased to disturb us, their echoes come back from abroad freed from much of the caloric and fervour of the original tumult. It will be remembered that, at the end of last year, the Consul-General for Denmark, Mr. E. DE BAVIER, when proposing the health of the President of the Yokohama Judicial Courts at a dinner given by the latter to the Foreign Consuls, paid some compliments to the new Japanese Codes as well as as to the promise of efficiency given by the judiciary. His speech created quite a sensation among the conservatives of our Settlement, whose apprehensions of impending changes were so keen that even a post-prandial oration tinged with liberal sentiments threw them into a fever of excitement. Taunts, sneers, abuse, and ridicule were heaped upon the unfortunate Consul-General's head, and altogether a perfect hurricane blew, for a few days, in the Yokohama tea-pot. Finally Mr. DE BAVIER appeased the uproar by addressing to the local press a few lines in which he took upon his own shoulders the whole responsibility of what he had said. This, to be sure, was a little superfluous, seeing that nobody suspected the Consuls of endorsing sentiments which pointed, in the near future, to a partial disappearance of their own *raison d'être*; but still in the abstract, if such a very simple step could still the storm, Mr. DE BAVIER would have been wrong not to take it. At all events he took it, and the incident had almost faded out of sight, when, after the interval necessary for the transmission of the news to Europe the

London and China Express sends us back an echo in the following form:—

The attacks recently made in various quarters on the immunities secured to foreigners in Japan by treaty have been so systematic and persistent that undue sensitiveness can easily be pardoned. Not to speak of the energetic and able advocacy of the policy of abolishing extra-territorial rights in a portion of the foreign Press in Japan itself, we see Dr. Von Stein on the Continent and writers in the London Press—of whom "Asiaticus," in the *Daily News*, is the most recent example—supporting a similar course. Foreigners in Japan may well be anxious about cherished privileges, which are to them as the breath of their nostrils, when they perceive them assailed on all hands, as if by a concerted design. These privileges are not, we think, in any serious danger just yet, for the men whose voices must be most potent in any settlement of this nature have not, so far, shown any tendency to deprive Europeans of their present treaty rights. Under these circumstances we are not disposed to attach undue importance to the speech of Mr. Bavier, the senior Consul-General at Yokohama, at a banquet recently given to the Consular Corps by the Judge of the Yokohama Court. Much allowance, too, must be made for the expansiveness natural and becoming in a convivial gathering such as this. Mr. Bavier—to whom we believe we do no injustice when we say that his studies have not lain in the direction of native or foreign jurisprudence—is reported to have contrasted Japanese legislation in the past with the codes recently issued. This was perfectly fair and appropriate; but the words with which special complaint is found are these:—"We find public courts constituted on modern principles applying codes of laws which answer all demands of modern civilization." Mr. Bavier's experience of codes of laws or of their administration is, we understand, of a limited nature. Had these remarks come from the trained Consular judges of Germany, France, England, or the United States, they would bear a different complexion. At the same time Mr. Bavier, in responding for his colleagues, should have been careful to ascertain that the language he was about to utter was not contrary to their sentiments. The Japanese, however, will know how to discount Mr. Bavier's speech; they are intimately acquainted with the difference between professional and trading Consuls, and know that Mr. Bavier, or the country he represents, can have little weight in the decision of the questions in which they are interested. The matter is hardly worth any further attention, and we trust there is no truth in the rumour that representations on the subject will be made to the Government which Mr. Bavier represents.

We do not know how the critics who assailed Mr. DE BAVIER will feel about this defence of their conduct and exposition of their motives. Our London contemporary is quite frank, and apparently quite unconscious of the oddity of his frankness. He tells us exactly in what consisted the gravamen of Mr. DE BAVIER'S crime, nay, even quotes the very words which are supposed to have destroyed the equanimity of half Yokohama:—"We find public courts constituted on modern principles applying codes of laws which answer all demands of modern civilization." There is the whole story. These nineteen words comprise the whole sum and substance of the Consul-General's offending. Yet not one of the nineteen is false, superfluous, or misleading. The Japanese public courts of criminal law are constituted on modern principles, and the codes of law they apply *do* answer all the demands of modern civilization. In what, then, did Mr. DE BAVIER offend? Evidently in speaking about courts or codes at all, since he is only a "trading consul" and since "his studies have not lain in the direction of native or foreign jurisprudence." We do not know much ourselves about Mr. DE BAVIER'S studies, and we venture to assert that the majority of his critics know very little more.

So far as they or we are concerned, he may be a very encyclopædia of jurisprudence. At all events, in proposing the health of a legal dignitary, it is not unusual to speak of courts and codes. To be sure, Mr. DE BAVIER, had his sympathy been sufficiently keen for the sensitiveness of some of his colleagues and the prejudices of many of his fellow-residents, might have avoided the difficulty by frankly confessing it. He might have informed his host, the President of the Courts, that the guests he had invited being, in the main, opposed to any applause of Japanese institutions, it really would not do to pay compliments; and that, in accepting his invitation and drinking his health, the Consuls wished distinctly to disavow any sentiment save that of pure conviviality. Such a proviso would not have been very polite to Mr. Justice HASEGAWA, but it is not always necessary to be polite, especially in Japan. The main object of public speakers should be to exhibit the utmost deference for those "cherished privileges" which, the *London and China Express* says, are to foreigners "as the breath of their nostrils;" and since these privileges are founded on the hypothesis of Japan's incompetence to exercise the functions of independence, nothing should be more carefully avoided than any suggestion of her competence. But Mr. DE BAVIER fell into the error of supposing that the usages of society and the principles of justice are pretty much the same in Japan as elsewhere. Possibly he had not made an original study of the workings of Japanese criminal courts or the provisions of Japanese criminal codes. But, at all events, he had the materials for a pretty conclusive estimate near at hand: he had the essays and reviews of some of the greatest European jurists; and if he consulted them, he might have found expressions like the following:—

"The reform of penal legislation in Japan will place the penal administration in harmony with the spirit and culture of modern days."—(WINES, President of the Penitentiary Congress, Stockholm.)

"The penal system is rationally constructed; the definitions of crimes are given in simple clear outlines; the penalties attached are proportionate and humane; and the experience of the cultured world as well as the progress of European science have been regarded throughout."—(BERNER, Berlin.)

"For those nations who have come into more active intercourse with Japan, there cannot but arise a pleasure in the consciousness of the fact that the prosecution and judgment of punishable offences are regulated according to European models. * * * Although it is true that in consequence of copying too closely the model of the French *Code d'instruction criminelle*, the Criminal procedure of Japan does not always deserve unlimited praise; on the other hand, we cannot withhold from the Penal Code the unreserved admiration which has already been expressed by an authority (Bernier) so generally acknowledged in the field of penal legislation. * * * This Code is well thought out, systematically arranged, and the penal system harmoniously and rationally elaborated."—(MAYER, Vienna.)

"A great change will be accomplished in the Empire of Japan when the new Criminal Law is applied there. No legislation will approach more closely to our own than that which will then enter into operation."—(DESJARDINS, Paris.)

"In sum, and with rare exceptions, when one considers the provisions of this scheme elaborated by a commission of Japanese, one fancies he is reading the text of an European legislation: one has, in a measure, before one's eyes one of those

schemes which the most advanced science presents to the legislators of the Occident. One is pleased with the diffusion of light over the whole surface of the globe, and feels almost ashamed to speak of ameliorations which our own jurists have counselled, but our legislators have not yet taken the time to effect."—(LABBÉ, Paris.)

"A Penal Code free from all reminiscence of a backward, aged, and crude law, inspired with a liberal spirit revealing a scientific sense, composed with a legislative art worthy of praise: a Code of Criminal Procedure which does not deserve, it is true, to figure in the first rank, and does not open any new horizons, but nevertheless sanctions, in general, the grand principles of modern Procedure, the irrevocable conquests of Civilization and Justice: such are the precious gifts that the Japanese Government has just made to its people."—(VAN HAMEL, Amsterdam.)

It may be, we say, that Mr. DE BAVIER consulted these authorities, and based on them his statements that there are in Japan "public courts constituted on modern principles," and that they apply "codes of law which answer all demands of modern civilization." He thought, perhaps, that the utterances of such jurisconsults as BERNER, WINES, MAYER, VAN HAMEL, DESJARDINS, and LABBÉ, were not less trustworthy than the opinions of the "trained Consular Judges of Germany, France, England, and the United States." Such a hypothesis showed a lamentable lack of discrimination, and fully merited the indignant protests it evoked.

BISMARCK AND THE HOUSE OF REPRESENTATIVES.

FURTHER details of the difficulty caused by the Lasker resolution have been received, but nothing in the way of final action is reported, either on the German or the American side. It now seems clear that the initiative measure of the House of Representatives did not necessarily call for Prince BISMARCK'S attention, and that his retransmission of the document was an extreme mark of disapproval. At the same time, he appears to have observed all the forms of official courtesy, and it is certain that he did not commit the error,—attributed to him in the earlier telegrams,—of communicating directly with Congress. The resolution was sent back from the Berlin Foreign Office to the Legation at Washington, and the letter accompanying it was addressed to Mr. EISENDECHER, the German Minister, who has announced that he is not instructed to depart from the usual course of addressing himself solely to the Department of State. Prince BISMARCK'S despatch contained the assurance that he should have asked the Emperor to empower him to present the resolution to the Reichstag, if the opinions expressed therein had not been opposed to his convictions; and he added, with a touch of satire, that he should not venture to oppose his judgment to that of so illustrious a body as the House of Representatives, but for the experience of thirty years, which justifies him in attaching a certain value to his opinion on German affairs. This is very neat in its way, but perhaps a little superfluous; for it now turns

out that the rejected document did not in any proper sense set forth the sentiments of the Chamber from which it emanated. It was drawn up by an eccentric new delegate, Colonel OCHILTREE of Texas, and was pushed through the House at the end of a day's session, without debate or examination, and so hurriedly that it is doubtful if more than a single member voted either for or against it. Colonel OCHILTREE asked for "unanimous consent;" there was no objection; and so the resolution was considered adopted. It was not submitted to the Senate, and consequently has none of the weight that would attach to a joint Congressional transaction. It may fairly be assumed that very few of the Representatives knew anything about Dr. LASKER, or understood the tendency of their tacit acquiescence in the proceeding. The subsequent announcement of Prince BISMARCK'S irritation created general surprise, and it was not until then that the subject was looked into; but no amount of scrutiny has discovered a sufficient answer to the question why an occurrence of such trivial import, regarded from the American point of view, should have produced so remarkable a manifestation on the part of the German Chancellor. That the effect is out of all proportion to the apparent cause, no one undertakes to deny.

If the suggestions of European commentators are entitled to consideration, Prince BISMARCK'S course may be credited to other influences than those which show themselves on the surface. Not a few of the leading journals, including several in Germany, intimate plainly enough that the LASKER incident is merely a pretext, and that the eminent statesman has seized upon a long coveted opportunity to interrupt the friendly relations between his Government and that of the United States. The London *Times* expresses this opinion without reserve, alleging that BISMARCK'S dislike is chiefly caused by the increasing emigration to the new world, which has already reached the annual average of nearly two hundred thousand. These figures, it is explained by another journal, imply the withdrawal of a full *corps d'armée* each year, from the German conscription list. In addition to this ground of complaint, there is the unsettled dispute concerning the exclusion of American pork from Germany; and, underlying all, is the undoubted fact that Mr. SARGENT'S Republican indifference to Monarchical etiquette and ceremony may sometimes have been carried to a point which the Imperial Court considers disrespectful. But no one pretends that the United States Envoy's offence is intentional; or that the authorities at Washington are responsible for the condition, good or bad, of the pork supply; or that any special inducements are held out to German emigrants, over those from other European States. Even the Ministerial organs of Germany admit that the LASKER resolution

might have reached its destination unchallenged, if no other discordant questions had arisen between the two countries. It is, nevertheless, reasonably certain that the hostile feeling which has now culminated in Prince BISMARCK'S act, was wholly unsuspected by the American people. They were entirely unprepared for the outburst of newspaper wrath which has been directed against them, and which concentrates itself into a general demand for the recall of Mr. SARGENT, "if his Government does not wish for further embarrassment." But however averse the United States may be to a quarrel with Germany, it is not likely that their desire to conciliate will go so far as to degrade a diplomatic officer without good cause, or to offer him as a sacrifice to the personal resentment of a powerful Minister. Some other means of pacification must probably be devised, or the misunderstanding suffered to remain as it is. Both the Secretary of State, at Washington, and the PRESIDENT'S private secretary, have publicly declared that "there is no thought of removing Mr. SARGENT."

Neither the House of Representatives nor the Reichstag has suffered the affair to pass unnoticed, but the debates, up to the 8th of March, were not of a kind to lead to practical results. The American legislators permitted the subject to be introduced by the naturalized German members, whose opinions respecting Prince BISMARCK and his performance were listened to with proper consideration, after which it was agreed that no action was desirable in the absence of authentic and official intelligence as to what had passed. When this shall have been received, the discussion will be resumed. In the Reichstag, on March 7th, —the session having opened the day before, —a stormy debate was bought about by the efforts of Independent and Progressist members to recognize the LASKER resolution and to criticize BISMARCK'S interference therewith. They were vehemently opposed by the Conservatives, led by the Secretary of the Interior, who appeared as the Chancellor's direct representative, and who repeatedly affirmed that the deeds of the Prime Minister were not open to hostile comment. Threats and defiances were freely exchanged, the Opposition being significantly reminded of the announcement, earlier in the day, that one of their number had been expelled from his seat for contumacy, and sent to prison for six months. These references to the Chancellor's power over his political opponents brought the controversy to a speedy and barren conclusion. We have yet to see whether the Liberals will risk their personal safety so far as to introduce the topic again. It will certainly be heard of in the House of Representatives, the sensitive temper of which will not accept with much kindness the rebuke of even the most potent of continental statesmen, and the ill feeling of which is likely to be intensified by the unprecedented attacks of German Government organs upon Mr. SARGENT,—who, until his appointment to the diplomatic office he now holds, was a prominent leader in the lower branch of the American legislature.

CORRESPONDENCE.

DOMESTIC AND FOREIGN LOANS; OR
WHAT IS CAPITAL?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Yes, it must be so. Capital is Capital when it is Capital, otherwise it is not. The proposition is as clear as mud when it is closely examined. The more Capital is considered, the more we become convinced that it is Capital, that is, if the Capital is borrowed Capital and is consumable and productive—for in the strict view of the thing, you see, Capital to be Capital, must be a "thing invested and has to be consumed to be productive." This is clearly demonstrated by the statement above elucidated, so there can be no question as to what this thing Capital is. But the reader must not entangle his reason by considering home Capital as being anything of the nature of foreign, borrowed Capital. We hope we are followed, for we would not have the reader go astray. For instance; it takes Capital to build a railway. You will observe that the road-bed must be graded after the route is surveyed, then sleepers and ties are necessary before the rails can be laid. Rails are sometimes made of iron and sometimes of steel. Then comes engines, and rolling stock to operate the road with—stations are to be built, &c. &c. Now as all of the requisites to build and equip a road are "consumable," of course they are the Capital of the road—clearly so. Now some fellows might suppose that the money it would take to build a railroad might be called Capital, but they only show ignorance, and don't know what Capital, to be real genuine Capital is. The notion that a man is a Capitalist, who only deals in stocks, bonds, and money securities, is a vagary. There is no such thing really as Capital stock in any banking institution—because, don't you see, it is not consumed to render it productive. Further, in building a railroad "Capital becomes fixed, and is no longer available for other uses." Money of course is required to purchase material and labor for such an enterprise, and money is not Capital—(don't be befogged if you can help it, if you feel yourself growing dizzy, take a dose of Mill or Fawcett, and be calm). Or rather, money borrowed at home is not Capital, but if money is borrowed from abroad, at good rates of interest to the lender, it is Capital. "All the Capital required for such an undertaking could be easily obtained from foreign countries, and domestic Capital would then be free for ordinary industry." We quote from "L." in the *Japan Mail* of the 5th inst. Wherefore why not, it being thusly, should it not be urged that the nation is being greatly harmed by not borrowing? Japan needs a protection or, as much as America did fifty years ago. So she should go into the money markets of the world and beg some power to loan her thirty millions of money to secure herself against harm from the pirates who would gobble her up. That is the only way she can get the requisite Capital. And there are so many enterprises that are languishing for the want of good roads, it would never do to build them with the money furnished by the people to be benefited. We have read of Sir George Francis Train, a nobleman of Boston, one of the United States, who was an authority on finance, and especially on Capital. He went crazy at last, but it was thought that, as a lunatic his ideas of Capital were as clear as when he was at his best. His strong holding was diagrams. He would diagram his hearers into the acceptance of his theories. Let us try his method. Draw a ship under sail, designate the material of which she is built, Capital, and you can demonstrate that fixed Capital *i.e.*, the material, is floating Capital as a ship. A ship when stranded is fixed floating Capital in a fix, and fixes some of

the Capital of underwriters. Capital must be consumable to be Capital. When a man has a stock of goods consumed by fire, and is largely insured, it is plain that he is a Capitalist, for the fire makes the thing remunerative, although the underwriter may curse his investment. Now observe, I do not pretend that I write any more instructively or intelligibly than other writers on the subject, but allow me to say, that however much we may skin the real meaning of words and terms, the vulgar acceptance of the ideas the words convey to the ordinary business man seems to be understood by the Japanese, and they show sense in determining to do all they can with their own money and domestic resources.

I am, Sir, yours, &c.,

[This letter is more amusing than instructive.—Ed. J.M.]

JAPAN AND THE WESTERN POWERS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—About a year ago there appeared in your columns a leading article which seemed to state so fairly and succinctly an important phase of the question now pending between Japan and the Treaty Powers, that I trust I may be pardoned for quoting from it. After noting the fact, which few, if any, will be inclined to deny, that the true disposition of foreigners towards Japan has nothing in common with the sentiments constantly professed by one of your contemporaries, you proceeded to speak as follows, of the spirit which induces Englishmen to be careful of every privilege they have acquired:—

It is the same spirit that has worked out all the great progressive measures of Western civilization—constitutional governments, liberty of speech, slave emancipation, removal of religious disabilities, and in fact everything that is implied in self-government. Just in proportion to the supremacy of this faculty does the safe enjoyment of liberty become possible, and it is because the instinct has been so largely developed in Englishmen by the institutions under which they live and the traditions of their race, that they are so conspicuously opposed to everything imperilling, however remotely, the stability of their precious rights. It were well that the Japanese should thoroughly recognize this, lest they fall into the error of classing with tyrannous injustice what is in reality the outcome of an instinct not alone respectable in itself, but also essential to the vitality of progress. We are well aware that from this standpoint the case assumes for Japan a somewhat hopeless aspect, since if the propriety of the sentiment which opposes her resumption of sovereign rights be admitted, its permanence also seems guaranteed. But it is an integral part of the instinct in question, that what it claims for itself it does not refuse to accord to others. The value men attach to the privileges of freedom and free institutions is, or ought to be, exactly proportionate to the respect they pay to a similar sentiment in their neighbours. Japan's impatience for the abolition of extraterritoriality and Englishmen's reluctance to surrender that privilege are only different expressions of the same sentiment, and claim at one another's hands an equal reciprocity of respect. It is hard, perhaps, to discern these things clearly across the fog of falsehood and malice in which they are too often enveloped, but that they are as we have represented them here, time will unfailingly demonstrate.

I think that the truth of the general principles set forth here is beyond all question, but I remember thinking also, Mr. Editor, at the time I read the article, that your faith in time must be very large. Yet events seem to indicate that you were not mistaken. Now and then one fancies that one discerns symptoms of that "reciprocity of respect" which all fair-minded men wish to see exhibited by Japanese and foreigners. Now and then, too, one is confronted by statements which render the prospect as hopeless as ever. One of your contemporaries—a journal, I may observe, which has shown, of late, a laudable desire to be moderate—had the following in a recent issue:—"Eager for this assistance" (foreign skilled labour and capital) "on which her life as a commercial, and consequently progressive, nation depends, Japan saddles her invitation for it with the unwise condition that the freemen to whom she appeals should surrender their liberties in order to afford it!" I can not, for my own part, see that there is any surrender of liberties involved. It has never occurred to me in my travels—and they have been tolerably extensive—that I made a series of successive surrenders of my liberty as I passed from place to place, submitting everywhere to the jurisdiction of the country in which I found myself. If I had apprehended such catastrophes, I should

certainly have stayed at home. But were I a Japanese, circumstanced as the Japanese now are, I should certainly think that I had surrendered some of my liberties. I should remember constantly that my country is not considered sufficiently civilized to be her own mistress. I should think that when I asked foreign States to restore to my nation the power of regulating its own tariff and exercising complete jurisdiction within its own territories, I was not seeking to deprive them of their liberties, but only endeavouring to recover my own. Even as a foreigner—one of those whose "liberties" are threatened—I cannot quite persuade myself to believe that we have acquired any perpetual title to the powers of which we temporarily deprived Japan on the plea that she was not yet competent to exercise them. I cannot learn to regard as an inalienable right the privileges Japan lent to us under a terminable treaty, and I think that our relations with this country would be more comfortable and better worthy of our civilization did we endeavour to treat her rights with a little of the respect we so loudly claim for what we call our own.

I am, Sir, your obedient Servant,

T.

Yokohama, April 8th, 1884.

RIGHT, OR MIGHT?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—To those foreigners who profess a disbelief in Japan's right to resume her powers of domestic jurisdiction and tariff control, and who assert that it is a moral duty, on the part of Great Britain and other European States, to prevent the resumption of those powers, I would address a question or two, which they may answer publicly to the world, or privately to their own consciences.

Suppose that this empire to-day possessed a trained and efficient army of one million, or even five hundred thousand men; and a navy equal in strength to that of, let us say, any second-class maritime nation of the West: would a demand from this Government for immediate revision of the treaties and restoration of all inherent privileges be resisted, even for a single day?

If not, what becomes of the moral duty of foreign countries to hold Japan in check? Or, does the moral duty of restricting an empire's independence exist only when comparatively weak nations are to be dealt with, and cease to exist in the case of strong nations?

I am, Sir, yours respectfully,

LIBERTAS.

Yokohama, April 15th, 1884.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The answer to the question put by 'Libertas' in your paper this morning is simple enough.

If Japan possessed the army and navy your correspondent suggests, it would at once be a sign, if not an absolute proof, that she had advanced in efficiency as a State to a position in which she might well be trusted with all the so-called "inherent privileges."

Yours truly,

FOREIGNER.

17th April, 1884.

A CORRECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The *Herald* of the 7th inst. publishes a rumour from Tokio "that the missionaries have had a meeting for the purpose of drawing up a memorial on the subject of opening the country to their labours, and that a document to that effect has been presented to one, or more, of the Foreign Ministers." Permit me to say, that no such meeting has been held, or will be held, for any such purpose; that no such document has been prepared or presented to any "one, or more of the Foreign Ministers;" that Missionaries desire no favours not accorded to other Foreigners, and that, if favours or further privileges are accorded to other foreigners, Missionaries will expect the same on the same con-

ditions, without having to hold meetings and frame petitions.

The *Herald's* disinterested remarks following the above quotation are about as near the mark as its text.

I remain, &c.,

A TOKIO MISSIONARY.

Tokio, April 11th, 1884.

TRANSLATIONS FROM NATIVE JOURNALS.

FRANCE THE BENEFACTRESS OF CHINA.

(Translated from the *Fiji Shimpō*.)

China is one of the largest countries in the world, covering an immense area, possessing an enormous population, and abounding with fertile tracts, great forests, rich mines, and natural products. There is but one serious drawback: the people are self-sufficient and prefer isolation to an intelligent intercourse with Occidental nations. Little intellectual or enlightened progress has been made by them for thousands of years; and thus, more than three hundred million people live like so many soul-less automata, dreaming away their existence in careless oblivion of the great world just beyond their borders. Although many years have elapsed since China first entered into relations with foreign nations, her people still cling obstinately to the worn-out customs of the past; men may come and men may go, but China is still the same country of a thousand years ago. In this nineteenth century, when steam and electricity are utilized by every land in the great comity of nations, no country, however rich in natural resources, can hope to maintain its independence without employing these agents of civilization. If China would but adopt the wonderful inventions of our age, she might—despite her infantile ignorance—uphold her independence and properly develop her natural resources. Whatever may be the sweeping dictum of the Middle Kingdom, that all nations other than Chinese are barbarous and despicable, it is very apparent that the tremendous weapons of war in the hands of the despised foreigners have made a deep and indelible impression upon the Chinese. The wonderful destructive power of the arms possessed by aliens has burst upon the people of China like a revelation; and, before very long, she too must be converted to this nineteenth century civilization. These facts the Chinese will be forced to recognise, if they possess the most ordinary intelligence. But, as yet, they have no intention of adopting any of these marvels of to-day, and until they are made forcibly and unpleasantly aware of the irresistible power against which they are trying to stand, their chronic conservatism will be incurable. Then will they be forced to adopt steam and electricity, and for this reason, if for no other, those who awake the Chinese, however roughly, from their slumbers, are their real benefactors.

Some few years ago, France, one of the greatest of the European powers, had occasion to disagree with China in reference to Annam. It was not, however, until May of last year, that this hard feeling grew into a serious dispute, and war seemed imminent. What may be the ultimate fate of Tongking it is not easy to state, for affairs are still in a most unsettled condition. As a matter of course, the Chinese, headed by their Minister in Paris, are hot with anger, and revile the French. But they are, once again, brought face to face with the probability of a great war; and, in order to enter upon a campaign with any chance of success, China must reorganize her Army and Navy, collect large stores of military supplies and munitions, acquaint herself thoroughly with the condition and spirit of her people, besides acquiring a fair knowledge of the French and their Eastern contingent. Being thus compelled to

study the domestic and foreign conditions of their country, the officials of China will make rapid advancement towards the adoption of Western civilization. The absolute necessity of a trained and efficient Army and Navy will become plainly apparent, while the most peaceful-minded will have to turn their attention to the manufacture of war-vessels, firearms, and torpedoes. Soon will the miserable inefficacy of the present internal communications become unbearable, while the advantages of the telegraph and the iron-horse will be patent to one and all; and as the conveyance of troops and the like is as clumsy in the Middle Kingdom as the postal system, the benefits of riverine and marine steam navigation will find universal appreciation. Finally, China will cross the Rubicon of conservatism, and find herself on the threshold of Occidental civilization.

The initial step towards this most beneficial revolution has already been taken. Telegraph lines are being constructed between Shanghai, Tientsin, and Peking, and the work will shortly be extended to Canton. Railways in miniature are already being laid here and there, while the Government is steadily purchasing ironclads, torpedoes, and ordinance both large and small. The services of European and American officers have been engaged, and a considerable number of recruits called to arms. The promptitude and activity which characterize this latest movement contrast most strangely and marvellously with the inactivity and tardy development of former years.

Turning our gaze to Europe, we find the Chinese representative busying himself in England and France with the Annam question, and constantly transmitting lengthy despatches to his Government, containing all manner of reports and information. The knowledge acquired by him in this manner will exercise great influence in China, and go far towards breaking the obstinate conservatism of his countrymen. For were the Chinese never so bent upon keeping their country isolated, and ignoring the existence of "barbarous and inferior" nations, this one little factor will produce a decided advance towards civilization. The employment of foreign weapons is, in itself, the earnest of a better future. What course matters will take in Annam, it is impossible to foretell, China may relinquish her claim to the suzerainty of Tong-king; or both parties make come to an amicable understanding; or China may obviate the present difficulties by paying an indemnity at the intervention of other powers. For the nonce, at all events, war does not appear imminent. Ten months have already passed without action, and a year or eighteen months may still elapse before affairs are finally settled; but, during that interval, China will have ample opportunity to become acquainted with the civilization of the West. Since the outset of her relations with foreign powers, China has several times become embroiled in wars; but while some of these were of too passing a nature to arouse effectually the spirit of the people, others were so sudden and disastrous as to preclude the possibility of extensive warlike preparations. Fortunately for the Middle Kingdom, the Annam affair is of sufficient importance to arouse the whole country, while it gives her ample opportunity to thoroughly acquaint herself with Western civilization. Should the difficulty finally be solved by intervention or arbitration, the Chinese will truly be a most fortunate people. And to whom is the credit due in the first instance? To France, the benefactress of the Middle Kingdom.

THE COMPETITIVE EXHIBITION OF PAINTINGS.

(Translated from the *Fiyu Shimbun*.)

The opening ceremony of the Second Competitive Exhibition of Paintings took place on the 11th inst., when H.E. General Saigo, Minister of Agriculture and Commerce, delivered the following address:—

The Art of Painting as cultivated in this country dates back to a very remote period, and although the influence of Chinese and Korean Art was, during the Middle Ages, great, and of considerable effect upon our artists, yet, as we are by nature richly endowed with a love of the beautiful and picturesque, our works of art have long been held in high esteem. How comes it that our paintings have acquired such great fame? Because, from the very outset, our artists studied the marvels of nature with the utmost care and the most painstaking patience; they followed with anxious eye all the changes of the material world, and pursued the study of true art with the most tireless energy. It is but the just reward of our artists that their works should command such universal admiration. Of late years, however, painting has fallen off in excellence, consequent upon the adoption of a less thorough style and the neglect of the exactness of former days. Roughness came to be considered the patent of genius, and the painstaking imitation of natural objects was abandoned. Those old-time systems of art which made the painters of antiquity so justly famous were well-nigh forgotten. Westerns, on the contrary, have extolled the excellence of our early painters; they have spent years in studying and collecting old pictures, while a few have developed into masterly connoisseurs. This more than sufficiently attests the excellence of Ancient Japanese Art. Should the artistic styles of olden time remain neglected and uncared for, we shall not only fail to recover the methods of our early art, but we shall see the best productions of this country pass into foreign hands. In these days of rapid advance in the Fine Arts, the decline of Japanese painting was a reproach to our civilization. And so, on the 1st of October, 1882, the First Competitive Exhibition was inaugurated. This Exhibition gave a decided impetus to the development and improvement of Japanese Art, and added largely to the skill of our painters by making them familiar with the best productions of ancient days. But as the full excellence of our earlier art may not yet have been realized, the Second Competitive Exhibition has to-day been opened. Thus will our pictorial art profit by experience and competition, and our galleries be well furnished. Whether the works on view at present surpass those of the former Exhibition, or are similar in style and execution to the celebrated painters of the past, I am not yet in a position to state. But I wish to express my earnest desire that those who devote their lives to the study of Art should press forward with redoubled energy, so that the lost greatness of the past may be more than amply compensated for by the bright promise of the future.

THE BUREAU OF CONSTITUTIONAL REFORM (SEIDO-TORI-SHIRABE-KIYOKU).

(Translated from the *Nichi Nichi Shimbun*.)

It has already been announced in these columns that a Bureau of Constitutional Reform was established in the Imperial Palace, on the 17th ultimo, under the presidency of His Excellency Hirobumi Ito, Privy Councillor, and that, on the 21st ultimo, the same official was also appointed Minister of the Imperial Household, His Excellency Tokudaiji, who had previously filled the latter office, having been transferred to the post of Lord High Chamberlain. Among recent events these are most important, and men have been asking each other why the above Bureau was established in the Palace instead of in the Privy Council; why His Excellency Ito, whose ability in matters connected with internal, financial, and legislative administration had been already recognised, should have been appointed Minister of the Imperial Household, retaining his rank of Privy Councillor; and why His Excellency Tokudaiji, who is thoroughly familiar with the ceremonies and customs observed in the

Palace, and who stands high in the Imperial favour, not less on account of his exalted rank than of his virtues, should have relinquished his post in favour of His Excellency Ito. Many persons appear to be much perplexed about these changes in the Cabinet, nor can it be denied that they had reason to be surprised when the news of the appointments first reached them. A little serious reflection will show, however, that there are legitimate causes which render the changes, to a certain extent, inevitable. We proceed to explain the matter briefly.

On October the 12th, 1881, His Majesty the Mikado issued a Rescript to the effect that, in pursuance of the design announced at the time of the Restoration, a National Elective Assembly should be convened in 1890; that, by this announcement, his Ministers would have sufficient time to complete all the preparations necessary for that purpose; and that with regard to the powers of the Assembly and the mode of its organization, he would himself give the matter full consideration, and make his decision known in due time. Since the issue of this Rescript, we have devoted much thought to the questions, where the Bureau for the preparation of the proposed Constitution should be established; to whom the task of preparation should be entrusted—the members of the Cabinet or the Senators who are regarded as the country's legislators—and whether the Bureau should be formed in the Palace, the Cabinet, the Council of State or the Senate. We have, indeed, awaited with much curiosity the advent of the day when the proposed Bureau should be actually established, and we have always hoped that as the Constitution will be the basis of our country's polity for many generations, His Majesty the Emperor would be pleased to entrust its compilation to his most impartial and unprejudiced statesmen. Similar ideas appear to have been entertained even by our political opponents, who have maintained that the Constitution ought to be so framed as not to confer benefits on one party more than another. Public opinion may therefore be said to favour the view that a special Bureau should be formed for the purpose, independent of the various Governmental Departments, with an unbiassed statesman as its president. (The writer then refers to the American Constitution, eulogizes its equity and completeness, and describes how it has remained unaltered amid all the strife of political parties.) Beyond all question, it would be most unwise to entrust the task of framing a Constitution to any one prejudiced party. How, then, ought the Constitution of this country to be compiled? If we look at the matter closely, we shall find that all the existing laws have been established by the Emperor himself. The various statutes are first drafted at the several Governmental Departments, and are then forwarded for sanction to the Cabinet, *via* the Council of State, when, of course, they are duly deliberated. Sometimes, however, the drafts are first laid before the Emperor himself, or submitted to the Senate for approval, and then enforced with His Majesty's sanction. But to whatever officials be entrusted the duty of preparing the drafts, or to whatever Departments that of examining them, officials and Departments alike derive their functions in the first place from the Emperor, and their proceedings must therefore be recognised as virtually the acts of His Majesty in person. This will be still more evident when we observe that no law can be enacted, or proclamation issued, without His Majesty's sanction. In a word, all the laws and regulations promulgated in the Empire emanate from the Emperor himself, as the prime source of authority. The question then arises, is the proposed constitution to be drafted in a similar manner? Shall it be drafted by the Privy Council or by the Council of State? Upon these points we cannot pretend to pronounce a decided opinion, but we do most emphatically think that such a duty should never be entrusted to the Home Department, or to the

Finance Department, for example. The matter is one that demands the deepest consideration.
